A good sized cruising motor boat is approaching completion at Stearns & McKay's yard at Marblehead, which has attracted considerable attention there, on account of the fine accommodations it has. This craft is for a Canadian yachtsman who will use the yacht on the St. Lawrence as well as off the coast. The dimensions are 80 feet length over all, 74 feet on the waterline, 14 feet 6 inches beam, 4 feet 6 inches draft. It will be driven by a 70-horse-power motor which will give a speed of 15 miles an hour. The boat was designed for comfort with a moderate speed and in the cabins ten persons can be accommodated in addition to the crew.

There is a raised deck forward which extends nearly half the length of the vessel, and as there is ample freeboard, she will be staunch and dry. Forward there is a large pilot house from which the yacht can be handled in bad weather, and aft of this house is a raised platform where the helmsman will stand in fair weather.

From the cockpit the main cabin can be entered. This is 10 feet long and 10 feet wide and is arranged to make a pleasant lounging room. Two staterooms can be entered from this cabin and a bathroom and passageway is arranged between these two rooms. The owner's stateroom is large and well arranged and will also be used as a living room. Forward of the staterooms is a solid watertight bulkhead separating the living quarters from the engine space, forecastle and galley.

The engine room is 11 feet 6 inches long. The galley is large and well ventilated and forward again is the forecastle. There are lots of lockers in the yacht and awnings extend over the whole of the deck which can easily be taken down and stored below.

POWER LIFE BOAT NOW USED ON COAST AND LAKES.

New York Motor Boat Club Schedule.

The members of the New York Motor Boat Club are looking forward to a lively season. The Regatta Committee, C. F. Chapman, J. P. Ackerman, F. W. Horenburger, L. Kromholz, C. A. Leonard and W. A. Little, has arranged a very complete schedule which follows:

May 28—Club goes in commission; 3 P. M., club boats relay races; 8 P. M., lantern hunt, no handicaps.

June 11—Sealed order race, 3 P. M.

June 18—Tarrytown Light race, starting on handicaps, 11 A. M.

June 24—Club races for cruisers, A. P. B. A. handicaps, 4 P. M.

July 1—Albany race, start 6 P. M.

July 8—Club race for open boats, 4 P. M.

July 22—Club races for cruisers, 4 P. M.

Aug. 4—New York to Camden race, 10 A. M.

Aug. 5—Club races for open boats, 4 P. M.

Aug. 19—Club races for cruisers, 4 P. M.

Sept. 2—Club races for open boats, 4 P. M.

Sept. 4—Hudson River Y. R. A. regatta at Yonkers.

Sept. 17—Economy race, 3 P. M.

Sept. 24—Rockland Light race, 11 A. M.

Canoeing.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—John V. Mulcahy, 23 Murray street, Trenton, N. J., by David S. Hill.

Central Division.—Edmund Dietzel, Saranac Lake, N. Y., by S. B. Burnham.

Eastern Division.—A. Russell Bowen, Beacon Chambers, Joy street, Boston, Mass., by B. F. Jacobs, Jr.; Harold I. Bosworth, 160 Burrington street, Providence, R. I., by Wm. A. Heath; Harlie E. Buckey, 22 Manchester street, Pawtucket, R. I., by Arthur W. Blut; Alfred C. Noyse, 33 Eddy street, Providence, R. I., by F. C. Rexford; Amos W. Hazard, Jr., 197 Harrison street, Providence, R. I., by William E. Collins; Charles A. Domler, 1125 Broad street, Providence, R. I., by William E. Collins.

NEW MEMBERS ELECTED.

Atlantic Division.—6186, William H. Logan, Jr., 1534 Arch street, Philadelphia, Pa.

Central Division.—6187, A. Frederic Saunders, care of Benedict Mfg. Co., East Syracuse, N. Y.; 6188, Fred. B. Kirchner, 1507 Pennsylvania avenue, Allegheny, Pa.

REMINGTON UMC
TRADE MARK

NEW .22 LESMOK CARTRIDGES MAKE UNEQUALLED ACCURACY TESTS FROM MACHINE REST.

On March 13th, Arthur Hubalek testing Remington-UMC Lesmok .22's, made these ten-shot groups.

On March 14th, Mr. Hubalek shooting Remington-UMC Lesmok .22's broke the world's record, scoring 2484 out of 2500 in 100 consecutive shots.

Every man using Remington-UMC Lesmok .22's in this match added ten to fifteen points to his best previous score.

These facts speak for themselves!

Remington-UMC — the perfect shooting combination.

Oct. 10-12.—Des Moines, Ia.—Iowa State tournament. C. W. Budd, Chairman Board of Directors.
Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

Hudson Gun Club.

JERSEY CITY, N. J., March 26.—At the traps of the Hudson Gun Club to-day there were forty-three shooters that took part in the program events of the regular bimonthly club shoot, and helped inaugurate a series of six shoots for the Du Pont and the Western Cartridge Co. trophies. In the series of club prize shoots that have been going on for the past three months, and which was finished to-day, J. Putney was the winner of first prize, a silver loving cup; A. P. Lane was second with a solid gold watch charm. C. Von Lengerke won a cut-glass flower vase. Mr. D. D. Engle took a piece of cut-glass for fourth prize. Whitley and F. Thoben, who tied for fifth place, each took a silver cup for their prize. H. J. Burlington won a bronze ornament, J. Pape, half dozen cut-glass tumblers, W. Emmons a fancy silver-mounted jug, H. Pape an oil painting. Dr. Groll took a leather-mounted flask for his prize. T. Kelley took a piece of gold. J. Williams a fancy imported ash tray, Tober, Jr., a fly-rod, J. Leary an ash tray. R. Strohel selected a cut-glass water bottle, W. O'Brien a steel rod, L. Shorty a steel engraving, and Williams, Jr., a reloading tool.

In the Du Pont trophy event, J. Whitley and W. Raymond were high with their added handicaps, each scoring 25.

The Western Cartridge Co.'s trophy was shot for in event No. 4, and W. Emmons, J. Whitley and W. Raymond managed to scratch out straight scores.

After the "bunch" had started for home, Dr. O'Brien challenged Dr. Groll to shoot a match at 50 pairs of doubles. Dr. Groll accepted, and as the scores will show, Doc O'Brien had to pay for his foolishness.

On April 9, our next shooting date, the Emmons trophy will be shot for at 50 targets. There is no entrance fee in this event, and it is a very nice trophy to try to win, so remember the date, April 9, and the way to our grounds is by way of the Turnpike car to the Hackensack River bridge, where you will fall in line with the crowd that always attends our shoots, and lead you to the club house.

T. H. K.

Championship of Philadelphia.

PHILADELPHIA, March 26.—Harry N. Kahler and "Butch" Landis divided the honors yesterday in the second shoot for the championship of Philadelphia and vicinity, each breaking 112 targets of their total of 120, over the Edge Hill traps, others of the Class A squad being George S. McCarty 110, Jesse Griffith 108, and Thomas Tansey 106. This brings the total to date as follows: Kahler 226, McCarty 222, Landis 219, Tansey 218, Griffith 217.

The new amateur trapshooting champion thus has a lead of 4 targets over his nearest competitor, McCarty, with one more shoot to decide the title. In the race in Class B, J. Franklin Meehan, by virtue of his excellent score of 110 yesterday, has jumped into first place with a total of 210, with Percy Pflegar only 2 targets away, followed by F. W. Mathews, 206 and W. H. Mathews 202.

An even prettier race is in Class C, where William H. Clegg and Dr. Wentz are tied with a total for the two shoots of 200, the former making 103 yesterday and the latter an even 100. Everything yesterday favored high scores, there being little if any wind, and the targets being thrown true. The shooters took full advantage of this, and the totals were correspondingly high.

Class A.	Champ.	T'l.		Champ.	T'l.

Indianapolis Gun Club.

SATURDAY, March 25, was a glad day at the Indianapolis Gun Club, due to the presence of Mr. Parry after an absence of three months spent in southern California. During that time both he and the old gun have grown a bit rusty, so the best they could do on 130 targets was 94 per cent., which included a straight 20. Smoke had a 25 to his credit, but generally his work was away below the high mark he maintained for many months.

In the cup contest Brennan posted 48 out of 50, Britton close up with 46. Scores:

Events:	1	2	3	4	5	6	Shot

Columbus Gun Club.

COLUMBUS, O., March 25.—Dr. Van Fossen was high gun Saturday afternoon at the traps by breaking 98 out of 100. H. E. Smith was next with 95. Smith also broke 25 out of 13 pairs. Webster, Chamberlain and Jones each had 94 out of 100. Weather couldn't have been better. Dr. Van Fossen, H. E. Smith and Shilling are in a tie for a point on the Du Pont trophy, each getting 50 straight with their allowance. Dr. Van broke 50 straight. The tie will be shot off Saturday, April 1, at 25 targets each.

We notice our brother secretary on the Lakes thinks we are too busy. Just let him bring that 90 per cent. team of his down and see how we will take care of them. When we get through with them you bet they will want to come again. Ask Circleville if they don't want to come back. But we don't like to wait a whole year for a return match. Any date will suit. April 20, our next monthly shoot would be a good time.

	Shot at.	Broke		Shot at.	Broke
Webster	100	94	Dr Van	100	98
Wing	100	92	Bolin	100	88

Du Pont trophy, 50 targets:

H E Smith	48	Bolin	46
G Smith	40	Dr Van	50
Shilling	41		

LON FISHER, Sec'y.

Northern Kentucky Gun Club.

The first of the weekly trophy matches of the club was shot on March 19, and drew a good crowd, fifteen men taking their places on the firing line. The weather conditions were hard, the day was pleasant, but a strong wind forced the targets to soar or duck in a most puzzling manner, and most of the shooters fell below their average. The match was at 50 targets, shot in two strings of 15 and two of 10 targets each, with a handicap of added targets. This handicap is never satisfactory, and the match to-day proved no exception. The trophy was won after two shoot-offs had resulted in the tie remaining unbroken, by the toss of a coin. The winner, Harrington, is a new man at the traps, having shot but six or seven times before to-day. He had 28 actual breaks, and his handicap tied him with Dea and Felix on perfect scores. The three tied on totals of 15 in the first shoot-off. In the second shoot-off, at 10 targets, Dea dropped out with two misses. Felix broke 10 straight, and Harrington broke 9, his handicap tying him with Felix. High score in actual breaks was made by Felix with 46; Dea was second with 43, and Schreck came third with 42.

Only a few over 50 targets per man were shot at, but those present had a whole afternoon of sport at a trifling expense. This is as it should be, and the sooner club officials realize that it is against the interests of the sport to try and force shooters to go beyond their limit, the better it will be for all hands.

Targets:	15	10	15	10	Bk.	Hcp.	Total.
Dea	13	10	12	8	—43	8	50
Harrington	9	4	10	5	—28	25	50

Schreck	20	..	..				

The weather on March 26 put a hoodoo on the club shoot and kept many away. The attraction which had been provided for the entertainment of the shooters was the visit of Fred Gilbert and Luther J. Squier, the latter known to many shooters as "Money-Back" Squier. In the morning the rain fell steadily, and the afternoon was made disagreeable by frequent showers. When the rain did not fall the air was full of a fine, penetrating mist, that made it extremely difficult to see the targets, as well as most uncomfortable on the firing line. However, seventeen enthusiasts hiked to the grounds and kept the traps busy until almost dark. Among the out-of-town shooters were Messrs. Donald, Sr., and Jr., and Houghton, of Felicity, O.; Francis, Turrell and Kater, of Harrison, O., and "Kid" Randall, of Mason, O. The second of the weekly trophy contests was won by Holaday, Sr., after one shoot-off, he being lucky enough to draw the short straw. In the main event Squier, Hammersmith, Holaday, Sr., Francis, Gould and Payne were tied on a perfect score of 50, including their handicaps, and in the shoot-off at 25 targets, Squier, Holaday and Francis tied again on perfect scores. By this time it was getting dark and raining again, so the winner was decided by drawing straws, with the result above given. Gilbert, scratch man, made high score in actual breaks, missing but 2 targets; Hammersmith gave him a close race, finishing with 47. Then came Payne with 45; Squier and Young broke 44 each.

In the morning Squier, Gilbert, Young and Holaday, Jr., attended the shoot of the new club in the East End Cincinnati, and in spite of the rain, there were four full squads in attendance. At this shoot a team match was started between Gilbert and Holaday, and Squier and Young, and was finished at the afternoon shoot at the Northern's grounds. Squier and Young had the best of the morning shoot, scoring 88 and 93, a total of 181, to Gilbert's 92 and Holaday's 94, a total of 176. The afternoon saw things reversed, Gilbert scoring 94, Holaday 89, a total of 183, to Squier's 83 and Holaday's 89, a total of 175, and giving the match to the former team by 3 targets, with total scores of 359 to 356 out of 400 per team. The next trophy shoot will be held on April 2, and all shooters are invited to take part. There is no entrance fee. There will be a special shoot on March 30, to which all are welcome. The club will be well represented at the merchandise shoot to be given by the Harrison Club on April 21. Luther Squier will have charge of this shoot, and Fred Gilbert and Charlie Young will be among the shooters, and help make things pleasant.

Targets:	25	25	15	20	25	Total.
Squier	19	13	13	18	20	83
Gilbert	23	14	15	19	23	94

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Philadelphia Y. C. at the Trap.

Philadelphia, March 26.—The Philadelphia Yacht Club's gun team defeated a team from the Beideman Club in a match shot yesterday at Essington. The teams were composed of five men each, and each man shot at 50 targets. The final scores was 204 to 199 in favor of the yachtsmen.

Yesterday's event was the final shoot of the season at Essington, and decided the winner of the silver cup offered by Commodore Bromley. The event was shot on each Saturday during January, February and March, eleven shoots in all, and Walter N. Stevenson won the cup with a total score of 39 points.

Eagle Gun Club.

Manoa, Pa., March 26.—Billy Severn and Fred Muller divided up the loot in the 10-bird event of the Eagle Gun Club match, which was shot yesterday afternoon at Manoa. Each gunner handed in a clean sheet for his afternoon's performance, and both firing from the 30yd. mark deserved the cash donated for high gun. Bivens and Murphy, with 9 apiece tied for second.

Amateur Championshp of America.

Travers Island, N. Y., March 23.—Seventy-five or more transhooters participated in the practice and preliminary events of the sixth annual championship at clay pigeons under the auspices of the New York Athletic Club yesterday. The weather conditions were not the best for high-class marksmanship, for a strong west wind whistled across the field, dipping the clay pigeons at all angles. Considering this handicap, the performances of many of the marksmen were meritorious. The championship event is at 200 targets, in strings of 25, and the first prize was a diamond medal. Prizes were also awarded for the first ten places.

Charles Newcomh, of the Independent Gun Club of Philadelphia, earried off the honors yesterday, winning first place in the preliminary event of 100 targets, in strings of 25, and he also was the high gun in the practice shoots. Newcomb's score in the 100-target event was 93, his strings being 23, 24, 24 and 22. W. M. Foord, of Wilmington, Del., and F. P. Stephenson, of the Crescent A. C., were tied for second place with 92 each. In the shoot-off, the Delaware gunner won the 25-target event by a score of 23 to 22. Harry Kahler, the amateur champion of Philadelphia, won fourth place with a score of 91. George S. McCarty, who has won the National Championship at Travers Island for the past two years, was eighth on the list yesterday with a score of 87.

The events began in the morning, practice being at four traps in strings of 15 targets. Charles Newcomb, the winner of last year's Eastern Handicap at Philadelphia, also captured first place in this event, breaking 56 targets out of a possihle 60. G. J. Lyon, a professional, held the high mark in the practice, smashing 57. Newcomb's strings were 14, 13, 15 and 14, and Harry Kahler, of Philadelphia, and N. Johnson, of Pittsburg, were tied at 53. W. M. Foord, of Wilmington, had a 53, while R. L. Spotts, the New York A. C. and Larchmont gunner, and E. A. Wilson, of the New York A. C., had scores of 52. J. L. Lyon was the best among the professionals in the 100-target event, breaking 95. The summaries:

March 24.—Harry W. Kahler, the youthful gunner from the Highland Gun Club, of Philadelphia, won the amateur championship of America at clay pigeons, at the New York Athletic Club traps, at Travers Island yesterday, smashing 173 targets out of a possihle 200. The championship emblem is a diamond medal. Second to Kahler in the tournament was George S. McCarty, winner of the title for the past two years. Young Kahler is a protégé of the former champion.

The largest field that ever took part in an amateur championship faced the traps, 120 taking part in the shooting. Veterans of several years' standing were among the competitors, and Kahler was one of the youngest.

Prizes were offered to the trapshooters who finished in the first ten places. There was a tie for third position between F. B. Stephenson, of Crescent A. C., and F. Hall, of the New York A. C. In the shoot-off Stephenson won, 22 to 20, and fourth place went to Hall. There was a tie between C. T. Day, Jr., of Newark, and C. H. Newcomh, of Philadelphia. In the shoot-off, Day won, 19 to 18, and got fifth place, Newcomh getting sixth. W. F. Clarke, of Boston, was seventh; G. G. McMurtry, of the Westchester Country Club, eighth; S. Scott, of the Larchmont Yacht Club, ninth, and John Martin, of the Bergen Beach Gun Club, tenth.

The competitors were divided into squads of five each, and shot from four shooting boxes. The weather conditions have seldom been worse for a national event. A strong wind, that at times almost blew a hurricane, came off Long Island Sound, and raised havoc with the blue-rocks. At times the gunners would hardly have a chance to sight the birds before they were caught by the gale and whisked away. The clay pigeons dipped and scaled far out of their course.

The national event this year was at 200 targets, the largest total ever attempted in the event, and the shooting commenced shortly after 9 o'clock, and the last target was not smashed until 5 o'clock.

Early in the day, Newcomb, who won the preliminary shoot on Wednesday, looked like a winner, for his work in the strong wind was excellent. His misses were made when the wind dipped the targets so quickly to one side that the gunner was completely puzzled in their flight. In the afternoon shoot, Newcomb's work was not so good, and he fell back. McCarty, the former champion, made a poor start in the morning, but his shooting in the afternoon brought his score up, and he was a contender for the title again, until the last string, when Kahler beat him out by two targets. McCarty smashed 171 to the new champion's 173.

The uncertainty of the conditions made the competition the keenest of years. Toward the end of the competition, John Martin, of the Bergen Beach Gun Club, and A. Lindley, of Newark, hoth had a good chance to tie the leader, and when they went to the traps for the last two strings, the gunners crowded around to see if they would forge ahead of young Kahler. The treacherous wind knocked out their chances, and both failed in the final attempt to reach the mark made by the Quaker gunner.

Although it was Kahler's first attempt at the amateur championship, he is no novice at the game. He is an Iowan by birth, and has done a lot of trapshooting in the Middle West, once figuring as a leader in the Grand American at Indianapolis. Last month he won the championship at Philadelphia.

There was some excellent shooting by the professionals, Lester German smashing 182, the hest performance of the day. In the two days' shooting J. A. R. Elliott had the highest total for the professionals with 270. George Lyon was second with 268. The summaries:

Amateur championship, 200 targets:

Harry Kahler, Philadelphia	88	85—173

Registered Tournaments.

Pittsburg, Pa.—Tournaments registered with the Interstate Association during the week ending March 25, are as follows:

May 24.—Stratford, Canada.—Pastime G. C. Wm. Bowles, Sec'y.
May 30.—Iowa City (Ia.) G. C. C. Bothell, Mgr.
May 30.—Buffalo (N. Y.) Audubon C. Edw. Reinecke, Sec'y.
June 1-2.—Jewell (Ia.) G. C. W. S. Hoon, Sec'y.
June 6-8.—Sioux City, Ia.—Soo G. C. W. F. Duncan, Sec'y.
June 8-10.—Gulfport, Miss.—Mississippi State tournament, under the auspices of the Gulfport G. C. N. H. Paythress, Sec'y.
June 9-10.—Columbus, Neb.—Big Four League tournament, under the auspices of the Columbus G. C. Dave Elliott, Sec'y.
June 14-16.—Spencer (Ia.) G. C. R. B. Randolph, Sec'y.
June 15.—Milton (Pa.) R. and G. C. S. H. Koch, Sec'y.
July 11-12.—Princeton (Mo.) G. C. E. W. Stacy, M.D., Sec'y.
July 11-12.—Manning (Ia.) G. C. E. E. Breckenridge, Sec'y.
July 18-19.—Albia, Ia.—Monroe County F. and G. P. A. J. R. Price, Pres.
Sept. 4.—Ogdensburg (N. Y.) Shooting Association. J. M. Morley, Sec'y.
Sept. 27-28.—Benton (Ill.) G. C. W. H. Foulk, Sec'y.
Oct. 10-12.—Des Moines, Ia.—Iowa State tournament. C. W. Budd, Chairman Board of Directors.

Elmer E. Shaner, Sec'y-Treas.

The Palefaces.

Boston, Mass., March 22.—Just a dozen shooters responded to the call of the Palefaces for their afternoon shoot, held to-day, and it sure was Paleface weather, with the exception of the fact that the rain was missing. Wind—and plenty of it—played havoc with the targets, and the scores were exceptionally good.

Frank still had the high average bug, and led the bunch by 3 targets at the finish. High in both matches were his honors of the day, but rules prevent this, and Jones was the winner of the added target race, with Dickey a good second and Charles in third position.

The doubles, as usual, proved a stumbling block, but Frank's single trigger was the candy, as usual, and a very neat score resulted. Scores:

Targets:	25	25	25	25	Bk.	Hcp.	Total.
Frank	23	18	24	21	86	8	94
Jones	18	15	21	18	72	20	92
Dickey	22	18	22	21	83	8	91
Charles	21	13	21	19	74	16	90
Morse	22	19	19	18	72	12	90
Steele	21	16	19	22	78	8	86
Wigglesworth	19	16	21	20	76	12	88
Wheeler	20	16	20	16	72	12	84
Hassam	21	11	16	19	67	12	79
Lockwood	20	12	21	17	70	0	70
Crogg	16	10	7	..	33	0	33

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

New York Athletic Club.

Travers Island, N. Y., March 26.—The gunners attending the N. Y. A. C. shoot to-day had their marksmanship put to a severe test by the strong, puffy wind sweeping in off the Sound, and high scores were scarce. There was a good turnout considering the two-day shoot our boys indulged in earlier in the week. The summaries are given below:

Trial shoot, special, scratch, 10 targets:

F A Schauffler	9	B M Higginson	7
E A Wilson	8	J M Jones	7
W B Ogden	8	R R Debacher	6
A E Ranney	8	C Mayer	6
G F Pell	7	G Lembeck	5
W B Elias	7	G H Abbott	5
E N Huggins	7	D E McMahon	5

Bready cup, 25 targets, handicap:

F A Schauffler	1	24	E N Huggins	5	17
W B Elias	3	22	G W Kuchler	1	17
E A Wilson	2	22	C Mayer	0	17
G Lembeck	2	22	W B Ogden	1	16
D E McMahon	4	21	G M Jones	5	16
G F Pell	1	19	J Martin	0	16
G H Abbott	2	19	J I Brandenburg	5	16
B M Higginson	1	19	G M Thomson	3	16
P R Robinson	4	18	O C Grinnell	1	16
R R Debacher	5	18	A E Ranney	1	16

Special shoot, 15 targets, scratch:

A E Ranney	14	E A Wilson	10
W B Ogden	12	D E McMahon	10
G F Pell	11	G H Abbott	10
W B Elias	11	G M Jones	10
F A Schauffler	11	C Mayer	10
G Lembeck	11	B M Higginson	9
G Debacher	11	E N Huggins	8

March cup, 25 targets, handicap:

W B Elias	3	23	G M Jones	5	20
G Lembeck	2	22	J Martin	0	20
B M Higginson	1	22	J I Brandenburg	5	20
D E McMahon	4	22	P R Robinson	4	18

DuPont Gun Club.

Wilmington, Del., March 26.—Eighty-two marksmen faced the traps at the weekly shoot of the Du Pont Gun Club yesterday afternoon. Several expert amateurs from other clubs were among the competitors. Frank Mathewson was high gun, breaking 115 out of a total of 125 targets. He made a score of 25 straight, as did several others. Ties of the previous Saturday were shot off. The results were:

Class A, Frank Matthewson, 25 straight; Class B, Dr. F. A. Buckmaster, 22 out of 25; Class C, Dr. Darlington, 18 out of 25; Class D, Mr. Betts, 16 out of 25.

In a tie held over for two weeks, F. F. Lofland won from H. T. Reed. Lofland made 13 to his opponent's 12.

J. F. Pratt, of Philadelphia, visited the Du Pont Club yesterday for the first time. He had two valuable guns with him, one being a $500 Purdy hammer weapon. The club had on hand six guns presented by Gen. T. Coleman du Pont. The results in the T. Coleman du Pont merchandise event were:

Class A, 25—Frank Matthewson.

Class B, 20 out of 25—Victor du Pont, 3d, Stanley Steele, H. C. Pollock, Dr. S. C. Rumford, W. A. Joslyn.

Class C, 16 out of 25—W. Tomlinson, Dr. Bedford, W. M. Hammond, C. R. Kenworthy, Dr. A. Patterson, W. B. Smith, Jr., Dr. C. R. Jefferis, Jr., S. Tuchton.

Class D, 12 out of 25—H. T Reed, S. J. Newman, J. B. Owens, William Coyne, J. W. Anderson, Jr.

The Du Pont Club members are greatly interested in the two-man team championship elimination race, which will start next Saturday. The prizes will be two silver cups, presented by a member who withholds his name. Club members only are eligible to compete.

The full scores of yesterday's shoot follow: J. W. Pratt 23 out of 25, William Edmanson 22, T. W. Matthewson 18, E. E. Handy 10, H. L. Morgan 18, H. T. Reed 12, M. Lynch 16, J. Monihan 11, William McKinney 9, J. Robison 9, J. W. Mathews 14, N. K. Smith 19, W. S. Simpson 18, J. McKelvey 22, F. Mathewson 25, Victor du Pont 20, H. H. Lukens 21, S. Steels 20, W. E. Ross 8, W. W. Bacon 11, L. Evans 19, H. Winchester 17, H. S. McComb 14, W. Tomlinson 16, E. H. Lambert 11, T. W. Young 15, S. G. David 15, J. J. Magahern 11, Dr. Bedford 16, Clyde Leedom 18, L. C. Lyon 16, Dr. Hibbert 13, H. G. Mitchell 13, Guy Lambert 5, R. S. Robison 7, J. T. Skelly 23, T. H. Keller 20, H. J. Donnelly 25, T. W. Keithley 21, D. J. Dougherty 14, W. M. Hammond 16, William Foord 21, S. B. Trott 22, C. P. Sharpless 6, R. Langford 7, J. Winchester 22, Col. Bryson 6, F. King 12, W. H. Neely 9, J. B. McHugh 22, S. Tuchton 16, J. R. Lynam 21, Dr. Darlington 18, S. J. Newman 12, P. H. Ferree 6, H. C. Pollock, 20, H. P. Carlon 17, R. L. Conner 17, I. Turner 14, C. R. Kenworthy 16, Dr. A. Patterson 16, W. B. Smith, Jr., 16, A. M. Lindsay 17, J. B. Owens 12, William Coyne 12, W. S. Garan 19, Eugene S. du Pont 21, R. A. Vance 18, Dr. F. A. Buckmaster 22, Dr. S. C. Rumford 20, Dr. Bullock 14, Dr. C. R. Jefferis, Jr., 16, W. F. Jensen 13, John Lindsay 19, C. A. Eckman 1, J. A. MacMullen 13, W. A. Joslyn 20, J. W. Anderson, Jr., 12, J. E. Ewing 22, T. E. Doremus 21, A. G. Reilly 12, G. T. White 4, E. J. White 6.

Crescent Athletic Club.

Bay Ridge, N. Y., March 26.—Weather conditions were very unfavorable to-day, yet a goodly number of shooters gathered before the Crescent traps and rolled up a number of creditable scores in the events on the program. Fred Shattuck, of Columbus, O., who won the Grand American Handicap last year in the West, was a visitor, and took part in several of the contests, shooting from scratch. The summaries:

Monthly cup, 50 targets, handicap:

R H George	8	45	A E Hendrickson	6	38
G G Stephenson, Jr	6	44	F S Hyatt	4	37
George Felix	4	43	C H Pulis	6	37

F S Hyatt	2	18			

*Guest.

Chicago Gun Club.

Chicago, March 18.—This was a fairly pleasant day, with the exception of a strong wind from the east, which made it rather hard to connect with the flying targets.

Stannard hung up the high score in event No. 1 with 46 out of 50, while Sharp was close after him with 44, Mathews getting third place with 43.

Young took first honors in event No. 2, at the doubles, scoring 32 out of the 20 pairs. MacLachlan was next in line with 30, while Sharp and Stannard each broke 29.

In the practice event Young and Stannard tied with 20 each, while MacLachlan and Mathews each scored 18.

Sharp took first place in the next event at 25 singles with 20 and scored 21 in another.

Frank Collins found time to stop in and shoot a century while on his way to Iowa.

C. B. Barnes took his first tryout on our grounds today, and says he is going to get back in the fray.

Hartman, Miss Sullivan and Koutsoumbos are new beginners, who will soon improve with practice.

March 19.—This was the most pleasant day we have had since last fall, the sky being clear and the sun warming up the atmosphere, so that quite a large number turned out for an afternoon's sport at our park. A large number of visitors were present besides the thirty-eight shooters who toed the mark on the firing line. Fred Bills found time to stop with us for to-day, and although he said he had not done much shooting and wasn't feeling in the best of trim, he managed to top the list in each event with a total of 97 out of 100 at singles, and losing only two birds out of the 20 pairs of doubles.

Fetherston headed the amateurs by scoring 44 out of 50 in event No. 1, from the 19yd. mark, and breaking 27 in the doubles from 17yds. McGary tied Fetherston's score in this event, shooting from 16yds.

Shrigley also did good work in the handicap event by scoring 43 out of 50 from the 18yd. mark, Bonsor making the same score from 16yds. Thwaites landed a score of 91 from 18yds., while Hlarka broke the same number from 16yds. Mott and Sharp each broke 27 in the double event at 20 pairs. Bonsor and Martin each scored 25 in this event.

In the practice event at 25 singles, Sharp and Panesi each scored 22, Kausche and Emery breaking 21, while Eck, Nitschke, Taggart and Robb each made a 20.

W. W. Bonsor, of Duhuque, Ia., and J. G. Martin, of Harrisburg, Pa., were visiting shooters who made their first appearance in our park.

Manhasset Bay Y. C. Invitation Shoot.

FORTY-TWO gunners took part in the invitation shoot of the Manhasset Bay Yacht Club on Saturday, March 25, and it was not until after sundown that the last gun was fired. Fourteen clubs in the vicinity of New York were represented among the shooters facing the traps.

The chief match of the day was the handicap shoot at 100 targets, which was won by D. Provost, of the home team by a score of 99, inclusive of his handicap of 25. C. Hinsdale and H. L. Hoyt, Jr., of the Manhasset Club, tied for second on 95. Hoyt's actual breaks numbering 90 gained for him the high gun price.

In a 50-target scratch shoot preceding the main event of the day. H. L. Hoyt, Jr., was the winner with 47, J. Hendrickson, 42, taking second. In the professional scratch shoot at 100 targets, J. Fanning downed 90 and C. Von Lengerke 81. Scores:

W W Thorpe	64	39	60.9
Winne	50	37	74.0

C. G. STONE, Secy.

Lorain Gun Club.

LORAIN, O., March 25.—I inclose scores of our shoot on March 17, a little late, but will be more prompt in the future. Our club is new, and we have a great many things to learn. We are going to have a shoot on March 31, at which Mr. Squier and Mr. Gilbert will be with us, and we expect to have a good attendance.

Event No. 1, 25 targets: Gifford 19, L. W. Traxler 17, Standen 7, Canalos 13, Stephan 16, Canalos 14, Gifford 20, J. P. Taylor 23, Dorl 15, L. W. Traxler 19, Seher 6, Hall 14, Williams 17.

Event No. 2, 25 targets: Gifford 23, Stephan 10, J. P. Taylor 22, Hall 15, Williams 17, L. W. Traxler 19, Canalos 15, Williams 17, Gifford 17, J. P. Taylor 24, Hall 19.

J. P. TRAXLER, Ser'y.

Ludlam Gun Club.

THE regular weekly shoot of the Ludlam Gun Club was held on the afternoon of the 25th ult., on the grounds at Sycamore and Union streets, Wilmington, Del. The largest crowd of the season was present. H. S. Metz, a well-known marksman, was high man, breaking 19 out of 20 birds. Scores:

R. Chase (shot at 75) broke 55, J. Fagan (255) 15, J. Burnes (100) 76, A. Dubb (100) 67, J. Shepherd (20) 10, G Blackston (25) 9, H. Metz (20) 19, L. Pike (25) 15, J Smith (25) 14, D. Ludlam (75) 58, H. Manuel (25) 18, H. Minker (75) 45, J. Barden (25) 15, J. Clemmens (25) 19.

Montclair Gun Club.

MONTCLAIR, N. J., March 25.—The Passaic County Gun Club visited Montclair to shoot the return match, ten men shoooting on each team, 50 targets per man. Several of the best shots were missing from each team and it was necessary to fill in with men who do not ordinarily shoot on either team. The scores were consequently lower than would otherwise have been.

In the three preliminary trophy events the shooting of Messrs. Coffin and Colfax was the best.

In the team race, event No. 4, Passaic won out by the margin of 13 points, H. Geiger being high man for the visitors with 45 breaks, and Coffin for the home team with 43. The North Caldwell Club visit Montclair on April 8.

E. WINSLOW, Sec'y.

Newton Gun Club.

GLOUCESTER CITY, March 25.—The Newton Gun Club to-day defeated the Linden Club in a match shoot at bluerocks, at the grounds of the latter club. There was a big crowd on hand to see the match and fairly good scores were made. There were five other matches. Samuel Powell won a prize shoot for an umbrella, and Thomas Gibbons won the shoot for the Du Pont trophy. The others were sweepstakes matches. There will be a return match between the two clubs in the near future. The following are the scores of the team shoot, 15 bluerocks each man:

Newton—Wallace 11, Strain 10, Parker 10, Chamberlain 9, M. Jungling 9, W. Jungling 7, W. McQuaid 4; total 60.

Linden—Gibbons 13, Bowe 12, A. Powell 10, J. Mealey 9, Ashton 7, Hill 1, Shubert 0; total 52.

Hyde Park Gun Club.

THERE was a big crowd at the shoot on March 25, Fred Gilbert and Luther Squier proving to be strong drawing attractions. Then those who attended had the pleasure of welcoming Pop Heikes and Charlie Young, whose presence was entirely unexpected. These four, with O. J. Holoday, our popular local man, made a squad hard to beat.

There were twenty-four shooters in the events, and over 2300 targets were trapped during the afternoon. Weather conditions were about perfect, and good scores were common, though some of the shooters fell a little below their average. Young shot a fast clip, breaking 96 out of the 100, and making a run of 80 straight in the practice and regular events. The professionals made up a little team match on the side: Gilbert and Heikes against Young, Holoday and Squier. The score of Young was to be used, and the five best scores of Squier and Holoday. The latter team won by a total score of 188 to 187. Pop Heikes was second with 95. Barker and Sunday, who used to be among the crackerjacks of the Cincinnati Gun Club, but who have been out of the game for a long time, demonstrated their ability to come back by breaking 93 each. Gilbert was a little puzzled on some of the angles, for which these grounds are noted, and didn't break quite so many as usual, but in the event at doubles, which closed the afternoon's sport, he had them all guessing. Welch built up a cheek pad on his gun, and his score went up over 90. De Mar was in good form, and shot a very event race, tying with Squier and Holoday. The latter started out with 24 in a practice event, then got four 18s and a 19 in the regular events. Squier had hard luck in his second event, which caused him to finish in the tie for fifth place. Johnson was not in good trim to-day, and had hard luck in three of the events. Dr. Leighner was not shooting as well as he knows how by several targets. Irwin was another shooter who fell below his average. Sampson is back in the game, but he has got to brace up; he has no business to miss 23 out of 100. Smith and Frohliger could find time to shoot in only one event each, their duties as scorer and financial man taking all their attention. Keplinger was a little off, but he will not stay behind long. Glad to welcome Richmond at the grounds, and hope he will come out often. He did very good work, considering his lack of practice, and tied with Keplinger, which is worth something. Rhodes made a fine start, but dropped in the following events. We were glad to see Reif out again. He got warmed up after a couple of events and shot in his old form. Sam Leever was a spectator, but was too careful of his "pitching" arm to risk shooting. Dull, of Goshen, was the only one to make a straight in the practice. An event at 14 pairs doubles, over expert traps, ended the sport. Gilbert was leader with 25, Heikes 21, Young, Holoday and Keplinger 19 each.

Messrs. L. J. Squier and Fred Gilbert will visit the Cincinnati Gun Club grounds on April 9. The members of the Hyde Park Gun Club will go to the Cincinnati grounds on April 1.

Targets:	20	20	20	20	20	Total.

West	..	11	..	..	..	11

Practice, 25 targets: Dull 25, Young 24, Heikes 24, Holoday 24, Johnson 23, Richmond 19, Gilbert 22, Squier 22, Barker 21, Wilson 19, Sunday 20.

Trap at Higgins, Texas.

HIGGINS, Texas, March 22.—While we have no club here, some of the boys get out about every two weeks and shoot up a few. Below are the scores made on March 17. It was a warm spring day, and there was no wind:

Targets:	25	25	25	25	25	Shot at.	Broke.
E. M. Congdon	21	24	22	25	24	125	116
Ed. A. Hoyt	17	16	17	..	..	75	50
J. Linn	20	16	..	..	..	50	36
Guyton	16	20	..	..	..	50	36
Brewer	8	13	..	..	..	50	21

Yesterday we had another practice shoot, but the scores were not quite as good, as there was a strong wind at our backs and it made the targets duck a good deal. Most of the boys are new at the game, but with a little practice can do a good deal better.

We are going to organize a gun club here, and will be glad to have any one call, when in our neck of the woods. Come out and shoot with us.

Targets:	25	25	25	25	Shot at.	Broke.
Congdon	21	21	24	23	100	89
Hoyt	23	22	22	19	100	86
Linn	18	15	17	15	100	65
Wilson	14	12	18	..	75	34
Garnett	7	9	14	..	75	30
Brewer	10	12	..	..	50	22

Rhymes of The Stream and Forest
FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

Durston Special
20 Gauge. Price $28.00

Ithaca Guns

DON'T COUNT LOCK PARTS UNTIL YOU SEE THEM IN THE GUN READY FOR ACTION.

Compare our lock, set up, ready for action with any other make—if we haven't the simplest lock we'll give you the gun—let the gun talk for itself.

If you see more than one hole in a hammer, look out for toggles or stirrups not shown.

Our hammer is all in one piece, only one hole, no toggles or stirrups attached. Coil main springs guaranteed forever.

Beautiful catalog FREE; 18 grades, $17.75 up.

Our little 5 1-4 lb. 20 bore is a howling success.

CHICAGO ST. LOUIS BOSTON

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness. Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin. Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

FOREST AND STREAM PUBLISHING CO.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

The Story of the Indian

By George Bird Grinnell, author of "Pawnee Hero Stories," "Blackfoot Lodge Tales," etc. 12mo. Cloth. Price, $1.50.

Contents: His Home. Recreations. A Marriage. Subsistence. His Hunting. The War Trail. Fortunes of War. Prairie Battlefields. Implements and Industries. Man and Nature. His Creation. The World of the Dead. Pawnee Religion. The Old Faith and the New. The Coming of the White Man. The North Americans—Yesterday and To-day.

FOREST AND STREAM PUBLISHING CO.

Cincinnati Gun Club.

THERE was little doing at the grounds on March 19, but the wind prevented any of those present from doing their best. Eight shooters came out and enjoyed the afternoon's sport, but none of them felt proud of the record made. Hammersmith was high gun on a score of 81, the wind being responsible for at least 10 or 12 of his misses. Randall, of Mason, O., was another one who shot away below his usual mark. Richardson is a new one in the game, and under the conditions to-day did not do so badly. Practice and normal weather conditions will enable him to make a much better showing. Hellman just couldn't catch the targets quick enough in their skyward climb, and made the poorest score he has recorded since his very first attempts. Tarbell was also a victim of the wind, falling considerably below his work at Hyde Park on the previous day. Towler has not been in the game a great while. Kemper went out with 80 per cent., which was fully as good as 90 percent. made under ordinary conditions. Dr. Bird had bad luck in his second event, outside of that he shot a very good gait in the wind. The next shoot of the club will be held on March 26.

Targets:	15	15	20	15	15	20	Total.
Hammersmith	11	13	17	10	13	17	81
Randall	14	13	15	12	9		63
Bird	13	9	14	12	12		60
Hellman	9	8	8	..	..	..	25
Towler	6	7	15	9	8	..	45
Kemper	12	13	15	..	..	..	40
Tarbell	..	..	14	12	12	..	38
Richardson	..	..	4	4	2	..	10

Hammersmith is pushing things at the club now, and since he got into the game there has been something doing each week. On March 25 ten shooters took part in the sport. No records were broken, but very fair scores were made. Hammersmith got in first place after a hard race with Bird and Codey, the two latter scoring 87 each to his 88. Hammer was not shooting at his best by a number of targets, but when his new gun arrives, he purposes to make them all hustle to keep in sight. Randall did not seem to point his gun with his old-time skill, and fell below the mark usual with him. Hellman did better than at the previous week's shoot, which shows that he needs to keep in practice. The club will entertain members of the Hyde Park Club on April 1, and a team match is one of the interesting events that will be pulled off on that date. On April 9, Fred Gilbert and Luther Squier will visit the club, and great preparations will be made to attract a big crowd to greet them. A number of the members are planning to attend the merchandise shoot of the Harrison Gun Club, to be held on April 21. Mr. Squier will be in charge of this shoot, which is an assurance that everything will be pulled off in first class shape. Fred Gilbert will also be there to show the boys how to be happy, even if you do miss a few.

The Fred Macaulay Business Men's Gun Club.

MEMBERS of the Fred Macauley Business Men's Gun Club held their regular weekly shoot at the Speedway traps on March 21. Although a high wind blew over the traps, the scores were good. J. Geiger being high gun with an average of 22⅜, Louis Colquitt second with 22 1-3, and Philip Coffin third with 22 1-9. Considering the wind, this was an excellent showing.

There was a match shoot between William Stengel and Peter Bey, at 50 white flyers. Stengel was the winner, the score being 39 to 32. The shooters and their scores are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Laureate Boat Club at the Trap.

TROY, N. Y., March 24.—The two-day trapshooting tournament which will be held under the auspices of the Laureate Boat Club on April 21 and 22, gives promise of being a big affair. The construction of the new dam across the Hudson River at Troy will put the sport of trapshooting out of commission at the Laureate Club grounds, and this will be the last tournament held on these grounds. New grounds will be sought, and upon securing same, the sport will be resumed. The program for the April tournament calls for 200 targets each day. Events 9 and 10 on the first day will constitute the Laureate Handicap, and events 9 and 10 on the second day will constitute the merchandise event. A fine list of prizes have been secured for these two events. Handicaps will be arranged on the added target system.

J. J. FARRELL, Mgr.

Trap at Larchmont.

LARCHMONT, N. Y., March 26.—Ideal weather favored the Larchmont shooters to-day, and a most enjoyable day was spent by the attending gunners. E. A. Wilson and Stuart Scott tied for high gun on 109 and in the shoot-off at 25 targets, Scott won, 23 to 22.

Mr. Wilson's showing during the day was the feature of the shoot. He won the trophy offered in the 125-target handicap, and also headed the squads in the special 10 and 15 target events, and scored a leg on the Commodore's cup. In the Sauer gun shoot he lost, after a tie with W. J. Elias. The summaries:

Special shoot, 10 targets, scratch: E. A. Wilson 9, W. J. Elias 9, E. L. C. Robbins 7, S. Scott 7, K. R. Hooker 7, R. L. Spotts 6, Dr. W. B. Short 6. Tie between E. A. Wilson and W. J. Elias won by Wilson.

Special shoot, 15 targets, scratch: E. A. Wilson 15, R. L. Spotts 14, S. Scott 13, Dr. W. B. Short 12, W. J. Elias 12, K. R. Hooker 12, E. L. C. Robbins 11.

Gun trophy, 25 targets, handicap: S. Halstead (4) 24, Dr. W. B. Short (1) 22, S. Scott (0) 22, E. L. C. Robins (2) 22, E. A. Wilson (3) 21, W. J. Elias (3) 20, G. L. Bready (2) 20, K. R. Hooker (3) 19, R. L. Spotts (2) 19.

Commodore's cup, 25 targets, handicap: E. A. Wilson (3) 25, S. Halstead (4) 24, S. Scott (0) 23, Dr. W. B. Short (1) 22, W. J. Elias (3) 22, R. L. Spotts (2) 22, E. L. C. Robins (2) 20, J. R. Collins (4) 20, K. R. Hooker (3) 19, G. L. Bready (2) 16.

Sauer gun, 25 targets, handicap: W. J. Elias (3) 25, E. A. Wilson (2) 25, G. L. Bready (2) 23, S. Halstead (4) 23, Dr. W. B. Short (1) 22, J. R. Collins (4) 22, S. Scott (0) 22, K. R. Hooker (3) 21, R. L. Spotts (2) 19, E. L. C. Robins (2) 19. Tie between E. A. Wilson and W. J. Elias won on shoot-off by Elias.

March cup, 25 targets, handicap: R. L. Spotts (1) 25, E. A. Wilson (2) 23, W. J. Elias (2) 23, S. Scott (0) 22, K. R. Hooker (3) 21, G. L. Bready (2) 22, S. Halstead (4) 21, E. L. C. Robins (2) 17, Dr. W. B. Short (1) 16.

Special shoot for permanent possession of March cup: R. R. Spotts (1) 25, W. J. Elias (2) 23, Dr. W. B. Short (1) 20.

Trophy shoot, handicap, 125 targets: E. A. Wilson (9) 118, W. J. Elias (5) 110, S. Scott (0) 109, R. L. Spotts (8) 105, Dr. W. B. Short (4) 100, K. R. Hooker (12) 99, E. L. C. Robins (8) 96.

Ten double targets, scratch: R. L. Spotts 14, E. L. C. Robins 9, J. Shattuck 9, S. Scott 8, W. J. Elias 7.

High gun prize, scratch, 125 targets: S. Scott 109, E. A. Wilson 109, W. J. Elias 105, R. L. Spotts 97, Dr. W. B. Short 96, E. L. C. Robins 88, K. R. Hooker 87.

Tie for high gun won by Scott on shoot-off, 23 to 22.

Wilmington Gun Club.

WILMINGTON, Del., March 26.—Willis was high man yesterday noon at the shoot of the club at Hazel Dell. The shoots have proved very interesting, and a large attendance was on hand. A midweek shoot will be held next Thursday afternoon. Yesterday's scores are as follows: J. W. Davis (shot at 100), broke 50, J. T. Birch (100) 63, W. Vandegrift (100) 54, C. H. Simon (100) 80, L. D. Willis (125) 114, A. Lobb (75) 68, J. Kaiser (75) 49, A. Hickman (50) 39, W. W. Stewart (50) 31, L. W. Buckmaster (50) 29, W. Hartlove (50) 23, F. M. Whitehead (75) 34, J. Parker (25) 18, C. Moore (25) 19, W. Kathrell (25) 15, R. Tadman (25) 15, G. Sands (25) 12, H. Hurlock (25) 15, Brice (25) 17.

Mineral Springs Gun Club.

JENKINTOWN, Pa., March 25.—At the regular March shoot of the Mineral Spring Gun Club, at Willow Grove to-day, with thirteen marksmen at the traps, Houpt won the club total shoot with 96 breaks out of a possible 100. Rorer, a new member, made a strong impression by finishing second. The program comprised four 25-target events. Totals: Houpt 96, Roerer 94, Nice 89, Hiltebeil 88, Pierson 83, Taylor 92, Haas 67, Nash 56, Mason 64, Williams 66, Kentner 46, Duckelec 42, Felton 25.

Lehigh Valley Shooting Association.

CATASAUQUA, Pa., March 25.—Owing to the high wind interfering with the gunners at the regular shoot of the Lehigh Valley Shooting Association, low scores were very much in evidence. Salome was the star of the match, breaking straight in the third and fifth events. In the special event Jones and Sobers, after tying three times, called the match off. All events were for 25 targets.

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Intercollegiate Rifle Shooting League.

WASHINGTON, D. C., March 25.—The Massachusetts Agricultural College and theUniversity of Iowa teams led the Intercollegiate Rifle Shooting League, with ten victories each, at the end of the tenth week. Columbia, Cornell and Washington State College each have seven victories and three defeats.

The scores this week were: Iowa defeated Cornell, 1877 to 1797; Massachusetts Agricultural defeated Missouri, 1876 to 1687; Minnesota defeated Arizona, 1730 to 1659; Dartmouth defeated Purdue 1765 to 1737; North Georgia Agricultural defeated Princeton 1707 to 1584; Washington State, New Hampshire College and Rhode Island State all won their matches by default against California, Louisiana State and Columbia respectively.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

SMOKELESS POWDER

Again to the Fore

At the New York Athletic Club's Amateur Championship Tournament, March 22-23, L. S. German again demonstrated

The Regularity and Reliability of

DU PONT

SMOKELESS POWDER

In the previous shoot held by the New York Athletic Club Mr. German made High Score with 96 per cent. His record for this year was 91 per cent., the only score of 90 per cent. or better.

You have a feeling of reliance when shooting

DU PONT

SMOKELESS POWDER

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

National Rifle Association Notes.

The Interclub Rifle League is the first one of the series of indoor rifle shooting matches for the season of 1911 to come to an end. From every standpoint, it has been a most successful tournament, and if all the clubs that were fortunate enough to get in the League, carry out their intention of being on hand next winter, it will undoubtedly be necessary to organize at least four leagues with about fifteen clubs in each league. More than this number of clubs is unwieldy, and extends the matches over too long a period, so that we can look forward to an Eastern League, Western League, Pacific Coast League, and probably a Southwest League next winter.

The shoot-off between the Winchester Rod and Gun Club and the St. Paul Rifle and Pistol Association should be a crackerjack, and should be very close. It is quite probable that a large gallery will watch the shooting of each team. In addition to the regular N. R. A. judge, an extra witness has been appointed for this match.

The Association's annual report for 1910, which is being published by the War Department in connection with the annual report of the National Board for the Promotion of Rifle Practice, has been greatly delayed in advertising for bids and making the necessary contracts which the War Department regulations call for. The book is now on the press, and under the terms of the contract is to be delivered April 10. The book will have over 200 pages and 100 half-tone illustrations.

Owing to the great expense entailed in getting it out the distribution will be limited and none will be sold.

The executive committee of the National Rifle Association have agreed upon the following distribution: One copy to each life and annual member, Adjutant-General and State Secretary; ten copies to each State Association; six copies to each affiliated regiment; four copies to each affiliated battalion; three copies to each affiliated company, troop or battery; four copies to each affiliated rifle club; three copies to each college club, and two copies to each school club.

Affiliated organizations that have not already done so should furnish the N. R. A. with the names and addresses of those officers to whom the book should be sent, under the above distribution.

In case of civilian, college and schoolboy clubs, the report of officers for the current year is sufficient. Many clubs have not yet made their report of their officers for the current year, nor submitted a list of their members. Until these matters have been attended to, such clubs will not receive any reports or benefits for the year.

Some little time ago arrangements were made with the Chief of Ordnance whereby N. R. A. rifle clubs and individual members of the Association could purchase new Krag rifles from the Government arsenal at the cost of $10. Under this arrangement a good many of these rifles were sold, but it was found that the cost of ammunition was quite a hardship, and representation was made to the Chief of Ordnance of the benefits that would accrue for making a special price on the ammunition for use in these rifles. Word has just been received from the Chief of Ordnance, that under the same condition of sale as the rifle, the ammunition for same would hereafter be sold to N. R. A. rifle clubs and individual members for $15 per thousand rounds; the minimum amount of ammunition to be sold to be 200 rounds. This concession is a most welcome one and ought to greatly stimulate rifle shooting among the clubs. It reduces their ammunition cost from nearly 3 cents a shot to a cent and one-half.

As soon as the League shooting is out of the way the National Association expects to go ahead with its plan to build a model gallery range in the city of Washington. Data of every description which might be used to advantage in such a range is being gathered.

Within a week or so the National Rifle Association will begin mailing out to its affiliated regiments a hanging colored poster covering the different features of the N. R. A. work as carried on by the regiments. A similar poster is being prepared to send to the civilian rifle clubs. The National Association within a very few weeks will also be ready to issue official score cards for use on outdoor ranges. These cards will be issued to civilian clubs and individual members, and are so arranged that they can be adopted for use on any rifle range in the United States.

The Association has been sending out a new circular to riflemen, urging them to become individual members of the National Rifle Association, and giving the following ten reasons why every rifleman in the United States should lend their support to the National Association and the work it is doing by becoming a member:

1. You will receive a copy of "Rifle Shooting in the United States for 1910," and thus keep in touch with what is going on in the rifle shooting world. The book contains a full report of all rifle shooting events for last year, and is finely illustrated.
2. You will receive a copy of the joint program of the annual matches of the National Board for the Promotion of Rifle Practice, and the National Rifle Association of America, with entry blanks, etc.
3. You will be given an opportunity to qualify as a member of any international rifle team organized by the National Rifle Association.
4. You will be given an expert, sharpshooter, or marksman's decoration for qualifying in any of the above classes under Special Course C, War Department.
5. You will be eligible to buy a new Krag rifle from the Ordnance Department for $10.
6. You will get a reduction of $1 a year on a subscription to the shooting and military weekly, Arms and the Man.
7. You will get special prices from nearly all of the leading firms dealing in arms, ammunition and rifle shooter's supplies. (See "Rifle Shooting in the United States for 1910.")
8. You will be welcomed at any rifle club or gallery or at any rifle range of any organization affiliated with the National Rifle Association on presentation of your member's card.
9. You will be allowed to compete in the national individual match and the national pistol match without

cost, and will receive a big reduction in entrance fees in the N. R. A. matches.

10. Because every rifleman should do what he can to support the National Association and thus show his appreciation for what the Association has done for the riflemen of the United States in the last few years—national matches, international victories, new State associations, new trophies and innumerable benefits.

Springfield Wins Championship.

Springfield, Mass., March 21.—Official returns from the final matches of the Indoor League of the United States Revolver Association last week, place the Springfield Club as champion. The League has been in operation for two years, and Springfield repeated last season's winning performance. Manhattan, of New York, and Portland, Ore., are tied for second place, and Boston and Newark tied for fourth position honors. The scores follow:

	Won.	Lost	Per C't.
Springfield	22	1	.957
New York	21	2	.913
Portland (Oregon)	21	2	.913
Boston	19	4	.826
Newark	19	4	.826
Washington	16	7	.696
St. Louis	16	7	.696
Providence	15	8	.652
Century	14	8	.636
Seattle	14	9	.609
Chicago	12	11	.522
Duluth	12	11	.522
Emeryville (California)	12	11	.522
Oakland (California)	9	14	.391
Philadelphia	9	14	.391
Portland, Me.	8	15	.348
Oakland Bank	8	15	.348
Spokane	7	16	.304
Columbus	6	16	.273
Youngstown	6	17	.261
Louisville	6	17	.261
Culebra	2	21	.087
Belleville	1	22	.043
Sault St. Marie	0	23	.000

The official scores in matches 23 and 24 are given below:

Match 23:

Spokane	1096	vs. Louisville	1028
Duluth	1037	vs. Youngstown	990
Seattle	1031	vs. Willow	1025
Smith and Wesson	1111	vs. St. Louis	1052
Myles Standish	1007	vs. Newark	1061
Culebra	944	vs. Belleville	940
Shell Mound	1082	vs. Providence	1079
Oakland	1049	vs. Oakland Bank	1027
National Capital	1075	vs. Manhattan	1101
Osborn	908	vs. Philadelphia	1067
Century	1068	vs. Boston	1103

Match 24:

Duluth	1071	vs. Columbus	——
Seattle	1032	vs. Louisville	1055

Century	1072	vs. Manhattan	1117
Portland	1091	vs. Philadelphia	1032

Columbus not heard from.

Interscholastic Rifle Shooting League.

Washington, March 25.—The Morris High School, of New York city, leads the Interscholastic Rifle Shooting League with nine victories. The Culver Military Academy, Culver, Ind., stands second with eight victories and one defeat.

St. John's Military Academy, Delafield, Wis., defeated McKinley Manual Training School, Washington, D. C., 919 to 879; Culver Military Academy, Culver, Ind., defeated Marist College, Atlanta, Ga., 904 to 836. Central High School, Philadelphia, defeated Kentucky Military Institute, Eau Gallie, Fla., 828 to 803; Deering High School, Portland, Me., defeated Harry Hillman Academy, Wilkes-Barre, Pa., 929 to 728; De Witt Clinton High School, New York city, defeated Harvard School, Los Angeles, Cal., 928 to 880; Morris High School, New York city, defeated Salt Lake City (Utah) High School, 911 to 881; Ogden (Utah) High School defeated St. Matthew's School, Burlingame, Cal., 804 to 0; Polytechnic Preparatory School, Brooklyn, defeated Portland High School, Portland, Me., 862 to 838; Polytechnic Institute, Baltimore, Md., defeated Western High School, Washington, D. C., 806 to 803.

DuPont Gun Club, Rifle Dept.

Wilmington, Del., March 25.—Considerable activity was shown in the rifle division. The members are striving to make ten strings count in the qualification class. The best score of the day was made by Lieut. Harkins in the revolver and pistol qualification class, it being 90 out of a possible 100. T. H. Keller, generally known as "Tom" Keller, came from New York to take part in the shoot. He is one of the oldest ammunition men in point of service. As the Eastern representative of a large cartridge company, he is well known in this city and throughout the East. His scores in the revolver division were very creditable. The 50yd. revolver and pistol qualification scores were: F. B. Harkins 90, 87, 86, 86, 82, 75, 74, 70, 60; K. K. V. Casey 88, 85, 85, 82, 81, 81, 80, 77, 75, 72, 74, 72; E. G. Ackart 88, 85, 85; John Bancroft, Jr., 70, 69.

Revolver and pistol practice scores, 50yds.: A. G.

ANOTHER VICTORY

Mr. Fred A. Hodgman wins
THE HASLIN TROPHY

The most important event at the New York Athletic Club, breaking 97 targets out of 100, March 18th, 1911.

Mr. Frank B. Stephenson of Crescent Athletic Club won the Amateur Trap-Shooting Tournament, Madison Square Garden, March 13th, 1911, breaking 96 targets out of 100.

Both gentlemen used their

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

PLANNING A HOUSEBOAT

Will be a leisure-hour occupation in many a family this winter. Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradlee Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

HOUSEBOATS AND HOUSEBOATING

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length with illustrations. Buckram, heavy paper, sumptuously illustrated.

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.

The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and game. ¶All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. ¶Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

Sixth Edition.

A Problem's Solution

LOG CABINS & COTTAGES;

How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth profusely illustrated, $1.50 postpaid.

FOREST AND STREAM PUBLISHING COMPANY

CANOE HANDLING AND SAILING

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. Bowyer Vaux ("Dot"). Illustrated. Cloth, 163 pages. Price, $1.00. New and revised edition, with additional matter.

A complete manual for the management of the canoe. Everything is made intelligible to the veriest novice, and Mr. Vaux proves himself one of those successful instructors who communicate their own enthusiasm to their pupils.

PUBLISHERS' DEPARTMENT.

In streams where trout run small, and there is a length limit, barbless hooks are advisable. Lacey Y. Williams, 46 Ohio Building, Toledo, O., will supply these hooks tied to your favorite flies.—*Adv.*

Trout fishing in Sullivan county and nearby waters will begin on April 16, and most of them are reached via the New York, Ontario & Western Railway. The East Branch of the Delaware, the Willowemoc, the Neversink, and the Beaverkill are all famous waters, accessible from stations on that railway. Ask for particulars at 56 Beaver street, New York city.—*Adv.*

The attention of anglers is directed to the offer, made in our advertising columns, of a good split-bamboo rod for $5. This is made by the Abercrombie & Fitch Company, 57 Reade street, New York city. Catalogue G and "Guide on Fishing" will be mailed free if you mention FOREST AND STREAM. This house has a very large stock of fishing rods and tackle, and handles a number of up-to-date specialties about which progressive angler should know.—*Adv.*

Messrs. Parker Bros., of Meriden, Conn., announce that they are now prepared to take any Parker hammerless guns that are non-ejectors and fit them with a genuine Parker automatic ejector. These, however, cannot be applied to 8-gauge guns, and guns of the very highest grade can only be altered at a special price. The charge for altering hammerless guns of the $80 grade or under is $18.75; for altering the $100 and $150 grade, $19.75, and the $200 and $300 grades, $32.50. All correspondence should be addressed to the factory at Meriden.

Mr. Fred. Shattuck, of Columbus, O., has been appointed special representative of the Liberty Cartridge Co., of Mt. Carmel, Conn., with headquarters at Columbus, O., and territory unlimited. Mr. Shattuck is well known all over the country as a sportsman and a contributor to sporting papers, winner of the Grand American Handicap at Chicago, 1909; tied in the Western Handicap at Des Moines in 1908; organizer and secretary of the Columbus Gun Club for five years, during which time was held one Grand American Handicap and three Ohio State shoots, and many other big events. Mr. Shattuck's large acquaintance and congenial manner makes him particularly adapted for this line of work, and the best wishes of this publication go with him in this new capacity.

At the Zettler .22cal. rifle tournament, New York city, March 11-18, both the popularity and the superior shooting qualities of Peters ammunition were clearly demonstrated. There were 52 entries in the 100-shot championship match, of whom 35 used Peters Semi-Smokeless cartridges. Mr. Harry M. Pope won third place with the excellent score of 2468; Mr. M. Baal, seventh place, 2463; Mr. W. Keim, ninth, 2461, and Mr. Louis Buss, tenth, 2457. Mr. Louis P. Ittel tied for first place in the ring target match with five perfect scores of 75. Mr. Louis Buss won the Zimmerman trophy match with a score of 77. Mr. T. H. Keller, Sr., made the greatest number of bullseyes, 68; also a 10-degree bull in the general bullseye match, winning third place. In this match Mr. Gus Zimmerman was second with a 9½-degree bull, and he was also second in the U. M. C.-Remington bullseye match with a 7½ degree bull. From this it will be quite apparent that Peters Semi-Smokeless ammunition still holds the pre-eminent place that it has occupied for the past fifteen years.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

SAFETY.—While the dictum that "there's safety in numbers" may be true in so far as it concerns individuals, it is certainly wrong when applied to parts of mechanisms; here the simplest is always the best, and the perfect gun is that which does its work effectually with the fewest parts. **Simplicity has always been the Keynote of Greener Guns,** and is clearly exemplified in the **Greener Side Safety.** This consists of a simple trigger-locking spindle absolutely infallible and possessing the following advantages over all other systems. It does not weaken the "grip" as is the case with the Top Safety in its weakest part; a hole 3-16 inch diameter through the "head," the strongest part of the stock, is all that is necessary to accommodate the Greener Side Safety; it is placed in the most rational position for use, just where the thumb falls naturally; it cannot be pushed on or off accidentally; it is a "safe" safety, always there when you want it, but never balking the unexpected shot.

Of course you must have it fitted to a Greener Gun to obtain fullest satisfaction.

This is but one of the many outstanding improvements on Greener Guns. Send for free catalog and let us tell you about the others.

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, library edition, $3.50.

"It Brings The Mark Up Close"

14

THIS Rifle Telescope, which has a power of about 5 diameters, is designed especially for the U. S. Springfield Magazine Rifle, and is equally effective on **any** sporting or repeating rifle of **any** make. It is set forward of the bolt so that it cannot possibly interfere while loading. Its over all length is 20 inches. It is regularly made with **Pin Sight,** although it is put up with cross hairs when so ordered.

One of the best features of this Telescope is the system of mountings which are easily detachable and operate on dovetail blocks screwed firmly to the barrel. The Telescope slides in its mountings. It is adjustable for shooting of from 200 to 2,000 yards.

All Stevens Telescopes are made in our Optical Laboratory of Precision under the direct supervision of a practical optician.

Our smaller Telescopes, those up to 3½ powers, are **permanently focused,** while the high powered Telescopes have a quick slide adjustment, which is also **permanently** fixed after the telescope is focused to the eye.

Write today for our new Telescope Catalog and also our complete catalog of 160 pages with 209 illustrations.

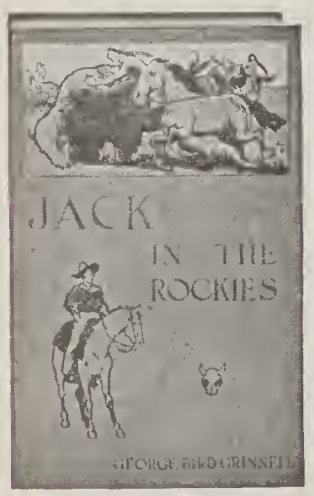
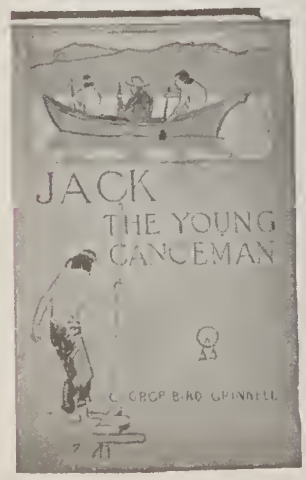
THE JACK SERIES

Best Books For Boys

By GEORGE BIRD GRINNELL





THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

TUNA FISHING AT CAPE BRETON.

THE best season is seemingly August and September. The tuna are, from all accounts, most plentiful in the latter month, but there is, after the third week of August, the daily risk of the weather going wrong. The oily, calm days are the best. Not only can the fish be seen and the bait maneuvered accordingly, but still water is an important consideration in such prolonged struggles. The worst wind is that from the northeast, which drives directly into the bay; the best, if there must be wind at all, is the southwest, which is off the land and which, in particular, leaves the water on the south shore (where the tuna lie) undisturbed.

Accommodation at Englishtown is not plentiful, and the arrangements are simple, but one or two rooms can probably be had at McRitchie's, Sellon's, or Morrison's, and a letter addressed some time before to Angus McRichie, who keeps the post office, will secure the best there is. There is not a boat in the bay fit for the work. My own was hired for £1 a week from Arthur Woodill, of Sydney, and it is at that port that the intending visitor would have to seek a boat suitable to such strenuous sport. There is a single power boat in the bay belonging to Buchanan, who lives at Indian Brook, on the north shore, and both Woodill and Lowe (the station agent at Sydney) have other suitable gasolene launches. It is absolutely essential to have something of the sort to stand by when a fish is hooked, as well as to tow the rowing boat the long distance to and from the grounds, and when the departure of Mr. Ross deprived me of the hospitality of his yacht I chartered Buchanan's boat at 10s. for the half-day, or £1 for the day. As the tuna seemed to feed only on the turn of low water (and rarely feed at all), the larger amount is incurred only when a fish is hooked.

Guides will be found a problem. There are plenty of able-bodied fellows among the farm-

AMERICAN DUCK SHOOTING
By GEORGE BIRD GRINNELL
600 Pages. Library Edition, $3.50.
FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, New York

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING
By GEORGE BIRD GRINNELL
(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, $1.25.

Jack in the Rockies;

Or a Boy's Adventure With a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, $1.25.

Jack the Young Canoeman.

George Bird Grinnell. Illustrated. Cloth, 286 pages. Price, $1.25.

Jack the Young Trapper.

George Bird Grinnell. Illustrated. 278 pages. Price, $1.25.

Manual of Taxidermy for Amateurs.

C. J. Maynard. A complete guide in collecting and preserving birds and animals. Illustrated. New edition. Price, $1.00.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

W. T. (Bill) Hamilton. The author was the last survivor of the old race of free trappers. Bill Hamilton was born in 1825, and was on the plains in 1842, trapper, Indian fighter, sign talker, trader, scout and guide so long as the old West survived. This book is the simple unaffected story of his adventurous life, more thrilling and full of personal interest than any romance. Cloth. Illustrated, 223 pages. Postpaid, $1.50.

Nursing vs. Dosing.

S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents: Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Earl, Mange, Nervous System, Colic, Worms. Cloth. Illustrated, 161 pages. Postpaid, $1.00.

Rhymes of the Stream and Forest.

Frank Merton Buckland. A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, $1.25.

The Still-Hunter.

Theo. S. Van Dyke. A practical Treatise on Deer-Stalking. Extra cloth, beveled, 350 pages. Price, $1.75.

Log Cabins and Cottages.

William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated, 44 full page plates and numerous text illustrations. Postpaid, $1.50.

The Angler's Workshop. Rod Making for Beginners.

Perry D. Frazer. A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, $1.

The Book of the Black Bass.

James A. Henshall. The standard work on the black bass, comprising a complete scientific and life history of the black bass, together with a practical treatise on angling and fly-fishing, a full description of tackle and implements, and general observations. Cloth. Illustrated. 470 pages. Postpaid, $3.00.

Men I have Fished With.

Fred Mather. Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. Illustrated. Price, $1.50.

My Angling Friends.

Fred Mather. A second Series of "Men I Have Fished With." Cloth, 369 pages, with 13 illustrations. Price, $1.50.

Training vs. Breaking.

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

How to Build a Skipjack.

Complete plans and instructions for building a light draft sloop. Plans and directions easily followed. Cloth. Illustrated. Postpaid, $1.00.

How to Build a Knockabout.

A wholesome boat for all-around cruising and racing; 33ft. O. W., 10ft. beam, 26in. draft. Full working plans and drawings, with instructions for building. Cloth. Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUB. CO., 127 Franklin St., New York

No. 6

KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how**. It is their business —and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle—and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.
FOREST AND STREAM PUBLISHING CO.

ers and fishermen who can handle a boat, but a little more than just that knowledge goes to the making of a tuna guide. Percy McRitchie, at Jersey Cove, is about the best, but he is employed by Mr. Ross during his stay. After him, I would choose his brother-in-law, Dan Montgomery, if able to spare the time from his farm. Bait is a still more serious difficulty, and the best plan of all would be to use one's own net for mackerel and gaspereau. Otherwise, bait can sometimes be had from Rory Macdonald, an Indian Brook, who will either send it in of an evening by the mailman, or will sail out in the morning and meet the motor boats. It is paid for at the rate of a dollar a dozen, with a gratuity for the mailman.

As regards tackle and bait, something has been said under these heads. Tuna tackle is similar to that used for tarpon, only the reel is larger, the line stronger, and the leader may be 12 feet instead of 6 feet. Personally, I regard this long leader (twice the length of the rod) as dangerous, but it is preferred by both Messrs. Ross and Conn, as they attribute the loss of at least one fish each during the present season to the use of the shorter wire. The mouth of the mackerel or gaspereau is sewn up and it is a good plan to sew in two or three links of the chain on the hook inside the mouth, as this throws the strain of trolling on the chain and does not tear the delicate mouth of the gaspereau open, as might otherwise be done.

Finally, the cost of a tip after these Cape Breton tuna is somewhat heavy, particularly having regard for the fact that not one fish has ever been landed. Assuming, however, that this only makes the chase more attractive, there should be many anxious to try their luck next year. In addition to the cost of reaching St. Ann's, by direct steamer to Halifax, or by C. P. R. Empress to Quebec, and thence by Intercolonial Railway to Sydney, there is the hire of man and boats, which, with the smallest available power boat, cannot be reckoned at less than 30s. a day. Bait will cost from 2s. 6d. to 3s. 6d. a day, accommodation at Englishtown may be put down at 35s. a week. All of which means that a month at St. Ann's with fares out and back, would make a hole in £100. Frankly, this is a considerable sum to pay for the possible chance of landing a tuna, though, on the other hand, many would hold it reasonable enough for the honor of catching the first. Moreover, there is talk of a handsome cup being offered for the acceptance of the lucky sportsman, the possession of which would in some measure recoup him for his outlay. Well, the tuna are the victors for the moment. Perhaps by this time next year some fortunate adventurer will score the trick, and we shall be able to say *Calicem qui meruit, ferat!*—F. G. A., in the Field.

LIVE EAGLE UNDER HIS ARM.

With a live eagle measuring six feet six inches from tip to tip of wings under his arm, Dr. J. C. McLaughlin, 308 Junction Building, created considerable interest recently on the streets.

The bird was shot by Mr. McLaughlin's brother, H. A. McLaughlin, on his ranch near Moran, Kan. A rifle was used and the ball took effect in the bird's wing, which paralyzed it temporarily and enabled him to capture it alive. The wing has healed now and the bird, being young, was shipped here.—Kansas City Journal.

EAGLE A SHIP'S PET.

Aboard the steamer Pathan, which arrived recently from Manila, Singapore, Cebu and Port Said, was a large eagle bought from a native at Manila by Capt. Chaplin.

The bird, which was named Sammy, measures just nine feet from tip to tip of wings when spread. It was kept in a large wooden box on the bridge on the voyage, but for a few hours each day was allowed to roam about the deck with a rope tied to one of its legs.

It has become the pet of the crew and is very tame.—Boston Record.

The Best $5 Fishing Rod Ever Built

YELLOWSTONE SPECIAL
All Sizes, Fly or Bait

Six strip selected split bamboo, German silver mountings. Solid cork grasp. Solid metal reel seat. Three piece with extra tip, put up on covered wood frame with canvas sack.

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE BAYNE BILL.

THE hearing on the Bayne bill at Albany last week was interesting for the unanimity with which sportsmen, game protectors, scientific men and the public generally advocated the enactment of a law forbidding the sale of game in New York State—whether killed in the State or elsewhere. The opposition consisted of a single individual, understood to be an attorney in the employ of an association of hotel keepers.

The bill's advocates made a very effective presentation of the case, and, so far as the hearing went, the sentiment was all one way. On the other hand, no one can tell what view the Legislature will take of the matter, and the fight is not yet over. Many petitions in the bill's favor are being sent in to the Legislature and should carry great weight. It is to be hoped that all interested in the passage of the measure will bring to bear on their Assemblymen and Senators all possible influence, whether by writing letters urging a course of action or by inducing acquaintances of the legislators to represent to them the importance to the public of its passage.

Those who oppose the Bayne bill do so in part on the ground that it forbids the sale within the State of birds taken outside of the State, but as a matter of fact this is one of the most necessary features of the measure. Why should New York State be utterly careless of the well-being of her sister States? It is only the large cities that furnish a considerable market for game, that encourage commerce in it, and so put a premium on its destruction. How great that commerce and that destruction are has often been shown, but perhaps never more effectively than in the year 1901, when a New York game protector seized at a single cold storage warehouse in New York city 50,000 game and song birds which were being illegally held in close season.

At the time FOREST AND STREAM printed an account of that seizure, giving a detailed list of the game found there. This was one of the most effective game protection documents ever printed, and in this number of FOREST AND STREAM we repeat the figures. They should be brought to the notice of every Senator and Assemblyman. If this were done and the legislators understood the figures' significance, the Bayne bill would be sure to pass.

FOR MICHIGAN TO CONSIDER.

IT seems an odd circumstance that of all the States and most of the Canadian Provinces lying along the international boundary line, Michigan is the only one in which spring shooting is permitted. It seems as if it were time now that Michigan should step forward into line and take her proper place with her sister States.

It was shown years ago that the number of non-residents that visited Maine in the year 1902 for the purpose of shooting and fishing was more than 130,000. If each of these visitors left behind him in the State, for transportation expenses, subsistence, payment to guides and other purposes, $100, it is evident that the sum of $13,000,000 was spent that year in Maine by such visitors. It is said that in Scotland the game yields annually more than $15,000,000. With these statistics before her, does it not seem worth while that Michigan should do everything in its power to conserve its game?

A great mammal, the elk; an important bird, the wild pigeon; a unique fish, the grayling, once existed in Michigan in great numbers. There are none there now.

In Michigan there is enough wild land to make many great preserves, which, properly protected, would insure the existence there forever of numerous beautiful and useful birds and mammals. Is it not time that the best people in the State should take a stand against the comparatively small number who wish to kill everything all the time and insist that laws be enacted and enforced which shall be for the benefit of the whole people, and not for a small class only?

OUR NATIONAL PARKS.

MANY years ago, John Muir, one of America's chief apostles of outdoor life, said: "When in trouble take a trip up the cañon." These words contain a profound philosophy. The real lover of outdoor life—whether he be observer or active lover of exercise—when he gets close to nature drops from his mind the worries and the burdens that oppress him, and for a time at least, forgets his trouble and anxieties in the delights which surround him.

Year by year the importance of permanent grounds for public recreation is coming to be better understood. This is given special emphasis in cities where the poor little children have no place to play except the public streets, but it is felt also that there should be playgrounds for children of larger growth. For a number of years the few people who harped on this subject talked to deaf ears; their words were as the voice of one crying in the wilderness, and received little or no attention. Yet with the Yellowstone Park as an object lesson, people have gradually come to realize that there should be such National playgrounds, and a number have been established, all of them in the West. We have thirteen of these National parks, but we ought to have a great many more. More than that, they should be better known and should be visited by hundreds of people for one who now goes to them.

At a recent dinner of the Canadian Camp, the chief topographer of the United States Geological Survey, Robert B. Marshall, expanded this idea, and gave an interesting illustrated description of a number of our National parks.

High officials of the Government recognize the importance of this subject, and recently the President recommended to Congress the creation of a Bureau of National Parks. A bill to create such a bureau was introduced in Congress, but did not pass. The time is at hand when the importance of these playgrounds will be more generally appreciated, and when far more attention will be paid to their care than at present.

THE wintry blasts which greeted early trout fishers last Friday and Saturday gave ample proof of the fallacy of opening the trout season earlier than April 15. To see anglers faring forth at daylight on a wintry day, clad in heavy garments and wearing wool gloves, tends to call down ridicule on the sport. In the New England and middle Atlantic States April 1 is usually anything but springlike, nor do the rough winds calm down for another ten days. In Pennsylvania trout may be taken next Saturday, April 15, while in the southern tier of counties in New York State Sunday, the 16th, is opening day, but the majority of anglers will defer their first journey to the brooks until the 17th. A bill is now pending in the Legislature which provides that when opening day falls on Sunday, as it does this year, the previous day, Saturday, shall be the legal opening day.

SINCE additional ships have been put into service between British and East African ports, sportsmen traveling to and from East Africa have found the long journey much pleasanter than it was a few years ago, with fewer delays and discomforts.

THE United States imported more Indian buffalo hides than any other nation in 1909. Of the 1,011,000 buffalo hides sent out of India in that year, 416,585 came to this country.

FIRE has rendered two State Legislatures temporarily homeless this year. The Missouri State House was burned early in February, and the New York Capitol last week.

THE first International Anglers' Congress will be held in Berlin, Germany, June 1 to 7, inclusive, 1912, under the auspices of the Deutsche Anglerbund.

THE SPORTSMAN TOURIST

Kareits and Hamadryads

Some of the Reptiles that are Seen Occasionally by the Sportsman in Burma

By STARLIGHT

DURING a time of service with the British Army I once found myself stationed at a little place called Thayet-Myo. This little jungle town lies on the right bank of the Irrawady River, 600 miles or so north of Rangoon. This district swarmed with snakes, of which the kinds most frequently to be met with were the grass and rat snakes, cobras, Russell's vipers and kareits, though the python or anaconda was not rare.

Snakes were frequently found in the house. Many houses had snake proof little wire gates at the top of verandah steps, and at the foot of inside stairways. The favorite resort of these reptiles used to be above the ceiling cloths, where on looking up one could distinguish their shapes outlined by the sagging of the cloth under their weight. At that time most of the bungalows had these ceiling cloths stretched under the fiber-thatched roofs to prevent dust and insects from falling into the room. It was no uncommon thing to find mongooses and wildcats also in the roofs. But I write of snakes. Both the parade ground and the golf links were infested with snakes.

The only time I have ever seen the sergeant-major of a regiment draw his sword was to defend himself from a cobra. I was superintending morning signal practice from the flat top of the main guard house across the river. Adjutant's parade was taking place, and he was marching the battaiion across the ground in quarter column, which is a very close formation. The ground was sandy with small scrub. Suddenly there was a wild diversion in the middle of the column and amid the temporary confusion the column divided. Into the space thus left clear stepped the sergeant-major, drew his sword, and to my surprise made a hearty cut at something. I was told at breakfast that a big cobra had suddenly appeared, and that the sergeant-major had swept its head off.

One day while playing golf on the nine-hole links I heard, on approaching the sixth hole, a faint screeching, apparently issuing from the ground near my feet. The sound was as though a young rabbit was in trouble, only fainter. I looked about and soon saw a rat hole in the sandy ground from which I judged the sound proceeded. Closer inspection showed the head and shoulders of a fair-sized frog protruding from the jaws of a Russell's viper, the rest of whose body was down the hole. With my mashie I dug away the ground behind, exposed the snake and broke his back. I might add here that this snake is a very venemous species, and that probably more natives die annually from its bite than from those of all the other poisonous reptiles in Burma put together. This is, I think, in great measure owing to the fact that the Russell's viper is sluggish, seldom moving out of the way, as do the other snakes or most of them at the approach of danger. Having killed the viper, I very carefully rescued the frog. It was very much alive, though the hind legs were almost entirely digested, and where they joined the body resembled cord, tapering away to thin twine at the extremities. "Paralyzed from the hips downward" would doubtless have been the doctor's verdict, but the frog could haul itself along on its two forelegs, the hind ones trailing. My servant, acting as caddie, was told to take it home after the game, and it lived in my house for three days, being fed on flies and moths caught round the lamps at night. This incident serves to show how powerful are the gastric juices of these snakes.

Of the kareit, of which there are eighty-nine varieties bottled in the old museum, Bombay, I have had three experiences only, and do not wish for others. I was once stationed at Wellington Barracks, ten miles from Ootacamund, in the Nilghiris, Madras. One day one of the native cooks in one of the company's cook houses overturned a degchai (brass cooking bowl) on the shelf. A little kareit, nine inches long, was ready and bit the man on the tip of his left thumb. Now this man acted with a knowledge, energy and courage which are not always to be found among his countrymen. He ran at once to the meat block, took the chopper and lopped his left thumb clean through at the middle of the second joint. Putting the end of what had been his thumb into his mouth he made straight for the hospital, where the wound was at once cauterized and dressed. This prompt action, the doctor said, saved his life. His companions killed the snake and took it also to the hospital, and it was duly classified as a kareit.

My second interview with a kareit is of a more doubtful character as far as the identification of the species is concerned. I was thamin shooting in Burma, near Prome. It is the custom to be driven to the shooting ground in bullock carts. These are covered with the leafy branches of trees to hide the shooter, as these deer are in the habit of seeing the bullock carts carrying green forage, and so the shooter can get to his stalking ground without scaring the whole jungle for miles. It was early morning and we were just starting. I had climbed into my cart and was standing up in it, my right hand holding to a green branch to steady myself. Suddenly I felt something cold fall across my wrist and remain there. I knew at once what it was. Karim, my shikari, was standing a yard below me. "Karim," said I, not even turning my head, "there is a snake on my wrist; kill it, or knock it off at once." Not daring to move, hardly to breathe, it seemed ages before I received such a crack on the wrist that I thought my arm was broken. Karim always carried a stout bamboo to beat either the jungle or the beaters, as the fancy took him, and had used it on my wrist. The snake fell to the ground and was stamped on. It was a most lovely apple green all over, and its eyes were just like rubies, but the natives could not agree as to whether it were venomous or not. I, therefore, give the snake the benefit of the doubt, the more readily as I have never seen its picture in plates in snake books, nor its like in the bottles of preserved snakes that I have come across. My third experience was thus:

I was employed under the Indian Government at Nagpur in the Central Provinces, India. Returning on my horse from my office to my bungalow one morning in the hot weather, I saw my wife in our little bit of garden. She appeared to be picking roses. On reaching the path near her, I noticed something constrained in her attitude. Apparently she was holding the stem of a rose bush at arm's length, and her arm was quite rigid. I leaped off my horse and was beside her in an instant, knowing that something was wrong, and guessing what it was. Looking along her arm I saw a red and yellow kareit, lapped round her wrist like some brilliant oriental bracelet. Fortunately, I had gloves on, though I do not suppose it would have made any difference, as I feinted a little dash at the snake with my left hand and nipped his neck with my right, as he thrust out his wicked little head on the defensive. Having thrown him to the ground I put my foot on him. My wife said she had been standing like that for many minutes, afraid to cry out or move, just hoping that someone would happen along. This snake was duly identified as a kareit. The reptile had climbed into the foliage, probably in search of flies or grubs, and as the bush was shaken by my wife's pulling the flowers, had fallen upon her wrist and remained there.

I have always taken a considerable interest in

snakes, and a great many were brought to me by men of my regiment, as well as by natives during my stay in Burma. One day when out shooting the Chinese francolin—partridges we used to call them—two brother officers and myself came upon a large python which had swallowed a jungle sheep whole. This jungle sheep is the ribbed-faced deer called in Madras "jungle sheep" and in Burma "gyi." The deer's body was inside the snake, the head and antlers protruding from its gape, for mouth hardly describes the aperture through which the deer's body had passed. The snake could do nothing but wriggle, and that—to use a nautical expression—only "abaft" the sheep. It was soon dispatched, I am sorry to say, as I would now give a good deal to have remained there and watched the process of swallowing instead of stopping it. I have been told that while in the act of "assimilating" a large body like this, the upper and lower mandibles—or jawbones—disengage, and travel independently, while the snake heaves and heaves, and gradually hitches itself forward over the animal to be "swallowed," until—after vast stretchings of the whole of the skin of the head and neck the great job is completed—they reunite in their original places. After such a meal the reptile may well be torpid for weeks or longer before regaining its slim graceful shape. It is of course a generally accepted fact that these pythons kill their prey by compression. The deer mentioned above certainly appeared to be a mass of jelly, but the odor when the carcass was opened overpowered our curiosity.

Once again I was visiting the jail at Thayet-Myo. A python twenty-two feet long and about twenty-eight inches in girth was lying dead in a cabbage patch of the jail garden. It had been shot by the prison guard under the following circumstances: The prison had a sentry posted on the roof at each corner of the square building. His duty was to give the alarm to the prison guard if any prisoner tried to escape, or any unusual occurrence took place.

On the morning of my visit there had undoubtedly been an unusual occurrence. A python, dimensions as above, had entered the vegetable garden and crossed it to the fowl pen. Besides the fowls there were some five ducks in the pen. Now the front of the pen was fenced with diamond mesh, galvanized wire netting of a strong type. The snake could not resist a fat duck, so putting its head and neck through the stout diamond frame it seized and swallowed one. I have no doubt whatever that it would have "mopped up the bunch" inside the house, but that in adjusting number one to make room for number two it became aware of an uneasy feeling, owing to the wire around its waist. Neither have I any doubt that in addition to becoming uneasy it became seriously alarmed. Being now unable either to disgorge or to get away, it tore off the whole section of netting six feet by eight and returned with this necklace or waistband through the cabbages. Not unnaturally, I think, the sentry seeing a six by eight foot wire section of fencing marching through the cabbage patch without any visible means of support gave the alarm, and then opened fire. The prison guard rushed out and also opened fire, and very shortly our hero lay dead in his frame. He was skinned and his skin cured and dressed in the jail, where they are noted for this kind of work.

Of all the snakes in Burma, however, the hamadryad is, I feel certain, the one which commands most respect from among the natives and the white men who know. I have spoken to many native shikaris about the habits of this snake, and much regret never having seen one alive. Their stories all agree as to details which point to the fact that this snake really does attack man on sight at certain times. In appearance it resembles a very large cobra di capello, being hooded and spectacled in the same manner and in similar colors. But its size is certainly three times as great when full grown, possibly more. A large cobra will measure five feet, very seldom six. The only hamadryad I have ever seen hangs in the old museum, Bombay, or did some years ago, and measured sixteen feet four inches. The natives of Burma say that during the breeding season the male hamadryad remains near the female in a state of most restless activity. He is reported to be ready—nay, anxious—to charge out at great speed, and strike with lightning rapidity anything that approaches, from a rabbit to an elephant. If such is the case, it is no wonder that the naked natives dread him.

While beating through the jungle for small game I have sometimes seen the beaters stampeded, and on asking the interpreter the reason, he has sometimes replied: "They thought it was a hamadryad, sahib."

If one pictures to oneself a cobra sixteen feet long charging to strike, his head would be some four and a half feet from the ground at least, a very nasty height—his great hood spread, his rapid pace, the length of his strike. No, Broadway for mine.

The Burmese eat snakes, baked and boiled. I once ate a section of a cobra baked. It resembled whiting and was good. If I had not known it was snake I should probably have eaten lots and enjoyed it, but the fact that I knew it was a cobra, strangled me.

Some years ago there was a great increase in the number of deaths from snake bite in India. The Government decided to take steps to put a stop to so alarming a state of things. It did so. A reward of one rupee was offered for every venomous snake killed, accounted for, and verified through the proper official channel. The following year was a record, both for deaths from bites and for rewards for dead snakes. The following year was worse still and nearly depleted the ruling coffers in paying up the snake bounty. A commission was appointed to ascertain how it was that in spite of the enormous amounts paid as bounties the snakes—the venemous ones only of course—had so enormously increased.

The commission sat. It took evidence and ascertained that every native establishment throughout the length and breadth of the whole of Hindustan was a snake farm, with its own ova, hatchery, brooders, yearlings and so on, and that the larger companies were just being turned into trusts holding cobra stock at a rupee per capita.

The Oak Valley; an Idyl

By S. A. WHITE

THIS morning I counted the standing trees again, and there is one less. For the last four years their number has not changed—till now.

The shining ax has found another victim, and the mighty oak is gone, yet the action is not so ruthless as it might have been, for the all-bestowing hand of time had long ceased to ring its trunk. Among his living brethren this comrade stood, but he could not feel with them the changing seasons. His was not to know whether the spring breeze waked or the fateful wind of autumn went moaning to December's end. Their wondrous secret life was no part of him, and darkness was no different from light, only he held the place of his youth, but now even that place will soon be gone, for the stump is crumbling nearer and nearer to earth. Fragments of bark, worm-burrowed and insect-bored, filled with parasitic larvæ, are strewn here and there, together with broken bough ends, but the next freshet will sweep all away, destroying every trace—a summer's breath will pass, when only a heap of brown dust, home for the giant ants, will remain.

The others of the grove up through the valley are still alive, grim old veterans of a thousand storm fights. Lightning-seared, tempest-scarred, time-dismantled, they rise in stalwart bulk on both sides of the tiny streamlet's banks. Their rude, deeply ribbed bark is black, and torn heavy knots speak of ancient wounds on trunk and crotch, the sturdy limbs show all the battle strength that years of wrestling have imbued—they have stood immovable and greeted every red dawn coming up over the rim of the world, seen every sunset in the sea of the West. It seems that the scythe of death cutting at their contorted roots has blunted and turned its edge till, recognizing the futility of the attack, he has passed them by. The moss clusters cling round their bases, upholstering in nature's cool, green velvet the sloping margin of the stream for boyhood's hot feet or the tired frame of maturity.

Limpid waters fill the dark, rich earth with moisture, and searching fibrous rootlets know where to turn in the swimming heat of a full summer noon. Of a truth, they have taken the stream edge as their own and lie like dark snakes under the drooping sedge. Some places the river's course has changed; abruptly the grinding spring ice has torn away the bends, exposing the matted roots with tenebrous caverns underneath, and the little waves rush up laughing in pretended boldness as if to enter, but whirl in sudden fear and scud with blanched faces down to the safety of the open meadow. Rolling ground spotted with innumerable tussocks spreads away on all sides, slender, scallop-leaved shoots marking where fallen acorns have fulfilled their destiny. Pasturing beasts know the boon of the thick, dark shade thrown by the massive heads of foliage, and

feathered tribes love those old oaks in common with man and his servant animals. Warblers, vireos, thrushes, creepers and kinglets make them haunts of delight in summer, while the barred and snowy owls seek them as lofty perches in seasons of snow.

How wonderful the volumes of lore the grove could write. How tremendous the chronicles and annals hidden away in their unspeaking souls. What is man to them? They know him only as an atom. Those wood fathers have listened to the lover and maid as they walked under the mystic moon, heard the sweet whispers which are everything to human hearts, have heard and laughed, for the earthly ideal is no greater in their sight than the moisture drop at one rootlet's tip. They have seen the seed time, gazed on the harvest toil, known the cradle toddler and the tapping crutch, understood heavenly blessing and evil curse beyond all knowledge of mankind. They know and smile.

The Oak Valley is a bourne of rest in a coign of the universe—the symbol of immortal mortality.

The Haymakers of the Rock Slides.

The small fur-clad haymakers of the West whose interesting habits are little known except to mountain climbers and mammalogists, bear the familiar name of conies. In Proverbs, in an enumeration of the creatures which "are little upon the earth but are exceeding wise" we read—"The conies are but a feeble folk, yet make they their houses in the rocks." In an enumeration of animals that are forbidden food for the Hebrews the cony again figures, "because he cheweth the cud." But curiously enough, the name cony appears to have slipped into the Bible through ignorance of oriental mammals, the Hebrew shâphân being translated cony, old English for rabbit, though the rabbit was unknown in Syria until imported in later times. So the little animal whose name has been familiar to us since childhood was neither the cony of our Western States nor a rabbit, but apparently a *Hyrax* or daman, belonging to an order of oriental mammals so remarkable in dentition and anatomical characters that Cuvier placed them next the elephant and rhinoceros. African species of *Hyrax* were encountered by the Roosevelt Expedition and described and figured by Mr. Roosevelt in his "African Game Trails."*

Our Western cony or little chief hare, instead of resembling the strange little damans, so closely resembles the ordinary rabbits that it was once classed with them, and now stands in an adjoining genus—*Ochotona*. But though looking much like a small tailless *Lepus*, *Ochotona's* habits set him quite apart. While the various rabbits live from sea level to timberline and in all localities from deep forest to open plains, the cony lives almost exclusively in slide rock, ta'us from lofty peaks.

To those who have once climbed the noble mountains in which he makes his home, what treasured mountain memories are roused by the nasal *yamp* of our cony! How one's heart warms at the sound! The big woodchucks that whistle from the talus boulders add to the keen zest of wild life, but do not elicit the feeling of friendly companionship the small conies evoke. Original and interesting in their ways and withal as winsome and gentle as rabbits, the little fellows, like the familiar camp jays, are dear to the heart of the mountaineer, their voices from the rock slides rousing echo as companions in the big silent wastes of broken rock.

Having known them in the California mountains we were doubly glad to find them in the New Mexico mountains. Near one camp, at

THE LITTLE HAYMAKER RESTING AMONG HIS ROCKS.

Photograph by Edward R. Warren.

11,600 feet on Pecos Baldy, a rock slide that covered several acres made of stone cracked off from the rock wall above and wedged together in close confusion afforded them a congenial home. The place was alive with them and their sharp bleat was continually coming from one or another part of the slide. They were so tame that we climbed up to photograph them. Some were sunning themselves when we arrived on the scene; others squeaking and running about among the rocks on various errands. As they went trotting over the rocks they looked like little bags of meal with big ears and short legs, for, like rabbits, they show no anatomy back of their ears. Their heads might have been modeled but their tailless bodies look as if smoothed off round with one pass of the modeling knife.

Now, not only are these conies "exceeding wise" because being "feeble folk" they take refuge in the rocks, but because living in the high mountains they take advantage of the short summers to make hay, stacking up loads of dwarf clover, grass and weeds among the rocks to cure out of reach of rain, that they may have food during the long winters when snow covers the rock slides. Last year's hay, mats of old dry weeds, were seen in the Pecos Baldy slide under some of the rocks, while fresh piles of green stuff were found under others.

One of the small haymakers was hurrying back and forth hard at work. Going to one especial place in the weeds outside of the slide he would pick a green bouquet and carrying it in his mouth run back to his haystack under the rock. Once when carrying a load too big to see over, he ran plump against the foot of the photographer, frightening himself so that he scampered off and hid away in his cave.

Another haymaker that I watched, an old one with brown fur, worked as if the cold storm had convinced him that winter was upon him. Unlike his systematic fellow who went and came to the same spots, he ran out into the weeds wherever the notion took him and dumped his load of hay under a number of different stones scattered about his end of the slide. He brought a variety of material, old brown leaves, fresh green grass, a bunch of asters, and once such a big bunch of cow parsnip that it was a wonder he wasn't tripped up by it. When he was photographed—at ten feet, for he was apparently fearless—he was sitting on a rock with his mouth full of hay, a daisy sticking up from one corner like an Irishman's pipe. While resting between loads, at my insistent call, "Go to work, Cony, go to work," he would start off for his hay on a trot, perhaps startled by the voice, perhaps influenced by the urgency of the tone, which probably accorded with his meteorological observations.

While the conies were storing hay, one of the reddish ground squirrels named *lateralis* from his side stripes, was also seen putting away winter stores in the rock slide. From one of his trips he returned with cheek pouches so stuffed out as to suggest a bad case of mumps. At the terrifying sight of a human being he stood up on his hind legs and put his paws to his breast as a startled woman presses her hand

*Pp. 318, 364—Tree hyrax, facing p. 220.

to her heart. Cony meanwhile, doubtless led by his sharp little nose, ran up to the foot of *lateralis*' rock, and ventured up beside him; but at this intrusion the superior squirrel made a pass at him that put an end to all Cony's friendly interest, and he ran off as fast as his feet could carry him, while *lateralis* complacently raised a seed to his mouth.

While the provident conies of the rock slide were gathering stores, others were taking their ease, coming up from the dark hollows between the rocks to sun themselves in characteristic statuesque attitudes, some with heads up, some squatting with ears folded down like those of a frightened rabbit; while one was seen washing its face with its paws like a kitten. While I was watching them quietly a squeak by my side made me look just in time to see a young gray cony drawing back under a rock. He did not stay long, for there was a tempting little flat stone to sit on in the hollow at the foot of his big protecting boulder, and he could not resist one more look at the stranger. First a little white nose appeared, then a gray head, and finally the big ears and the gray body; but the face wore a solemn, anxious look, and after a quick glance, with a frightened squeak the little fellow disappeared down his cave.

Safe shelter from prowling foxes and swooping hawks the caves afford the conies in their long arctic night when roofed by the great white snow pile of the mountain sides! And with no work to do through all the long dark months, surely they may well afford to make hay while the sun shines!

A Freak Robin.

Fountain City, Ind., March 23.—*Editor Forest and Stream:* One of the robins in our yard saw his reflection in one of the cellar windows, and for four successive days he fought it until he was tired out. Then he would go away for a whi'e, and after a rest wou'd renew the attack. I also know of a sturdy turkey gobbler that came on the veranda and attacked his reflection in the window glass with such vigor that the glass was broken.

After all, these birds were not so different from some of us humans. No doubt a good many, perhaps all of us, have fought and worried greatly over enemies as imaginary as the reflections of these birds. A good illus'ration of this point is found in the story about the old German who, when he knew he was to die very soon, called his sons to the bedside and said: "Poys, listen vonce now to your tying fater's atvise. Many drouples a'l my life haf I hat, te most of vich neffer happened."

O. H. Hampton.

The Aquarium's Elephant Seals.

The six elephant seals at the New York Aquarium are flourishing, we are glad to say. Each day they receive from twenty to thirty pounds of fish for the six. They are eating heartily and their appetite seems to be continually increasing. They are offered small fish like tomcods and smelt entire, as well as cut up cod and larger fish. All this is eaten with relish.

The sea elephants seem to be rapidly recovering from the nervousness that followed their long journey across the continent, and as has been said, are eating well and becoming used to their surroundings. They are not at all shy, but devour their food in the presence of people. The cut printed in this issue is the best photograph ever taken of this species so far as known.

Woodcock West of the Rockies.

Jamesville, N. Y., March 27.—*Editor Forest and Stream:* I recently noticed an editorial and some letters in Forest and Stream concerning the occurrence of woodcock west of the Rocky Mountains.

A few years ago I was hunting the pools along an arroyo about three miles east of Nampa, Idaho, with a companion, when in a little moist patch near a pool I flushed and ki'led a woodcock. On another day we flushed another within a mile or so of the same place which either of us might have killed, but did not, because one woodcock seemed rather small game among a bag of ducks and sage hens.

The bird we killed was seen by at least two witnesses, now resident in Nampa, Idaho, who, I have no doubt, would still recall the incident clearly. I myself know a woodcock at least as well as I know a Plymouth Rock rooster. I have no doubt that it will not be long before a freshly killed specimen will be forwarded from some point west of the Rockies. When I killed the bird mentioned I was not aware that the woodcock's range was not supposed to extend west of the mountains.

I do not know that the statements made in your columns regarding the range of the ivory-billed woodpecker are meant to cover any territory outside of the United States, but wish to mention that I have seen several specimens and killed one of these birds in the Sierra Madre about on the Chihuahua-Sonora boundary line, perhaps 300 miles south of the border.

GAME BAG AND GUN

Running Down Turkeys.

SOUTH of Fort Meyers, Florida, below the pine plains and north of the Big Cypress, the transitional territory is one of grassy plains in the dry winter season, with a very few pine islets, occasional reedy lagoons and hummocks (hammocks) of acorn-bearing oaks on which the turkeys feed. Palmetto patches are everywhere on the higher ground and cabbage palms give a tropical touch to the crisp winter air.

My guide, Dave Pool, and I started out on horseback from our wagon camp on a frosty morning with Cuff and Spot ranging ahead for game. The bare patches of ground showed deer tracks leading in every direction, with 'coon, 'possum, wildcat, otter and turkey tracks in a bewildering maze. Dave would ride one side of a hummock and I on the other and the dogs would go through the middle. The hummocks were about fifty yards wide by 200 yards long and scattered from one-quarter to three-quarters of a mile apart over the grassy and palmetto-patched plains, and the trees not over high so the turkeys would not take refuge there from the dogs, but try flying to other hummocks.

I had never seen a turkey wild and the sight of several fine dead gobblers that some home-going hunters had shown us made me very anxious indeed to try for one myself.

The dogs came to a point at what fizzled out to be a skunk, which "varmint" was quickly dispatched and the turkey hunt continued. Before long the dogs jumped a band of fifteen or twenty turkeys in an acorn hummock. Most of the flock made straight for the next hummock, the dumpy little hens running like California quail and the gobblers flying strong. I rode fast to the further end of the hummock and took a stand to await developments. Dave went slowly keeping abreast of the dogs. As the dogs approached, a splendid gobbler ran out of the brush into the open not twenty yards from me. I spurred my horse toward him and he flew off at right angles to a very small hummock a half mile away. I was hot after him, tearing through palmettoes and splashing over boggy places and arrived a few seconds after the turkey. I thought he would make for distant timber, so started to circle the hummock, but he had adopted different tactics and had turned at right angles again and was running through the grass toward the oak timber.

It was chance that I happened to go on that side of the hummock or that I saw him at all as he was running away. I started after him at full speed, yelling to Dave and the dogs to follow. The splendid old fellow was running hard, swinging from side to side with head low. He made a beautiful sight with the sun glinting off his broad bronzed back as he went unswerving, straight for the oak hummocks. I was overtaking him fast, however, and as I came up with him he would swerve a little to avoid the horse, but kept doggedly on toward the oaks. He looked as if he would drop of apoplexy and finally as the dogs were coming up I jumped from my horse to save my first gobbler's tail. I grabbed him by the neck after a little dodging and saved his plumage from the little pointer who came snapping up.

I now saw why he had not tried his wings again. Fat layers of pure acorn fat lay all over the old fellow. I will not attempt to recall any dimensions or weights, but he seemed very heavy to me. The only thing I measured was his beard, which I now have, and this was thirteen inches long. I do not know whether this is common or not, but he was a big bird and in prime condition, and I was very proud of my first turkey.

We now went back to the wagon and decided to try for deer in the afternoon. We had gone probably a mile when the dogs flushed a fine gobbler, and I missed him point blank at ten yards with both barrels of BB's as he flew on my right and back, an awkward shot from the saddle. He must have been disconcerted, for he made a bee line for the open prairie, not rising more than ten feet from the ground, and flying hard for one-third of a mile with the pointer not far behind, and the rest of us doing the best we could to keep up. His strokes grew less strong and he started to sail, with an occasional flutter like a meadow lark and finally lit running and would have tried to hide in the palmettoes, but by the time we came up, the little pointer had him where his tail had been. He had been in the air probably a mile and had run three or four hundred yards.

This was my second turkey and the last running we did, as after that we kept to the wooded parts and shot turkeys only when the dogs happened to flush them. We devoted ourselves to the other game of the country, and in the whole trip I never had a shot at or saw another dumpy little hen turkey—"cute round little brown things" Dave called them—and was not sorry that we got none.

C. GRANT.

Washington Squirrels.

ACCORDING to special policemen assigned to duty in the various parks throughout the city the number of squirrels which cavort about the public reservations is rapidly decreasing. A number of the little animals are killed annually by dogs despite the vigilance of the park guards. Owing to the limited number of nut-bearing trees in this city, the policemen are required to give them nuts and other food supplies.

Another reason advanced for the decrease of Washington's squirrel population is their migration to woods on the outskirts of the city. Some perish in the attempt, and those that reach the woods never return.

Several years ago there was a small colony of the snow white squirrel in Seaton Park, but the tribe has entirely disappeared. The species seem to have been too delicate for this climate. The first male specimen was brought from the Mississippi Valley some five years ago and was turned loose in Seaton Park.—Washington Star.

From the Tropics to 46° North, for Moose.

A STORY in a January issue of FOREST AND STREAM, entitled "Two Thousand Miles for Moose and Caribou," prompts me to contribute an account of my own trip for moose last fall.

Nathan Prescott and myself are in business in Porto Rico, and both being natives of New England, we have an annual longing for a few whiffs of the bracing fall atmosphere and for a tramp in the Northern woods. For several months we had been planning a moose hunt in New Brunswick, and after the usual amount of correspondence decided to put ourselves in the hands of Dr. Greene, of Centreville.

We sailed from San Juan, the capital of the island, on Sept. 7, and arrived in New York four and a half days later, a trip of some 1,380 miles. After a whole year in the tropics, New York looked good to us, and as we were not due in Centreville until the 20th, we looked the town over until the 19th, when we took an early train for Boston. There we made a few purchases and took the evening train for Bridgewater, Me. Arrived there next morning, we found a double hitch waiting for us and departed for Centreville, New Brunswick, across the line and about eight miles from Bridgewater. It was a delightful drive that fine fall morning, not very cold, although the air seemed sharp to us, as we had lived in the tropics for the past seven years. We were in high spirits and anticipating the sport awaiting us in the green woods, which we could see stretching away for miles to the east of us.

At Centreville we had a good lunch at the hotel, and then took buckboard again for a thirty-mile jaunt to the Forks, which is the junction of the north and south branches of the Little Southwest Miramichi. It was nearly midnight when we reached there, went to bed, were up before daylight next morning and took canoes down the river about twelve miles where we established our home camp and were comfortably fixed by night.

For guides we had Dr. Greene, of Centreville, and Charley McEwen, the latter a good guide and a fine fellow. Manzar Clarke did the cooking, did it often and well, and was always willing and ready to please. How many of us have a faculty of "keeping on the right side of the cook"? Besides being a good cook he is a good companion, weighs 240 pounds and is a brave man. Left alone in camp many nights, he would turn in with a repeating rifle alongside of him and a big revolver within reach and sleep peacefully with never a thought of the many dangerous animals which prowl at night in that Northern wilderness.

We started at once to call for moose in the evening and early morning, but for five days did not receive a single answer. We were somewhat puzzled and could not account for it, as in our rambles during the day moose signs were abundant, and we had seen a number of cows and calves but no bulls. On the evening of the 27th we were calling at a point about four miles be-

low our camp where a deadwater makes up from the river, called McKeels Logan, and were about to give it up again for that night, when my guide stepped down to the edge of the water for one more call. As he parted the bushes at the river's edge he looked up the deadwater, and there, standing in mud and water almost up to their bellies, were a bull, a cow and a calf. They were fully 350 yards from us, and it was growing dusky. Under cover we worked our way up the shore for about fifty yards, and then took a peek.

The wind, what there was of it, was blowing toward them, and they were all three looking directly toward us with their ears pointing forward. My guide did not want me to chance a shot, and suggested waiting until morning or the next night, with hopes of calling the bull out under more favorable conditions and get an easier shot, but I did not feel like that. Sitting perfectly still for an hour or two, shivering with cold and cramps, waiting for an old bull to come out, gets wearisome after a week of it, so I said I would take a chance. The bull was in the middle of the deadwater, and just as I raised my gun the cow started to walk out. She went slowly and did not appear to be frightened. I took careful aim and fired at the bull. He went down and never got on his feet again, although he lived for some time after and I was obliged to shoot him again at close quarters.

When he saw the bull drop, my guide ran back after the canoe while I stood in my tracks, ready to shoot again in case the bull got on his feet. I then got into the canoe and we poled up to where the bull lay. It was an awful mud hole, and he was thrashing around and spattering rich black mud in all directions. I was somewhat nervous, sitting in the bow of the canoe as we poked up near the bull, but another shot ended his struggle, and with a lantern we began to look him over.

We found that my bullet hit him square in the throat, just above his breast and came out near the backbone just forward of his hind quarters. He had fourteen points and a spread of only forty-two inches, hardly worth mentioning, but think of the fun I had and how proud I felt as my guide praised and congratulated me. I had made a long journey for just that one solitary shot, but it was worth it, and I want to try it again next fall.

It was dark now and we poled down to our lean-to tent, talking and jabbering on the way and hoping the boys in the home camp had heard the shooting and would come down the river and lend us a helping hand in the morning.

We started for the home camp at about 11 P. M. It was inky dark, we were going against the current and the water was unusually low, so you can imagine we had trouble. I sat in the bow holding a lantern in my lap, thus shading the light from my guide who could see ahead quite well, but for me there was nothing but a blank blackness. We had two short carries around some swift water, the worst one called "Big Louis" and the smaller one called "Louis Pup" and finally arrived at about 1 o'clock A. M., routed everybody out, made a big fire and had a regular pow-wow. After breakfast we all went down and got the head and some of the best of the meat and brought all back to camp.

Prescott got his moose a few days later. He was leaving the camp just before sunset to go up river to call with Charley McEwen, when he saw a bull drinking on the opposite shore about 200 yards up stream. When he fired the first shot the bull dashed into the river and made for our side; I was a spectator to this and thoroughly enjoyed it. It was a picture to see that big animal splash the water in front of him in his rush across the river. Prescott kept the bullets flying and stopped him before he got across. He did not fall, but stood near the bank in about three feet of water and did not attempt to climb the bank, which at that place was rather steep. Prescott got into a dugout and Charley poled him up for a closer shot, which he delivered at about sixty yards and downed the bull. This animal had a very pretty head with seventeen points and about the same spread as mine, but he was as fat as could be and his coat was as sleek as that of a well kept Government mule. We took home with us the best part of this animal and enjoyed eating it with other members of our families who know nothing of the sport, but who appreciate moose meat.

This was my first experience in calling moose. I usually hunt in November after the rutting season is over. We called faithfully every evening and early morning from Sept. 21 for nearly two weeks without receiving an answer to our calls. We just happened to get the game; the calling was without result.

The woods were beautiful at that time of the year and we only had one rainy day. The trout fishing was always good and up to Oct. 1 we enjoyed this sport as well.

This section is a fine game country, according to the signs, but the Grand Trunk Pacific Railroad is putting its line through there, and this I think will surely drive game to other parts. From our camp we could hear steam shovels at work and locomotives whistling night and day. Prescott's moose was shot within a few hundred yards of the railroad and must have crossed the tracks when he came down to drink. Little by little these grand game animals will be pushed further away, probably north of the belt now traversed by the railroads connecting the Atlantic with the Pacific ocean. It is a sad subject for a sportsman to think about, but those who hunt moose ten or fifteen years from now will have to go further north for their game.

MR. COE AND HIS TROPHY.

MR. PRESCOTT'S MOOSE.

Want Bounty on Squirrels.

Since the bounty on squirrels was stopped several years ago the little pests have greatly increased in numbers until the question of handling them has become of vital importance to the welfare of all growers of grain and vegetables.

Every farmer has to devote from five to fifteen days each year in fighting squirrels, and the annual cost of poison to each farmer averages $5.

During the operation of the former squirrel bounty law the animals became quite scarce in this section, for men often made wages in the spring by a systematic campaign against the squirrels. The amount of damage caused each year in this county by squirrels runs into many thousands of dollars, causing a consequent decrease in the amount of grains, grasses and vegetables produced and an increase in the cost of production.—Spokane Herald.

Pheasants in New York City.

NEW YORK CITY, March 27.—*Editor Forest and Stream:* Section 96 of the game laws, as amended by Chapter 657 of the laws of 1910, provides that there shall be no open season for Mongolian, English or other pheasants, nor shall the same be killed or possessed, except in certain counties of the State of New York, prior to October, 1914. "And it is further provided that pheasants bred or purchased or liberated in Suffolk, Dutchess or Fulton counties by the game clubs or private owners may be possessed in Greater New York for consumption, but not for sale."

In the neighboring States of New Jersey and Pennsylvania there are game clubs and private owners who have pheasantries, raise pheasants, liberate them, shoot them and can, under the laws of those States, take them out of the State.

There are a number of sportsmen resident in Greater New York who belong to clubs such as those mentioned. Why should they not be allowed to possess in Greater New York "for consumption but not for sale" pheasants legally shot in New Jersey and in Pennsylvania as well as those shot in Suffolk, Dutchess and Fulton counties?

It seems to be an unreasonable injustice and I write in the hope that FOREST AND STREAM may be able to persuade the fish and game commission to have the law amended.

OLD SUBSCRIBER.

Michigan Efforts.

SAGINAW, Mich., March 30.—*Editor Forest and Stream:* The Michigan Legislature now has before it three of the most advanced and meritorious bills for the preservation of game and birds that it ever had a chance to consider. These bills were introduced by Senator Watkins in the Senate. One consolidating the Game Warden's Department with that of the Fish Commission by creating a new board of five to be appointed by the Governor, honorary (without salary) non-partisan. This bill is yet in the Senate. The other two bills have passed the Senate and are now before the committee on game laws in the House, and the chairman of the committee is unfavorable to our bills and thinks they are against the farmer. Of course this element always looks with suspicion on anything advocated by sportsmen, especially if said sportsmen live in the city. One bill is for the licensing of resident hunters for shooting protected game. It is $1 per year. License for resident aliens $10 per year, for non-residents for hunting other than deer $10, carrying with it the privilege of taking home out of the State a legal day's shooting. The deer license is left the same as now —$1 for resident, $1.50 for non-resident. This should raise a fund of $150,000 a year to be used by the, to be created, Game and Fish Commission. The third measure is our general game bill to put a stop to spring shooting. This is meeting with a lot of opposition from a lot of pot hunters who want to destroy the game and not save it. We have had this same gang to combat years before, and they have always defeated us, and they may beat us this time, for nine times out of ten selfishness seems to get the best of it. Our present limit on ruffed grouse is twelve a day, fifty in possession and no season limit. The new bill modifies this to six a day, not over fifteen in possession and not over fifty in a season, certainly a very liberal limit, and yet you will find many who are trying to have this limit increased. One feature of this bill is new, and that is that it will allow people to engage in the rearing of game in inclosures and the marketing of same under proper restrictions. It contains the Audubon bird protective features, the no selling of plumage feature, that may be combatted by the millinery interests.

Some of us have been laboring for a life time for better outdoor conditions to make it possible for the children of the future to enjoy outdoor life, to hunt and fish and picnic and canoe, gather wild flowers and put up bird houses for birds. The boy that likes to hunt and fish and live out-of-doors is pretty apt to be a good citizen. You do not generally have to pass prohibition laws for his benefit. I would a great deal rather bank on his future than the boy that hangs around town, smoking cigarettes, is a good pool player, must have an automobile if the old man has to mortgage his house to get it, but you cannot make the farmers in the Legislature see this. They always know a heap about banking and insurance legislation; they know exactly how to run railroads, but they never legislate anything for agricultural improvements.

W. B. MERSHON,
President Michigan Association.

New York Legislature.

The Assembly has progressed the bill of Assemblyman T. K. Smith, providing that if in accordance with the provisions of this chapter the open season commences or ends on Sunday, it shall be deemed to commence or end, as the case may be, on the Saturday immediately preceding such Sunday.

Bills introduced:

By Senator T. D. Sullivan and Assemblyman Gurnett, in relation to breeders of game and game fish. It provides that farmers and other landowners and their lessees who undertake to increase game or game fish may be licensed by the forest, fish and game commissioner. The license fee is made $10 annually. All licensed breeders must keep a registry of all such game or game fish sold, stating the kind, amount and date, and the party to whom sold. The bill provides an open season for game and game fish breeders as follows: For game, from Sept. 1 to April 1; for game fish, from April 1 to Dec. 31. It also provides for licensed game dealers who shall be authorized to sell the game or game fish reared by licensed breeders. The license fees for such dealers are to be $50 annually in cities of the first and second classes and $25 elsewhere.

By Assemblyman Colne, providing for the licensing of pheasant breeders. The license fee is made $25. Licensed breeders may kill pheasants bred in captivity at any time between Nov. 1 and December 31, but only in the presence of a game protector or justice of the peace.

By Assemblyman Shea, authorizing the hunting of game birds, rabbits and foxes during the open season with dogs licensed by the forest, fish and game commissioner. The applicant for a license for such dogs to give bond.

Wolves in the South.

NEW ORLEANS, La., March 31.—*Editor Forest and Stream:* News has been received here to the effect that wolves have been exceedingly bad near Rayville, La., and several calves and pigs have been killed by them. W. J. Coleman with two packs of trained dogs went out and hunted down a large wolf. The hunters in and near Rayville will keep up the hunt until they have destroyed all the wolves in that section. On account of the wolves the farmers have experienced much difficulty in raising hogs, calves and chickens.

Since the regular hunting season has closed in this State it is expected the reports of various game wardens will be made public shortly showing the game killed during the past season.

An effort will be made by the game commission to have some kind of measure passed which will protect the alligator in various bayous and streams. President Miller says that the alligator destroys the muskrat and the alligator gar, and both of those animals are destructive and a nuisance. The alligator gars devour game and table fish by the hundreds, while the muskrats ruin the levees protecting the farms and towns. The city council of New Orleans declined some time ago to pass an ordinance protecting the alligator in Orleans parish. It is claimed that souvenir stores sell scores of baby alligators, and professional hunters slaughter the big alligators in order to procure their skins for the manufacture of handbags and purses. It is said the alligator is fast becoming extinct, and something will have to be done to protect them at once.

Harry B. Farwell, of this city, a leading member of the Delta Duck Club at Myrtle Grove, La., died at the Touro Infirmary on March 23 of typhoid fever after an illness of about ten days. Mr. Farwell was a leading business man, clubman, capitalist and one of the best known men among the fishermen and hunters in this section of the South. He was a member of social and carnival clubs and a Mason of the highest standing. He was fifty-three years of age and was born in Maine, coming to New Orleans when a mere lad. He was very fond of hunting, fishing and boating and was looked upon as an authority on the sport.

Commissioner Miller has received a large collection of lantern slides in colors which he will display and explain in a lecture before the Louisiana Press Association at its annual convention, to be held at Lake Charles April 25 to 27. The slides show the haunts of various species of birds in Louisiana and also the scenes of a number of the most important fishing streams. Mr. Miller will give several lectures and tell the newspaper men of the importance of the conservation of the natural food supply of Louisiana. He hopes to enlist the press in the good cause and to assist in the education of the public on conservation subjects.

F. G. G.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

The Use of Game.

Browning, Mont., March 28.—*Editor Forest and Stream:* We all know that it is impossible for game to exist in most of the European countries except on preserves or under domestication, and we are rapidly drifting that way.

It has long seemed to me astonishing that the game laws of this State permit the killing of many of our wild game animals, but prohibit under severe penalties the saving or trying to domesticate them.

Where would have been the buffalo if men had been fined and imprisoned for caring for them? No doubt elk eat up some hay, but the accounts are probably exaggerated and many stories get into the newspapers that have very little foundation. Range cattle eat hundreds of tons of ranchers' hay where elk eat one. When we complain that his cattle destroy our hay, the rich cattle man laughs at us and jeeringly says, "Fence your hay." Can you get damages for this destruction? Try it and you will see where you stand. You will be out more than hay; in fact, it will take several crops of hay to make you even.

In my opinion a man should have the right to trap or to preserve beaver upon his own land. I believe the beaver is the greatest of moisture conservationists, and that he does hundreds of dollars' worth of good where he does one cent's worth of harm. Streams that used to run a large volume of water all summer fail now—the beaver have been trapped and high water has washed out the dams—just when the rancher and farmer need the water.

A trapper of the present day never makes a dollar or saves any amount of money, and I do not believe that many people will weep at the passing of trapping as a profession.

There is nothing more aggravating than to have a colony of beaver, or a family of kit foxes on your land and to have some trapper watch until you are away or busy, and then kill your foxes or trap your beaver. Beaver conserve moisture; kit foxes catch a great many squirrels and grain-eating animals.

Our plains, which are now almost barren, ought to support millions of antelope, grouse and wildfowl. There was a time on our great American continent when men both red and white lived by destruction, but the wilful and wasteful destruction of timber and the wanton killing of every living head of game that could be seen belong to the days that are gone forever.

I believe that a man should be permitted to domesticate game under proper restrictions. But the man who wants beaver trapped on his own land must produce absolute proof that he is not trapping beaver that have strayed from some other person's land for the night.

I presume that in the long run it would be best for the Government to take charge of such things, though we should all kick and roar for a time.

I believe elk would be a far more profitable animal for a man to raise for beef than cattle on the Western plains. Also that mountain sheep would be a great deal better from a financial standpoint than domestic sheep. Neither will winter kill or die of poison in the summer.

The time has come when we must cease living by destruction, for there is little left to destroy. We must now reconstruct what our forefathers and ourselves tore down. I would encourage the domestication and sale of all kinds of live game under proper restriction as regards capture. I would allow a man to trap or own beaver under proper supervision and on his own land.

I was once going down the Missouri River with the State game warden of Montana, and an antelope followed our boat for a half mile. I called the warden's attention to the fact that this antelope had been raised by a rancher and was as gentle and as playful as a lamb. It was against the law of Montana to catch or hold game, but the game warden only said: "That man is a Christian, but if he had that antelope in a small dirty pen and half fed with stuff unsuited to it, I would have him locked up inside of twenty-four hours."

And there is the secret of the whole matter; to allow an ignorant, coarse brute to catch and snare game that had always been free and attempt to raise this game as he would swine would be a crime. To compel a careful conscientious man to kill a slightly wounded or stunned animal when his whole nature longs to save it does injustice to the man and animal alike. Hence the need of careful and thorough supervision.

A FIVE-INCH SECTION OF POPLAR LIMB TAKEN FROM A TWO-YEAR-OLD BUCK'S CHEST.

A word about Federal or Government supervision is worth speaking. The average American does not so much object to supervision as he does to the manner of the man who does the supervising. A county official drawing a salary of $2,000 per annum is usually courtcous, pleasant and sociable. A $1,200 Federal official from a distance is often as cold and unapproachable as the Czar of Russia.

When the forest service was first started, many of the appointees did more to antagonize the movement than all other conditions combined. They seemed to imagine that the particular reserve on which they were stationed was their individual estate to rule as they saw fit. The publications of the Forestry Bureau and the careful culling out of undesirable officials have greatly changed the sentiment of the West, and the forest reserves are being appreciated.

So with game supervision; let the public and the supervisor know where he must stop and where the citizens' rights begin. Americans do not take kindly to supervision, and we take less kindly to rough orders from an old country emigrant who is sometimes the only one that will work for Government pay in this Western country.

A quiet sensible man who can answer questions as to diet, care and exercise, who hands you a pamphlet with laws, rules, regulations and advice, is worth all the bluffers on earth.

Let us have supervision, but let us have the right kind of article. J. B. Monroe.

Snagged Adirondack Buck.

Poland, Herkimer County, N. Y., March 25.—*Editor Forest and Stream:* Not very long ago I was much interested in reading in Seton's "Life Histories of Northern Animals" the description of the snagging of deer and little thought then that I was soon to find an example of the same myself.

Last fall while hunting in the town of Wilmurt in the West Canada Creek country, we secured a two-year-old buck, and on dressing him out we were surprised to find driven into his chest a piece of poplar limb shown in the photograph. This piece measures five and one-half inches in length and one and three-eighths inches in diameter, and when found in the beast was encased in a sack of tissue. On the outside of the deer's chest there was no sign or scar showing where the wood had entered.

Trume Haskell, the well known guide of this section, who was along with us, claimed that of all the deer he had killed and seen killed, this was the second time he had noted such an occurrence. The first was some years ago and the deer was snagged in one of his hind hams. The first mentioned deer was apparently healthy and semed to be in no way affected by this accident.

Charles A. Gianini.

[The experience of our correspondent is an interesting one, and as Mr. Seton suggests in his admirable work, such accidents are probably much more common than we imagine. The snagging of horses when going through down timber used to be not uncommon in the West, even though every effort was made by their riders to avoid such a danger. Woundings from fighting or in the capture of prey are another class of accidents that sometimes happen to animals. We recall many years ago seeing the case of a Rocky Mountain goat which had evidently been fighting, and in the ham of which was found imbedded the broken horn of another goat. Not long ago, in talking with a recently returned African hunter, he told of a recently killed lioness, in the shoulder of which was found, on skinning, the fragment of the tusk of a wart hog. The lioness's hide showed no scar on the outside and the wound had been inflicted during the capture of prey some time before.—Editor.]

The Need for More Wardens.

Editor Forest and Stream:

Having read a great many leters from different parties concerning the Adirondacks and the game laws of the State of New York, I wish to make a few suggestions in regard to protection of the fish and game and timber in the Adirondacks. Having been a guide for forty years, and a hunter and trapper also during that time, I am fully acquainted with the woods and waters of nearly all of the Adirondacks. As I have guided parties through all the waters of the Saranac, Racket, Grass, St. Regis and Ausable rivers, I feel that I know as much about what is going on in regard to the protection of the fish and game as any one does unless he is older than I am.

When they made a law that every resident should pay a hunter's license of $1.10, and non-residents should pay a license of $20.50, it was said that the license money would be used to pay for extra game protectors and everyone seemed satisfied, but what are the results? We have no more game protectors than ever, especially in this part of the Adirondacks.

We have a law prohibiting the sale of trout, but they sell them all the time down to five inches in length. I do not wish to find fault with the game protectors, because they are all good men and try to do their duty, but how can one man look after a territory of, say, twenty-five miles square? While he is in one end of his beat, the poachers are busy at the other end. Nearly every house has a telephone, and they can all keep track of the protector all the time.

Now, if we had more protectors, each would have only one-half the work that one has now, and I think the forest commission could find good men for the work at $500 a year with $400 expenses. Then they would be so plenty that poachers could not get in their work so easily.

The commission knows all about some of the wood cutting that has been done this winter, but do they know half of it yet? This is a large country for one man to look after.

I would suggest that the State make fewer laws and the forest commission appoint more foresters and game protectors—good men at fair salaries. This country where I live is one of the best hunting and fishing countries in the State. I know that to be a fact.

I sincerely hope that the legislators will leave the laws for fishing and hunting as they are now, and that the forest commission will appoint protectors and foresters enough to look after the best interests of the State. Rawson L. Hayes.

I have recently noticed in various periodicals remarks on the efficient service that the commission has afforded the Adirondacks, especially on the increase of deer and the protection of the forests from timber thieves. This sounds well to the people living in the cities and large towns of Northern New York, but to me it sounds ridiculous. I live in the heart of the Adirondacks and where the deer are as plenty as any place except in private parks. It is a common occurrence to see two or three deer from our house nearly every day during the summer.

We see reports that such a man has done so much toward protecting them. No doubt he has, but even that little is so small it needs no consideration. Why does not the commission have enough wardens to cover the territory thoroughly, visiting it often instead of once perhaps in two or three weeks? The wardens cannot do this, as they have too much assigned to them; there are not enough wardens to afford proper protection. It is a common thing to see men going to the woods every day, summer and winter, and we know they do not go for nothing. They are mighty good hunters, too, as personally I know some of them live only by hunting. Only the other day a man hounded a deer to the ice and wounded it. The next day they found it nearly dead and finished it, and loaded it into a sleigh and drove home. This was in broad daylight, too, and several persons were witnesses. It was a pitiful sight and should be stopped. It may be asked, "Why do not you report it?" But we are not receiving a single penny for that if we did it and would not get a thank you, while the salaried men would get the credit. It is the same with the timber thieves. Logs are going to mill every day sent by men who never owned a stick of timber, but who dare to cut it and take the chance of getting caught by a warden, but the chance is so small that it is frankly no chance at all.

I am speaking not from hearsay, but from what I know and not to blame the protectors, because they do all they can, but to inform you of the situation as it is, not only here, but all through the Adirondacks.

What we need is more game wardens. If the State cannot afford to protect the forests and game, why make a poor attempt at protection?

If we had a warden for every ten or fifteen square miles instead of perhaps every twenty-five or fifty, there would be more cases in court in a year than there are in five years now. It would be better to have twice the wardens at $500 or $600 per year than what we have at $900.

I could write on this subject for hours and prove every statement by plenty of good woodsmen who want protection, but unless this impresses our commission and commissioners, it would be useless.

Come to the rescue of our deer before it is too late. Investigate a little. Do something for them. We are all good sportsmen and honor our game wardens, as they are the best friends we have. A Sympathiser.

[It is a waste of paper and ink to make complaints of the New York Forest, Fish and Game Commission for not having more game protectors. The law of the State provides that the commissioner shall appoint ninety protectors, and provides also what pay each one shall receive. If the citizens of New York wish to have more protectors, and to cut down or increase the pay protectors get, the remedy lies not in complaining of the Forest Commission, which is obliged to obey the laws, but in inducing the Legislature of the State to believe that the number of game protectors is too small for effective enforcement of the laws.

Sportsmen and forest lovers generally believe this thoroughly. They have succeeded on several occasions in having the number of game protectors increased. The force has been brought, we believe, to a high state of efficiency, but as has been so often said, the territory to be covered by each protector is far larger than he can satisfactorily look after.

It is only within a comparatively short time that it has begun to be realized that one of the chief duties of the game protector is to educate the people with whom he comes in contact, and to interest the residents of his district in the proper enforcement of the game, fish and forest laws, in order that such resident may lend the weight of his influence in behalf of the law. The game protector is much more than a mere constable, whose duty it is merely to arrest violators of the statutes, and the sooner this is realized everywhere, the better it will be for game and fish protection.

All sportsmen feel that there should be more protectors and better enforcement of the law, but they must try to secure these things by intelligent effort, and must not waste their time in empty grumblings which can by no possibility serve any good purpose.—Editor.]

Kansas in Early Days.

Editor Forest and Stream:

Some time ago I wrote you about antelope in the old West. Riding in to the railroad with a friend one day long ago in Kansas, we of course camped out and cooked our bacon. The weather was fine, the great expanse of ever-rolling and seemingly unending vista, with its great divides and far away valleys, marked by ribbons of cottonwood—never-failing sign of moisture of the plains—was enchanting.

As we came out on the plateau between the Saline and Smoky Hill rivers there were thousands of skeletons of buffalo. I asked how so many of them came to be there. My friend told me they had been killed for their hides, that the hunters got seventy-five cents apiece for them, and it was a great help to the homesteaders, as they could go out and get all the meat they could haul without price, as the hunters made no use of the meat. I said: "This looks to me as though there is so much of this country that can never be cultivated it would be better to fence the cultivated land and save the buffalo. They would always provide meat without labor or care."

It was a pleasure to see these huge innocent animals racing away in their rolling gait appearing so well to fit the immense surroundings. I understand that about 4,000,000 head of buffalo were killed in about four years after the railroad passed through this country.

In the winter one could camp among the herd and shoot down as many as he could skin during the day.

I was told two exhorters killed and skinned 700 in one winter. I think they got more hides than souls. I have always believed no one had a right to kill more than he needed of the Creator's creatures. There were now many teams hauling buffalo bones to the railroad for shipment. Thus they made a clean job of it, meat, hide and bones.

On the way back we came to a place called Bacon's Creek. My friend was telling me about the Indians having killed some people here the year before and showed me blood stains on the rock where it was claimed the people were shot. A few minutes later as we came near the divide we saw a large band of Indians come over the ridge. They gave one of their bluff yells. I reached down and commenced to raise up our shotgun. My friend asked me what I was going to do with that. "Nothing," I said, and lowered it, and he laughed. Heman Blackmer.

Hearing on the Bayne Bill.

On Wednesday of last week, while the Capitol at Albany was burning up, a large number of sportsmen passed it on their way to attend the hearing held on the Bayne bill before the Forest, Fish and Game Committee of the New York Legislature. This bill amends the present New York game law by forbidding the sale of game, whether birds or mammals, and whether killed within or without the State.

Owing to the fire at the Capitol, the hearing was held in the Albany City Hall. It was the only hearing had on that day and was largely attended. The advocates of the bill were in the great majority, and this support consisted of delegates from sportsmen's clubs all over the State, from scientific societies and from game protective associations. Dr. T. S. Palmer, who has charge of the game protection for the Department of Agriculture, was present.

The sole recognized opponent of the bill was Mr. Campbell, an attorney said to represent associations of hotel keepers.

Among the advocates of the bill were Dr. W. T. Hornaday, who appeared for the Camp-Fire Club; Andrew D. Meloy, president of the New York Forest, Fish and Game League; Dr. T. S. Palmer, of the Biological Survey; Madison Grant, secretary of the New York Zoological Society and of the Boone and Crockett Club; Robert B. Lawrence and John O'Connor, representing the New York Association for the Protection of Game.

Dr. Hornaday, who is largely responsible for the Bayne bill, made an excellent speech, showing why it was necessary to take away the market, if the game is to continue to exist. He quoted most effectively figures showing how game is destroyed, and how it is kept over from season to season, referring particularly to the seizure some years ago of 50,000 birds made at a New York cold storage warehouse, the figures of which were printed at the time in Forest and Stream.

Andrew D. Meloy made a telling opening to his remarks by saying that the Capitol just destroyed by fire could be replaced by the State of New York more easily and at less cost than could the game now so swiftly vanishing from the State be restored to its citizens. He spoke of the widespread interest in the bill among game protectors and sportsmen and declared that petitions signed by more than 200,000 sportsmen were about to be sent in to the Legislature. Senator F. D. Roosevelt of the committee confirmed this by declaring that these petitions were already being received.

Dr. T. S. Palmer pointed out that from his position he was able to survey the field for the whole country. He referred to the value of the game and the importance of protecting it, and declared that the present movement was not in behalf of any special class, but was for the good of the whole people. The public can get along without game to eat at restaurants and in private houses. He said that for two months after the burning of the Iroquois theater in Chicago, when all the theaters were closed, the sale of game in that city fell off to nothing. In other words, the people who purchased game were largely of that class which calls for "a hot bird and a cold bottle" late at night.

Madison Grant spoke briefly, but with telling force, warning the Legislature that this bill must be passed if any game was to be left, and that if the bill were not passed it would soon be necessary either to put a close season on all game or else to see the game wholly exterminated. Already one is obliged to pay $4 or $5 apiece for ruffed grouse, so that these have become luxuries possible only for the very wealthy. They are beyond the reach of people of moderate means. He urged the passage of the bill without amendment and insisted especially on the feature which forbids the sale of game in New York State, no matter where killed.

Mr. Grant pointed out that we are now facing a new set of conditions. In old times, while there was plenty of game, every one felt at liberty to kill it, and to do what he pleased with it, but now the game has become so scarce that this old time license can no longer be permitted. So in old times the skin hunters destroyed deer, elk and antelope and sold their hides, but this now is generally forbidden by law. It is a well established principle that the game belongs to the State. It should be no more lawful for a man to kill game belonging to the State and to sell it than it is for a man to fell timber which belongs to the State and sell that. Yet when a man does the latter, he is prosecuted. The present bill should be passed without amendment. When people have taken to rearing game in domestication, he believes that sportsmen and protective clubs will be glad to favor a properly drawn bill in behalf of the breeder of game.

Robert B. Lawrence spoke urgently for the bill in behalf of the New York Association. H. Le Roy Austin, former Forest, Fish and Game Commissioner of New York State, said that he knew nothing of game or of shooting, but that he had been greatly impressed by the large number of people who, during his service on the commission, had come to him and told him that unless some bill of this kind were passed, there would soon be no game left.

Other speakers told of the enormous destruction of wildfowl and other game in regions which were little settled, and how this game was smuggled out of the State without regard to law, and sent by sea or otherwise to the markets of Philadelphia, Baltimore and New York.

Mr. Campbell, speaking in opposition to the bill, declared that it was a measure which should not be passed, because it was solely for the benefit of a particular class—the sportsman. He stated that the Legislature had no right to enact such a measure with regard to this game, and especially with regard to game killed out of the State. He declared that the bill would take away the rights of persons who were engaged in rearing game, which under this law, if passed, they could not sell. He did not, however, give examples of anyone who was raising game and whose rights would thus be interfered with.

The hearing at Albany was remarkable for the substantial unanimity of those present in behalf of the Bayne bill, and it seemed evident that the committee was much impressed by them, the arguments offered in its behalf, and is in favor of the passage of the bill.

At a dinner given by Governor Dix a number of those interested in game protection were present; among them Dr. Palmer, Mr. Meloy and Dr. Hornaday.

Why Shooting is Poor.

(From Forest and Stream, Sept. 14, 1901.)

Recently a reporter of Forest and Stream accompanied Mr. Overton to another storage warehouse, where in sealed baskets samples of the seized game are kept, to be used as evidence in prosecution of the warehouse people charged with possessing game illegally. An examination was made of the samples for the purpose of identifying the species, and the samples were compared with the list made by Mr. Overton and his assistants at the time of the seizure. The quantity of game shown on the list is stupendous, and yet the bare statement of the number of the birds, or of the barrels and boxes containing so many dozens or so many hundred birds, conveys little impression to the average man. He passes over the words "a barrel of grouse," or "a box of English snipe," without much thought. But if he sees that barrel or that box emptied on the floor and takes in with his eye the number of individual birds that it contains, he then begins to realize something of what 1,000 or 50,000 birds may mean. He sees in this barrel or in this box perhaps more than he ever killed in all his shooting. He knows that this barrel or this box is not one-hundredth part of the game received by this particular storage warehouse in a single season, and there is then borne in on him—perhaps for the first time—a realization of what the sale of game means to the game supply of this country.

The samples examined were contained in fifteen large baskets, which, as stated, had been sealed up after they had been labeled and marked for identification at the time of the seizure. Each basket contained from twelve to thirty samples, and the work of going over the lots occupied several hours. Their contents included most of the commoner game of the country. Waterfowl were less numerous than upland game, yet there were hundreds of canvasbacks, redheads and mallard ducks, about 9,000 golden plover, about 7,000 English snipe, besides vast numbers of sandpipers and yellowlegs, and a few woodcock. Of quail there were between 4,000 and 5,000. There were nearly 1,000 ruffed grouse, about 1,200 sharp-tailed grouse and nearly 4,000 pinnated grouse. All these were highly interesting as game, and hardly less so as ornithological specimens, so great was the variety seen in them. The ground color of the sharp-tails varied from distinctly rufous to very dark slate; the pinnated grouse seemed to run through all the forms described, as did also the ruffed grouse.

Besides the birds distinctly game, there were nearly 10,000 song birds, chiefly bobolinks or reed birds and snow buntings. The snow buntings were tied up in dozen bunches and were usually fat and in good order, but the best of the reed birds—which were as fat as butter—were neatly packed in paste board boxes, a dozen in each, and were attractive to look at.

It has been stated that the freezer people were carrying on a legitimate business, and had nothing to conceal, but this statement is negatived by various marks on the boxes, which show attempts to deceive. Thus, boxes containing quail were marked "5 doz. squab." A box containing grouse and quail was marked "broilers"; another containing ruffed grouse, "small broilers"; a package containing woodcock was marked "B. geese";

golden plover were marked "ducks"; mallards were marked "pidgeon"; grouse were marked "fowl"; snow buntings were marked "fancy squabs"; 300 big yellowlegs were marked "mixed fowl"; 500 quail, "fancy poultry"; 2,400 English snipe, "ducks," and so on to the end of the chapter.

Besides the birds already mentioned there were of ducks, broadbills, pintail, green-winged teal, dusky ducks, blue-winged teal, widgeons, whistlers and ruddy ducks. There were thousands and thousands of sandpipers and hundreds and hundreds of upland plover. English pheasants and deer carcasses were there, the latter readily recognizable by bits of the hide and the tails still attached to the flesh.

Suits have been brought against the freezer company for penalties in large amounts, and if these should be carried to a successful issue, it is hoped that the business of keeping game out of season in New York city will have received a shock from which it will not easily recover. It is certain that nothing that could be done in the way of preserving the game supply would be at all comparable in importance with the putting an end to this freezer business. Men will not kill for the market unless they can sell their game, and purchasers of game—even in the cities—will not buy it in great quantities unless they can be sure that it will be preserved.

Attention has already been called in FOREST AND STREAM to the fact that the game held in cold storage in the rooms of the Arctic Freezing Company was in a double sense illicit. It was held unlawfully in close season, and besides this, it can undoubtedly be shown that it was shipped in violation of the laws of the States where it was killed. While, of course, in the case of many of the packages it would be impossible to determine whence the game came, yet there is evidence in the marks on barrels and boxes that some of it came from Indiana, a State in which the law provides that certain specified game as deer, quail, partridge, wild duck, grouse, prairie chicken and woodcock shall not be transported by any railroad company, express company or other common carrier beyond the limits of the State. It is, of course, well known that Connecticut, New Jersey, Pennsylvania and other States forbid the export of their game, and such game reaching New York is contraband and cannot be dealt in.

We give below a list of the different lots of birds seized by J. E. Overton in May and June last, at the rooms of the Arctic Freezing Warehouse. This list, however, does not include the seizures of the first day, which by order of Police Justice Brann were sealed up and put back in storage before samples were secured by the game protector.

The "lots" enumerated often consisted of several boxes or barrels, but in the list are given the number of birds in each lot, the English name and the Latin name. The list is commended to the attention of all gunners: It follows:

ROOM 5, LOTS 1 TO 4.

741 quail (*Colinus virginianus*).
97 grouse (*Tympanuchus*).
2 pheasants (*Phasianus*).

ROOM 36, LOTS 5 AND 6.

808 wild birds, golden plover (*Charadrius dominicus*).

ROOM 37, LOTS 7 TO 10.

4 web-footed wildfowl, broadbills (*Fuligula marila*).
214 grouse, sharp-tail (*Pediœcetes*).
60 grouse, pinnated (*Tympanuchus*).

ROOM 4, LOT 11.

½ wild deer, not seen.

ROOM 3, LOT 12.

600 wild birds, English snipe (*Gallinago delicata*).

ROOM 39, LOTS 13 TO 31.

23 web-footed wildfowl, green W. teal (*Nettion carolinensis*).
333 grouse, sharp-tail.
63 web-footed wildfowl, mallards (*Anas boschas*).
45 web-footed wildfowl, canvasbacks (*Aythya vallisneria*).
602 wild birds, golden plover.
115 grouse, ruffed (*Bonasa*).
1416 wild birds, snow buntings (*Plectrophenax nivalis*).
10 web-footed wildfowl, dusky ducks (*Anas obscura*).
43 grouse, pinnated.
96 wild birds, pectoral sandpiper (*Tringa maculata*).
276 wild birds, English snipe.

ROOM 10, LOTS 32 TO 47.

22 wild ducks, mallards.
226 grouse, pinnated.
18 pheasants, English.
67 grouse, sharp-tail.
288 wild birds—reed birds, bobolinks (*Dolichonyx oryzivorus*).
29 grouse, ruffed.
398 grouse, pinnated.
35 wild birds, upland plover (*Bartramia longicauda*).
26 pheasants, English.

ROOM 23, LOTS 48 TO 53.

52 grouse, pinnated.
598 quail, Virginia.
41 grouse, ruffed.

ROOM 24, LOTS 54 TO 64.

240 quail, Virginia.
38 grouse, ruffed.
120 quail.
121 grouse, pinnated.
96 woodcock (*Philohela minor*).
44 wild ducks, canvasbacks.
¼ venison, Virginia deer.
75 grouse, sharp-tail.

ROOM 25, LOTS 65 TO 68.

28 wild ducks, mallards.
61 grouse, sharp-tail.
72 quail, Virginia.

ROOM 26, LOTS 69 TO 89.

108 teal (domestic pigeons).
36 wild ducks, canvasbacks.
48 grouse, pinnated.
21 wild ducks, ruddy (*Erismatura rubido*).
228 wild ducks, redhead.
3600 wild birds, golden plover.
53 wild ducks, brant (*Branta bernicla*).
1152 wild birds, snow buntings.

ROOM 30, LOTS 90 TO 104.

1050 grouse, pinnated.
40 wild ducks, mallards.
9 grouse, sharp-tail.
7 carcasses venison, Virginia deer.

ROOM 29, LOTS 105 TO 118.

42 grouse, ruffed.
425 quail.
16 wild ducks, canvasback.
48 wild ducks, pintail.
74 wild ducks, mallards.
124 ruddy ducks.
80 wild ducks, brant.
68 grouse, pinnated.

ROOM 28, LOTS 119 TO 124.

186 grouse, ruffed.
40 wild birds, snipe (Bartram's sandpiper).
48 grouse, sharp-tail.

ROOM 27, LOTS 125 TO 129.

3168 wild birds, sandpipers
18 wild ducks, mallards.
1296 wild birds, English snipe.
60 grouse, ruffed.

ROOM 41, LOTS 130 TO 146.

103 grouse, ruffed.
720 wild birds, reed birds (bobolinks).
30 wild ducks, ruddy.
5760 wild birds, snow buntings.
121 grouse, sharp-tail.
174 grouse, pinnated
12 quail.
48 wild ducks, widgeon.
36 pheasants.
975 quail, Virginia.
143 wild birds, Bartram's sandpiper.

ROOM 43, LOTS 147 TO 155.

22 wild ducks, goldeneye (*Clangula clangula*).
230 grouse, pinnated.
4 carcasses venison, Virginia deer.
90 grouse, sharp-tail.
227 quail, Virginia.
65 wild ducks, canvasback.

ROOM 44, LOTS 156 TO 164.

10 grouse, ruffed.
36 grouse, sharp-tail.
288 wild birds, little yellowlegs (*Totanus flavipes*).
30 wild ducks, mallards.
28 wild ducks, green-winged teal.
96 wild birds, pectoral sandpiper.
64 wild ducks, canvasback.
150 wild birds, golden plover.

ROOM 45, LOTS 165 TO 177.

70 quail, Virginia.
1157 grouse, pinnated.
1200 wild birds, Bartram's sandpiper.
128 grouse, sharp-tail.
43 wild ducks, canvasbacks.
100 wild ducks, blue-winged teal.
200 wild birds, small yellowlegs.
20 wild ducks, mallards

ROOM 13, LOTS 178 TO 186.

16 wild ducks, broadbills.
129 grouse, sharp-tail.
36 wild ducks, mallards.
150 quail, Virginia.
49 grouse, ruffed.

ROOM 12, LOTS 187 TO 202.

458 wild birds, golden plover.
5 wild ducks, pin-tail
40 gray squirrels (*Sciurus carolinensis*).
3000 wild birds, sandpipers.
3000 wild birds, English snipe.
730 quail, Virginia.
300 wild birds, greater yellowlegs (*Totanus melanoleucus*).
100 grouse, pinnated.
84 wild ducks, mallards.

ROOM 11, LOTS 203 TO 208.

144 grouse, ruffed.
1 carcass venison, Virginia deer.
168 quail, Virginia.
1800 wild birds, English snipe.
3200 wild birds, golden plover.

Sandhill Cranes in Illinois.

TARPON SPRINGS, Fla., March 28.—*Editor Forest and Stream:* In an article published several weeks ago your correspondent, Sandy Griswold, gave us some interesting notes on the old-time sandhill crane.

To me, who knew them well, it seems odd that they should be a thing of the past in Illinois, yet such seems to be the case. I doubt if there is now one of them to be found within the limits of the State.

I first met them in Central Illinois in the autumn of 1855. At that time the Chicago branch of the I. C. R. R. had just been constructed as far south as Champaign. There were few houses on the prairies, and the timber was almost confined to the streams in consequence of the frequent prairie fires. Game of many sorts was abundant and I remember counting fourteen deer in one herd about two miles west of Lodi. The prairie chickens and other birds were there in great multitudes and we seldom shot many of them unless to send away to some friend.

The cranes were conspicuous because of the noise they made. The great white crane was not numerous, but the others were very abundant. They were sometimes domesticated, and became very tame, although they would at times attack strangers, and the long sharp bill was a dangerous weapon. I never found one of their nests, but it was said that these were made in the top of a tussock, and the mother bird sat on them with her feet in the water. Their "dancing" was very comical, and I think not common. It seemed to be practiced as an amusement.

I have shot a number of them, and I found that the surest way to get them was by riding toward them at full gallop and to shoot in passing when perhaps thirty yards away.

They were very tenacious of life. I once sent a ball from my old "Punkinslinger" rifle through one of a flock. The bullet (32 to the pound) passed completely through its body, yet the bird rose with the rest and flew perhaps a quarter of a mile before it fell. When I reached it, it was dead. KELPIE.

SEA AND RIVER FISHING

A Nomadic Angling Family.—III.

We lingered about the town next day, objects of curiosity to the inhabitants, until the passenger train arrived. When we attempted to board the train we found a photographer awaiting us, but if he took our pictures I am quite certain that he did not get our faces.

We left the Northwestern at St. Andrews, where the Soo Line crosses, and promptly set out east along the Soo road, our destination being Cavour, three miles distant, where the railway crosses the Peshtigo River. The afternoon was hot, our packs heavy, and owing to the dense woods on either side of the track, what little breeze there was did not relieve us. The perspiration rained down our faces but we struggled on. Had we found a respectable creek crossing the right of way, I am sure that we would have gone into camp at once, as I was about exhausted and Girl almost discouraged, though she bit her lip to keep from crying while she maintained that she was not the "least bit tired." Wife stood the drilling best of all. We would sight a tree, stump or other object some distance down the track and promise one another that we would reach it before stopping, then how good to slip out of the galling straps and rest! If Heaven is anything like those first few moments when I threw the heavy pack upon the ground and stretched myself beside it, I shall be satisfied.

ANXIOUS MOMENTS.

At last, after what seemed an interminable time, we saw Cavour and welcomed its few desolate buildings, for they indicated the end of the day's journey. The station-master proved a good fellow and informed us that we would find a good camping spot close to the river half a mile beyond the station. Again we shouldered our packs, and though every muscle cried out with agony, we did not set them down until we reached the place of which we had been told. Probably whoever first selected the spot for a camp did so because it was upon high ground and close to the river, but is was also very beautiful. Our tent was surrounded on three sides by tall spruces, while the fourth was open to the river. Once the tent was up and firewood collected, I jointed my rod and followed the river bank a little way, but as fish were not rising I returned to camp to rest my aching bones upon soft, fragrant spruce browse.

The next day the sun had been about his business for some time when at last we emerged from the tent, stiff and sore from our unusual exertions. That morning I would have been glad for a high range to cook on—it was so difficult to bend over the fire. Girl, with a child's ability for felicitous expression, said, "There is something in my back needs oiling."

Knowing that there was nothing like action to cure my ailment, I jointed my lightest fly rod and went down the bank of the stream, determined to limber up and secure enough fish for dinner. I found a number of likely looking pools, deep, dark and well shaded, but no rainbows were stirring. In all my rainbow fishing I have found the forenoon the poorest time of the day for casting, unless the day was stormy. Not until three o'clock do the fish begin to feed, and from six to dark is a better time. At a little rapid I hooked and landed three rainbows and was forced to be content with that number. On my way back to camp I walked into a bunch of ruffed grouse and the birds did not seem in the least alarmed. My first wish was for the .22, forgetting that it was the closed season, then I wished for the camera, to have taken a picture would have been easy. Some of the birds were within eight feet of me, but as I remained perfectly still they did not move, and eyed me unblinkingly. At last I found it impossible to stand the strain of so many eyes, so I started to walk away, upon which the birds burst into instant flight and disappeared.

After a hasty dinner we took down the tent and shouldered our packs once more, making our way back to the station. The agent informed us that the east bound train did not leave until 7 o'clock and for that we must wait. With five hours and more at our disposal we looked about us for amusement. Not far north of the depot we discovered the remains of an old dam, through the wreck of which the murky waters of the Peshtigo seethed and boiled, the certain promise of a deep pool below. Out came the fly rod, but the pool seemed literally alive with voracious chubs and I soon turned the rod over to Girl, who likes to catch chubs. Hardly had I retired from the projecting timbers of the ancient dam before Girl had hooked a fine rainbow. I shouted to her to keep cool and take her time, but before I could reach her side the fish had escaped, simply because the child was too much in a hurry to bring it within reach of the landing net. Those large rainbow must be played until exhausted before one attempts to reel them in. I then took the rod and soon hooked and netted a fish that weighed slightly over two pounds. Later Girl landed a smaller one. So the afternoon sped and as night shut in we took the train for Armstrong Creek, which takes its name from a stream, one of the confluents of the Peshtigo, justly noted for its rainbow trout fishing.

It was so late when we reached Armstrong Creek that we perforce went to a hotel, which we did not like to do. The next morning we were early astir and settled with our host, who was greatly disappointed when he found that we intended to dispense with his services as guide, for he takes fishing parties to and from the river. He insisted that we would be unable to find the trails without help and vouchsafed no information about their whereabouts, but nothing daunted we set out. Just to prove that I bear the man no ill will: if you would like to try some of the best, if not the best rainbow fishing in Wisconsin, write to A. Pinkowsky, Armstrong Creek, Wis., who will make all arrangements and satisfy you in every particular. The best fishing is not found in the creek, but in the main Peshtigo.

It is a short mile from the station to the creek, reaching which we decided to make a permanent camp in some secluded spot from which to make day-long excursions. It would have been better to have followed a plainly marked trail to a bit of rough water we discovered three or four miles down stream and named for our own convenience, "Lower Rapids."

When we had settled upon a position for the tent, the ground was leveled and the tent set, and we gathered a great heap of hemlock browse. It always pays to build a good bed. We dug a cellar in which to store our meat, butter and milk, and lest some may not understand what I mean by a cellar, let me describe

ours. A little hole not over eighteen inches deep was hollowed at the roots of a pine stump, on the north side, and lined with green leaves and ferns; then a pail of water was thrown in and the hole roofed over with sticks and dirt, leaving an opening on one side through which we could reach the articles wanted. The evaporation of the water kept the contents always cool, the butter would come out as solid as from the refrigerator at home. All the care necessary was to keep the hole filled with leaves and once a day throw in a pail of water. Butter and meat were kept in friction top tins, so the water did not harm them. Unless you have tried the scheme you will be surprised to find how successful it is.

Camp completed, we called it a day and spent the rest of the time in getting a good dinner, for we had brought with us from Cavour the large rainbow trout caught the night before, the cooking of which demanded time and care. Some editors think, so they have expressed themselves to me, that we out-door dwellers talk too much about our dinners and suppers and breakfasts; the fact is, those are the three points we count time from in the woods. "What time is it?" some one asks. "Two hours to noon," "three hours to supper," is the answer as the case may be. No, I am not going to tell of the planking of that rainbow, but it was delectable eating.

On Sunday we lay in bed until the glare of the hot sun drove us out of the tent. The day passed quickly, though we did not fish, for each had a book for just such occasions. Night came all too soon, and we realized that our last Sunday in camp had passed.

On Monday we were up early, and while Wife got breakfast, Girl and I tried for a trout, but though we saw plenty of fish, none condescended to touch our flies, baits or spoons, for we tried all. After breakfast we went down the trail with lunch, camera and rods, bent on discovery. That walk through the shaded aisles of the woods was a continuous delight. We saw both ruffed grouse and deer, neither of which seemed greatly surprised at our presence, but gazed at us with wide eyed curiosity. We spent two hours upon the trail before we came to the creek and then we found it a deep, sluggish river, mirroring the trees along its banks upon its placid bosom. It did not look fishy but before our shadows fell upon the water I sent a grasshopper skipping out over the surface and instantly it was taken, and shortly a pound rainbow was struggling upon the bank. Two more were caught and then the fish took a vacation. We spent the day wandering up and down the bank, fishing when the spirit moved, but for the most just loafing. By three o'clock we had several rainbows and some large trout, which satisfied us, and we returned to camp.

Some boys were fishing where Girl and I had failed to score in the morning. As they had a fairly good string of fish I asked them what they were using for bait. The boys informed me that pieces of chub alone would attract fish in that stream. When I informed them of my success with flies and 'hoppers further down, they only smiled and I saw that they did not believe me.

During our absence a fire had started some forty rods west of our tent and was burning furiously, a matter which disturbed us, for we knew that if the wind changed to the west the flames would be down upon us in short order.

The next day Girl and I repaired to the stream, determined to try the bait the boys were using so successfully the night before. The catching of a chub was a simple matter, for the stream was alive with them. We baited up with generous pieces of the white flesh and waited for a bite. Soon I hooked a fish, then Girl hooked and landed a trout that weighed almost two pounds; it was not so long, but was very thick, the largest speckled trout caught on the whole trip. Girl's satisfaction was complete, and without waiting to remove the fish from the hook she rushed up to the tent to tell her mother the story of the capture. That trout would take such bait in preference to flies or grasshoppers was a surprise to me, and I soon gave up fishing, for trout fishing with meat for bait did not appeal to me.

Having heard of another stretch of rapids a mile or so below those discovered the day before, we set out for them. The distance was long but at last we reached the rapids and a likely place it would have been, too, had there only been water enough; as it was we secured only a few small fish and soon tired of the sport. After a lengthy rest we started homeward, Girl complaining of a headache, her flushed cheeks indicating fever. We were not a little disturbed but concealed our anxiety as much as possible from the child. At the tent we administered what simple remedies we had with us, but her condition not improving at four o'clock Thursday morning we determined to start for home by the first train. By the light of the camp-fire we took down the tent and by seven o'clock were at the station. Fortune favored us, for we caught a south bound freight on the Northwestern line. A friend met the train with his automobile and hurried us to our home. Thirty minutes after we reached the house rain began to fall and continued all night. As we bent over the bed of the sick child we rejoiced that we had fled in time, but her sickness proved merely a severe attack of indigestion and was not of long duration.

As we look back over the events of the trip we feel that it paid, but we do not care to take another like it, because of the curious people we met. Next year if we pack we shall keep away from towns, and as much as possible from people.

O. W. Smith.

Fishing in Florida.

Punta Rassa, Fla., March 18.—*Editor Forest and Stream:* The tarpon are here. Six large fish have been caught in San Carlos Bay and the pools of Matlachee back of Pun Island since the season opened. None has been caught in the Caloosahatchee River at Fort Myers, although they usually show there first. E. S. Burnham, of East Orange, N. J., came up from Caxambas this morning with the "bayonets" of two tarpon each of which weighed over 115 pounds, the capacity of the scale.

He said that a party of two anglers caught seventeen tarpon at Chockaloskee in one day, and that he never saw so many tarpon before, but they would not bite at anything. They merely rolled around the boat showing their backs. Mr. Burnham, who is a keen observer, says that he believes that the bayonet on the tarpon's fin is a useful member. He thinks that it is erected by the fish when at the top of water, and that it is a highly nervous appendage which quickly apprises the fish when it strikes the air night or day.

From now on the tarpon will undoubtedly be easy meat around here, but as usual the majority of the anglers are pointed for the North. Clayton E. Rich, of Seventy-fourth street, left with his wife to-day with a record of two tarpon caught and three strikes. Edward Vom Hofe and wife will soon follow, but there are a few others who will stay for a fortnight or more. Then the usual crowd will come down later to slaughter tarpon in Captiva Pass, Blind Pass, Boca Grande and the pools of San Carlos Bay. Those who fish in the passes in May and June often aggregate fifty or sixty tarpon a day, running ashore with the fish as soon as they are taken.

E. H. Tomlinson, who has a place at St. Petersburg, is an occasional visitor. He is a harpoonist of distinction and is out for big things, his pet sport being harpooning devilfish (manta) with a lily iron. He gets a few every year, but has found none this season. Mr. Tomlinson has a seven-foot stepladder strongly braced on the top of the pilot house of his big power boat, and he says that it is surprising how much a man can see from this height that he cannot discern from the deck.

Mr. Tomlinson showed the head and hide of a big porpoise at the wharf last week. He harpooned the fish, which was nine and a half feet long and so old that nearly all of its teeth were ground down to the flesh and were hollow. "I wonder whether he suffered from the toothache," he remarked. The cuticle of the porpoise was blue-black and as thin as cardboard, while the hard fat, or blubber, was three-quarters of an inch thick. The head when cut off fairly leaked oil."

Harrimac.

Casting Tournament at Paris.

The casting tournament held on March 9-12 inclusive at the Cercle du Bois de Boulogne, in Paris, under the auspices of the Casting Club de France was not so well attended as it should have been, and only a few of the British casters took part. The scores were not above the average.

Wilfred M. Plevins, who took up bait-casting while in New York three years ago, and adopted American tackle, showed improvement in light lure casting. His best cast with the quarter-ounce weight was 44 meters. With the half-ounce weight he scored 53 meters, but this appears to have been made in practice. In practice he scored 47 meters with the salmon rod, the length of which was restricted to 15 feet, as in this country. In practice M. Decantelle cast the 2½ ounce weight 92.20 meters (302 feet 2½ inches), whereupon the makers of the British reel he used came out in the Fishing Gazette with an advertisement in which it is said that M. Decantelle established a new world's record. How we love to roll the term "world's record" around our tongues! But M. Decantelle deserves great credit for this great cast, even if it does not count in the records. He won several first prizes in the tournament, and the Tuckerman special prize for highest general average.

The Lake Champlain Situation.

Albany, N. Y., March 29.—*Editor Forest and Stream:* A matter of very great importance to the fishermen of our States bordering on Canada will come up at the special session of Congress called by President Taft for April 4 in the form of legislation intended to ratify regulations agreed upon by the International Fisheries Commission of the United States and Canada.

On April 11, 1908, the Hon. Elihu Root, then Secretary of State, agreed to and signed with the Right Honorable James Bryce, English Ambassador Extraordinary and Plenipotentiary, a treaty relative to the fisheries contiguous to the United States and the Dominion of Canada, which was ratified in due course. This treaty provided among other things that within three months the contracting parties were to appoint a commission to be known as the International Fisheries Commission, consisting of one person named by each Government, whose duty it should be to prepare a system of uniform and common international regulations for the protection and preservation of the food fishes in international boundary waters. It was provided that the regulations should embrace "close seasons, limitations as to the character, size, manner and use of nets, engines, gear, apparatus and other appliances; a uniform system of registry by each Government in waters where required for the more convenient regulation of commercial fishing by its own citizens or subjects within its own territorial waters or any part of such waters; an arrangement for concurrent measures for the propagation of fish; and such other provisions and measures as the commission shall deem necessary."

President Roosevelt appointed David Starr Jordan a commissioner representing this country, and T. S. Bastedo was appointed commissioner representing Canada. Mr. Bastedo was afterward superseded by Edward Ernest Prince. These commissioners in company traversed the international boundary waters and eventually draughted a set of "tentative regulations" which were submitted to Secretary Knox by Commissioner Jordan, and by Secretary Knox transmitted to President Taft on Jan. 31, 1910. On Feb. 2, 1910, President Taft submitted the regulations to Congress "in order that due legislative action on the part of the Government of the United States may be taken as stipulated for in Article III. of the convention." The message and tentative regulations were read and referred to the Committee on Foreign Affairs, but no action was taken by Congress. Again on Feb. 10, 1911, President Taft sent a message to Congress stating: "I cannot too strongly urge upon Congress the importance of taking prompt action to put into operation the conservation measures provided in the regulations, and to which this Government is pledged by treaty stipulation." This message carries with it a report from David Starr Jordan under date of Jan. 20, 1911. It was read and referred to the Committee on Foreign Affairs, where the matter rests at present.

The Forest, Fish and Game Commission of the State of New York was never consulted in any matter having to do with the proposed regulations by Commissioner Jordan. The regulations in some respects appear very unfair and ill advised as applying to New York. The Lake Champlain situation is particularly significant in this respect. New York State for years has endeavored to secure co-operation in preventing net fishing in Lake Champlain. New York and Vermont came to an understanding in this respect and tried to get the Province of Quebec to co-operate with them, but though the two States sent several commissions to Montreal, and in one instance at least procured an agreement from the Quebec Minister of Fisheries that netting licenses would no longer be issued on the Canadian side, the agreement was not kept and Quebec has never ceased netting spawning fish in her end of the lake.

The situation has been extremely aggravating to public-spirited citizens of New York who are interested in conserving the fish supply of Lake Champlain. The lake is roughly 120 miles in length. Of this practically the entire extent is in the United States, forming a boundary between Vermont and New York, except Missisquoi Bay, which extends about six miles into the Province of Quebec. Missisquoi Bay, as it happens, is unfortunately the spawning ground for the wall-eyed pike which are by all odds the most important food fish in the lake. These fish are netted from March 15 to April 15 in Missisquoi Bay, and until recently were shipped away by the carload. In the last few years the authorities of New York and Massachusetts have cut off the most profitable market for the netters and not nearly so many fish are shipped. The result has been apparent in that many more pike are being taken during the open season in New York State and Vermont as a result of the saving of breeding fish.

The better people in Canada have not sanctioned this netting during the spawning season of the pike and have realized it was particularly unfair to their southern neighbors, but it is said an unsavory political deal has prevented an improvement of the condition. It was hoped that Commissioner Jordan would take some effort to improve this condition, but instead of doing so he has, if anything, made matters worse.

There is no earthly reason why Lake Champlain, a long narrow lake running southerly more than one hundred miles south of the international boundary, should be classed as a border water. Under the proposed regulations the police powers are taken away from New York and Vermont. Instead of prohibiting netting, the regulation permits the use of nets except within a radius of one mile from the mouth of any river flowing into the lake, and instead of making the months of March and April the close season for pike, as in New York State, the regulations permit these fish to be taken up to April 15, which has always been the limit permitted the netters under the Canadian license. Whether or not this is good judgment from a purely theoretical standpoint is doubtful, but from the practical standpoint the people who profit financially by stripping the lake of its breeding fish could have nothing better. When Professor Jordan was in the neighborhood of the lake, it is said, he spent his time with the Canadians chiefly and got his ideas from them. Some of the influential people in the northwestern corner of Vermont, whom he probably saw, are also beneficiaries of the Canadian net licensing matter in Missisquoi Bay. The Legislature of Vermont, evidently taking its cue from these proposed international fisheries regulations, which it is confidentially stated will be passed, have again permitted the netting of fish on their side of the lake. The situation is discouraging.

No one who has studied the situation believes that with the large number of inhabitants at the present time on its shores, Lake Champlain can stand any considerable amount of netting and have any fish left. The time has passed when this destructive method of taking fish can sensibly be permitted and the remnant should be conserved for those who fish with hook and line. Even with hook and line it was getting possible under the improved conditions which have lately obtained to make a large catch—thirty, fifty, eighty and even one hundred pike were taken last summer from a single boat in a day. It will now be difficult to resist the pressure of those wanting to net in New York State with both Quebec and Vermont raking the lake, and it is more than likely the next few years will see the supply of fish in this beautiful body of water most seriously depleted, unless—and it seems this is impossible—the shortsighted regulations formulated by Jordan fail of passage in Congress.

John Bird.

Opening of Maine Lakes.

John C. Phillips, of Wenham, Mass., has most kindly sent to us some information which will be of no little interest to many Maine anglers. It has to do with the average time of opening of Maine waters for fishing and comes to him through the kindness of C. E. Farnsworth, advertising agent of N. Y., N. H. & H. R. R. Co. Mr. Farnsworth speaks of the difficulty of obtaining detailed records of the going out of the ice in certain of these Maine lakes. From an official of the Maine Central R. R. he has received the following information:

"I find that it is impossible for me to give you the dates when the ice has left Sebago, Rangeley and Moosehead for the past five or ten years, but I am giving you below the dates the ice went out in the spring of 1910, which was an abnormal year, and some three weeks ahead of the usual schedule for that event.

"Sebago Lake, April 1. Steamer service commenced April 2. Singularly enough the ice left Sebago last year the very day the law was off, April 1.

"Belgrade Lakes, April 6. Last year, 1909, the date was April 26.

"Green Lake, and other fishing waters on our Mount Desert Branch, April 6.

"Grand Lake, April 10. Last year, 1909, the date was May 6.

"The Rangeleys, April 18.

"Moosehead, April 20. Last year, 1909, the date was May 15.

"Lake Moxie, and the other smaller lakes in Somerset Railway territory about Moosehead Lake, April 16."

The Bangor and Aroostook R. R. says that "the opening of navigation on Moosehead Lake for the last five years has been as follows: May 13, 1906; May 14, 1907; May 15, 1908; May 15, 1909; April 20, 1910."

The Maine Central Railroad has not been heard from with dates of the opening of Rangeley and Sebago lakes. The information is expected every day, however, and when received will be sent on.

Fishermen Protest.

New Orleans, La., March 31.—*Editor Forest and Stream:* Petitions continue to come in to the State Game Commission, asking that the law passed by the last Legislature be not enforced making April and May a closed season for catching salt water fish. A big petition was received this week from fishermen in the parishes of Avoyelles, Concordia, Pointe Coupee and West Feliciana, who state that if the law is enforced they will suffer great hardships, and their families will be in dire distress. They assert that the law protects in April and May buffalo and catfish; that the buffalo spawn during March, and the catfish in June. They claim nothing will be gained by protecting the two species of fish named.

The petitioners declare that the Legislature passed this law without due consideration and without a proper hearing of those who are most concerned. The fishermen propose as a substitute for the present closed law an act which will make it a criminal offense for any railroad or public carrier to transport fish caught by those who have no regular license. They claim that such a law will protect the fish and conserve the natural food supply, and they will see that it is carried out. Fish dealers here are receiving many petitions asking that the closed season be not enforced. They are leading the crusade against the law. The fishermen say if the closed season is rigidly carried out, many of them will suffer for want of food, and furthermore they had not had sufficient time to prepare themselves for other vocations since the passage of the law a few months ago.

Fishing at the various places on the Gulf coast is steadily improving and some fairly good catches are reported. The unsettled weather and the cool spell of the past few days have served to keep a number of fishermen away from Lake Catherine, the Rigolets, Chef Menteur, Lookout, Waveland and the Barataria section. Those who have gone over to the clubs state that shrimp are coming in well, and good bait can be procured, but the weather is not yet quite settled sufficiently for the best results and the waters are yet somewhat cold. Spanish mackerel, speckled and green trout and sheepshead have been landed. It is expected that fishing conditions will improve considerably within the next ten days, and after Easter a large number of business men will have more time to go to the clubs and enjoy the sport.

President Miller, of the game commission, and Superintendent Tullian, of the hatcheries, have returned from an inspection tour at Morgan City, La., where they went to study buffalo and catfish for the purpose of ascertaining the time when these fish spawn. Mr. Miller and Mr. Tullian spent some time at the big canning factories and also questioned a number of the professional fishermen, but they announce they have not reached a conclusion and will investigate further. It is the intention of these officials to study the subject thoroughly, and also to get the opinions of scientists who are now engaged in a study of the question. Many of the professional fishermen claim that neither the buffalo nor the catfish spawn in April or May, the closed season. It is thought Mr. Miller will announce his conclusions within a short time.

F. G. G.

Too Early.

Springfield, Mass., April 3.—*Editor Forest and Stream:* The fishing season for brook trout opened in Massachusetts April 1 this year, it having been changed from April 15 by the Legislature last year. Quite a number of enthusiastic sportsmen in the western part of the State tried their luck, but with very poor success. A few large fish were secured, but only a few, and in several instances none were taken.

The swamps and woods are still covered with ice in many places, and nearly every sportsman that I have talked with agrees that the change to April 1 has been a bad one, and several of them say that they will use their influence to have the law put back as it was before—April 15.

George H. Graham.

YACHTING

Some News and a Little Gossip.

The three-masted schooner building for Robert E. Todd at Staten Island is to be launched on April 13. The work on this yacht is well advanced and Mr. Todd expects to have Karima, as she is to be named, in commission early in June.

William E. Iselin's new schooner Enchantress is being finished at Lawleys. The motor is to be installed and then the yacht will come east to City Island, where the furnishings and interior fittings will be put in. This yacht will also be ready early, as Mr. Iselin is very fond of cruising, and he wants to get his yacht in shape for racing as soon as possible. A. Cary Smith & Ferris were the designers of this vessel, and Mr. Smith will personally have charge of the tuning up trials. This means much for Enchantress, as Mr. Smith by his long experience is invaluable on a new vessel.

At Herreshoffs, Elena is progressing fast. There have been some delays owing to the illness of Capt. Nat. Herreshoff, but the yacht is now plated and has been cemented. Work is being pushed as fast as possible, so that she may be launched on April 24, which is the 70th birthday of John B. Herreshoff, the head of the firm.

Harold S. Vanderbilt is the first to make a formal entry of his yacht, the schooner Vagrant, for the Bermuda race. Vagrant won this race last year. Bryan S. Permar, chairman of the regatta committee of the Boston Y. C., is sure there will be at least six starters, and these he thinks will be the schooners Sunshine, of New York, Margaret, Seneca, Vencedor, Shiyessa I. and Acushla II.

Yachtsmen interested have made the request that the race be given an early start, so the chances are that the date originally named, June 3, will be the final selection. The Boston Y. C. will have official charge of the start and will decide upon where the starting point will be. Chairman Permar is of the opinion that the most suitable starting point is between Thompson's and Castle Island. There was some talk of starting the race off Rowe's Wharf, but this would not be feasible for several reasons. First, it might interfere with shipping; secondly, there would be little room for maneuvering and the wind would be shut off from the yachts, or would come puffy from different quarters owing to the dock buildings. The starting point that Mr. Permar suggests would give plenty of room in any wind that might be blowing and a fine chance to observe the start either from Castle Island or from the pier at Marine Park in South Boston.

Hollis Burgess recently wrote to Mayor Fitzgerald, of Boston, suggesting that the city should offer a prize for the Bermuda race. He pointed out that the city of Philadelphia last year gave $1,000 for the Havana race. The City Council has voted a $500 appropriation provided there are six starters.

James O. Heyworth, of Chicago, has bought from the Lewis R. Alberger estate the 70-foot yawl Polaris. She will be fitted out and taken to the Great Lakes for cruising and racing.

Herbert M. Sears has sold the fast Sonder boat Eel to Commodore E. Walter Clark, of the Philadelphia Corinthian Club, who owns Queen, now Irolita. The sale was made through the Hollis Burgess Agency. Commodore Clark will use Eel for racing at Marblehead.

The Lakewood Y. C., of Cleveland, whose members are building 18-footers for inter-city racing, will this year be prominent in the 23-rater class of the Interlake Yachting Association. A. J. Prentice, secretary of the club, has purchased the 21-foot raceabout Psammiad. This boat has long been known on the Sound as a fast one. She was raced last season in the handicap class by L. H. Dyer. She was originally the Persimmon and was built by Stearns & McKay at Marblehead from designs by J. R. Purdon. She raced one season in Massachusetts Bay and was then taken to the Sound by F. T. Bedford. She is 32 feet over all, 21 feet on the waterline, 7 feet 6 inches beam and 5 feet 4 inches draft. She spreads 550 square feet of canvas. The Psammiad is smaller than the lake class R boats, but she comes in well under the rule. Mr. Prentice purchased the boat to stimulate the sport on the lakes and he hopes that other lake yachtsmen will get boats for the class.

The regatta committee of the Rhode Island Y. C. elected by the board of directors at the last meeting is composed of E. L. Arnold, chairman; Charles H. Weeden, Capt. Lew Tillinghast, Bradbury Barnes and Frank Sweet.

Mr. Arnold has long been a racing man, in fact he handled many of the famous Crosby cats; at present he is owner and skipper of Isuelo, for two years champion of Class Q.

Mr. Weeden owned the 21-footer Peggy, and these two men with their associates promise to bring the Rhode Island club once more into prominence in racing affairs.

This is the first club on Narragansett Bay to offer cash prizes. In every class where there are two or more starters the winner will have the preference of a cash prize or a suitable trophy of the same value. The board of directors has also decided to secure a paid judge to act at all regattas. It is also expected that the Bensonhurst to Pawtuxet long distance race for cruising sail and power boats, for which a trophy was offered more than a year ago by Mr. Day, will be held this season.

Many Ocean Races.

Ocean racing will be a feature of the coming yachting season. There will be races for big yachts, as well as those for smaller ones, which have been very popular in recent years. Of these there will be the Block Island, the usual events to Stratford Shoal light and Cornfield light on the Sound and some races on the south side of Long Island, but there will be races for larger craft over courses that will require skillful navigation and give those in charge opportunities to exercise their skill in seamanship.

The Eastern Y. C. has arranged two of these races. One will start from New London after the Harvard-Yale boat race, and the finishing mark will be at Marblehead. This race will take the yachts over the treacherous shoals off Cape Cod and at times those who sail this course have all the weather they want. Such boats as the Enchantress, Irolita, formerly Queen, and possibly Karima and Atlantic will take part in this race, which is for a prize offered by Commodore Clark, of the Eastern Y. C. After this race the fleet of the Eastern Club will cruise to the eastward, finishing at Bar Harbor and then the schooners and larger sloops will race back to Marblehead for the Norman cup. This trophy was first sailed for last year and the race was a most successful one. It was won by the old Irolita, and Commodore E. Walter Clark, of the Philadelphia Corinthian Club, hopes to win again with his present yacht, which is having some changes made to improve her sailing qualities.

The Corinthian Y. C. will have an ocean race this year as usual, which will take the yachts over to the north end of Cape Cod and to other marks well out in the ocean. This race will be a good one and the new course is expected to enable the yachtsmen to make a better contest than it has been in former years.

The Indian Harbor Y. C. will have a race from Greenwich to New London to get the yachts there for the intercollegiate boat race and the Seawanhaka-Corinthian Y. C. has arranged a race to start after the boat race for those owners who wish to come west.

Three large schooners have been built this winter and their owners want some racing. Such boats as the Atlantic, Karima, the new one for Robert E. Todd; Enchantress, W. E. Iselin's new boat, and others of that size can do little on the short triangular courses and races over ocean courses are best suited for these craft to show their speed. To develop such boats James Gordon Bennett, when commodore of the New York Y. C., offered the Cape May and the Brenton's Reef cups, and after having been in the trophy locker for many years, they are to be in competition again. The Brenton's Reef Lightship cup is to be sailed over a course from Brenton's Reef Lightship off Newport to and around the Ambrose Channel Lightship and back. It is held subject to challenge and the race must be sailed within fifteen days of the issuing of the challenge, but the holder of the cup does not have to defend it more than twice in a season.

The conditions for the Cape May cup are similar to those for the Brenton's Reef cup, but the course is from the Ambrose Channel Lightship to and around the Five Fathom Lightship off Cape May and return. Robert E. Todd has challenged for both of these cups, which are held by the Atlantic, owned by Wilson Marshall. The regatta committee of the New York Y. C. is anxious to make these two races features of the season, and in addition to the Atlantic and Karima, defender and challenger for the cups, it is very probable that Morton F. Plant's new schooner Elena, William E. Iselin's new 100-foot schooner Enchantress and possibly some others will take part in the races. There are several cruising schooners owned by American yachtsmen that would do well in such races as these and their owners are becoming interested in the races.

The Brenton's Reef cup was offered in 1872 and the winners have been: 1872, Rambler, J. M. Forbes; 1873, Rambler, J. M. Forbes; 1876, Idler, Samuel J. Colgate; 1885, Genesta, Sir Richard Sutton; 1893, Navahoe, Royal Phelps Carroll; 1904, Atlantic, Wilson Marshall. The Genesta transferred the cup to Britannia and that yacht sailed against Navahoe.

The winners of the Cape May cup have been: 1872, Dreadnaught, A. B. Stockwell; 1873, Enchantress, J. F. Loubat; 1877, Idler, Samuel J. Colgate; 1885, Genesta, Sir Richard Sutton; 1886, Irex, J. Jameson; 1889, Wendur, T. B. C. West; 1893, Britannia, the Prince of Wales; 1904, Atlantic, Wilson Marshall.

Cruise of Aloha.

It is not the good fortune of all to be able to make long cruises in fine big sailing craft. The next best thing to making one of these cruises is to be able to read about those who do, and the recent run of former Commodore Arthur C. James' big yacht Aloha, from Newport to Nassau is interesting, because it gives a whiff of the sea. It is a tale told by one who was on the yacht.

"On Feb. 19, while the good ship Aloha was lying in Newport Harbor, we received orders to proceed to Nassau. The sails were loosed, the anchor hove short and broken out, and we steamed for Fort Adams. With the fort abeam at noon, steam was shut off, the propeller feathered and with the wind north, we moved along at a good pace and passed Montauk Light at a quarter past three o'clock that afternoon, with a smooth sea and under full sail.

"As the day wore on, the weather changed, the wind hauling southeast, and it looked like snow, which followed. The night was dark and gloomy. The gray old sea was showing signs of disturbance, and the yacht reeled off the knots in admirable shape. As the night advanced the wind increased and Aloha began to 'fly.' The weather was threatening at daylight, and soon after it was blowing a moderate gale, and Aloha at times was making fifteen and a half knots, which means 17.82 statute miles an hour.

"It had been found during Aloha's previous cruise that the 15-knot log was exceeded several times, so a 16-knot log was made, and recently a new machine was provided that will register seventeen knots. This speed it is believed by those interested in Aloha will be made by her some day under favorable conditions.

"The yacht has made under both lower topsails and a staysail 14¾ knots an hour, and you could not see for the spray she knocked up. But to stand under the lee of something and with collar turned up to keep the snow out of your neck and see her lunge through it the first morning out from Newport was a sight for the gods. The wind screamed through the gear, the weather rigging was as taut as iron bars, and as the yacht plunged a mass of foam flew from the lee bow as white as snow, with the wind from the sails tearing it into ribbons and sending it far to leeward; and while to windward the tops of the seas were knocked off in a shower of spray that struck your oilers like a shot hitting you.

"On Feb. 20, at noon, 212 knots were read off the automatic log as having been made since we left Fort Adams, an average of 8.9 knots an hour. That afternoon the wind shifted northwest, and as night approached, the sea increased and it was squally. The weather prevented any observation of Feb. 21, but at noon the log showed 238 knots, an average speed of 9.9 knots an hour for the twenty-four hours.

"The wind, still northwest, moderated during the morning of Feb. 22 and the skies were clear. At noon the log told the story of 220 knots, an average of 9.1 knots for the sea day. The yacht's position was latitude 31.9, longitude 74.31. Aloha was then under full sail, the wind being west-northwest and the sea moderate.

"The weather was warmer that night, and we had a glorious moon, not a New York moor that looks at times from long association like a stage moon, but a tropical moon in all its beauty.

"To stand that night and watch the shadows on the canvas was like being in fairyland. Backstays cast shifting black lines on the sails as the yacht swayed to the sea; weird shadows appeared and disappeared quicker than thought, while the wind sang in many tones in the rigging. If that night's scenes could have been bottled up and brought home with us it would, indeed, be a pleasure.

"The wind was northwest and moderate, with smooth sea, and the yacht still under full sail the morning of Feb. 23. It remained clear and bright during the day. With the sun striking the bow waves as they went far away to leeward, beautiful rainbows were seen in the mist. They came and went like phantoms, and at times the deck watchers could easily imagine a fairy dancing in the mist; probably the good fairy that watches over yachtsmen on dark nights; you can only see her when the sun shines—like a humming bird poised over a flower—there's a prismatic glitter, then 'tis gone.

"At noon this day, Feb. 23, Aloha was in latitude 27.1 north, longitude 76.38 west. The log's records for the twenty-four hours was 267 knots, an average of 11.12 knots.

"Elbow Key was abeam at 4:45 o'clock that afternoon, and at 8:45 o'clock that evening sails were furled and Aloha steamed to an anchorage off Nassau.

"There is no rig like the square rig for sea work, especially for men who are born with the love for salt water and all the poetry thereof."

Beach Yachts New Novelty Here.

The beach yacht is the latest novelty here. It has been popular at seashore resorts for some time. It is something like an ice boat, but has wheels instead of runners. It is said to handle as easily as any sailing craft and to be able to make 40 to 50 miles an hour. The craft has been designed by H. E. Dantzebacher, of Philadelphia, and one is to be built for use at Five-Mile Beach.

Bicycle wheels with pneumatic tires are used and the frame is either gas pipe or seamless drawn steel tubing. The frame complete weighs about 150 pounds. It is made to take apart easily and can be stored in a small space for transportation. There are three wheels, one aft and two forward, one at each side of the mast step. The craft is rigged with a jib and mainsail which are cut similar to the sails of an ice yacht. The helmsman keeps the craft on an even keel by sitting well out to windward.

Motor Boating.

Eliminating Trials.

The regatta committee of the Motor Boat Club of America announces that the eliminating trials to be held for the purpose of selecting three defenders for the British International trophy for motor boats will be held at Huntington on Aug. 16, 17 and 18. With a view to stimulating motor boat races in this country as much as possible, the club has decided to present a cup for high speed motor boats measuring 40 feet over all and under for a race that will be from 100 to 150 miles in length. The exact distance has not been agreed upon, but it will not be less than the century mark. This is probably the longest distance that has ever been arranged for such high speed craft, and

the intention is to make it for motor boats what the Grand Prize race is to automobile racing.

By limiting the over all length to 40 feet the boats that will race for the British International trophy will be eligible to enter the long distance high speed trophy contest. Five starters are expected for the elimination trials, and the two eliminated will have an opportunity to come back in the endurance event. There will be no limit as to horsepower and the event probably will be held during the national motor boat carnival at Huntington beginning on Labor Day, Sept. 4. The rules and regulations have not been agreed upon, but each boat taking part will be allowed to take on a fresh supply of gasolene if required.

Yacht Yards Busy Places.

Just now every yacht yard presents a very busy scene. Work is being rushed on the new boats and old ones are being overhauled getting in readiness for the season. The continued cold retarded things very much, but every one hopes that when it does settle in fine it will stay fine and get warmer without any setbacks.

There have been many yachts built during the winter, and the motor boats have been the most popular type. Motor boating is growing more each season, but while the fleet of motor boats grows the fleet of sailing craft does not get any smaller, and this winter there are more new ones on the stocks than there have been for several seasons.

One of the busiest spots in this vicinity is at Morris Heights, where the Gas Engine and Power Company is finishing boats of all sorts and sizes each week.

The largest yacht building and one that will attract much attention is the 165-foot twin screw, steel and tobin bronze steam yacht, designed by Charles L. Seabury for M. C. D. Borden. This vessel is rapidly nearing completion and will be launched very shortly; 35 miles per hour has been guaranteed for the Sovereign, which is the name of the new yacht. Capt. Charles Conk will be in charge.

The new twin screw, 138-foot steel motor yacht building from Charles L. Seabury's designs for Morton F. Plant at the same yard is also progressing very rapidly. This boat will be fitted with two air starting and reversing Speedway motors, and will be delivered on June 1, according to contract. The name of the new boat will be Thelma and it will be in charge of Capt. Wickes.

Carl G. Fisher's new 90-foot motor yacht Raven is almost completed. This boat has two air starting and reversing Speedway motors. Albert Y. Gowen's new 77-foot twin screw motor boat Speejacks is completed and will be launched at an early date. This boat has two six-cylinder Speedway motors installed of 200 horsepower each. Both Mr. Fisher's and Mr. Gowen's yachts will be used on the Great Lakes.

The 65-foot single screw cruising motor boat for Henry B. Joy, of Detroit, is well along. This boat will be equipped with a six-cylinder 100-horse-power engine and will be named Spray II. Mr. Joy will use the new boat at his summer home at Watch Hill, R. I.

A. B. Waring's new 65-foot motor boat for service on Moosehead Lake is growing. Two six-cylinder—60-horsepower each—engines will be installed. The 50-foot cabin motor boat Kalolah, for Albert H. Schmidt, of Detroit, is about completed and will be launched upon the owner's arrival from Europe. A six-cylinder 60-horsepower engine is installed.

The 42-foot raised deck cruiser Tsana III., built for Herbert W. Warden, was shipped recently to Havre, France. The boat will be used in that vicinity for a short time by the owner and then shipped to Lake Geneva in Switzerland.

The 39-foot mahogany speed boat Eph, also for C. G. Fisher, will be tried out very soon. A speed of 34 miles an hour is guaranteed for this boat. She has a six-cylinder 200-horsepower Speedway engine. W. V. Kelley, of Chicago, is having a 32-foot Speedway runabout built which is to make 15 miles an hour. A six-cylinder 35-horsepower motor will be installed. The boat will be used in the vicinity of East Hampton, L. I., where the owner has a summer home. John C. Eaton, of Toronto, Canada, is having a duplicate of the Kelley boat built for service on Muskoka Lakes in Canada.

Walter P. Bliss, owner of the steam yacht May, is having a new 28-foot mahogany motor boat built. The steam yacht Hiawatha, J. B. Ford, owner; the steam yacht Carmina, F. S. Smithers; the steam yacht Zara, A. L. Stephens; the steam yacht Winchester, P. W. Rouss and Alfred I. du Pont's steam yacht will all be provided with new Speedway yacht tenders built of teakwood.

E. S. Woodward, of New York and James R. Sheffield, of New York, also Mrs. E. V. Z. Lane, have placed orders for 30-foot Speedway runabouts. Arnold Wood, of New York, has placed an order for a 37-foot open gasolene launch with six-cylinder engines for service in Maine waters. S. W. Bonsall has purchased the 47-foot twin screw motor boat Nawquisi. H. J. Rock, Lake Charles, La., has purchased the motor boat Brownie II. and changed the name to Onward. C. B. Baldwin has purchased George McMinn's 37-foot hunting cabin cruiser Niobe for use on the Chesapeake Bay.

The steam yacht Kanawha, owned by A. Baudouine, is having new boilers installed as well as other improvements. The steam yacht Vixen, John D. Archbold, is having a new boiler installed. John F. O'Rourke's motor boat Lady Jane is having two new engines installed, four-cylinder type, 50 to 60 horsepower each. The Rober Machinery Company, of Portland, Ore., is having four Speedway engines shipped to it, two six-cylinder 135-horsepower twin screw, one 175-horsepower air starting and reversing, and one six-cylinder 60-horsepower.

George McKessen Brown is having a 28-foot mahogany speed hull built, in which a 100-horsepower foreign make of engine will be installed.

A four-cylinder 4½ by 5 Speedway engine has been shipped to J. White, East Cowes, Isle of Wight, England. A four-cylinder 40-horsepower engine has been ordered by M. A. Healey for a new launch he is having built in Wisconsin. A new power yacht tender has just been completed for T. M. Russell, of Middletown, Conn. A 16-foot power boat for use principally for fishing has been built for Albert H. Schmidt, of Detroit, Mich. A four-cylinder 40-horsepower engine was shipped to the Huasteca Petroleum Company, Tampico, Mexico. A new six-cylinder Speedway engine was installed in the 35-foot semi-speed boat Daisy Adele, owned by D. P. Duffle, West New Brighton, Staten Island. A new 125-horsepower six-cylinder engine has been installed in the 43-foot motor boat Winninish, owned by LeGrand C. Cramer, of Lake George.

The new 25-foot motor boat for F. C. Fowler, for service on Rangeley Lakes, is completed and ready for shipment. A four-cylinder, 40-horsepower engine was installed in a 40-foot open launch owned by St. John Wood. A four-cylinder 20-horsepower engine will be installed in the owner's tender belonging to the yacht Enchantress, now building by Lawley for W. E. Iselin. The new 20-foot mahogany motor boat which was exhibited at the Hotel Breslin during the motor boat show was tried out a few days ago and made 19 miles an hour. H. Anderson, of Philadelphoia, Pa., has bought Major C. Ewin's hunting cabin launch Bessie. A new six-cylinder 60-horsepower engine has been sold to E. W. McCready, to be installed in his 60-foot hunting cabin launch Mary Ann, which he uses on Chesapeake Bay.

Scripps' Cruise for Motor Boats.

The committee having in charge the arrangements for the Scripps' cruise for motor boats has framed the rules and arranged the details. The rules were made similar to those governing the Glidden tour for automobiles.

The members of the rules committee were D. H. Lewis, Buffalo, chairman; W. E. Scripps, Detroit, donor of the trophy; Robert E. Power, Cleveland; Frank M. Martin, Buffalo; Dr. A. E. Hubbard, Commodore of the Great Lakes Power Boat League, and H. H. Boggs, Detroit.

The cruise will start from Detroit, Aug. 7 and will wind up at Buffalo Monday, Aug. 14. The first day's cruise will cover 82 miles and the checking in point will be the Rushmere Club. The first leg of the cruise will be by way of Chatham. A trifle over 77 miles will be covered on the second day of the cruise. The start will be made from the Rushmere Club bright and early and the windup will be at Mount Clemens. Stag Island will be passed on this leg. Put-in-Bay will be the point at which the cruisers will put in at the end of the third day's run. This will cover 84½ miles. From Put-in-Bay the cruisers will make for Toledo by way of Point Pelee.

The distance to be covered on this leg will be 75 miles. About 90 miles will be covered on the sixth day of the cruise. From Toledo the cruisers will ship for Rocky River, just west of Cleveland. Saturday's run will be the lightest of the cruise. Only 54 miles will have to be negotiated by the cruisers. The controlling station will be at Rondeau. Sunday's cruise will be a long one, 95 miles. Erie will be the destination point. The final leg will be from Erie to Buffalo.

The cruise will be open to boats of the cruiser type of not less than 30 feet in length. Each cruiser must carry at least one man for every 10 feet of length. Entrants must be members of clubs affiliated with the Great Lakes Power Boat League, the Western Power Boat Association or the American Power Boat Association The cruise will be a severe test of the cruisers. There will be only one control, this at the end of each day's run. Every entrant will be penalized for every minute that his engine stops during any leg of the cruise. The engines will have to move continuously from the time that boats start out in the morning until they have checked in at night. Entries must be filed with H. H. Boggs at Detroit not later than July 15.

Flag for Gasoline Boats.

Morris M. Whitaker, secretary of the American Power Boat Association, writes:

"At a recent meeting of the American Power Boat Association, the matter of a distinguishing flag to be used in connection with gasolene supply stations was brought up, and as secretary, I was asked to get in communication with the different papers interested in and fostering motor boating, and with the principal oil companies, with a view of recommending the use of a distinguishing flag, flown above each station, so that it can be readily seen by boats passing by, as under present conditions these supply stations are often located at the head of slips or at points not readily discernible from passing craft.

"It was suggested that a rectangular white flag with a black cross, the arms running vertically and horizontally, would be readily distinguished against most any background, and I trust that you will give this matter of a distinguishing flag publicity, which will be instrumental in leading to its adoption.

"If clubs and individuals will impress upon the fuel dealers the value of such a distinguishing flag in bringing them business, I think its universal adoption would be a matter of only a short time."

Engine Builders Elect Officers.

At a meeting of the executive committee of the National Association of Engine and Boat Manufacturers, held at the Engineers' Club, New York city, the following officers were unanimously elected to serve for the ensuing year: President, John J. Amory. First Vice-President, Henry R. Sutphen; Second Vice-President, W. J. Reynolds; Third Vice-President, W. H. Mullins; Treasurer, James Craig.

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Sparks.

A racing launch, which is expected to be one of the fastest afloat, has been designed by H. E. Dantzenbecher, naval architect. The length over all of this boat is 40ft. 5in., and with her twin 6-cylinder engines, is expected to make 40 miles per hour. The hull is of special construction, and this, as well as the engines, which are all of Mr. Dantzenbecher's design, are expected to be marvels of lightness and strength. Each engine will give over 200 horse-power and weigh only 1250lbs. This boat, when finished, should make a stir. She is to be entered in the international race for the Harmsworth trophy and the American Power Boat Association gold challenge cup on the St. Lawrence River.

Harry Rusmussen, of Essington, is preparing to launch the glass cabin launch of Mr. Bretsford, of Woodbury, N. J. Rusmussen is also building a 24ft. gas launch for Mr. Chambers, of Ocean City, and a 40-footer for Mr. Schaffer, of this city.

Weather Spoiled the Paint.

The weather has been very tantalizing to those owners who are fond of early outings on the water and who like to have their boats in commission this month. There have been some fine warm days and many wet and cold ones. One enthusiast a few weeks ago thawed out with the warmth, purchased $4 worth of paint and spent the day painting his boat. She looked fine when he got through at sundown and he figured on getting the boat overboard the next day. That night there was a snow and sleet storm and the craft looked as if it had weathered several winter storms the next day. The paint was all washed off. He waited then until last week and with $2 worth of paint he worked again and had the deck yellow, the top sides white and the underbody a bronze red. It rained that night as if it had never rained before and was making up for lost time. The next day the yellow had run down to the white and the white was smeared over the red. "Two days' hard work and $6 gone to waste," said the enthusiast. "Now, I'll wait until July."

The Marblehead Race.

The Motor Boat Club will handle the Marblehead race this year. For two seasons this event has been managed by the Crescent Athletic Club, and the prizes donated by Commodore F. M. Wilson have been the most handsome offered for motorboat racing. Two years ago there were twelve starters and Elmo II. won. That year a boat named Kitcinque, really not a cruising boat, but technically within the rules, started and was burned off Gay Head. That boat did much harm to motor boating. Last year another boat, Blue Peter V., was built. She had a 60-horsepower motor, and although she made fast time and finished first, she was beaten by Elmo II. on corrected time. The Crescent Club thought that the rules should be amended so that in some way power should be limited and would not handle the race again until some such change had been made. The Motor Boat Club of America will start the race this year from off the Château des Beaux Arts, and it is said the rules will be changed so that high power boats will not be eligible. This race is to start on July 14.

New 25-Footers.

Two 25-foot motor boats are building by J. E. Vanderslice at Camden for members of the Ocean City Y. C., and others, it is said, will follow. The plans were drawn by J. W. Hussey and the boats should be seaworthy and have some speed. The freeboard is greater by about four inches than is usual amidships and the flare forward gives quick lifting where the sea runs high. The reduced deck crown gives a greater and larger appearance and is permitted by the unusual low engine position.

The motive power is a four-cycle Sterling engine under hatches forward of the bulkhead, with exhaust led aft through seamless and very thin copper tube, water-cooled and with spark throttle and reverse lever controls at bulkhead, which enables the owner to operate the boat with the ease and comfort of an automobile. The cockpit is ample, with accommodations for four on the two permanent seats and two more in chairs.

The construction is carvel built, light but effective, and every timber and carline adds to the hull stiffness. The frame spacing of five inches insures a perfectly tight hull under stress. The finish is in mahogany and a special feature is an inlaid cockpit floor of two-inch white pine and one-eighth inch mahogany alternating. The decks are canvased with canor finish and fittings polished brass. The rudder and strut are especially designed for minimum resistance and maximum rigidity.

This type of boat forming a one-design class bids fair to add greatly to the interest of motor boat racing. A speed of 22½ miles an hour is expected.

The Fitting Out Season.

Winter lingers and the owners of small craft who are fond of fitting them out early and doing the work themselves are fretting. It is useless to attempt to get a boat ready for the season until the weather is warm and settled, and those who start in early often find that they have to do the work all over again. The Yachtsman in its last edition tells what should be done to get a motor boat in shape. These fitting out yarns are told almost every season, but while they often tell what is generally known they fill in time and often they give new wrinkles to the veteran and lots of good instruction to the novice.

Any disquisition upon the subject of fitting out a motor vessel must naturally be of a character to appeal to the man who is accustomed

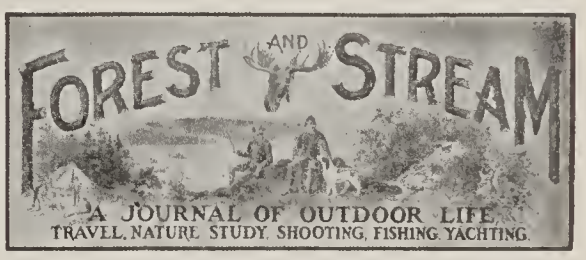
YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.

Gas Engines and Launches.
Their Principles, Types and Management. By Francis K. Grain.
The most practical book for the man or boy who owns or plans to own a small power boat. It is motor launch and engine information boiled down and simplified for busy people, and every line of it is valuable. Cloth, 122 pages. Postpaid, $1.25.
Forest and Stream Publishing Co.



CORRESPONDENCE.
The Forest and Stream is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.
Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:
Three Copies, $7.50. Five Copies, $12.
Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.
Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.
Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.
Display Classified Advertising.
Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.
Solid Classified Advertising.
For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.

to, or who intends to fit out his own vessel entirely, or almost entirely, by himself. The man who does not go in for fitting out on his own account can be treated very simply; he only needs to place his boat in decently competent hands to have the whole series of operations which constitute fitting out done for him without more ado. Indeed, one is inclined to give this advice to all men who do not take a really keen personal interest in their craft; with all boats, sail as well as power, the mere running of them is only a part of the pleasure to be extracted from their ownership. The true yachtsman, the "husband" of his packet, finds a wealth of pleasure in attending to the little wants of his boat and applying corrective remedies to the ailments which afflict her from time to time. People are remarkably fond of referring to the winter season as the "off" season; in reality it is one of the busiest times of the year for the yachtsman. There are a thousand and one little matters connected with every boat which need attention; there is little time available in the summer and autumn—the "yachting" season—so the yachtsman really can do more to his boat in this "off" season and be brought into more intimate contact with her than at any other time in the twelvemonth.

To get the most out of any boat, to extract the fullest enjoyment from her, the owner must be in such sympathy with her that he becomes a part of his vessel when running her. This understanding is quite as necessary in a power boat as in sail yacht. The really enthusiastic motor boat man admits that his engine "talks" to him, his ear is attuned to the engine's note, and the slightest change in the rhythm of her running lets him know exactly what she is about to do. A great deal is to be learnt in this direction while the motor is running, and a great deal more, almost, while the owner is taking care of her between runs or between seasons.

It strikes one as a particularly healthy symptom that the number of men who perform all the operations that go to the fitting out of their boats is on the increase. Naturally, such owners are to be found more in connection with the smaller size vessels. A large motor boat or power yacht entails as much, if not more, work in fitting out than does a yacht of the same dimensions. If a man has not the time to spare—or lacks the inclination, perhaps—then the best thing he can do in his own interests is to entrust his boat to one of the numerous firms available and get things done for him, properly and thoroughly. But the man who, for any reason, is keen on doing things for himself, will find intense pleasure in getting his boat in trim for the next season's running. Fitting out is hardly a job to be worked off in a short time, just before the season opens. As a matter of fact, it should begin when the boat is being laid up; paradoxical though such advice may sound.

Laying up and fitting out are much more intimately connected than many men realize, particularly so with motor boats. Protection from the winter's weather is the chief reason for laying up, of course, but a great deal can be done at that time of year which will save time and trouble in the early spring following. An early start in fitting out brings its own reward very often in our climate, as the owner is then in a position to take advantage of any spell of fine weather which may happen along while his more dilatory acquaintances are slaving ashore.

Everything connected with the fitting out of the motor and its gear together make up the bulk of the work entailed in fitting out any motor boat. The hull is, in a way, a minor question, as unless the driving gear is in perfect form, the most resplendent of hulls is very little use. It is also the work which must be undertaken first of all; it can become a frightfully messy job under certain circumstances, and it is an immense convenience to be able to fit out without regard (comparatively) to the hull. There is no use at all in approaching the job in a namby-pamby spirit or with the tips of the fingers. Oil and grease are there, and the best and most sensible course to pursue is to get right in and (suitably clothed) not worry about the state of filth one will ultimately get into. And, on this subject, a word of advice: wear aged clothes, useless for anything else, and don't worry about overalls, which are a nuisance, always.

If the boat has been properly laid up, a large proportion of the preliminary spade work will have been done. With most of the small movable accessories stripped from the boat and stored indoors they are available throughout the winter, and the prudent owner will have operated on some, at least, of them, finishing them off betimes. But the prudent owner is none too common, and the following actual experiences of the worst and foulest fitting-out job ever undertaken by the writer should convey a useful moral in addition to covering most every point connected with fitting out.

The boat was a small launch, half-decked, with a useful 2½ to 3-horsepower motor running at a moderate speed. Both engine and boat were what might be called "popular priced" articles; not a penn'orth of decent finish about them, but fairly well made, especially the motor, and capable of affording a deal of fun. When the boat was delivered on the scene of operations—a back garden, in fact—she was a thing to strike terror into any man's heart. Everything was in her just as it had been left the last run—many months before.

A start was made by cleaning the inside of the hull sufficient to allow of the possibility of sitting down. Then the whole ignition gear was stripped from her; coil and battery, wires, switch, and contact maker; and that laid on one side for attention in the evenings. Every scrap of brasswork about the hull: cleats, fairleads, tiller rope sheaves, even to the brass letters of her name; were all removed. The reversing propeller, with lever and linkwork, was removed, together with the stern tube. Carburetter and lubricators were taken off the engine. The pump, copper piping, and strainer of the water circulating system, were also removed. Lastly, the fuel tank and piping came out; leaving a bare hull and the stripped engine.

After some consideration it was decided to start on the remains of the engine first; when that should be finished the hull could be proceeded with while the accessories were being got ready. The cylinder head was removed and the cheeks of the crank case taken off to get inside and remove the crank shaft, after casting the big-end adrift. The piston lifted out of the top of the cylinder; and all the component parts were get-at-able. The state of the cylinder wall was a proof that a motor can receive remarkably little attention without being much the worse for neglect. Though the engine had never been opened up since the boat had been bought the inside was in a very satisfactory condition. Scraping with an ancient dinner knife, worn thin and springy, removed the carbon deposit; the inside was thoroughly wiped clean and greased. The piston rings were badly stuck; lengthy soaking in paraffin cleared them, and after thorough clensing of the connecting rod parts and crank shaft, these parts were all assembled again, after thorough greasing. It was remarked that we were putting on as much grease as would suffice for the launching of a liner, but it did no harm apparently, beyond making a frightful smoke for some time after she was got running again. The joints where the crank case ends fit are extremely important in a two-cycle engine; so the faces were thoroughly scraped with the invaluable table knife, and the joints remade with oiled brown paper, the very best thing to use in that part of a motor.

The cutting of joint rings is a simple matter—when the method is known. They are not cut, as a matter of fact, but hammered out. A circle of brown paper is cut something larger than the outside diameter of the joint; this is laid over the "check," then gentle tapping with a small mallet—the end of a hammer haft will do—round the inside diameter removes the useless interior. The ring is treated in the same way for the outside, and for each if the bolt holes. It is useless to try and perform the operation with scissors; the result will only be failure and much bad language. The rings when cut were soaked in oil and then smeared with a mixture of thick cylinder oil, to which finely powdered blacklead had been added. The result was perfectly successful.

The joint on the cylinder head was made in a similar manner, but asbestos millboard was used instead of brown paper; cut in the same manner, also soaked in thick oil and smeared with much oil and blacklead, and the cover then screwed down tight.

The oil burns out after starting up, and the cover should be tightened up some more. The burnt oil and blacklead together make a perfect joint, which appears to have the additional advantage of being easy to "break" when wanted. As the work had to be done outside, and the only protection available for the engine was the tarpaulin boat cover and some sacks, great care was taken throughout to prevent wet or moisture entering the inside of the engine. The cleaning of the piston, connecting rod, and crank shaft, was hurried through with all speed, and once the motor was re-assembled the corburetter orifice in the crank chamber, and the spark plug and priming-cock holes on the cylinder head, were carefully plugged with wooden plugs wrapped in oil-soaked cloth.

The overhauling of the reversing propeller demonstrated certain facts in electro-chemistry very plainly. The inner rod connecting the reverse lever with the blades was of iron, while the blades themselves were bronze; as the cover on the after end of the boss was missing the steel rod was eaten right through. Happily it meant nothing more dreadful than obtaining a turned rod of certain diameter and length with little extra in the way of pins or screw cutting. But it taught a lesson in carefulness; everything should be of bronze in a propeller; if by chance there is any iron in proximity to bronze there should be proper protection from sea water.

As the boat lay usually on mudflats, drying out at every tide, a certain amount of filth in the water circulating system was inevitable, as there was no gauze in the strainer on the water suction pipe. Happily it was a plunger pump with a remarkably powerful delivery, so the amount of silt was really less than was anticipated. However, as a matter of precaution, the pipes were washed through by coupling up to the domestic supply, and the pump thoroughly cleaned and re-packed round the plunger. Every joint on the water circulating system was looked to; they were sort of conical joints, which were stated to be a continual source of annoyance; so they were attended to with a little emery just to make sure.

[TO BE CONCLUDED.]

Oct. 4-5.—Columbus (O.) G. C. L. Fisher, Sec'y.
Oct. 10-12.—Des Moines, Ia.—Iowa State tournament. C. W. Budd, Chairman Board of Directors.
Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

DuPont Gun Club.

Wilmington, Del., April 2.—Despite a cold wind, which swept across the grounds, close to ninety shooters faced the traps of the Du Pont Gun Club yesterday afternoon. The cross-wind, together with the uncertain flight of the targets prevented the usual high scores of some of the club's best marksmen. The best score of the afternoon was made by J. B. McHugh.

He broke 24 out of a possible 25 in the trophy event and thereby won one of the T. Coleman du Pont silver spoons. This was the best shooting of the day, although H. H. Lukens, in a practice event, missed but one in a string of 25 birds.

The ties in the merchandise event of last Saturday resulted in Drs. Steele and Rumford again tying in Class B. The spoons in Classes C and D were won by G. H. Mitchell and William Coyne with scores of 22 and 18 respectively.

The two-man team championship race proved attractive in the neighborhood of thirty two-man teams competing. This will be an elimination race. The winning team wil be presented with two silver loving cups.

The scores in the T. Coleman du Pont merchandise events were:

Class A, 24 out of 25—J. B. McHugh.

Class B, 19 out of 25—D. A. Grier, J. McKelvey, R. P. Choate, Clyde Leedom, L. R. Beauchamp.

Class C, 15 out of 25—J. E. Gregg, H. S. McComb, H. L. Morgan, W. A. Casey, W. M. Hammond, L. C. Lyon, Dr. Betts, H. C. Pollock, H. P. Carton, S. Tuchton, W. S. Garvan.

Class D, 12 out of 25—P. T. Pennington, William Neely, C. R. Kenworthy, W. F. Jensen.

The full scores, 25 targets each man, follow:

Guy Lambert	9	C B Holliday	16
Bayard John	15	S J Newman	13
J E Gregg	15	W Tomlinson	11
D A Grier	19	P T Pennington	12

Philadelphia Trapshooters' League.

Philadelphia, Pa, April 2.—A surprising defeat for Highland and South End's victory yesterday made the outcome of the championship in the Trapshooters' League anything now but a certainty. Providing the Camden gunners can continue their good work, the Edge Hill men will have to shoot much better than they did yesterday to come out on top.

The much-trampled-on Meadow Springs Club made all this dope possible. The West Philadelphians, by giving Highlands their first defeat of the season, not only accomplished what every other club has been aching to do, but failing to accomplish, but as well put the result of the race in the doubtful class. South End cleaned up both the S. S. Whites and Haddonfield teams, hut had to shoot some to do so.

The day favored good shooting, hut very few high scores were turned in for the afternoon's pastime. South End's victorious score of 412 was the best team mark, with the Whites second with 402. Meadow Springs smashed an even 400, trimming the leaders, while the Highlanders totaled 387. Haddonfield made 364.

Forty-five smashes out of fifty targets was the best any of the League gunners could get. Cordery, Tomlin and Cook, all South End men, reached that mark, while Tansey and Landis, of Highland, and Hogan, of Meadow Springs, all broke 44.

The points scored and targets broken follow:

	Points.	Broken.
Highland	14	2168
South End	13	2119
S. S. White	11	2073
Haddonfield	9	1965
Meadow Springs	8	2054

South End in Second Place.

Philadelphia, Pa., April 2.—The South End Gun Club yesterday cinched second place in the Philadelphia Trapshooters' League race by a victory over the S. S. White and Haddonfield teams over the South Camden traps, the scores being: South End 412, S. S. White 402, Haddonfield 364. The contest for high honors was keenly contested, and the South End and Whites ran neck-and-neck almost down to the last squad. Then Dr. Cook swung into the breach, and by a 45 settled the fates of the Dentists, although Appleton came through with 40, he being the last man at the traps. South End's victory was largely due to the shooting of Cordery and Tomlin, who shared the high gun honors with Dr. Cook. These two shooters were in the same squad, and the South Enders let out a mighty yell when they had finished.

The Whites did not have a large turnout, and that they did as well as 402 was a commendable performance, as they were minus some of their best guns. Frank Cantrell worked hard to keep his club to the fore, and his 44 was made under trying conditions. Billy Severy started the hall rolling with 42, and Hand secured the same total, while Fontaine went them one better with a 43. Haddonfield proved unexpectedly weak, and though they had a large squad, their members appeared to be all out of their usual League form, and their total was decidedly below the average. They only had three men with 40 or better, of whom J. Peacock starred for his club with 42.

South End.		S. S. White.	
Cordery	45	Cantrell	44
Tomlin	45	Fontaine	43
Cook	45	Severn	42
Quigley	41	Hand	42
Hineline	40	McKean	40
Muller	40	Appleton	40
Green	40	Wilson	39
Chalmers	39	Ford	39
Watson	39	George	38
Butler	38—412	Beyer	35—402

Haddonfield.			
J Peacock	42	F Holloway	38
E Tomlinson	40	Gaskill	33
F Tomlinson	40	Eyster	32
S Bergen	39	Tompkins	31
E Webster	38	Bennett	31—364

Scores made by gunners who failed to qualify for their teams:

South End—W. Johnson 38, Wakeman 37, Rexon 37, Slear 37, Peak 37, Simpkins 37, H. Anthony 37, Holloway 36, Shattuck 34, Fleming 34, Dehner 34, Peckman 32, Bartlett 31, Murphy 31, J. Anthony 26, Horner 26, Newkirk 25, Bavington 24.

Haddonfield—K. Peacock 37, G. Bergen 29, C. Holloway 29, Stafford 28, J. A. Logan 28, Dungan 26, Manning 22, Pedloe 22, Lye 21, J. Logan 21.

S. S. White—*James 38, Sidebotham 35, *Lewis 33, *Watson 33, Rowland 33, Abbott 32, *Pratt 29.

*Visitors.

Meadow Springs Wins from Highland.

Philadelphia, Pa., April 2.—Meadow Springs Gun Club pulled a nice little first of April surprise on the Highland gunners of Edge Hill yesterday afternoon at Fifty-seventh and Lancaster avenue by winning the Trap-shooters' League match from the leaders by a score of 400 to 387. Meadow Springs shot a consistent race from the start, and six of their ten high men succeeded in getting 40 or better. The Highlands were erratic. The usually high men from Edge Hill shot away below form, only four getting 40 or higher.

The weather favored good scores, although the wind at times carried the bluerocks on flights which were not of the best for the sportsmen at the traps. But very few had any actual cause to blame old Boreas, for the most of the misses were due to over-anxiety and not the wind.

Hogan led the Meadow Springs men with 44 breaks, while Tansey and Landis, of Highland, both reached that mark. Lester German, Shattuck and Slear also shot in the day's events as visitors. Shattuck is a Grand

American Handicap champion. German was the high man of the day, breaking 47 out of his 50, while Slear broke every one of the 25 he pointed his gun at. Shattuck lost 7 of his 25. Scores:

Meadow Springs.		Highland.	
Hogan	44	Tansey	44
Sloan	43	Landis	44
Hillpot	41	Pflegar	42
Williams	40	F Heeman	40
Henry	40	Hoover	37
Clegg	41	Biddle	37
Coyle	39	Dalton	36
Mardin	38	Anderson	35
Kirsch	37	Wentz	35
Moore	37—400	Perry	37—387

Scores made by gunners who failed to qualify for their teams:

Meadow Springs—Keenan 22, Wiley 36, Emerson 34, Pierce 26, G. Smith 30, Pepper 25, Hewlett 32, Gideon 36, Chandler 34, Murdock 30, Garrett 27, G. L. Emery 30, Torpey 35, Fish 22, Woodward 26, Renner 34, Lemmon 26 Warren 36, Hall 36, Kincker 33, Letford 21, Gothard 29.

Highland—German 47, F. Meehan, Jr., 16, Lindsley 28, Davis 31, Hibbs 32, Harkins 32, Flannagan 34, T. Meehan 31.

Tenneesee Trapshooters' Association.

Memphis, Tenn., March 26.—The Tennessee Trapshooters' Association was formally launched at a meeting held yesterday morning at 10 o'clock, at the Hotel Gayoso, attended by prominent trapshooters from various parts of the State. The purpose of the organization is to advance trapshooting in general and to provide for the holding of State registered tournaments.

A general discussion of the purport and meaning of the organization was entered into. No action was taken as it was deemed advisable to defer active work until by-laws and rules could be drafted and submitted to the board meeting, to be held in Memphis on April 8. A committee consisting of James Day, J. B. Goodbar and B. H. Finley, was appointed to draw up the rules and regulations.

Those in attendance yesterday were: D. A. Edwards, Union City; P. B. Plummer, Chattanooga; Fred Schmidt, James Day, J. H. Sims, J. B. Goodbar, B. H. Finley and John W. Turner, of Memphis. The following cities were represented by proxy: Johnson City, Morristown, Knoxville, Chattanooga, Brownsville, Collierville and Dayton.

The following were elected officers: D. A. Edwards, Union City, President; B. H. Finley, Memphis, Vice-President; John W. Turner, Memphis, Secretary.

Every gun club in the State is accorded the privilege of joining the State Association. The membership and initiation fee is $5, subject to the remittance of the secretary and treasurer.

Indianapolis Gun Club.

Indianapolis, Ind., April 7.—No high scores were posted at the weekly shoot of the Indianapolis Gun Club on April 1, the conditions being again unfavorable. In practice, Smoke was high gun with an average just under 90 per cent. Fayette second with 84. In the trophy contest Brennan posted the high score of 45 out of 50. Fayette again was second with 43.

Practice· Events:	1	2	3	4	5	Shot at.	Broke.
Targets:	20	20	20	20	25

Smoke	41	Brennan	45
Moller	42	Hymer	40
Golden	30	Dark	35

Clearview—Riverside.

Darby, Pa., April 2.—The Clearview Gun Club won the return match shot with the Riverside Gun Club of Essington yesterday in a ten-man team contest on the Draby grounds by a score of 370 to 323. The previous match shot at Essington a few weeks ago ended in a tie, but yesterday the Darby men easily captured the race with 47 targets to spare.

Clearview had four men to get scores of 40 or better, McCullough breaking 43 out of his 50 birds and leading the entire field for the day's sport. Bockius broke 41 and Fisher and Ferry each totaled 40. Not a Riverside man succeeded in reaching the 40 mark. Wiltbank was the highest with 37. Scores:

Clearview.		Riverside.	
McCullough	43	Wiltbank	37
Bockius	41	Eachus	36
Ferry	40	Clark	34
Paulson	36	Warbel	33
Dalton	36	Donohue	33
Elwell	36	Johnson	31
Hunter	35	Worrell	30
Lohrmiller	33	Lodge	28
Fink	30—370	Bowers	27
		Fisher	40—323

Other scores made by gunners who failed to qualify for their teams:

Clearview—Krietzber 30, Ullman 29, Bonsall 27, Darby 23, Bevan 27.

Riverside—Eisel 26, Siberling 21.

Linden Gun Club.

Gloucester City, N. J., April 1.—There was a special open shooting match at the grounds of the Linden Gun Club this afternoon. The weekly shoot was discontinued for the day. The prize for the shoot to-day was an English setter dog. At the end of the fifth round there were five who were tie with a clean score, so they shot it off, and Thomas Horner won the dog for Albert Dasch.

The scores were: T. Horner 5, Clarence Redfield 5, Horner (Dasch) 5, Horner 5, Wedemyer 5, Holloway 4, Ben Martel 4, Tomlin 4, Martin 4, McMaster 4, Gaynor 4, Murray 4, Hallowell 4, Harman 4, Madara 4, Rexon 4, W. Powell 3, J. Healy 3, Tomlin 3, Gibbons 3, Hawlings 3, Martel 3, Mahan 3, Murray 3, Beck 3, Barley 3, A. Powell 3, Blymer 3, Neunheuser 3, Phillips 3, Shubert 3, Beckett 3, Barley 3, Horner 3, Bobo 2, S. Prickett 2, Holloway 2, Phillips 2, Mealey 2, Howarth 2, Stewart 2, Bennett 2, McMaster 2, Murray 2, McQuaid 2, Quingling 2, Ashton 2, Bowe 2. The others broke one or missed all of their chances.

Sweepstake: William Howarth 8, J. Mealey 7, J. Healy 7, T. Gibbons 6, F. McQuaid 6, Murray 5, W. Powell 5.

Sweepstake, 10 bluerocks: J. Mealey 8, W. Howarth 7, W. McQuaid 6, Schubert 6, Gibbons 5, W. Powell 5.

Lorain Gun Club.

Lorain, O.—The following scores were made over the traps of the Lorain Gun Club on March 31. Owing to the gale blowing off Lake Erie, it was very disagreeable for the gunners, nevertheless some good scores were made. We were pleased to have Messrs. Gilbert, Squier, Heikes, Taylor and Chamberlain with us. We had a good attendance considering the bad weather. The scores were as follows:

Event No. 1, 100 targets, strings of 20, experts:

R O Heikes	19	19	20	19	19
W R Chamberlain	17	17	18	19	19
J R Taylor	18	16	19	19	19
L J Squier	16	20	20	20	19
Fred Gilbert	18	17	18	19	20

Event No. 2, 25 targets: Gifford 11, Todd 5, Canalos 13, Black 17, Ayliffe 6, Weikel 21, Traxler 10, E. B. Gilbert 17, Faragher 14, Black 21, Hahn 18, W. Freeland 22, R. McCotter 18, J. Smith 11, Gifford 12, Ayliffe 9, Weikel 18, Murray 17, Traxler 20, E. Gilbert 23.

Event No. 3, 25 targets: Faragher 16, Black 23, Traxler 23, Damon 18, Smith 16, W. Freeland 23, Gifford 13, Hall 22, Murray 22, Hahn 22.

J. P. Trayler, Sec'y.

Western Connecticut Trapshooters' League

The newly formed league, whose prime objects are the promotion of trapshooting and the protection and propagation of fish and game, is now fairly under way. The six clubs comprising the league are busy increasing their membership and making all efforts to further the interests and objects of the associated organization. Several more clubs are expected to join before the shooting year comes to an end. Already a number of trophies have been offered for competition, as well as a substantial contribution from the Interstate Association. H. H. Hall of the Mattatuck Rod and Gun Club of Waterbury, is secretary of the league.

Tournaments for the season have been arranged as follows: May 13, Bethel Gun Club, at Bethel. May 30, New Haven Gun Club, at New Haven. June 21, Hillside Gun Club, at Long Hill. July 22, Pahquioque Gun Club, at Danbury. Aug. 19, Seaside Gun Club, at Bridgeport. Sept. 4, Mattatuck Rod and Gun Club, at Waterbury.

The Constitution and By-Laws of the League are concise and to the point, and might well serve as a model for other associated clubs of this character, and read as follows:

Constitution.

ARTICLE I.

The name of this Association shall be the Western Connecticut Trapshooters' League.

ARTICLE II.

This Association is formed for the purpose of securing and maintaining proper legislation for the protection and propagation of fish and game throughout the State, and for the vigorous enforcement of fish and game laws, and for the promotion of kindly intercourse and generous emulation among sportsmen at the traps.

ARTICLE III.

This Association shall be composed of the following organized gun clubs in the State of Connecticut: Pahquioque Rod and Gun Club, of Danbury; Bethel Gun Club, of Bethel; New Haven Gun Club, of New Haven; Seaside Gun Club, of Bridgeport; Mattatuck Gun Club, of Waterbury, and Hillside Gun Club, of Long Hill, any other organized club which this Association votes to accept. Each club shall be entitled to three delegates to represent them at all meetings. Proixes count as delegates.

ARTICLE IV.

Section 1. Any club desiring membership in this Association shall present to the secretary or any officer of the association a written application signed by its president and secretary, setting forth the name of the club, date of its organization, names of its officers and the number of members composing it, which shall be acted upon at any meeting of the board of directors.

Sec. 2. No shooter will be eligible to compete for any prize offered by this Association designated in program for members of League only, unless he is a bona fide member of a club or association that is also a member of this Association.

Sec. 3. The membership fee for clubs shall be $5, and if necessary the board of directors shall determine the anual dues to be charged not to exceed $5 for each club.

ARTICLE V.

Section 1. The officers of this Association shall be a president, vice-president, secretary, treasurer, and a board of six directors. Seven shall constitute a quorum. The office of secretary and treasurer shall be held by one person.

Sec. 2. The officers and board of directors shall be elected by ballot at the annual meeting to be held at Bridgeport on the third Monday in January, at 1 P. M. The officers then elected shall respectively hold office until their successors are elected.

Sec. 3. Any vacancy in any office may be filled by appointment by the board of directors.

ARTICLE VI.

Section 1. It shall be the duty of the president to preside at all meetings and to call extra meetings whenever he shall deem it necessary. He shall have no vote, except on equal division, when he shall have the casting vote, and shall appoint all committees, unless otherwise ordered.

Sec. 2. It shall be the duty of the vice-president to perform the duties of the president in his absence.

Sec. 3. It shall be the duty of the secretary to keep an accurate record of all the proceedings of this Association in a book; to notify clubs and individuals of their election, to issue notices of meetings, to take charge of all communications, to reply thereto in accordance with such instructions as he may receive from the Association, and to keep a record thereof in a book, and he shall deliver to his successor in office all books and property belonging to the Association in his possession.

Sec. 4. The treasurer shall receive and hold all funds of the Association, and shall disburse the same by check as he may be authorized to by a vote of the Association or by the president. He shall keep a correct and detailed account in a book of all moneys received and disbursed by him, which book shall at all times be open to the inspection of any of the officers of the Association, or any committee duly authorized therefor, and he shall report at each meeting of the board of directors a full statement in detail of all receipts and disbursements.

The treasurer, upon entering his office, shall execute a bond to the Association, the amount to be $500, the cost to be paid by the Association. He shall deposit all moneys in a national or savings bank and shall credit all interest accruing upon such deposit to the Association.

Sec. 6. Any meeting may be adjourned from time to time by vote.

ARTICLE VII.

No delegate shall be admitted into the Association unless he shall have handed or forwarded to the secretary a certificate, signed by the president or secretary of the club he may represent.

ARTICLE VIII.

The Board of Directors shall have charge of all business matters not otherwise provided for in this Constitution.

ARTICLE IX.

All proposed alterations, additions and amendments to the Constitution and By-Laws shall be submitted in writing to the secretary at the annual meeting or any special meeting called, and shall not be adopted unless by a two-thirds vote of those present.

ARTICLE X.

The management of the tournaments held by this Association shall be given to each club under whose auspices the tournament is given. Such club shall conduct the tournament under the By-Laws and Constitution, and Rules of this Association. The financial control, expenses, liabilities, profit or losses of the tournament shall be vested in such club.

ARTICLE XI.

Section 1. The Interstate Association rules to govern.

Sec. 2. A handicap committee shall be appointed each year by the board of directors, consisting of one member from each club.

ARTICLE XII.

Each club holding a registered tournament shall duly notify the secretary of this association two weeks in advance of holding said tournament, who shall duly notify the secretaries of the clubs belonging to this Association. The club holding the tournament shall see that the secretaries of the clubs belonging to this Association are provided with necessary programs.

Sec. 2. There shall be a team race at every tournament held by this Association.

Sec. 3. The number of targets in each regular program of any tournament held by this Association shall not exceed 150. Special events optional.

ARTICLE XIII.

All tournaments given by this Association shall be registered with the Interstate Association, and a copy of the official score sent to the secretary of said Association; also the chairman of the handicap committee of this Association. All dates of tournaments held by this Association must be settled at the annual meeting.

By-Laws.

Section 1. The order of business at all meetings shall be as follows: 1. Roll call. 2. Reading of minutes. 3. Report of committees. 4. Unfinished business. 5. New Business. 6. Election of officers.

Sec. 2. Any member belonging to this Association behaving in an ungentlemanly manner may be expelled by a majority vote of the members present.

Sec. 3. All charges against any member or club must be submitted in writing to the board of directors, and notices of such charges furnished such member or club so charged, who shall be entitled to submit a written defense.

Chicago Gun Club.

Chicago, March 25.—This was a beautiful day, and had it not been for the stiff wind blowing, it would have been ideal for trapshooting, but that several excellent scores were made.

Barto did fine work on both singles and doubles, breaking 48 out of the 50 singles, and then brought down 42 out of the 24 pairs. This is a fair sample of his shooting when he gets down to business with his gun, and as better weather is about due, we expect to see him among the regulars from now on.

Our Kentucky friend, Mr. E. O. White, was high in the fray and shot after Barto with a score of 46, while Mr. H. K. Cramer, a visiting shooter from Nelson, British Columbia, put up the good score of 44, this being the first time he has ever shot on our grounds, and as his gun went wrong early in the afternoon, he did most of the shooting with a borrowed gun, which was much too short for him.

Sharp was in good form and did fine in both singles and doubles—four scores of 23 out of 25 is consistent shooting; but he says he will feel better satisfied when he can mix in a few scores of 25 sctraight, and here's hoping he will get them the next time he is with us.

Barnes is coming along fast, and will soon be among leaders.

Skeel is going to try to get away from business every once in a while and to get back in the sport.

Miss Sullivan's scores show up well for a beginner, and she feels quite encouraged at her success in smashing the flying spheres. Scores:

Events:	1	2	3	4	5	6	7
Targets:	50	24	24	24	25	25	25
J B Barto, 19	48	22	20	..	..	..	..
A F MacLachlan, 18	36	20	17	..	..	..	..

J A Fuzzott, 16	..	..	..	12	..	..	19
Miss Z V Sullivan, 16	..	..	..	..	10	12	14

Events Nos. 2, 3 and 4 were at 12 pairs.

March 26.—The weather man had to butt in again today with a rainstorm, which continued all day and a strong southeast wind drove the rain into the faces of the shooters, which not only made it quite disagreeable, but also made the targets exceedingly hard to connect with.

Fetherston "copped' first honors in the handicap event at 50 singles, breaking 43 from the 19yds. mark. Thwaite was next in line with 40 from 18yds. Thomas scored 39 from 19yds., Sharp coming close on his heels with a score 38 from 18yds.

First place again went to Fetherston in the second event with a score of 32 out of the twenty pairs. Sharp was a close second with a score of 30, while Thomas broke 29 and Seelig 26.

In the practice event at 25 singles, Sharp, Thwaite, Fetherston and Emery each broke 20, Hlvaka scoring 18 and George 15.

Thwaite took first place in the next two frames of 25 targets, breaking 21 and 24, the latter score being the high score of the day in a single frame.

Thomas and Thwaite shot a race from 23yds., in which Thomas brought down 22 out of the 25, while Thwaite scored 18. They then shot another race from 16yds. in which Thomas again won out with 22 to Thwaite's 20.

Mr. O. D. Baxter, of Lima, Ohio, was in the city for to-day, and being a lover of trapshooting, Mr. Sharp induced him to come out for the afternoon. Although he had not shot targets for fifteen years, he connected with some of them in good shape.

Dr. Griffith did not do quite as well with his 20-gauge to-day as he did with the 28-gauge a week ago, but then the weather was not quite so bad as to-day.

George had one poor frame, but the other three scores showed that with a little more practice he will be back to his old form.

Events:	1	2	3	4	5	6	7	8	9
Targets:	50	40	25	25	25	25	25	25	10

O M George, 16	..	..	..	15	8	15	18	..	..

Event No. 2 was at 20 pairs; event No. 9 at 5 pairs.

Wm. Merkle, Supt.

Frontier Rod and Gun Club.

Buffalo, N. Y., March 27.—The fine spring weather had its effect on the gunners, thirty of whom enjoyed an afternoon's sport at the Frontier traps on Sunday, among them being many visitors and several from out of town. Lawson, of Niagara Falls, took high honors with 89 per cent., followed closely by Jack Talcott, who broke 87 out of 100. In the cup race, A, B and C classes, points were won by Suckaw, with 23; Peasland 17, and Hehler, 13, respectively. Ed. Youngs reappeared on the grounds, just recovered from a severe attack of grip. He proved interesting in the gun race, for he tied Wakefield with 21, but lost by one bird in the shoot-off. The strain had a telling effect on his weakened condition.

President Patterson and Secretary Jeffries, of the Bridgeport Gun Club, were among the visitors. A live-bird shoot is to be held on their grounds on Saturday, April 8. All members and friends of the Frontier Rod and Gun Club are requested to meet at the Sportsman's Show on Thursday evening, March 30. Scores:

Event No. 3, cup race; event No. 4, gun race.

The Fred Macaulay Business Men's Gun Club.

Members of the Fred Macaulay Business Men's Gun Club held their regular shoot Tuesday afternoon, March 28, at the Speedway traps and a large crowd turned out, considering the weather, and there were some good scores made.

C. W. Billings captured the prize donated by President B. M. Shanley by breaking 47 out of a possible 50. He was closely followed by H. H. Shannon, who broke 46 out of 50. Peter Bey was third, breaking 45 out of a possible 50.

Several prizes were donated to be shot for at the weekly shoots. There was also a match between J. J. Quinn and William Stengel, Quinn winning by breaking 15 out of 25, while Stengel broke 13. C. W. Billings donated a diamond pin, to be shot for next Tuesday. There were 1,500 white fliers thrown from the traps. The scores:

C. W. Billings, 23, 24, 19, 22, 22, 23; B. M. Shanley, 17, 15, 18, 17, 16; H. H. Shannon, 21, 22, 22, 19, 21, 22; P. Bey, 15, 16, 15, 17, 19, 16, 20, 19; J. S. Fanning, 20, 19, 20, 22; L. Cook, 13, 14, 14, 15, 10; G. Ohl, Jr., 7, 12, 10, 5, 14, 15, 13; J. Murphy, 12, 12, 16; W. Stengel, 15, 13, 11, 12; C. Von Lengerke, 22, 20, 19, 20; Sweeze, 10; Quinn, 9, 16, 12; Bennet, 7; Higgin, 7.

Smokeless.

Interclub Shooting at Bay Ridge.

Through the courtesy of the Crescent A. C., the New York Athletic gunners ran off their regular events in connection with the two team shoots at the grounds of the Crescent A. C. Both of the team shoots, which are the first of a series of home-and-home matches, were won by the New York A. C. In the five-man tri-cornered match between New York A. C., Crescent A. C. and Larchmont Y. C., the New York A. C. led the other two teams by 3 targets, and in the fifteen-man high score match between New York A. C. and Crescent A. C., the former led by 101 targets. The shooting was hard, as a stiff wind blew "steady by jerks" all the afternoon, making high scores impossible. Only one straight score was shot; that one being pulled through by W. J. Elias.

In spite of the difficulty experienced in hitting the ducking and soaring bluerocks, every one had a good time and enjoyed the hospitality of the Crescent shooters exceedingly:

Five-man tri-club match, first leg:

New York A. C.		Crescent A. C.	
F Hodgman	81	H M Bingham	79
F Hall	78	W W Peabody	79
C W Billings	77	F B Stephenson	75
G J Corbett	72	F W Moffett	73
O C Grinnell	72—380	G H Piercy	71—377
Larchmont Y. C.			
R L Spotts	85	W B Short	72
R K Hooker	75	G Lembeck	70—377
E A Wilson	75		

Fifteen high-score team match:

N. Y. and L. A. C.		Crescent A. C.	
R L Spotts	85	H M Brigham	79
F H Schauffler	83	W W Peabody	79
F A Hodgman	81	D T Leahy	79
W B Ogden, Jr.	81	F B Stephenson	75
B M Higginson	80	F W Moffett	73
G L Bready	79	A Blake	72
W J Elias	79	G H Piercy	71
F Hall	78	A Corlies	71
C W Billings	77	G W Felix, Jr.	71
M V Lenane	77	C Blake	68
E A Wilson	75	J P Simpson	67
A E Ranney	74	G Stephenson, Jr.	66
T J O'Donohue	73	C H Pulis	65
G J Corbett	72	J F James	65
O C Grinnell	72—1166	C R James	64—1065

Regular events of the New York A. C.:

Events:	1	2	3	4	100-Target Scratch.	100-Target Hcp.

W J Simpson	2 15	2 19	2 21	2 20	67	75
G M Thomson	2 19	2 18	2 25	2 17	71	79

No. 1 was for the Bready trophy and was won by B. M. Higginson. No. 2 was the April cup, won by A. E. Ranney. No. 3, the Spotts cup and won by W. J. Elias. No. 4, the Travers Island trophy and won by F. H. Schauffler.

The 100-target scratch shoot was won by R. L. Spotts. The 100-target handicap was won by F. H. Schauffler.

Trap at Larchmont.

Larchmont, N. Y., April 3.—At the regular weekly shoot of the Larchmont Yacht Club yesterday afternoon, eighteen gunners faced the traps. Very good scores were made under fair weather conditions. E. A. Wilson carried off the honors of the day, for he won five of the eight matches. With a score of 14 in the 15-target contest he defeated the seventeen other competitors. A. Bryan Alley was the runner up with 13. In the special match at 25 targets, Wilson broke all of his clay birds, with R. L. Spotts as the runner up, breaking 24. The leg for the commodore's cup also went to Wilson, who returned a card of 24, and he won both of the 125-target matches—the first a scratch contest, with 112, and the second, a handicap, breaking 115 out of the 125.

R. L. Spotts, shooting against seventeen, won the 10-target scratch contest with a full score. He also won the leg for the April cup with 22 as his score. The leg for the Sauer gun went to Dr. W. B. Short. He tied with a full score of 25, W. J. Elias and K. R. Hooker, and in the shoot-off he won with another full score. The summaries:

Special shoot, 10 targets, scratch:

J G Batterson	8	E L Hatch	8
W E Bemis	5	R A Gillespie	6
H T Shriver	4	A S Pitt	7
W J Elias	7	B S Allerie	4
K R Hooker	6	E G Unitt	5
D McMahon	8	G L Brenan	8
E A Wilson	7	J R Collins	6
R L Spotts	10	A B Alley	7
E L C Robbins	9	W B Short	7

Special shoot, 15 targets, scratch:

J G Batterson	11	E L Hatch	10
W E Bemis	8	R A Gillespie	7
H T Shriver	8	A S Pitt	8
W J Elias	11	B S Allerie	11
K R Hooker	10	E G Unitt	9
D McMahon	10	G L Brenan	10
E A Wilson	14	J R Collins	9
R L Spotts	12	A B Alley	13
E L C Robbins	10	W B Short	12

Special shoot, 25 targets, handicap:

J G Batterson	3	17	E L Hatch	0	18
W E Bemis	4	20	R A Gillespie	0	19
H T Shriver	3	20	A S Pitt	0	13
W J Elias	3	22	B S Allerie	0	16
K R Hooker	3	23	E G Unitt	4	21
D McMahon	3	17	G L Brenan	3	23
E A Wilson	1	25	J R Collins	4	23
R L Spotts	1	24	A B Alley	5	21
E L C Robins	3	21	W B Short	3	24

Commodore's cup, handicap, 25 targets:

J G Batterson	3	16	E L Hatch	0	19
W E Bemis	4	20	R A Gillespie	0	12
H T Shriver	3	19	A S Pitt	0	10
W J Elias	3	21	B S Allerie	0	15
K R Hooker	3	22	E G Unitt	4	21
D McMahon	3	15	G L Brenan	3	20
E A Wilson	1	24	J R Collins	4	22
R L Spotts	1	22	A B Alley	5	22
E L C Robins	3	19	W B Short	3	22

Sauer gun trophy, 25 targets, handicap:

J G Batterson	3	23	E L C Robins	3	23
W E Bemis	4	20	E L Hatch	0	20
H T Shriver	3	20	B S Alvin	0	20
W J Elias	3	25	E G Unitt	4	22
K R Hooker	3	25	G L Brenan	3	17
D McMahon	3	21	J R Collins	4	24
E A Wilson	0	24	A B Alley	5	23
R L Spotts	1	24	W B Short	1	25

Shoot-off won by Short.

April cup, 25 targets, handicap:

J G Batterson	3	17	E L Hatch	0	18
W E Bemis	4	15	R A Gillespie	0	11
H T Shriver	3	20	A S Pitt	0	15
W J Elias	3	20	B S Alvin	0	11
K R Hooker	2	21	E G Unitt	4	15
D McMahon	4	14	G L Brenan	3	18
E A Wilson	0	21	J R Collins	0	w
R L Spotts	1	22	A B Alley	0	w
E L C Robins	3	17	W B Short	2	22

Shoot-off won by R. L. Spotts.

Special shoot, 125 targets, scratch:

J G Batterson	89	E L C Robins	86
W E Bemis	82	E L Hatch	95
H T Shriver	79	R A Gillespie	60

Ten double targets:

R L Spotts	16	K R Hooker	11
E L C Robins	10	D McMahon	11

Cincinnati Gun Club.

The attendance at the shoot on April 1 was not up to expectations, only nine shooters facing the traps. The day was partly cloudy, with a strong, chilly wind blowing in the faces of the shooters, causing the targets to soar badly, and keeping the scores lower than the average for most of the contestants. Several members of the Hyde Park Gun Club visited the grounds, and a three-man team match was arranged between the two clubs. The visitors put up a good race, and in the last round led their opponents by two targets, but lost the match by a score of 210 to 220. Welsh was high for the visitors; breaking a total of 83; Irwin made the highest score in a by a total of 83; Irwin made the highest score in a single round, missing but one target out of 25. There was quite a close race between Hammersmith and R. Trimble for first place, the former finally going out with 3 targets to the good, getting this lead in the first 50 targets shot at. In the last half of the contest, Trimble tied him on 43. On April 9 the well-known experts, Messrs. Gilbert, Squier, Young and "Pop" Heikes will visit the grounds, and their presence is expected to draw a record crowd, if the weather is pleasant. The club has applied for a registered tournament, the dates claimed being Sept. 22 and 23. In to-day's scores, 20-Gauge makes rather a poor showing; he was using a 20-gauge gun and only 7/8oz. No. 9 shot, a handicap for the kind of conditions that prevailed; with a 12-gauge and trap loads, he is an 80 per cent. or better shooter.

Targets:	15	15	20	15	15	20	Broke.
Holaday	11	11	14	10	10	20	76
Hammersmith	13	13	19	12	13	18	87

Bird	73	Irwin	79
Connelly	60—220	Frohliger	48—210

The Palefaces.

Boston, Mass., March 29.—Four squads of New England's best shot through the Paleface program to-day, and it is a sure guess that many shoots will pass before another such spirited contest for high average takes place. Looking over the list, at least half of the entrants had a look-in for the coveted honor, and not till well into the double event did a possible chance present itself to pick a winner. Steele, Edwards and Clarke were the trio to finally fight it out, the former pair entering the last event two targets to the good, and while Clarke made a game effort to close in on them, could only reduce the lead to one target, Steele and Staples breaking even. Naturally, in the tie something had to bust, and a prettier shoot-off would be hard to see. Steele started in like an expert and ground target after target like a year's average winner, and never let up on one, cleaning up the 25, while his rival let three go away unscathed. George was warmly congratulated for this exceptional piece of work, and goes to show what this enthusiast is capable of when anywhere near right.

In the added target race, Steele, through his win of high average, was ineligible for this, leaving President Charles a winner. This being Charles' fourth win of this match during the five shoots for March, many unkind remarks were made, and it is up to the official handicapper to get his ax busy before April 5th shoot.

The doubles brought out Staples' strong work, 24 in all being good enough for any shoot. Steele and Charles took second in this event, just a pair less.

High average for the month was won by Frank, making his second win, and now shoots off with Doc. Clarke on April 15 for the final possession of the trophy. This will be a dandy event, and no pair of trapshots in this section could make any better attraction to watch than this pair of trapshooters.

Targets:	25	20	15	25	Broke.	Hcp.	Total
Steele	24	17	22	22	85	8	93
Charles	22	17	22	20	81	12	93
Edwards	24	15	24	22	85	4	89
Chapin	21	17	20	21	79	8	87

Charles	23	22	22	67

Marine and Field Club.

Bath Beach, N. Y., April 2.—Five well-known professionals gave an exhibition over the Bath Beach traps of the Marine and Field Club yesterday. The best work was done by H. S. Welles, who broke 153 out of a possible 175 targets. There also was an amateur shoot at 125 targets, which was taken by C. D. Ludwig with a total of 96 breaks. In the April cup that was started, the high gun for the day was Paul G. Chase. The scores:

Professional shoot, 175 targets, strings of 25:

H S Welles	17	24	22	22	20	24	24	153
J A R Elliott	19	20	20	21	17	21	22	140

Ossining Gun Club.

Ossining, N. Y., April 1.—The following scores were made on the grounds of the Ossining Gun Club to-day. Event No. 1 was practice. The 60 targets in events 2 to 5 inclusive made up a competition for two fine scarf-pins, donated by a member. Blandford won first from scratch, and J. H. Moran got a tie with Col. Brandreth, who waived his rights to a shoot-off, Moran taking the pin, with his handicap of 8. All others shot from scratch. Event No. 6 was for the Du Pont fob. Col. Brandreth won in this event with a margin of one from Mr. Moran, including the club handicap of misses as breaks. Events 7 and 8 were sweeps from 20yds.

Figures immediately following names denote handicaps in event No. 6, as figured in 1910:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	15	15	15	25	10	10
C G Blandford, 2	7	12	13	12	13	19	9	10
D Brandreth, 2	7	11	11	10	9	18	8	5
J T Hyland, 3	7	11	12	9	12	18	9	6
Col F Brandreth, 3	7	12	14	9	12	21	9	7

J H Moran, 10	7	9	9	11	10	13	..	..
J T Blandford	..	10	..	..	..	..	..	..

C. G. Blandford, Capt.

Northern Kentucky Gun Club.

The last live-bird shoot of the season was held on the grounds on March 30, with an attendance of only three members. The weather conditions were fairly good, and no complaint could be made of the birds, which were fast and strong ones The first event resulted in a tie between Gould and Payne, on 17 out of 20. The shoot-off was won by Gould, and he added the trophy to his large collection. Payne won the last event with a straight score, and was high man for the afternoon with 30 out of 37 shot at, Gould being only one bird hehind in the total. Schreck was not doing the work he usually does on pigeons.

Event No. 1, 20 birds, entrance $5:

Payne, 31yds. .....20111222112111020111—17
Gould, 30 .....21111211110112002112—17
Schreck, 31 .....22222222201022210012—16

Shoot-off, 10 birds:

Gould .....1110122220—8 Payne .....0000111222—6
Schreck .....1001022212—7

Event No. 2, 7 birds:

Payne .....2222222—7 Schreck .....0201220—4
Gould .....0012120—4

Montclair Gun Club.

Montclair, N. J., April 1.—Five faithful trapshooters showed up to-day. Conditions were not very favorable, the weather being cold and at times a very strong gale blowing. In the first event at 15 targets, Frazee ran 14 straight, losing his last bird, easily winning out. In event 2, 25 targets, handicap, the third leg of the Du Pont trophy, Frazee again was winner with 21 breaks to his credit, or a total of 24 points. In the third event, the first leg for the members' April cup, Bush and Frazee tied with 25 points each. In the shoot-off Frazee easily won again.

The North Caldwell Gun Club team of ten men will visit Montclair on Saturday the 8th to shoot a return match. Scores:

Events:	1	2	3
Targets:	15	H.25	H.25
Chas L Bush	11	3 21	3 25
Y T Frazee	14	3 24	1 25

Aug. 22-23.—St. James (Mo.) G. C. R. H. James, Sec'y.

Elmer E. Shaner, Sec'y-Treas.

Lehigh Rod and Gun Club.

Bethlehem, Pa., April 1.—Good scores were made at to-day's trap shoot of the Lehigh Rod and Gun Club. Bitterling and Smith tied in the club shoot, each breaking 25 targets, but Bitterling was high gun in the other events. He broke 119 out of 125 targets. Sobers was second with a score of 103 out of 125. Summary:

Club event, 25 targets: Bitterling 25, Smith 25, Schroeder 24, Sobers 18, Grant 17, Werst 16, Earlbruch 13.

Ten targets: E. J. Bruch 10, Dorn 7, Earlbruch 7.

Ten targets: Bitterling 9, Miller 9, Sobers 8, Keiser 6.

Ten targets: Keiser 10, Bitterling 9, Miller 8, Sobers 8, Snyder 6.

Ten targets: Dorn 10, E. J. Bruch 9, Smith 9, Grant 7, Schroeder 7, Gapp 6.

Ten targets: Sobers 9, Miller 9, Bitterling 8, Keiser 6, Snyder 5.

Ten targets: Bitterling 10, West 9, Gapp 9, Miller 7, Sobers 6, Snyder 5.

Fifteen targets: Bitterling 15, Gapp 13, Miller 12, Sobers 11, Werst 10, Snyder 9.

Fifteen targets: Bitterling 14, Miller 14, Keiser 12, Sobers 11, Snyder 8.

Fifteen targets: Smith 14, Gapp 13, E. J. Bruch 13, Dorn 12, Grant 10, Schroeder 9.

Fifteen targets: Sobers 15, Bitterling 15, Miller 13, Keiser 10, Snyder 8.

Fifteen targets: Miller 15, Bitterling 14, Dorn 14, Sobers 13, Keiser 11.

Salt Lake Gun Club.

Salt Lake City, Utah, March 20.—Members of the Salt Lake Gun Club displayed good marksmanship yesterday afternoon at the traps, seven men shooting 45 or better, possible 50. The weather was ideal, which added to the day's sports, and from now on weekly contests will he held. With a perfect score of 50, Kingsley led the field, although he was close pressed by John Sharp, Jr., and Miller, with 49 each; Morgan with 47, Mills and Burgess 46, and Gillette 45 placed the first seven men at a score that would break up most club shoots in the country. The scores follow:

Kingsley 50, Sharp Jr., 49, Miller 49, Morgan 47, Mills 46, Burgess 46, Gillette 45, McGamery 45, Sharp, Sr., 43, Riley 39, Bodmer 39, Young 37, Hewitt 36, Bain 36, Cowan 36, Salisbury 35, Ball 34, Ryan 34, Albertson 33, Bartlett 29, Smith 24, Rumel 22.

Interclub Shoot at Wilmington, Del.

The second interclub match between teams representing the Wilmington and Baltimore Country Clubs will be held on the Wilmington Country Club's grounds on Saturday afternoon, April 8. In the first match, shot at Baltimore, March 11, the Wilmington team lost by a close margin, making all the best individual scores.

Practice on the Wilmington Country Club's grounds is being held throughout this week, in preparation for the return match.

The Forest and Stream may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

The Cole—Clarke Shoot.

In announcing their yearly event, the promoters say: "On June 17 next, at the Paleface shooting grounds, Wellington, Mass., the writers intend to hold their 1911 trapshooting tournament, an event looked forward to in this section as one of the season's best shoots, probably due to the fact that our previous efforts have been most successful and enjoyable. This year we naturally wish to eclipse all former shoots in attendance, etc., and we are soliciting the aid of both shooters and sportsmen, feeling that the results will be of mutual advantage. One thing we wish to state relative to our shoot is the fact that it is not run for any monetary consideration on our part, simply an effort of our own to boost the game and keep it in the front, where it belongs."

G. E. Cole, Boston, Mass.
W. F. Clarke, Melrose, Mass.

Eastlake Gun Club.

Wilmington, Del., April 2.—The Eastlake Gun Club held its regular Saturday shoot at its grounds, Thirty-fifth and Monroe streets, yesterday afternoon. The following scores were made: E. Potter (shot at 30), broke 14, W. Gray (45) 22, H. Jones (25) 12, W. Fincher (50) 22, H. Black (45) 28, K. Davis (45) 12, J. Loyd (10) 5, R. Gray (15) 11, H. Kirby (25) 12, W. Jones (45) 20, P. Quigley (10) 6, C. Haverbeck (25) 10, V. Davis (20) 6.

Pennsylvania Live-Bird Match.

Shenandoah, Pa., April 1.—In a live bird shoot for a purse of $30), at 13 birds each, 21yds. rise, between George Sagaritus, of Connerton, and John Coler, of Girardville, to-day, Sagaritus won by killing 6 birds to his opponent's 5. A high wind interfered with the shooting. Coler was the favorite.

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Interscholastic Rifle Match.

The third annual competition for the Astor cup, emblem of the interschool gallery championship of the United States, will be shot at any time between May 15 to 20. Targets to be used in the match will be issued from the office of the National Rifle Association to those schools entering a team or teams. The N. R. A. will also appoint a judge to take charge of the firing when the match is shot. All entries must be in before May 10. The conditions of the match are as follows: Open to teams of five pupils from any N. R. A. rifle club in good standing of any public or private preparatory school. Each team may shoot as many members up to ten, as desired. The best five scores to count for the team's record score. Distance, 50ft. Target, the N. R. A. 50ft. gallery target, especially stamped for the match, must be used. The targets to be returned to the office of the N. R. A. after being fired on. Number of shots, 20 for record each boy; 10 standing and 10 prone; to be shot in strings of 5. Two sighting shots allowed at the beginning of score. Boys to shoot in pairs, if the target facilities permit. The entire team must shoot at the same time. Position, standing, body and rifle must be free from all artificial support; prone, head toward target, rifle free from all artificial support; match shot without the use of strap. Rifle, any .22cal., with sights (other than telescopic) in front of the firing pin. Ammunition, .22cal. short. Eligibility: Competitors to be bonafide scholars of the school which they represent, certificates to this effect to be furnished by some duly authorized authority. Entries of more than one team may be made from the same institution, provided an entrance fee is paid for the extra team or teams. A competitor is not allowed to shoot on more than one team. Judge: The National Rifle Association will appoint a judge to supervise the firing of each team entered, and no scores will be accepted unless such judge is present when the scores are shot. Entrance fee, $2 per team. For extra teams, $2 per team. Prizes: The championship Astor cup, to be held by the school represented by the winning team for one year, when it will again be put in competition by the N. R. A. Silver medals to the individual members of the winning team; bronze medals to the members of the second team. The cup will become the property of the school winning it the most times in twenty years. It was won in 1909 by the Morris High School, of New York city; in 1910 by the De Witt Clinton High School, of New York city.

Philadelphia Rifle Association.

Philadelphia, April 1.—The first weekly competitions of 1911, of this Association were shot to-day, on the Arlington range, Lansdowne avenue and Cedar lane, near Llanerch, Pa. Although the attendance is usually good on the opening day of the season, the only members who showed up were Rangemaster Dill, Secretary R. L. Dubbs, J. G. Schnering, Dr. G. G. Davis and Williamson.

Record match, 200yds., rifle: Dr. Davis 147.

Offhand match: J. G. Schnering 218, 215, 210, 205, 201.

Military match: H. A. Dill 45, 44, 44, 43, 42, 41; Dr. Dubbs 44, 44, 43, 42, 42; Williamson 46, 44, 42, 42, 40.

Pistol match, 50yds.: Williamson 80, 79.

Rhymes of The Stream and Forest
FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

For Sportsmen's use. Combines Head Jack (Front and Top), Boat Jack, Fishing, Camp, Belt and Dash Lamp, Hand Lantern, etc.

EXCELSIOR LAMP,
For Night Driving, Hunting, Fishing, etc. Is adjustable to any kind of dash or vehicle. Send stamp for Illustrated Catalogue and address all orders Lamp Department.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

A Demonstration Before a Jury.

DENVER, Colo., March 16.—*Editor Forest and Stream*: Shooting his way out of prison is quite a sensational way to gain notoriety, but that is the manner in which Captain A. H. Hardy, one of the world's greatest fancy rifle and revolver shots, became known to the public. Captain Hardy is now located in Denver with a large cartridge company, and but few of his Denver friends and admirers remember the interesting incident which first brought him before the public as an expert marksman.

In shooting his way out of prison, he did not terrorize a sheriff or murder a jailor, nor even attempt to shed blood, but the manner in which he escaped a term in jail in a little town in Nebraska in 1895, not only made him friends, but established one of the most interesting anecdotes of Western court procedure.

Shooting was a hobby with Hardy even when he was a small boy, and by the time he had reached the age of sixteen he was beginning to attract some attention as a marksman. It was then that he and his brother, E. E. Hardy, who was also a crack shot, decided that they would take a trip westward from Columbus, Neb. Being short of cash, they decided to make use of the side-door Pullman instead of paying railroad fare.

Everything went well until the boys reached Hyannis, a little town in western Nebraska, where an over-important brakeman demanded a little cash from them before he would let them ride over his division. The amount asked would have left the boys without money, so they decided to take chances on stealing a ride between the cars. They agreed that in case either of them was put off the train, he would fire a signal shot to notify the other, in order that they might not become separated.

Shortly after leaving the station at Hyannis, a brakeman spied young Hardy hanging on a ladder on the side of a car, and swooped down on him without warning and began to strike at him with his heavy lantern. Hardy was forced to drop from the train, and after falling and rolling down an embankment, he drew his revolver and fired the signal shot to notify his brother, as they had agreed, that he had left the train. His brother also dropped off and fired an answering shot to let the other know his signal had been heard.

That is where the trouble began. The brakeman, thinking the young men were shooting at him, went into the next town and swore out a warrant for their arrest, charging assault with intent to kill. It was a serious proposition. They were arrested at Alliance, and taken back to Hyannis by the sheriff. They secured bail and went to work until the time for the trial to come around. In the meantime, A. H. Hardy had taken advantage of every opportunity to demonstrate his ability with a revolver, and before the next term of court opened, he had gained a wide local reputation as a marksman, and had made many friends. Hyannis in those days was a rough Western town, where every cowboy, ranchman and most of the townspeople admired a good shot as much as they did a good rider.

The time for the trial finally came around, and it aroused a great deal of interest. People came in from all directions to hear the testimony. The railroad was represented by its able attorneys, who were determined to make an example of the two gun-men. The Hardy brothers secured the services of a bright young lawyer of Alliance by the name of Mitchell, who put up a strong fight for his clients. Heated arguments were made by the attorneys on both sides, and the case simmered down to the question as to whether Hardy was really shooting at the brakeman or as a signal. The case began to look discouraging for the two brothers.

"Your Honor," said Hardy's attorney to the judge, "we contend that if the defendant had shot at this brakeman there would be no brakeman here to tell the story, and if you will adjourn court for a few moments and take the jury in charge of a bailiff to the rear of the court house, I will demonstrate to the satisfaction of the judge, jury and the attorneys for the prosecution that my contention is right."

Judge Thompson granted this request, and after the jury had lined up on one side with the judge and the attorneys and a large crowd of spectators on the other, A. H. Hardy was given the revolver he had used on the night of his arrest, and with this he gave a most remarkable demonstration of his marksmanship. He cut playing cards held edgewise between the fingers of his brother at a distance of twenty-five steps; shot potatoes off his brother's head, and broke small lumps of coal tossed in the air. A dozen gun-wads were pinned to his brother's hat, and each one was knocked off by bullets without touching the hat-brim. Other equally difficult tests were successfully demonstrated before the jury.

Upon returning to the court room, Hardy's attorney addressed the jury, and again declared that if the young marksman had been shooting at the brakeman there would have been a different story to tell, and the brakeman was forced to admit that no attempt had been made to shoot him. The jury went out for a few moments and brought back a verdict of "Not guilty."

The trial at that time was given wide publicity, and papers far and wide published pictures of a jury watching a shooting test. Hardy's friends rallied to his support, raised a fund to start him in the saddle and harness business, and from that time on he prospered and became known as one of the best shots in the West.

Few of Captain Hardy's present admirers remember the time sixteen years ago when he shot his way out of jail.

WM. A. BARTLETT.

Seventh Regiment Championship.

THE season's rifle shooting over the Seventh Regiment ranges in the armory at Park avenue and Sixty-seventh street, came to an end Friday night, March 31. Final figures for the season showed that Private J. K. Boles, of Company I, had won the regimental rifle championship by the closest possible margin over Private A. Scholz, of Company A. Private Scholz, in taking the title last year, established a new record total of 115

out of a possible 120, the maximum being 70 for deliberate fire and 50 for rapid fire. This year, however, both Private Boles and Private Scholz bettered the score and set up a new mark of 116.

The fine shooting of Private Boles has been the sensation of the season at the Seventh Regiment. He enlisted less than a year ago, and that he should win the championship in so short a period is considered remarkable, and is unprecedented. Private Boles came to the Seventh Regiment from the State militia of Arkansas, in which he was a leading crack. He represented Arkansas in the national military shoot at Camp Perry, Ohio.

Chicago National Guard Revolver Tourney.

CHICAGO, Ill., March 25.—In the annual officers' revolver shoot of the First Regiment, Illinois National Guard, held last night in the armory, Lieut. J. M. Richmond won first prize with a score of 181. As the shoot was conducted over a four-course range of 50yds., slow fire, with 10 shots, two scores of 5 shots each on a 25yd. range, with 20 seconds each; two scores of 5 shots each at 25yds. in 10 seconds, and two scores of 5 shots each on a 15yd. course, with 8 seconds each, expert marksmanship was necessary.

The competitors were divided into three divisions: The expert, of which Capt. Edward Bittle took the title with a score of 179, and the sharpshooters, of which the championship went to Capt. C. M. Gale with a score of 170. Capt. Richmond was rated as a novice. In all classes the shooting was keenly contested, the winners securing their prizes by a few points.

Appropriate awards were made, and as only commissioned officers were allowed to compete, the scores were very good.

As the regiment officers have challenged all other regiments stationed in the city, including the Naval Reserves, the meet was well attended. Much time has been expended in an effort to improve the marksmanship, as many teams have answered the challenges. The summaries:

					Total.
Lieut. Richmond	44	46	44	47	181
Supt Bittle	44	47	42	46	179
Capt Borgmeier	43	43	44	48	178

DuPont Gun Club, Rifle Dept.

WILMINGTON, Del., April 2.—On the rifle and pistol range of the Du Pont Gun Club, a number of scores were fired yesterday, both for qualification and for practice. The qualification prize system used on this range has proved popular, as it affords every club member an opportunity to win a prize in some class.

During the past week qualification prizes were awarded Capt. K. K. V. Casey for ten qualifying scores in Class 6, as follows: 84, 84, 82, 80, 83, 83, 83, 82, 81, 81. Also for ten qualifying scores of 85 or better in Class 5, as follows: 86, 87, 88, 88, 86, 86, 88, 87, 88, 85, 85.

The scores for yesterday were:

Fifty-yard revolver and pistol qualification scores: F. B. Harkins 90, 87, 86, 86, 84; K. K. V. Casey 89, 87, 85, 84, 80; E. G. Ackart 87, 82, 75, 72.

Fifty-yard revolver and pistol practice scores: I. Shepard 75, 58; J. T. Skelly 71; A. G. Riley 66, 64, 41; J. L. Fagan 48; S. B. Trott 43; W. J. Pumphrey 38, 35, 24; M. Carey 21.

Fifty-yard rifle (.22cal.) qualification scores: W. S. Weedon 56, 56, 55.

50yd. rifle (.22cal.) practice scores: D. Appleby 84, 83, 80, 77, 69, 66, 60; John B. Grier 72, 61, 60, 59, 57, 52, 43; S. B. Miller 64, 62, 55; H. E. Haines 63, 51, 69, 58, 56; G. A. Wilson 69, H. H. Bedford 56, W. McElwee 51, D. R. Rutter 44, G. T. White 42 L. Lofink 36, 22, M. Carey 34, E. E. Shallenberger 33, P. Dougherty 37, 19.

Interscholastic Rifle Shooting League.

THE Morris High School, of New York city, stands first in the Interscholastic Rifle Shooting League, at the end of the tenth week with ten wins.

Results last week were: Morris High School, New York city, defeated St. John's Military Academy, Delafield, Wis., 925 to 808; Deering High School, Portland, Me., defeated Kentucky Military Institute, Eau Gallie, Fla., 923 to 830; McKinley Manual Training School, Washington, defeated Culver Military Academy, Ind., 892 to 888; De Witt Clinton High School, New York city, defeated Harry Hillman Academy, Wilkesbarre, Pa., 912 to 0 (by default); Salt Lake City (Utah) High School defeated Ogden (Utah) High School, 888 to 829; Harvard School, Los Angeles, Cal., defeated Western High School, Washington, D. C., 903 to 0 (by default); Marist College, Atlanta, Ga., defeated Central High School, Philadelphia, 853 to 840; Portland (Me.) High School defeated Baltimore Polytechnic Institute, 850 to 742.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

The Marlin Repeating Shotgun

12 GAUGE

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action.

The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hangfires harmless.

All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. Illustration shows Model 24 grade "A" 12 gauge; it has all the features that make for a perfect gun

Send three stamps postage today for our 136 page catalog, describing the full *Marlin* line.

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid. $1.

Intercollegiate Rifle Shooting League.

Washington, D. C., April 1.—Massachusetts Agricultural College and the University of Iowa are tied for first place with a clean record of twelve wins in the Intercollegiate Rifle Shooting League matches.

Results this (the twelfth) week were: Columbia defeated Arizona, 1879 to 1675; Iowa defeated Dartmouth, 1876 to 1783; Cornell defeated Rhode Island State, 1783 to 1703; Washington State defeated Missouri 1773 to 1732; Massachusetts Agricultural defeated New Hampshire, 1870 to 1706; Purdue defeated Princeton, 1745 to 1739; North Georgia Agricultural defeated Louisiana State, 1746 to 0 (by default), and Minnesota defeated California, 1604 to 0 (by default).

PUBLISHERS' DEPARTMENT.

Mr. Geo. L. Carter, of Lincoln, Neb., won high general average at David City, Neb., March 22-23, using Peters factory loaded shells. He scored 293 out of 315.

At Peoria, Ill., March 26, Mr. E. K. Crothers, of Bloomington, won high amateur average, 93 out of 100, and Mr. H. W. Cadwallader won high professional average, same score, both using Peters factory loaded shells.

At Crawfordsville, Ind., March 17, Mr. H. W. Cadwallader won high professional average, 191 out of 210; also high general average at New Holland, Ill., March 14, 193 out of 205. At the New Holland shoot, Mr. A. C. Connor, of Springfield, was high amateur, 185 out of 205. Both Messrs. Conner and Cadwallader used Peters factory loads.

At the second annual Maryland Trapshooters' tournament, held at Baltimore, March 18, Mr. Clarence Malone, a son of Capt. J. R. Malone, scored 39 out of 40 live birds from the 29yd. mark, and not only won the high average, but the live-bird championship of the east. This is a most creditable performance, inasmuch as the other competitors included some of the best live-bird shots of the country. Mr. Malone used Peters factory loaded high grade shells, and every bird was killed clean as a whistle, except his 19th, a difficult bird, on which he led a little too much.

USEFULNESS OF BIRDS.

Did you ever stop to think how much we owe to the birds for their care of our spreading shade trees, our fruitful orchards and our verdant woods?

The birds is just as necessary to the tree as the tree is to the bird. The tree furnishes the bird with nestling places, shelter and food. It bears buds, blossoms and seeds which birds eat, and also furnishes food for insects and other animals on which birds feed.

In return the birds distribute the seed of the tree, that other trees may succeed it and that its descendants may occupy more ground. They assist and regulate nature's pruning of the tree; they guard the tree against destruction, for they check the increase of many creatures that feed upon it.

The truth of these statements has been proved by a study of the habits and food of birds. Let us see then how birds work for the welfare of the trees.

As the trees grow they produce too many limbs and twigs, too much foliage and fruit. The pruning of limbs is left by nature to shade, wind, ice and snow, but much pruning of twigs, leaves, buds and blossoms is accomplished by the birds that feed on them. The ruffed grouse or partridge, rosebreasted grosbeak, purple finch and other species live largely on buds, leaves or blossoms.

Such pruning as they ordinarily give the trees is beneficial. The food habits of many woodland birds also tend to prevent an excessive amount of pruning by insects, and this brings us to the most important office that is performed by birds.

Birds guard all parts of the tree from the too injurious attacks of its insect enemies. The young or larvæ of beetles and cicadas live in the ground, where they feed on roots. Birds which feed much on the ground scratch or dig up such larvæ or grubs, or eat the beetles and cicadas when they come out of the ground to fly about and mate. These insects form a favorite food of very many birds. Other insects which feed on the tree bury themselves in the ground to undergo their transformation; others still hide among the dead leaves of the forest

floor. Such insects are sought but by scratching birds, like the partridge, brown thrasher and chewink.

The trunks and limbs of trees are pierced by the larvæ of boring beetles. These grubs cut channels or burrow in the wood. Other species, known as dark beetles, tunnel between the bark and the wood.

The grubs of boring insects are dug out of their hiding places by woodpeckers. These birds are of great service, for a borer will sometimes kill a tree, and a single woodpecker often destroys many borers in a day. Insects that hide in the crevices of the bark are sought by prying chickadees, creepers and nuthatchers. Insects that eat buds and leaves are hunted by warblers, vireos, thrushes, orioles, tanagers, cuckoos—a host of birds that feed much among the foliage of trees. Insects that reach the flight stage and fly about among the treetops are taken on the wing by warblers and flycatchers.

Those that escape all these and test their newgrown wings by longer flights are chased by flycatchers; while those that reach the upper air are pursued by swallows, swifts or nighthawks.

When we realize that the unchecked increase of one species of insects might easily be sufficient in a few seasons to enable it to destroy most of the trees of the woods, and when we consider that the birds restrain the increase of hundreds of species of insects, then we can appreciate the value of birds as protectors of trees. It is now well understood that the birds and other natural enemies of insects ordinarily keep most tree pests so well in check that they do no great or serious injury to trees.

When it is stated on good authority that the people of the United States have suffered from the ravages of insect pests to the extent of about $700,000,000 in a single year, when the agriculture of the small State of Massachusetts is said to lose nearly $5,000,000 annually from the attacks of insects, it is time to look about us to see how we can get help in the war against them; it is time to do something to increase the numbers of the creatures that feed upon these insects.

But possibly the most useful bird to crops is the bobwhite, the common partridge. The agricultural reports of the Southern States, especially Virginia, show that annually several hundred tons of pernicious weed seeds are destroyed by bobwhites alone.

It is figured that from Sept. 1 to April 30 annually in Virginia alone the total consumption of weed seed by bobwhites amounts to 573 tons.

Some of the pests which it habitually destroys, the report says, are the Mexican cotton boll weevil, which damages the cotton crop upward of $15,000,000 a year; the potato beetle, which cut off $10,000,000 from the value of the potato crop; the cotton worms, which have been known to cause $30,000,000 loss in a year; the chinch bug and the Rocky Mountain locust, scourges which leave desolation in their path and have caused losses to the extent of $100,000,000 in some years.

While we can do little to multiply those useful insects that feed upon other insects, we can protect useful birds, and so bring about their increase. An increase of birds always occurs where conditions are favorable. Tree planting in the prairie States was followed by a multiplication of the numbers of insectivorous birds.

One of the best possible ways to observe arbor day is by planting trees, shrubbery and vines that will produce food for the birds to eat. Trees like the mountain ash, that retain their fruit in winter, are very attractive to birds. Such shrubs as the barberry and sumach and vines like the Virginia creeper or woodbine also furnish fruit for birds in the late fall and winter.

There are many trees, shrubs and vines which bear fruit that is not eaten by human kind, but is acceptable and nourishing to birds. The Russian mulberry is one of the most valuable trees to plant, as its fruit ripens early, and many birds prefer it to early cherries or strawberries.

Cone-bearing trees should be planted in

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

groups, to protect the birds from cold winds and storms. These evergreens and tangles of wild shrubs and vines along the fences and road sides afford places of refuge to which the smaller birds can fly when pursued by their enemies.

Swallows, swifts and phoebes can be encouraged by leaving barns, chimneys and sheds open, that they may enter where they please.

Even if our feathered friends were of no practical value they would still be indispensable to the world's best happiness. As little messengers of good cheer, as exponents of grace, song and living beauty, as examples of parental devotion, they help to brighten and uplift our lives. All that we can do to render their lives freer, safer and happier should be done as a duty as the willing payment of an obligation that we owe.—Massachusetts Arbor Day Manual.

BIG TROUT.

Among the biggest trout captured within recent history pride of place belongs to the monster of Loch Stennes, which weighed twenty-nine pounds and was caught on a hand line in 1889. It was one of those big brown trout which have taken to salt or partially salt water ("slob" or estuarine trout), and the fine cast of it made by Mr. Malloch and now in the Fly Fishers Club shows that salt-water agreed with it. Another big trout was caught in Lough Ennel in 1894. This weighed twenty-six pounds and took a spoon bait.

The Irish lakes have yielded several fish of fifteen pounds or more in recent years. A trout of twenty-one pounds was caught in Loch Rannoch in 1904 by a young lady, and in the same year a youthful angler of 10 got one in the Test at Broadlands which weighed sixteen pounds. The largest trout caught in the southern streams of late, however, was the eighteen pounder from the New River, which fell a victim to a lobworm in 1908. The record Thames trout was caught in 1880 and weighed sixteen pounds fifteen ounces.—Journal of the Salmon and Trout Association.

For Sale.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Tumbler Bolting Safety.—Of course you are convinced that the Greener Side safety is a sine qua non of the perfect gun, yet to make assurance doubly sure your gun should be fitted with an internal or "tumbler bolting" safety, operated automatically and entirely independent of the shooter's volition. A safety that will safeguard the user of the gun and his companions against all risk of accidental discharge.

The Greener Tumbler Bolting Safety is almost human in its ingenuity, yet consists of but two limbs operating in such a manner that it is a mechanical impossibility for a Greener gun fitted with this safety to be fired unless the triggers are actually pulled Should the locks by any mischance jar out of bent, the "silent sentinel" checks the fall of the tumbler instantly and effectually. Should the tumbler through dirt or other cause fail to go properly into bent, the safety prevents its fall upon the cap. When the trigger is pulled voluntarily, a projection of the trigger blade depresses the rear end of the Safety, lifting it clear of the tumbler's path and permits the gun to be fired in the usual manner

Look at the drawing, it explains the simple working of the device exactly; of course you will have this safety fitted to your new Greener gun. *Catalog free*

Are You A Gunner?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

Trial size of Stick, Powder or Cream sent for four cents.

COLGATE & CO., Dept. 46, 199 Fulton Street, New York

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING COMPANY

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System Abscesses. Colic. Worms.

FOREST AND STREAM PUBLISHING CO.

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Book Catalogue Free on Application.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

Sam Lovel's Camps.

Rowland E. Robinson. Another charming story of life in innermost Yankeeland. Quaint and delightful stories of a delightful life. A splendid book for boys and scarcely less pleasing to their elders. Cloth. Illustrated. Postpaid, $1.00.

American Big-Game Hunting.

The Book of the Boone and Crockett Club. Theodore Roosevelt and George Bird Grinnell, editors. Narratives of white goat hunting, elk hunting, old times in the Black Hills, prong-buck coursing, nights with the grizzlies, buffalo days, blacktails in the Bad Lands, notes on forest reservations and game refuges. Contributors: Theodore Roosevelt, George Bird Grinnell, Owen Wister, Winthrop Chanler, Col. Geo. S. Anderson, Col. Roger D. Williams, Archibald Rogers, F. C. Crocker, Dean Sage, and others. Cloth. Illustrated. Postpaid, $2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. This is a fourth and by far the largest and handsomest of the club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics. 490 pages and 46 full-page illustrations. Price, $2.50.

American Duck Shooting.

George Bird Grinnell. With 58 portraits of North American Swans, Geese and Ducks. Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Cloth, 630 pages. Price, $3.50. Edition de luxe, price, $5.00.

The Art of Shooting.

Charles Lancaster. An illustrated treatise on the art of shooting. Illustrated. Cloth. Price, $1.25.

The Gun and Its Development.

W. W. Greener. With Notes on Shooting, Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Choke-boring, Gun Trials, Theories and Experiments. "The Gun and Its Development" is the standard work of the age on projectiles and all relating to them. Fully illustrated. Cloth. 770 pages. New edition. Price, $4.00.

Domesticated Trout.

Livingstone Stone. Contents: Trout Breeding Works, Ponds, Buildings, Hatching Apparatus. The Nursery, Taking the Eggs, Hatching, Care of Alevins, Rearing the Fry, Growing the Large Trout, General Observations. Cloth. Illustrated. Postpaid, $2.50.

Modern Fishculture in Fresh and Salt Water.

Fred Mather, author of "Men I Have Fished With." with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chaper on the Pike-Perch by James Nevin. Illustrated. Price, $2.00.

Familiar Fish and How to Catch Them.

Eugene McCarthy. A Practical Book on Fresh-Water Game Fish. With an introduction by Dr. David Starr Jordan, President of Leland Stanford Junior University, and numerous illustrations. Price, $1.50.

Training the Hunting Dog for the Field and Field Trials.

B. Waters. This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority. Cloth. 281 pages. Price, $1.50.

Inter-Ocean Hunting Tales.

Edgar F. Randolph. A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint and dealing with every kind of game that falls to the rifle of the American sportsman. Cloth, 200 pages. Postpaid, $100.

Pocket Kennel Record.

A handy book for immediate record of all events and transactions, relieving the owner from risk of forgetting important kennel matters by trusting to memory. Morocco. Postpaid, 50 cents.

Diseases of the Dog.

By Hugh Dalziel. A handbook for amateurs. Treats of the causes of disease in dogs, symptoms and treatment, modes of administering medicine, treatment in cases of poisoning, etc. Paper. Postpaid, 40 cents.

The Spaniel and Its Training.

F. H. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Pheasants; Their Natural History and Practical Management.

W. B. Tegetmeier. New, enlarged edition. 16 plates. Cloth. 237 pages. Price, $3.50.

Woodcraft.

Nessmuk. No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm. Cloth. 200 pages. Illustrated. Postpaid, $1.00.

Houseboats and Houseboating.

Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is $3.00 net. Postage, 34 cents.

How to Build a Motor Launch from Plans.

Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty, stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, $1.50.

Manual of the Canvas Canoe.

F. R. Webb ("Commodore"). Many illustrations of designs and plans of canvas canoes and their parts. Two large, full-sized working (24x38) drawings in a pocket in a cover. Cloth, 115 pages. Price, $1.25.

Canoe and Boat Building.

W. P. Stephens. Contains plan and comprehensive directions for the construction of canoes, row and sail boats and hunting craft, directions that the amateur with tools can follow. Fifty plates and working drawings in separate envelope. Cloth. Illustrated. 264 pages. Postpaid, $2.00.

Canvas Canoes and How to Build Them.

Parker B. Field. The book gives very precise instructions by which a man with ordinary mechanical bent may build a serviceable canoe at slight cost—a plan and all working directions. Paper. Postpaid, 50 cents.

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle—and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.

FOREST AND STREAM PUBLISHING CO.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

CANOE HANDLING AND SAILING

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. Bowyer Vaux ("Dot"). Illustrated. Cloth, 163 pages. Price, $1.00. New and revised edition, with additional matter.

A complete manual for the management of the canoe. Everything is made intelligible to the veriest novice, and Mr. Vaux proves himself one of those successful instructors who communicate their own enthusiasm to their pupils.

U. S. R. A. State Championship.

PINEHURST, N. C., April 8.—Results in the annual United State Revolver Association State championship pistol shoot were announced to-day. At the head of the list is Thomas Le Boutillier, of Westbury, N. Y., with 420; L. C. Hopkins, of New York, is second with 357, and J. W. P. Moore, of oston, thBird, with 243.

Williams' Shaving Stick

"The kind that won't smart or dry on the face"

THE real test of a shaving soap is applying it to the skin that has been irritated by wind and weather, as is so frequently the case in outdoor life. Williams' Shaving Soap benefits the face under these conditions, and is soothing, comforting and grateful.

Williams *Quick & Easy* Shaving Powder

Somehow the real sportsman suggests a clean shaven man.

The razor is one of the toilet requisites which a man carries into the wilderness with him. The razor in camp or on the trail demands a soap adapted to outdoor conditions. This is found in Williams' Quick and Easy Shaving Powder.

Special Offer: A miniature sample package of either Williams' Talc Powder, Shaving Stick, Shaving Powder, Jersey Cream Toilet Soap or Dentalactic Tooth Powder, mailed for 4 cents in stamps.

All five articles in neat combination package for 16 cts. in stamps.

The J. B. Williams Co., Dept. A, Glastonbury, Conn.

—FOREST AND STREAM, Aug. 14, 1873.

NEW YORK SPRING SHOOTING.

IT is reported that the efforts to repeal the New York law prohibiting spring wildfowl shooting are to be renewed at Albany, and a letter from a Rochester correspondent printed in this issue sounds a warning note that should be heeded.

The Long bill, which extends the wildfowl season to March 31, passed the Senate by a bare majority, was defeated in the House by a vote of 66 to 73, and was then laid on the table. At any time, however, it may be taken from the table, provided a sufficient number of members wish to have this done. The situation calls for especial watchfulness on the part of game protectors, all of whom should be prepared for any effort to do this.

The method of bringing a tabled bill to a vote on final passage is more or less laborious. A vote of seventy-six members will take from the table the motion favoring the bill. After that has been done, seventy-six votes will be required to reconsider the adverse vote on the bill's passage, and finally after the bill has been taken from the table and the adverse vote reconsidered, the bill will come up on its passage and seventy-six votes will be required to pass it. Unless the game protection sentiment in the New York Assembly is less strong than we believe, and unless sportsmen through over-confidence cease to watch this bill, there should be little danger of its passage. Yet, in dealing with game protective bills in State Legislatures, eternal vigilance is the prices of success.

THE good work of the Kentucky Fish and Game Protective Association deserves the support of every sportsman in that State. Judge James P. Gregory recently said of the organization and its plans: "If we were to stock the streams and forests of Kentucky with fish and game, and protect them as they should be protected, our State would be a veritable hunters' paradise." Kentucky is, indeed, a wonderland of which the seeker after recreation never tires, but its fine streams and its covers have been sadly abused, and there is abundant need for work in renewing its stock of fish and game.

AN APRIL MORNING.

WHEN the good people of a large part of the country awoke on Sunday last, a great surprise awaited them. The world was covered by a white blanket such as is seldom seen save in winter. The greening sward was hidden and the trees bent low under a moist burden. Every object was outlined in purest white, and the vista of fields and woods was far more beautiful than pen can describe.

When the sun rose, turning the treetops to spires of dazzling brightness, the background of hills in the distance assumed deep tints of purple and azure. Fields were beautiful, woods a fairyland. Robins sat about on fences and low trees, strangely quiet and subdued, as if trying to solve the problem of their advent into a wintry instead of a vernal season. Bluebirds flitted about, equally mystified, while jay and crow scolded from the higher treetops.

The full brooks ran noisily through meadow and woodland, their waters strangely black, their margins strangely white. Every little feeder was picked out in hard black, its overhanging willows and huckleberry bushes lined out in white. Every pussy willow and gray birch catkin supported an oval globe, and the bursting buds of the witch hazel peeped out on a wintry aspect. Here and there the opening leaves of the skunk cabbage showed patches of lavender and green in the universal white, and the deep shadows of overburdened pines and hemlocks stretched far toward the west.

As the sun rose higher the buds of the red maples appeared first, as if claiming their right to herald the real coming of spring. By and by the red-browns and the greens triumphed over the white covering, and where this had been completely dissipated, the evidences of the near approach of the season of tender greens and of blossoms were complete.

MISSOURI'S AWAKENING.

THE sportsmen of Missouri are to be congratulated on the fact that Jesse Tolerton is not to be removed from the office of State Game Warden, merely to satisfy the politicians. Mr. Tolerton has prosecuted a vigorous campaign against law breakers in regions where for many years it has been the rule to destroy game and fish by wholesale.

It is not an easy matter for wardens to perform their duties in many of the backwoods counties, where public sentiment is bitterly opposed to any laws which serve to restrain the people from doing those things which they mistakenly believe it to be their hereditary right to do. And if the leader of these wardens is not a man of action, backed by a governor like Herbert S. Hadley, all the advance that has been made will soon be lost.

That large portion of Missouri which lies south of the Missouri River is peculiarly adapted to the needs of game birds and mammals and fish. A little protection is productive of excellent results, but until recently the people's assistance has never been sought in a popular way. Too often the residents have regarded visiting sportsmen with suspicion, considering them as outlanders, to be feared and avoided, but in recent years a better visiting element has sought the backwoods for recreation, and through them and through the work of Mr. Tolerton's wardens a great deal of missionary work has been performed, the result of which is increasingly satisfactory. The people's eyes are being opened to the beauty of their own surroundings and the possibility of turning it to account in attracting visitors. It follows that they are coming to realize now as never before, that the game and fish they destroyed so ruthlessly, and the forests they sold for a song, will, if replaced, prove a valuable asset.

To lose the able assistance of Mr. Tolerton now would be for Missouri a grave misfortune.

FOGAS—PIKE PERCH.

A RECENT article in one of the Sunday dailies described at some length a certain fish, the fogas, which is to be brought from Hungary to this country to be served April 26 at the dinner of the Hungarian Republican Club of New York, when President Taft is to be its guest. The article states that the fogas is caught in only one lake in Hungary, and is to be the especial delicacy for the dinner.

The sentiment here implied is charming. We have no doubt the fogas will be good, and that Mr. Taft and his fellow diners will enjoy it; but for the sake of accuracy, it is perhaps just as well to say that the fogas is the ordinary pike perch, an excellent fish, but one that might readily be obtained from nearer waters.

The fogas of Hungary freshly taken from the Danube is cooked in Budapest in such a way as to furnish an excellent dish. It is reported that in Louisville, Ky., also they have a special method of cooking it so that after one has eaten it there, the mention of jack salmon—the local name—always makes his mouth water.

THE findings of the United States Board for the Study of Tropical Diseases, in the matter of heat resisting garments for the tropics, are not without interest for the sportsman. It was the board's intention to ascertain the effect of the sun's rays on various fabrics, with a view to recommending that color which would absorb the least heat. White drill, it was found, was the coolest material, gray was second, and dusty brown khaki seems to be third, with the olive-gray of the regular army uniform in fourth place.

The Sunrise Buck

A Day on a Stand and an Evening Beside the Camp-Fire With an Adirondack Guide

By PAUL BRANDRETH

THE fire had burned low. Overhead, between the dark silhouettes of the balsams the stars glittered with that peculiarly brilliant luster which precedes the break of day. Gusts of air, cool and fragrant with the odor of frosted leaves, circulated around the camp, puffing slender columns of smoke from the dying embers, and in the forest there had fallen a complete and unbroken silence—the silence of night lulled to the deeper silence of the early morning.

I knew it was time to be stirring, but no sooner would I get one eye open than the other would close. A charred log slid off the fire and sent a cloud of sparks whirling upward into the darkness. High among the treetops a light wind rustled almost inaudibly. I looked at the Naiad comfortably tucked in a red blanket, deep in slumber and quite oblivious to the struggle I was making in the name of sport. The sight being more than human nature could stand, I went to sleep again.

Further sleep, however, was destined to be brief, and I had barely dropped off when I was roused by hearing Rube cough in the tent adjoining our spruce bark tepee. As a matter of fact, Rube's cough is more compelling than any alarm clock ever invented, especially if one is bent on the daylight quest of game or fish, and thenceforth I remained awake. Presently I heard him shake himself out of the tent, throw an armful of birch logs on the fire, and a few minutes later the tea pail commenced to bubble and twitter over a crackling blaze.

By this time a yellow streak of dawn had broken in the east, and looking off into the woods, one could vaguely catch the outlines of the trees, standing black and shrouded in billows of gray-white fog. The air was fresh, but lacked the sting of frost, for it was still early in the autumn. When I had dressed and emerged from the camp, I found Rube squatted before the fire, in one hand a frying-pan and in the other a fork with which he kept a golden island of butter circling and sizzling on the bottom.

"Hev an egg fer breakfast?" he inquired without looking up and endeavoring to wave back an assault of pungent smoke. Eggs being a decided luxury in camp, I made haste to say, "Yes," and from a tin cracker box he produced four — white, spotless, appetizing. These he deftly broke into the pan, and in less time than it takes to tell, breakfast stood hot and smoking on the rickety affair we used as a dining table. Then we sat down, and with visions of deer, great and small, walking in my head, and dawn brightening between the balsams, I forgot to envy the Naiad and her dreams.

"Awful still, ain't it?" Rube remarked when we had eaten for some minutes in silence. He poured himself a third cup of tea from his much treasured tea pail, and stirred it thoughtfully with a spoon.

"I guess we'll hev to let the still-huntin' go fer this morning and watch the pond instead," he added.

"All right," I agreed; "those eggs are fine, Rube."

"They do taste kinder nice, don't they?" In the half light his patriarchal beard flickered steadily as he did honor to the repast, and always with the alertness of the born woodsman, his glance kept searching the shadowy vistas of the outlying wilderness. His had been a lifelong and intimate relationship with the things that lay therein. Every square foot of the region in which we were camped he knew, even as you and I might know a room which, for many seasons, had housed and sheltered us. Indeed, there were times when we were hunting together that I believed him possessed of an intuition as mysterious as the forest itself; a knowledge that only years of living in the wilderness could make perfect. On occasions too numerous to mention I have seen him hasten through the woods, careless of the noise he made, breaking twigs at every step, and bent solely on picking out the easiest trail. Then suddenly he would alter his pace, stealthily moving forward without sound, and a little while later you would either hear or see a deer.

Breakfast over, we put the dishes aside, built up the fire, and slipped away from camp without wakening the Naiad. Rube walked ahead, a weather-stained canvas pack slung over his shoulder and a small pocket axe swinging in his hand. The pack, which was his own invention, contained a coil of stout rope, a pulley block and a few hardtack, the former to be used in hanging up game if we were lucky enough to bag any—the latter to ward off hunger pangs in case we were late in getting back to camp. In the line of firearms I carried an old model repeater. Otherwise we went unburdened, and when you are hunting it is a never-ending comfort to travel light.

The trail to Buck Pond led northward from the camp. For the first quarter of a mile it zig-zagged through a belt of low, swampy ground where the balsams stood close together and twilight fell before the sun had set. Beyond it emerged on a wide expanse of beaver meadow. Clumps of alders, young spruce trees and flag pole tamaracks decked out with long streamers of gray-green moss were scattered far and near, and in all directions deer runways crossed and re-crossed each other in a labyrinth of pathways. The pond lay in the southwest corner of the meadow, a narrow strip of water scarcely a hundred yards wide in any place and not more than half a mile in length. On the further side it was backed by thick timberland and a rocky fire-swept hillock. Yellow patches of marsh cut the edge of the woods in various places, and the shore skirting the beaver meadow was soft and boggy, running grassy tongues out into the cool black mud where in summer and early autumn the deer loved to wallow. An abiding seclusion, abundance of food, and the fact that every condition was favorable to their wants had long made it their chosen haunt.

We followed the trail in silence, picking our way over the slippery tree roots and seeing the woods fill with light as it grew time for the sun to rise. Bluejays chattered in the balsams, and as we came out on the beaver meadow, several whiskeyjacks passed overhead, mysteriously silent. The mist lay so dense in every direction that it was difficult to distinguish anything further than a few feet in advance, and while near objects loomed up dark and strange, those further away melted into a ghostly vagueness and uncertainty.

The trail now fell in with a runway. On each side the small spruce trees growing in the marsh were wreathed with dew-sprinkled cobwebs that flashed and sparkled as though covered with hoar frost, and through this miniature glittering forest we advanced noiselessly, our moccasined feet sinking ankle deep at every step in the spongy reindeer moss. Behind us, over the rim of a hog-backed hill, flame ravaged and sentineled by the gaunt figures of dead pine trees, the rising sun blazed through a rift in the clouds and touched the cobwebs with gleaming rainbow tints. Above the phantom sea of mist it resembled a livid moon. Then as quickly as it had broken its cloudy nightcap, it disappeared again, drowned in a gulf of milky fog.

When we reached the pond, the mist had apparently grown more dense than ever. It was impossible to see the opposite shore, so there was nothing to do but sit down and wait. Pres-

ently the fog lifted, disclosing hazily the outlines of the marsh. We scanned it carefully, but there was no sign of life to be seen, not a motion in the grass nor the flicker of a bush.

"Suppose we hunt down the pond careful and hev a look at the lower marsh," Rube suggested. The plan seemed a good one, and after circumventing a piece or rough ground we gained the shore and crept cautiously forward. We were within a hundred yards of the lower end when Rube grabbed me by the arm.

"Righ over there," he whispered; "a nice buck, just behind that little spruce."

Through the mist that was curling off the water like white steam I caught the outlines of a deer silhouetted on the opposite shore between two dwarf spruces. He was standing broadside, motionless as a statue, his head partly hidden behind one of the little trees, his blue coat glistening velvety and almost black through the rifts of moving vapor. Evidently he had either seen or winded us, for the rigid poise of his body bespoke alarm, and he appeared to be looking straight in our direction. It was a sight to be remembered — the water with its cloudy breath and sharp reflections, the yellow marsh struck by a shaft of early sunlight, the dark figure of the buck looming and fading through the thin clouds of mist.

"Are you sure it's a buck?" I asked softly.

"Sure," he replied. "I seen his horns."

I shoved the sight on the rifle up to the second notch for long range, knelt down on the boggy ground, took a good steady knee rest and fired. As the smoke cleared I saw the buck standing in exactly the same position—missed clean! Only one who has had a similar experience can appreciate my feelings. While I was staring at him and wondering why he did not fall or show signs of being hit, he turned and started for the woods.

"Shoot him again! Shoot him again!" cried Rube.

A second bullet sped harmlessly over his back and I groaned inwardly. He disappeared for a second, only to reappear almost immediately, evidently bewildered as to the direction of the shots. This time I drew a very fine sight and somewhat nervously pulled the trigger. At the report, he gave a jerking bound, and we saw him lurch out of sight behind a screen of alder bushes.

Rube gave his beard a contemplative stroke.

"Well?" I interrogated.

"Oh, he's hit all right," he answered after a pause, "but I guess we'll let him alone for a while. It's a poor plan to chase a deer up too quick when you don't know just where they're hit. A wounded one's always lookin' back and 'll go twice as far if he hears ye comin' after him. Let him be fer a time and he's pretty sure ter lie down."

Back we went to the lower watch ground, settled ourselves comfortably in the long grass and waited. An hour passed. The fog cleared and the sun came out warm and friendly. It was one of those mellow September mornings when the autumnal tints of the forest glowed softly through a bluish haze, and the sky, mild and serene as in Indian summer, brooded tranquilly above the quiet waters and golden shadows of the wilderness. Now and then an insect shrilled in the long, dry marsh grass. Occasionally a broad-winged hawk sailed out over the treetops, or rising abruptly to a greater height, spun slow, measureless circles against the filmy blue of the heavens. A yearling doe, scrawny and still in the red coat, came out on the shore opposite to where we sat and walked about leisurely in the edge of the water. Presently she was joined by a large blue, long-eared doe who fed restlessly and kept lifting her head with every mouthful, while her nose searched the air for a taint of danger. Both remained out for nearly half an hour, quite oblivious to the fact that they were being watched by human eyes. Then with slow jerky steps they disappeared in the woods, and the shores of the pond were again left empty.

Another hour passed. The sun climbed higher and a little breeze sprang up. Still Rube continued to sit in the shadow of a low bush, peacefully whittling a stick of wood, now and then taking a squint at the pond. Always I grew more dubious as to the probability of ever finding the wounded buck. The thought of having missed a deer twice in broad daylight at a distance that could not have exceeded seventy-five or a hundred yards was anything but consoling.

BUCK POND.

Moreover, I imagined the buck putting miles between us, escaping into the forest to perish miserably in some remote place, and gradually my patience wore away.

"I suppose we might as well," said Rube in answer to my question. "We'll hev ter go awful careful, for I don't believe he's gone very far."

This sounded good. A second time we took our way up the shore of the pond and reaching the end crossed the inlet—a narrow stream of cold, clear water—and struck into the woods on the other side.

Instead of picking up the trail from the spot where the buck had stood when shot at, Rube went in diagonally, meaning to take it up on whatever runway the animal followed. And this he did. It was as pretty a piece of hunting craft as I have ever seen, for the woods just there were literally chopped into a network of deer paths, yet he had gone only a short distance when he halted, stooped down, examined the ground closely, then straightened up with a quiet smile. Cut clean and fresh in the soft soil of a runway were the buck's tracks, and here and there on the green moss a telltale spot of red.

The trail led forward up a steep spruce-clad hill. Half way to the top we saw where the buck had turned off at right angles and clambered along the side of the slope. When a wounded animal leaves a runway thus, it usually means that he is hit very hard and will only go a short distance further, so we advanced with greater caution than ever.

Just ahead a giant spruce had been tumbled down the hillside, its roots, matted with dirt and boulders, flung upright like a barrier across the trail. When we came within a few feet of it, Rube stopped, craned his neck, took a step forward, and slapping the gun to his shoulder, fired. Then he heaved a profound "Ah!" and threw the shell out of the chamber. Behind the upturned roots lay the buck, a swift bullet having put an end to further suffering.

"I just see the tip of his horn," he explained. "I kinder had an idea he'd be layin' behind that stub, but when I first see the motion I thought it was a squirrel flickerin' round. Then I stepped up closer and seen it wasn't. Well, he's a nice deer, ain't he?"

"Where's he hit?" I asked, remembering the morning's fusillade.

"Ye held fer his shoulder, didn't ye?"

"Yes," I said, grimly.

"Well, I can't find no mark." Then in a mild tone: "I guess ye hit him in the hind leg."

Further questions I did not ask. As a matter of fact the best thing to do if you make a fluke shot, when without doubt you should have made a good one, is to retire discreetly into the profunditics of silence, and blame the conditions—blame anything so long as it eases your conscience. Rube, however, was kind, and after talking it over we came to the decision that the moving fog had been the cause at least in part of such poor marksmanship.

"Ye got the deer, anyway," was his final comment. "That's the main thing."

From the canvas pack Rube now brought forth rope and pulley block. These he secured to a stout balsam log which he stood in a half slanting, half upright position against the old spruce stub, and here the buck was swung high, beyond the reach of foxes or other marauding night prowlers. Twenty minutes later the head was skinned and packed and ready for transportation to camp. The horns were slender and symmetrical, lacking the massive beauty of a heavier deer's, but making nevertheless a pretty trophy to recall, in the grime of civilized paths, memories of the wilderness.

We sat late that evening around the campfire. The night was mild and dark with a smell of coming rain in the air. When the dishes had been washed and the blankets spread, we stretched ourselves luxuriantly and someone called for a bear story.

"Let's build up the fire if you're going to tell any bear stories," said the Naiad.

So Rube stirred the glowing bed of coals with a beechwood poker, laid on two or three fresh logs and returned to his seat. The embers, catching the yellow curly birchbark, flared brightly while the circle of light warmed and

A SKI JUMPER.

widened, chasing backward the inky shadows of the forest.

"You never got that one you chased for two weeks last fall, did you, Rube?" I inquired by way of a beginning.

He twirled his thumbs meditatively and stared into the flames.

"No, I hed hard luck with thet feller," he said at length; "ought ter hev got him, too."

"Ever see him again after the first time you shot at him?"

"I seen him once," he said slowly. "I'd been chasin' him fer a week in the snow, findin' a little spot of blood here and there, pickin' up his trail fresh from day ter day. Well, this time his tracks went up a mounting, and when I'd got about two-thirds of the way up I seen a small spruce jist ahead thet looked queer. Sure enough it was the bear lyin' curled up under it, only a piece of him showin' about as big as yer hat. I let go fer the piece thet was stickin' out and the next minute a black streak went scootin' down the hill. Thet was the last I ever seen of him."

"He was wounded badly, wasn't he?"

"The bullet went square through his shoulders, 'cause he bled both sides, but it hit him too high up. I followed him fer another week, then it snowed one night and I lost the trail."

He paused and we listened to the snapping and crackling of the fire. Off in the woods a tree toad whistled plaintively. Still further away an owl gave vent to prolonged hootings. Presently Rube's voice broke upon the hush.

"Ye run onter bears sometimes in queer ways," he began. "I heerd of a young feller down ter Long Lake who came mighty near gettin' mauled in jist such a way. He was huntin' rabbits one day in November, and round noon set down to eat his lunch near an old log road. There was a big pile of brush off to one side partly covered with snow. The sun was right on it, makin' a nice warm place, so he clim' up and made himself comfortable. Pretty soon when he was eatin' his lunch he heered a little scratchin' underneath him in the brush pile. It sounded jist like a rabbit, so he picked up his gun and peaked down through the twigs, tryin' ter see what it was. Then all of a sudden the whole brush pile heaved up under him, dumped him over backward, and a great big bear went rushin' out the other side and away up the log road. Well, sir, I guess his hair must hev stood on end till he got out of sight. It's jist at times like this when a bear's scared thet he'll pounce on a man. I don't believe thet feller took much stock in rabbit huntin' fer a good while afterward," he ended with a chuckle, and I vowed inwardly to be wary in the future of large comfortable looking brush piles.

"There was a minister livin' down there about the same time who hed jist such another squeak," Rube went on. "Trailed a big bear in the snow up ter a ledge of rocks and found where he'd gone in a cave. I guess he must hev been kinder green on huntin', fer he stood right in front of the cave, peerin' in and tryin' to see the bear. It must hev made the old feller restless bein' looked at like thet by a dominy, and out he come lickety cut. His head struck the preacher square in the stomach and sent him flyin' over a ledge into a snowbank."

Here Rube doubled up in a spasm of mirth. It was some minutes before he got breath enough to finish the narrative.

"I've always wondered who run the fastest—the bear or the man. I'll bet a dollar thet dominy never stopped ter look fer his gun, but jist picked hisself up and dug fer home. It was lucky fer him thet bear didn't change his mind and come back. He must hev been skeered of gettin' called up fer a revival meetin'."

Rube stopped speaking, shifted his hat back and forth on his head until it rested in the right place, and commenced idly to pluck the needles from a balsam twig. The shadows seemed to draw closer; the circle of firelight to wane and narrow. Contrasted with the outlying world of blackness the interior of the tepee glowed with a warm and homely atmosphere. A faint aromatic perfume came from the thick bed of balsam fans; a lone candle burning at the back and ingeniously fastened to an upright birch stick, cast wavering fantastic figures on the walls of yellow spruce bark. Always the smell of rain grew stronger, the darkness of the night more impenetrable. Perhaps it was only a threat; perhaps next morning we

would wake to an autumn gale and blinding downpour.

"I wish I could hear a bear sometime at night when we're out like this," remarked the Naiad sleepily.

"Or a panther," I suggested.

"Sugar! If ye ever heered a panther screech in the dark, yer hair would stand straight up," said Rube, who was busy building up the fire and laying a pile of logs handy for use during the night.

"Didn't you see one a few years ago on a pond near here?" I asked, fishing for another yarn.

A suspicious twinkle came into his eye and he poked the blazing logs vigorously.

"You mean the feiler I see catchin' frogs?" he inquired.

I nodded. The gleam of humor deepened and broadened into a grin.

"I ain't seen a panther fer twenty years," said he. "I jist told of thet one so the folks would hev somethin' interestin' ter talk about fer awhile."

Winter Sports in Norway

By CHR. G.

HAMAN, Norway, April 1.—*Editor Forest and Stream:* I am sending you a few photographs from a ski jumping competition, which may interest your readers. In our neighborhood we have a hill that holds the record for jumping in Norway (51 meters) made last winter.

A month ago there was the annual contest and some 140 of Norway's best skiers competed for the prizes, the first of which was the King's cup. It was a very close competition and a difficult matter for the judges to decide. There were as usual two runs combined, first the long distance run of about ten miles and afterward the jumping, the result of both being combined.

In the jumping the judges give more attention to the graceful position of the contes'ants, and the manner of holding the skjis while in the air than to the length of the jump, and this of course has some influence on the length, as one who is among the first in the long dis'ance run naturally does not like to risk his chances by getting a fall in the jumping. Still there were many elegant jumps of 40 meters and more, and one of 47½ with a fall.

I saw it stated some time ago in FOREST AND STREAM that ski jumping was a very dangerous sport. To this I cannot agree, however. Take it, for instance, here in Norway. Every Sunday in winter there are thousands of men and boys practicing jumping and accidents are very seldom heard of. If there is one, nine times out of ten there has been too little snow, or a stone or stump in the way.

It does look neck-breaking, however, to see a person sailing through space for 45 meters with a sheer drop of 28 meters, as in the above mentioned hill whose pitch is about 40 degrees, but as stated before, if there is plenty of snow, a clear way and a decline to land on—a level place would not be very healthy—there is a minimum of danger.

In combination with the ski competition the rifle club also had an interesting contest starting with a sham fight. The members all had skiis and were divided into two parties under command of army officers. After the fight there was sharpshooting at figures, unknown distances.

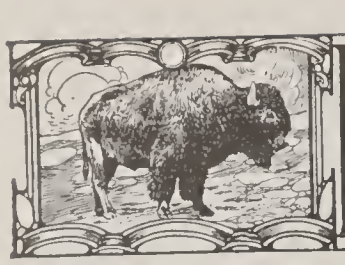
We generally have a scrap or two like this every winter, and it is great sport, but the funny thing is that some of the best range shots are outclassed at the unknown distance shooting. That is where the man who "goes a hunting" has the best of it.

A SKI JUMPING COMPETITION AT HAMAN, NORWAY.

Black Fox.

GEORGE L. WORTHLEY, of Norridgewock, shot a black fox, which is estimated to be worth from $250 to $500. Mr. Worthley thought he was on the trail of a red fox.

He had set his Kentucky fox hound on a scent and in a few minutes after the dog had made a circuit of several miles the fox ran up close to where Mr. Worthley was on the watch. It took but one shot to kill the animal. This is the sixth black fox that has been killed or captured in Norridgewock this season. Three of them have been captured and are still alive.—Lewiston Journal.



NATURAL HISTORY

Queen Charlotte Island Caribou.

PENTICTON, B. C., April 1.—*Editor Forest and Stream:* I spent last summer near Masset, Graham Island, Queen Charlotte group, and since my return my friend, Allan Brooks, has asked me to write to you on the subject of *Rangifer dawsoni.*

From actual experience I can give you no information about the animal, but from what I was able to find out from Indians, inhabitants and prospectors there can be no doubt that the animal is not numerous and that the existing specimens are wholly confined to the northwest corner of Graham Island.

The distinctive characteristics of this species of caribou have been set forth by competent, interested naturalists, but no one, I fancy has arrived at the reason for the existence of a few degenerate caribou in the corner of an island 200 miles long and anything from twenty to seventy miles wide, all of which area is well suited to caribou; in fact, exceptionally well suited for any species of deer.

It has been suggested that these few animals are the remains of a herd which happened to be on Graham Island before it became an island by the forming of Hecate Strait in the far off ages.

There appear to me to be conclusive objections to that theory.

To begin with, in that case there would be scattered degenerate caribou in all the suitable parts of the Queen Charlotte group, but we may fairly ask why degenerate? In-breeding would have to be very exceedingly close in wild animals to produce degeneracy, and I believe, as a matter of fact, does not occur, nature providing against it.

Even if it were only one small herd isolated there, in a country of that size and suitability their descendants would never have degenerated, but in time would undoubtedly have spread over the whole country.

One might as well expect the wapiti and blacktail deer of Vancouver Island to be degenerate.

The black bear of Queen Charlotte Island is not degenerate, very much the reverse; neither do any other mammals of the islands show any signs of weakness, though from their long isolation they show, I believe, certain modifications in structure.

If these caribou were a subspecies of their own genus as are the black bear, they would, like the black bear, be all over the islands. Hecate Strait is over twenty miles wide at its narrowest place, and being the roughest piece of water on the Pacific coast, no land animal of any species ever swam it. These caribou were, therefore, undoubtedly introduced.

The Haida Indians of Graham Island are quite the most virile race on the north Pacific coast, and have always been constant, though at one time unwelcome, visitors to the mainland.

I have no doubt that during some expedition to the mainland some Indian, perhaps 200, perhaps 300 years ago traded for or took a pair of caribou calves from a mainland Indian and brought them over to his home on Naden Harbor, probably presenting them as pets to his children.

These calves—no doubt the offspring of one cow killed just after calving—wandered off from Naden Harbor into the suitable caribou country which begins within a mile of the beach, and being male and female, and finding neither wolves, coyotes nor cougar on the island, were able to breed unmolested, but it would certainly occur that before they became a band large enough to scatter in the least, they became so in-bred that they lost many of their caribou characteristics, including their size, and no doubt had there been vermin on the island, would not have survived. C. DE B. GREEN.

Mr. Allen Brooks, of British Columbia, to whom we owe the first news and photograph of the only ones of these caribou ever secured by naturalists, writes us of them as follows:

I examined a specimen of this animal (*Rangifer dawsoni* (Seton)) in Victoria two months ago—January, 1911—and was at once impressed by the extraordinary slender formation of the head and limbs as well the small size of the animal. The animal—a bull of two or three years—was no larger than an ordinary sized mule deer and of a peculiar pale yellowish brown color, or rather a grayish brown tinged with yellow. The neck was whitish, which color ran up toward the face, which was brownish, not dark black or brown as in most caribou. It had a white nose and white around eyes, white around the feet and up posterior aspect of all the legs. The whole belly was white and there was a light—but not abruptly paler—area on the buttocks; no dark brown or black anywhere.

Late Spring Storms.

SAGINAW, Mich., April 5.—*Editor Forest and Stream:* A Saginaw paper says that a white robin had made its appearance here and was to be seen on South Jefferson avenue. Presumably this is the white robin that is looked for each spring by the employes at the postoffice, and which has made an annual appearance in Federal Park for some years.

For a number of years the arrival of the white robin in the postoffice grounds has been noted. This probably is the same bird. I am wondering what became of him. The weather was warm and spring-like until a few days ago when we had a blizzard and it has been at the freezing point ever since. There are lots of robins, killdeer, meadow larks, horned larks, and I have been told that the bluebirds are here. I wonder if they go back south or if they simply starve to death?

I once was on the North Branch of the Au Sable River about the 1st of May. For several days the banks of the stream had been literally alive with warblers, waders, purple grackles and thrushes. The woodthrush predominated; there were hundreds of them. Then came on one of those sudden changes that Northern Michigan is noted for. Eight inches of snow fell. The first day it was not cold and wherever the snow melted the birds congregated. The next day it turned cold and there was a regular old blizzard. I know we stopped three times to warm ourselves by fires that we started, and in some places the birds would come and sit in the bushes near by as if they, too, were warming by the fire. In waiting for the team to take me home toward evening I went into a deserted log camp and a number of birds were in there sheltered from the storm and some of them so numb that I could pick them up. A storm of this kind meant death to thousands of our songsters.

W. B. MERSHON.

Mammals of West Virginia.

IN the report of the West Virginia State Board of Agriculture for the quarter ending Dec. 30, 1910, is found a paper of much interest on the mammals of West Virginia. It is prepared by Fred. E. Brooks, of the Agricultural Experiment Station at Morgantown, W. Va., and covers all the known native species. Except for a briefly annotated list of Thaddeus Surber, of White Sulphur Springs, no systematic effort so far as known has before been made to record the names, distribution and habits of the animals of the State.

Deer still occur in some numbers, and Mr. Brooks quotes Emerson Carney as writing in FOREST AND STREAM that as late as 1900 one hunter killed thirty-five deer and three bears in the mountains of Pocahontas county.

The elk has long been extinct. Records are given of animals killed in 1830, 1835, 1840 and 1843, which last is the final record so far as known. It will be recalled that the last elk in Pennsylvania was killed in 1867.

The buffalo probably once roamed in considerable numbers over the greater part of the State. Hale, in "Trans-Allegheny Pioneers," p. 62, says that the last buffalo killed between the Kanawha and Ohio rivers was taken in 1815, but Maxwell speaks of a cow and calf killed in 1825.

Beaver, which were once common, are probably long since extinct, though there is a well authenticated case of a beaver killed in Pocahontas county in 1907, but this was perhaps an escaped captive.

The panther, which is generally supposed to be extinct, Mr. Brooks thinks still exists, though he has not succeeded in obtaining convincing proof of this.

The spotted skunk, sometimes known as civet cat, occurs rarely in the southern and southeastern sections of the State.

Black bears are still quite common, and it is reported that twenty-five sheep belonging to one man were killed by bears in the Canaan Valley in the year 1908.

Mr. Brooks' list is very interesting and reflects credit on him. Evidently, however, he did not have an opportunity to revise his proofs. We have mentioned only a few of the rarer or extinct species which it names.

Widgeons of Europe and America.

HOW TO TELL THE EUROPEAN WIDGEON (*Mareca penelope*) FROM THE AMERICAN WIDGEON (*Mareca americana*) OR BALD PATE.

It is well known to sportsmen that the widgeon of the Old World is not infrequently taken in America. It is not, however, realized that this bird must be far commoner in our waters than the long list of recorded instances of its capture would indicate, because almost the only examples which are noticed as peculiar, and therefore saved as specimens, are adult males. Such birds must be outnumbered at least three to one by females, young males and adult males in eclipse plumage—the male widgeon not assuming its nuptial dress till near mid-winter.

It is not surprising that gunners have failed to find birds when out of plumage, because ornithologists have always been puzzled to distinguish with absolute certainty between the American and European species when clothed in these nearly similar dresses. The European species is usually more ruddy in coloring, especially about the head than the American bird in corresponding plumage, but this character is not always found to hold. Worn or faded specimens of the female or young male of the European widgeon are almost identical with our American species so far as a superficial inspection goes.

There is, however, a very simple though infallible way of telling the European from the American species, regardless of the sex, age or plumage of the specimen, and if this point is attended to by gunners, we shall soon have more accurate information regarding the status of the European widgeon in this country. The character referred to is the color of the axillars. The axillars, which are well developed in ducks, are the long, stiff, narrow feathers which are found under the wing, lying close to the body of the bird, and about four inches in length. They rise from a point close to where the wing joins the body. In our widgeon these feathers are pure white in all plumages, while in the European species they are always gray.

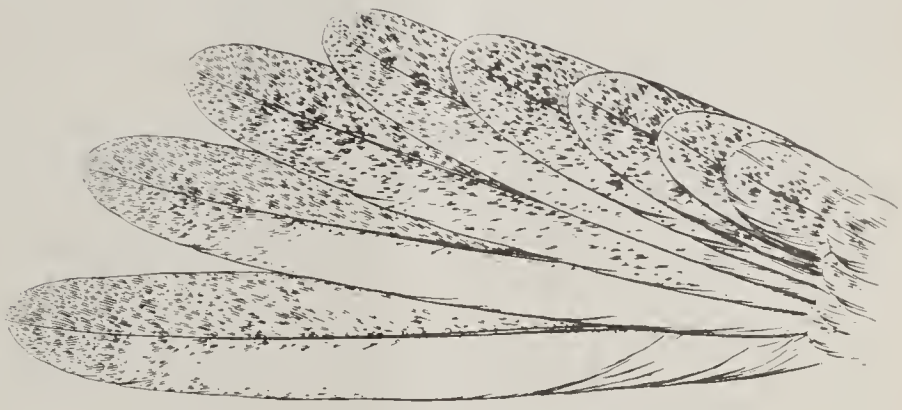
It is necessary to explain a little further so that no confusion may exist. In fully adult European widgeon the axillars closed together may look almost white, but if the feathers are spread apart, the inner web will always be found to be distinctly marked with gray. In the American bird, both webs (that is, both sides of the central shaft of the axillars) will always be found to be white. Occasional specimens sometimes show a very slight dusky discoloration at the extreme tips of the feathers. Sometimes also the shafts of the axillars will be found blackish in color, but this does not affect the pure white of the feather as a whole, both of the inner and outer webs.

The accompanying sketch shows at a glance the appearance of the whole group of axillars in each species, drawn from adult male specimens.

It is hoped that this note will encourage gunners to examine and report on their bags of widgeon, so that we may get a better idea of the distribution, migration and numbers of the beautiful European bird undoubtedly well established and breeding somewhere in this country.

J. C. PHILLIPS.

AXILLARS OF BALDPATE (*Mareca americana*).



AXILLARS OF EUROPEAN WIDGEON (*Mareca penelope*).

Bluebirds in New Jersey.

NEW YORK CITY, April 8.—*Editor Forest and Stream:* Bluebirds were seen by me for the first time this year late in February, although a neighbor's boy, who is frequently abroad, told me that he had seen them frequently throughout the winter. This I can readily credit, for I saw some in December, after the first cold snap.

On March 11 bluebirds were present in numbers, and thinking the youngsters of last year's hatching might return to their home, I put up their box, which had been repaired and painted. I also put up a new box and the two are on high poles thirty feet apart. Sparrows immediately took possession of both boxes and began to make nests. I lowered the boxes, cleaned them, put them up again, and since that time have shot a number of sparrows and frightened away others, so that they seem to be less active than at first.

A pair of bluebirds first began to take an active interest in the boxes on March 18, though they had visited one of them earlier. They inspected the old box first, then the new one, and this they continued to do at every visit until the 23d, when they seemed to be content with the old box. During that week they dominated the sparrows. The latter would alight in a tree close to the box and twitter a challenge, then both the bluebirds would swoop down and drive them away. If the sparrows alighted on the new box, the bluebirds drove them from that, too.

Now and then the sparrows would seek help from their kind and harass the bluebirds, and on two occasions when scrimmages occurred, a starling swooped down and drove the sparrows off to their winter refuge in a wild cherry tree. As starlings were seen in the vicinity every sunny day during the winter, but seldom took more than passing interest in the bird boxes, their action in befriending the bluebirds was surprising, but gratifying, for while I peppered the sparrows with .22 bullets every time I saw one while I was at home, the starlings acted as wardens during my absence.

During the active nest building work I often let opportunities to shoot sparrows pass, fearing that the bluebirds might be frightened away by the report, but when I did shoot, the bluebirds flew away but returned presently, while the surviving sparrows lost some of their boldness.

Last year the pair of bluebirds that nested in my box in June reared four young ones, and all returned once after their first absence in the fall, but so far this spring only one pair has returned to the old box, although there is room in the two boxes for four families. It would be interesting to know whether this pair are the old birds or two of their offspring.

New Publications.

HUNTING WITH THE ESKIMOS, by Harry Whitney. Octavo, cloth, 453 pages, illustrated from photographs, $3.50. New York, the Century Company.

With the main facts connected with Mr. Whitney's journey into the Arctic region, the public is familiar through the publicity given his presence there during the time Commander, now Rear Admiral Peary was prosecuting his last and successful pole-hunt. Mr. Whitney went along merely to hunt and fish, to see the vast region and its people, and to collect specimens. While he devotes considerable space in the book to all these, it is by no means a dry narrative of events, but a vivid pen picture of the vicissitudes that beset every human being in the Arctic, Eskimo as well as American. He lived with the Eskimos and they hunted with him. The story, and the excellent illustrations from the author's photographs, make a volume of absorbing interest.

NOTES ON NEW ENGLAND BIRDS, by Henry D. Thoreau. Arranged and edited by Francis C. Allen. Cloth, 452 pages, illustrated from photographs from life, $1.75 net. New York, Houghton, Mifflin Company.

These notes are taken from Thoreau's "Journal" and arranged in compact form for the use of bird lovers and those admirers of the great naturalist who are most interested in feathered creatures. The bird pictures are from photographs made by H. K. Job, H. W. Gleason and others.

GAME BAG AND GUN

With Old-Time Fox Hunters.

THE fascination of fox hunting will never be lost to the old-time fox hunter of Meigs county, Ohio, so long as he can light his lantern after the shades of night have fallen, and with the old hound pick his way through the trees and underbrush to the highest knob in the neighborhood, where he will await the first bay of his good hound, announcing that he is on the trail of old red fox. With great expectancy he waits developments, where every note of the hound means something to his experienced ear, and tells him the direction taken by the fox and about how far behind the hound is, and when the hound begins gaining and keeps getting closer, then the music comes fast and furious, and the old fox turns his head every little bit to see just where his pursuer is and how much faster he ought to run, or doubles on his trail or executes one of the many other cunning tricks which often keep hound and hunter guessing. And about the time you think old Drive has lost him, you hear a faint bay over some ridge telling you that red fox is still being pursued.

The old fox hunter generally starts out soon after nightfall, as the fox, after being holed all day or lying in some thick cover, is then on the move to seek some covey of quail or a luckless rabbit that may happen in his path. The love of nature and its creatures is the incentive which promotes that desire to be out under the canopy of the sky with its stars and moonlight, or the blackness of a stormy night and clouds. It is all the same to the fox hunter. Even a little rain or snow does not deter him nor dampen his ardor and enthusiasm. If very cold or damp he will build a little fire in the niche of a rock protected from the wind, and there keep in touch with the work of the hound. Knowing the crossings well, it is not unusual to see the fox on moonlight nights.

Frequently other hounds are turned loose in the neighborhood by farmers who are out feeding late and hear the hound of the lone hunter on the hill. They see the little fire and go up to be in at the finish. Often a half dozen will congregate and have as many as a dozen hounds all running at the same time.

Having accepted the hospitality of Hartwell Stanbery, of Pomeroy, for the quail season of 1910, we were most comfortably located in a fine old log cabin in Bedford township on the Whaley farm, known as Loren Parsons' Hollow, near which were a number of large caves and numerous springs, making excellent hiding places for fox, and many an evening while resting before the log fire the hounds of the neighborhood would take a fox past the cabin a stone's throw from the door.

Mr. Stanbery wished to give the fox hunters of the vicinity a little party, and invitations were sent by mail, telephone and horse to the fox hunters to be present on the evening of Nov. 21 for a big chase and a turkey roast on Turkey Knob. As early as 4 o'clock in the afternoon of the 21st they began to assemble at the cabin with dogs and lanterns, and by 6 o'clock, all being ready, old Drive, a hound belonging to William Whaley, was released back of the cabin and all the other dogs led up the hollow about a hundred yards. In just twelve minutes she gave tongue and had a fox started. The whole pack was then released and the chase was very lively, as a portion of the pack were running him close and the noise they made was great music to that crowd of sixty men who listened until the hounds took the fox over Bear Wallow Ridge and down Irwin Creek where Reynard worked a trick on them, but the hounds turned him up again on Jones Ridge and down on Shade River bottom over on to Bunker Hill and Middle Branch. Old Drive and a dog belonging to Ed. O'Brien, were well up, while a number of other hounds were prominent in the chase.

It was an ideal night, but clouded later, and a little rain fell, making it fine for the hounds. After starting the hounds, all hands were taken to Turkey Knob, the highest point in that vicinity. A clear place having been found, a large fire was built between two hickory saplings and a pole run across between them where I was to do the honors of the turkey roasting, a twenty-two-pounder being candidate for browning. The turkey was suspended on a wire in the center of a pole directly over the fire and high enough to keep it away from the flame, and as the fire burned down to coals, the turkey was lowered. The light of the fire shining on the faces of a fine assembly of sportsmen made a fanciful scene, with the grizzled beards of the older men and the different characters. I walked away from the light of the fire and looked at them. It was a picture. Little groups of men would leave the fire to get away to more clearly hear the progress of the hounds, and the stories of former chases told by the older hunters were immensely interesting.

Old "Daddy" Reinhart told of when he came with three other fox hunters from Pomeroy in 1879 to hunt. He walked the eighteen miles to meet the best dogs they had in that county. "They knew we were coming," said he. "I knew that we had splendid hounds, as they had been training ever since the first frost that fall. My big long-bodied Old Gun Barrel I had picked as one hard to beat. My other dog was Whistle Trigger. We had a few little side bets up on the relative merits of our dogs, but when we had run a few chases we cleaned up on the Bedford boys so hard that they would not bet any more, so we ran a lot of new dogs they brought in just for fun. We stayed there nearly ten days and had one of the best times I ever had in my life."

Daddy is getting old now, but his spirit is young and he likes to sit by the fire and see those dogs running in the coals. Among those in attendance not mentioned were Jackson Howard, eighty-four years old; Loren Miles, seventy; John Carsey, sixty-six (we called him General Custer owing to his likeness to the ill-fated general); Daddy Reinhart, sixty-three; Servitus Hart, fifty-nine; John Hines, fifty; Benny Morris, Mike Williams, Charles Hines, Dell Whaley, Luther Carsey, Welby Whaley, Otis Whaley, Earl Hines, Ernest Hart, Ray Morris, Click Howett, Dale Whaley, Will Beechman, Ed. Sharp and Theo. Minnick were from Pomeroy.

At 10:45 the turkey was brown as a berry and looked fit to eat, so all hands were directed to cut a forked stick and toast themselves a slice of bread and come for a slice of turkey which, with the other refreshments liberally provided, made a very fine lunch for the hungry hunters. "General" Loren Miles, who was an old soldier, made a very able address, as did also Mr. Howard, eighty-four. John Carsey, Bob Perry, Ike Cullom and Ed. O'Brien all made addresses, and in concluding the banquet Mr. Stanbery told them it was a pleasure to meet such a fine lot of hunters, and he hoped it would not be the last time.

About 11:15 the dogs holed the fox about a mile distant, and the chase was over. The Bedford boys passed a vote of thanks for the entertainment and begged the privilege of entertaining us on Nov. 28, before breaking camp. We accepted.

Monday evening, the 28th, found all the hunters on hand for the second chase. The night was a bad one with a drizzle, and it was found necessary to hold the turkey roast in Devil's Cave, 200 yards from the cabin, where ample room for 500 men was to be had. This cave is one of the largest in that section of the country and well fitted for an event of this kind. The turkey, a very large one, as well as chickens and various other good things, were furnished by the fox hunters of the neighborhood, and the chase and the banquet given in our honor. I was pressed into service to roast the big turkey. Three dogs were loosed back of the cabin at 5 o'clock, and in less than five minutes had a fox started up Loren Parsons' Hollow, less than 500 yards away, and the whole pack was loosed and the fox followed the ridge around just above the cave where a number of dogs were pressing him close. The tracking was good, and Mike Williams' hound and William Whaley's Drive kept well along toward the front. The chase was continued from one ridge to another, across Shade River and Middle Branch, twice bringing the fox near us, and the music of the hounds was most pleasing to the entire party.

While the turkey was roasting, the string band from Pomeroy and Columbus rendered fine selections. The smooth side of a large cut slab was found and Dell Whaley had his brother Will play his famous "Clucking Jenny," and Dell did a line of clog dancing that would have made some vaudeville performers turn green with envy. Dale Whaley, a lad of twelve years, did some fine clog work. Uncle Jackie Howard, eighty-four years of age, gave the boys a good talk, and by his presence that stormy night showed that he was indeed a believer in what he preached. General Miles also addressed the assembly at some length, and time rolled around until about 10:30, when the turkey was ready,

the toast made and the carving began. The evening was pleasantly spent, and Mr. Stanbery, Mr. Shattuck and the visitors from Pomeroy thanked the boys of Bedford township for their hospitality. Responses were made by the old fox hunters, and they said they would look forward to our coming the next year and hoped to be able to have as good times as in 1910. The fox holed about 11 o'clock, the turkey was all gone, and preparations were made to break camp. The scene of that big fire in the middle of the cave just near enough to the front to allow the smoke to go out was, indeed, of the type of a pirate's cave with the hidden treasures, but it was only a crowd of congenial spirits, and their treasures were the true enjoyment of life in the open, with the old fox hunters of Meigs county.

Fred Shattuck.

British Columbia Game and Fish.

The Bureau of Provincial Information in the sixth edition of its Bulletin 17 gives a very great deal of extremely interesting information about the Province, the means of getting about in it, the game and fish to be found there, and useful talk on guides, cost of outfitting and other subjects. In British Columbia one must of course have a guide, and the success of the hunter or angler depends largely on the excellence of his guide. British Columbia is a country of long distances, and getting about there is naturally expensive. The best guides understand the value of their services, and while there are plenty of cheap guides, they often prove worse than useless. In British Columbia, pretty much every variety of North American game now accessible may be had. Moose, elk, caribou, deer of three species, mountain sheep of several species, white goats, bears, wolves, panthers and fur bearers may be had here or there; while of waterfowl and game birds there are a great multitude, and the fishing for trout and salmon, as is well known, is quite beyond compare. On the other hand it must be remembered that after they reach fresh water, the salmon do not rise to fly or bait. There are some people who believe that in that Province salmon have never been given a really good try with a fly, but most anglers are satisfied that they will not rise to the fly.

The material brought together in this booklet was gathered chiefly by A. Bryan Williams, J. P., Provincial Game Warden. His address is Vancouver, B. C. He has prepared a beautiful book illustrated with extraordinarily interesting engravings, some of which, through the kindness of the Secretary of the Bureau of Provincial Information, we are permitted to reproduce.

The Last Wolf of Niagara County.

Lockport, N. Y., April 4.—*Editor Forest and Stream:* About a year ago, Karl Brong, of this city, showed me a mounted wolf which he said was killed in the town of Wilson, and the last wolf killed in Niagara county. Questioning him I learned that it formerly belonged to the late George F. Smith. I then remembered to have seen it in Mr. Smith's place of business more than forty years ago, but never learned its history. I immediately wrote to my old (eighty-six year) friend, R. Wilson Oliver, living at Wilson, asking him if he knew anything about the last wolf that was killed in Niagara county and received the following letter:

"The wolf you speak of was killed about three miles south and one mile west of this village on a farm owned by F. Richmond about seventy-one years ago.

"I saw the wolf after it was killed. The wolf had been followed by relays of men—there being snow on the ground—for three weeks. On Saturday quite a number of sleigh loads of men turned out. The men on the track of the wolf had horns they blew, so they could tell which way the wolf was going. A pair of gray horses driven by Peter Haner with a load of men was driving west on the Richmond road. They saw the wolf fifteen or twenty rods away and shot it about 2 o'clock P. M. My impression is that the wolf had lost one of his front feet in a trap. The wolf was brought to the village. This was the last wolf killed in Wilson.

"The same winter the gray wolf was killed. Walter Brown killed a black one near Ransomville."

Ransomville is in the town of Porter adjoining the town of Wilson.

The mounted specimen of Mr. Brong shows that it has a mangled fore foot and no doubt is the one seen by Mr. Oliver. J. L. Davison.

Warden Tolerton to Remain.

Doniphan, Mo., April 1.—*Editor Forest and Stream:* Missouri retains intact her present game law. One of the strongest fights ever made in this State to prevent the extirpation of game was waged. On the other hand, the following that came with the intention of repealing the law were very strongly represented, and it looked for a long time that the violating element would carry things as they pleased, but they reckoned alone on their usual capabilities of controlling a majority supposed to be prejudiced against game legislation. Hopeless as it appeared to those interested in game that the present law would remain intact, they found the strongest factor, and he alone their salvation, in Governor Herbert S. Hadley.

Scanning carefully the pages of the history of game protection in our State, we can find no instance where a governor has supported a game law so substantially as the loyal manner in which Governor Hadley stood toward the interest of the sportsmen. Every bill antagonistic to protection failed when the Governor threatened it openly with his official veto. While the chief official had many pet bills of his own that he could have carried through by bending to the influence of those who were fighting the present protective law, he sacrificed his own measures to stand by the sportsmen. His acts were grand and far-reaching, considering what it meant to the lovers of outdoor recreation in search of game.

When the legislators first met they were, if not a certain majority, at least sufficiently influenced by the sections that for time immemorial have fought with vehement potency every attempt to secure legislation for game protection. The battle cry that at first raged through the House was, repeal the game law. Fortunately for us every member had a pet game bill, and it met a reverse on presentation. Trying with all the influence they possessed to secure its passage, but failing, they diverted their attention and in a spirit of revenge began an attack on Game Warden Tolerton, who has so faithfully and efficiently performed his duties. They directed an investigation of his office. A very superficial investigation was held by the Senate. On the committee that it appointed were placed two who were prejudiced by the fact that their own pet bill abolishing the office of the game commissioner had met defeat. They began an investigation that for method of procedure was similar to that of a prejudiced prosecution. The game commissioner was not permitted to be present, and even the established custom in all courts of equity, that of being allowed to cross-question the witnesses, was entirely denied him. Every letter in the game commissioner's office, whether personal or otherwise, was distorted into evidence of malfeasance in office. The report of the investigators recently showed nothing, but rather suggested by its bold accusations that they had only one way to make atonement to the public as an excuse for such a farcical trial—to find the official guilty on about every count without submitting any facts to prove it. Their findings were submitted to their brother members in the House and showed that the investigation was held for the single purpose of getting the scalp of Mr. Tolerton.

In the meantime the demands from the public at large became insistent for the usual appropriation. Realizing that it would not be well to deny their wishes, the Legislature made the paltry appropriation of $90,000 to carry on the work during the next two years, with a rider spitefully attached that none of this appropriation could be used while the present game warden (Mr. Tolerton) was in charge; in other words, a forcible demand for his resignation. The report of the political minority was very flattering to Mr. Tolerton; in fact, on account of its fairness, shou'd have been the accepted finding, for none on this side had any pet bills to fight against or for game laws.

Again comes the Governor to the front, and in a masterly manner tells the Senate that he appointed the present warden, and as long as he, the Governor, was in office, Mr. Tolerton would stay. He had the power to appoint and would ignore the decision of the Senate, for Mr. Tolerton had, as every one knew, performed his duties faithfully and effectively, and until evidence to the contrary could be brought he intended to keep him in his present office. In this decision Governor Hadley met the approbation of every sportsman in the State.

While they have made a small appropriation it will seriously affect the efficiency of his department, as it cuts down the number of deputies to one in each congressional district.

Having had the good fortune to be connected with the department of Mr. Tolerton and travel through every county in Southeast Missouri, I was in a position to appreciate the efficiency of his methods in stopping violations and restoring the fields and streams of the State with game and fish, so the action of this tribunal could be felt in its full absurdity. J. B. Thompson.

County Laws.

Hendersonville, N. C., March 27.—*Editor Forest and Stream:* Since my last letter to you, our Legislature has "quit," and again it passed a job lot of county game laws, and we in this county have our share.

This county has the privilege (?) of shooting during January and February, and during those months it is explicitly stated quail can be bought and sold in the county, but not sold outside the county, and a non-resident tax of $5 is charged sportsmen of other counties who are not property owners in it. I wrote our representative requesting him not to carry through this bill, but to support the Dillard bill, a State measure, but he got it through, anyhow.

It may possibly be that after our game is all destroyed that we may be able to induce our Legislature to look at the game proposition as something of value and admit, when too late, that no system of county game laws is worth the time lost in making them. It is said that this State has passed more game laws than all the rest of Uncle Sam's broad domain. Most certainly, unless we can in a very few years get a fair law passed for all the State, the game, more especially the bobwhite, will follow the wild pigeon.

The destruction may not be complete, but the birds will become so scarce that they will seldom be seen.

The experience of sportsmen and those who study conditions in the field counts for nothing with the Legislature. If we could have a State-wide law making the open season from Nov. 15 to Jan. 1, or if we must have two open months, then Nov. 1 to Jan. 1 and a bag limit not over twenty or twenty-five, presumably I would be satisfied with fifteen, and a resident tax. But think of January and February, when the birds find it hard to exist and they are shot until then on all sides of us; all the counties surrounding us to contribute to the destruction of our birds. And a county license of $5 against other counties! Naturally, what will other counties do when the next Legislature meets?

A closed year entirely would have been better for us than our new law, yet I feel quite sure a reasonable law, with bag limit, and resident tax for all the State, is the thing we need.

In our State it looks to me like it must be every county for itself "and the devil take the hindmost" in passing game laws that must act as boomerangs. Ernest L. Ewbank.

Kill the Pernicious Long Bill.

Rochester, N. Y., April 8.—*Editor Forest and Stream:* As chairman of the legislative and law committee of the Western New York Sportsmen's Association, I desire to call the attention of all the sportsmen in the State to the possibility of the Long bill—so-ca'led—being passed, permitting persons on Long Island to shoot ducks and wildfowl until April 1.

This bill has already very unfortunately and through a misunderstanding on the part of some of the Senators, as alleged, passed the Senate by one majority, as I am informed. It is now in the Assembly, and has once been defeated by a majority of seven votes against it. Thereupon the bill was laid upon the table and now, as I understand it, is in a position which will admit of its being called up at any time and a vote be taken. I desire in this communication to request every sportsman throughout the State to at once write his Assemblyman to be on guard against the passage of this bill by the Assembly. No sportsman and no right-thinking man who has a drop of sportsman's blood in him should neglect this matter. For ten or fifteen years past this same bill or one similar to it has been before different Legis'atures, and in every instance has been defeated. This year one branch of the Legislature, most of whose members are new in office and unaware of the past annual controversy in regard to this same subject, has voted for it, not appreciating the effect of their vote. The proposed bill is one of the most pernicious ever introduced in relation to waterfowl. It is proposed by this bill to permit shooting down to the time these birds are practically on their nests, reproducing their kind, after they have been shot at for a period of three months and over.

These birds are God given creatures. They do not exist by the grace of man, but rather in spite of man. Shall they be allowed to be exterminated as was the passenger pigeon, and as practically the prairie chicken, and some of our game anima's have been? Shall we be aroused when it is too late? This bill, which is against decent sportsmanship, can be defeated only by your prompt action. Write your Assemblyman at once to vote against the Long bill, known as Senate Bill No. 9, House No. 2, introduced by Frederick Sheide. John R. Fanning.

The Use of Game.

Linville Falls, N. C., April 8.—*Editor Forest and Stream:* It will be thirteen years ago this summer that I made my first trip into Routt county, Colorado, one of the most attractive regions in the Rockies. Steamboat Springs was then eighty miles from the nearest railway and deer were all about there. Back in the hills thirty miles, where we went for our permanent camp, the deer were thick, fairly nosing our camp in coming to water. On the way from Steamboat Springs to our camp we saw many antelope. Now the Moffatt line has reached Steamboat Springs and its marvelous variety of water, possessing in its uncounted springs all the different minerals the average man can think of, hot and cold—soda, sulphur, iron, magnesia, phosphorus, etc., both separately and united; all these wonderful waters are "on the market." The crowd is going there and the game has left. And that is only thirteen years. There was no gun license then; now it is $25 and little to shoot. I used to think Wyoming was foolish to impose such restrictions—$40 gun license and no game shot except in company with a licensed guide, but the men who made that law were wise. Wyoming has more game than other States that let everyone in free. If Colorado had done likewise, the State would be richer now, for with its advantages of accessibility to the great rich Middle West and even to Eastern sportsmen of means, it would have a large income from hunters who can afford to pay a $50 license if they get something for it.

The people of the country, of the States, are just awakening to the economic necessity of saving the game, the wild life, as well as the trees and the streams from the wasteful hand of the destroyer, from the man who wants it all now for himself without regard for the future or any other man. We have been going too much on the theory that we must get our share while it is going, and that probably it will last as long as we want it, anyway. That is the main obstacle in the way of the stopping of spring shooting of wildfowl, which everyone knows is absolutely necessary if we would avoid the extermination of ducks. In most parts of the United States the geese and brant have already been entirely driven away. I do not believe that sportsmen are such hogs, either. They simply do not stop to think what their reckless slaughter means. Some of them are living long enough to see it, however, and be ashamed.

The preservation of wild life is not only important to the sportsman and to the lovers of nature in her normal condition, but it is highly important in many economic ways. It has been well enough established to be no longer disputed by any except the very ignorant that agriculture and horticulture need the help of birds; that when you interfere with the economy of nature, with the divine plan of balancing one thing against another, you want to be very sure you know what you are doing, or you will uncover an enemy by destroying a friend. In this region ignorance has permitted the destruction of many birds, so that they are only just beginning to come back as the people are learning that the birds are the friends of the farmer and the gardener and fruit raiser and must not be destroyed. And what will the woods and fields be without the birds and squirrels? Who would not rather watch a beautiful squirrel enjoying life in the trees than have the morsel of meat he gives to the hunter's pot?

I have no patience with the argument that market hunting should be permitted for the sake of those who are unable or unwilling to hunt themselves. Those who do not want to go to the trouble of hunting for game should not have it any more than they should have the other benefits far greater than the mere meat that is obtained, of engaging in the invigorating sport of following the game through forest and over field, along the stream and even to the lake and the sea. These blessings can only be had by going after them. No lazy man can buy them in the market, and he should not have the privilege, for it is not a right of buying the game which is merely incident to the outdoor life. Every time that game is sold in the market it lessens the chance of the man who is willing to go after it in a legitimate way. It reduces the attractiveness of the outdoor life, and fewer people will enjoy its benefits. The sale of game ought to be stopped entirely at all times everywhere.

Nor is there any danger that game will become destructively numerous, for as soon as it is, if the regulations are reasonable it will attract sportsmen. Some years ago a herd of deer began to grow in Southwestern Iowa. Now there are several hundred. The law prohibits killing any. A report was started that they were damaging the farmers. A hunt was organized, or "drive" it was called. It was proposed to drive the animals into an inclosure and sell a larger part of them. Hundreds of men and boys were to do the driving. But those who planned the drive forgot one thing—they did not consult the farmers. When the latter heard about it they quietly said there would not be any drive; not over their properties. They wanted the deer left alone. What if they did eat a few tons of hay and a little corn. They said it was worth much more than it cost to see the beautiful little things with the cattle and almost as tame. No one had ever hurt them and no one should.

Let us have more wild life everywhere. It is worth protecting, as other people have found out. I hope we may learn our lesson before it is too late. Frank W. Bicknell.

Connecticut Spring Shooting.

Essex, Conn., April 3.—*Editor Forest and Stream:* A bill has been reported to the General Assembly at Hartford which will close the month of September for the shooting of ducks.

I do not believe the gunners of Connecticut are at all in sympathy with any bill repealing the present law forbidding spring shooting. I have talked with several, some of whom were at one time genuine dyed-in-the-wool spring shooters, and the consensus of opinion seems to be that the present law is excellent. Among those whom I have consulted I might mention one whose prowess as a shooter has already been referred to in Forest and Stream. I refer to one of the two hunters who were reported to have killed 800 ducks, mostly blackducks, near the mouth of the Connecticut River last season. This report, however, was an error, as this man told me himself that the number was around 500; this including what he, his partner and their guests killed during the four open months.

My own idea is that the present law, under existing conditions, could not be much improved upon. Whenever a game law is proving its efficiency, it should certainly be retained. Anyone who has at all observed our wildfowl during even the period our spring shooting law has been in force, cannot but see that they are on the increase, and this, too, in spite of our army of gunners which increases greatly from year to year.

It is a pleasure to me every morning upon arising to look down upon the cove a few rods distant to see what is there in the shape of wildfowl. Every morning some variety is in evidence, mostly shellduck, occasionally blackduck, but nearly always some kind or other to gladden the eye and heart, and this is made possible through the abolition of spring shooting.

I sincerely hope that every sportsman in the State who has the interests of our game at heart will do all in his power to thwart any attempt of the spring shooters to push their bills through. To alter our present excellent law would indeed be a backward step.

George W. Comstock.

Massachusetts Deer.

Boston, Mass., April 8.—*Editor Forest and Stream:* The Massachusetts Legislature has made some progress during the past week upon fish and game matters. Representative Frank A. Palmer, of the Eighth Berkshire district, made an eloquent speech for the substitution of his bill for an adverse report of the committee on fisheries and game. His bill provides for a close season on deer until the expiration of ten years from the third Monday of November, 1910, after which date "it shall be lawful to take or kill by the use of a shotgun a wild deer in the counties of Berkshire, Franklin, Hampden, Hampshire and Worcester. Mr. Palmer said only $400 was paid last year for damages caused by deer in Berkshire county while license fees for hunters amounted to $2,000.

Representative Langtry, of Springfield, ably seconded Mr. Palmer moving the substitution of his own bill for a close season of ten years in the five Western counties, deer committing depredations to be killed by wardens. He declared that the killing of deer with shotguns last year resulted in cruelty to the deer which had been tamed by years of protection. Representative Look, of Tisbury, a member of the committee, defended its report, claiming that in a close season of ten years the number of deer would increase to more than 200,000.

Mr. Underhill, of Somerville; Mr. Hardy, of Huntington; Mr. Wright, of Southboro; Mr. Avery, of Charlemont; Mr. O'Hearn, of North Adams, and several others spoke in opposition to substitution, and the House refused to substitute either the Palmer or Langtry bill and the report of the committee was accepted.

H. H. Kimball.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

Game in New York State.

Recently we printed an extract from the report of Deputy Forest Fish and Game Commissioner Burnham, covering his last year as chief game protector of New York State. From the other recommendations made by him the following paragraphs are taken. He says in part:

The game protectors prosecuted a total of 1,496 cases during the past year, and procured a recovery for violations of fish and game laws of $51,363.67. In addition to this the game protectors originated thirty-eight actions for trespass on State lands, resulting in a recovery of $6,999.10. This is the best showing ever made by the Department and indicates increased efficiency as a result of systematic organization and the following out of the principle that a game protector must do as good work for the State as would be expected of him if employed by an aggressive business corporation.

Owing to the dropping of inefficient men and other causes, the number of protectors in actual service at any one time is never up to the maximum permitted by law, and during the past year the number of men actively employed was less than usual. Under these circumstances the record of cases shows an average of about thirteen cases per protector, or one case per month for every man on the force during the year. When it is added that only about 5 per cent. of the cases handled were lost, it will be seen that the record of the protectors of the State of New York for 1910 is very commendable.

As a straight business proposition it would undoubtedly pay the State to establish a Bureau of Inland Fisheries, as a division of the Forest, Fish and Game Commission, with an executive officer to be known as the Superintendent of Inland Fisheries. The expense of such a bureau should not exceed $5,000 per year, and it is estimated that it would produce a revenue to the State of twenty to twenty-five thousand dollars annually. The bureau would have charge of all the commercial fisheries of the State not already cared for by the Bureau of Marine Fisheries. The chief business of the latter is the leasing of State oyster lands, and it also looks after the lobster and other shell fish industries and the menhaden and other salt water fisheries of the State.

The fresh water fisheries of the State, which are hardly of less importance, are now cared for by one clerk under the supervision of the chief protector in a department already overburdened with work, and it is no reflection on this department to say that the revenue received by the State from this source is not what it should be. Lakes Ontario and Erie and the Hudson River have very important fisheries from a commercial standpoint, and there are many other inland waters that could be made to yield good returns. From this entire territory the State received in 1910 a revenue from the sale of netting licenses of but $9,207.76. This is altogether too small an amount to be paid by existing fisheries. There is good reason to believe, moreover, that under proper supervision and suitable laws the revenue could be tripled or quadrupled, the increase coming chiefly from what are now neglected sources.

There is one injustice in the present hounding law which should be remedied. Some suitable amendment shou'd be made which would permit the possession and use of dogs for legitimate purposes in the Adirondack section. The owner of a dog should, as at present, be held responsible if his dog pursues deer, but the farmer and the citizen who is not interested in hunting, also the bird shooter and fox hunter have rights which cannot be disregarded. These men are not law breakers, but as the statute stands at present they are often made to suffer for the sins of the illegitimate hunter.

A proper system of registration of dogs would no doubt solve the difficulty. The law could be amended to permit the use of dogs for legitimate purposes in the forest preserve counties outside the Adirondack Park on the sole condition that such dogs be registered and have at all times tags, giving the registry numbers attached to their collars. It should be made a misdemeanor and punishable by a fine of $100 to permit a dog to run at large in the forest preserve counties without the tag attached as indicated. Such a law would give the game protector a much

(*Continued on page* 597.)

Trout Fishing at Panther Gap.

James K. Polk France was a fixture of the Farmer House. If he was not enthroned in the most comfortable chair that chanced to be unoccupied by nine in the morning or two in the afternoon, all Richmondville knew that Polk was hunting or fishing somewhere among the rugged hills. Of a little more than average stature, broad shouldered, lithe as an animal and of prodigious strength, he belonged to an older race of men. Time and again when the villagers attempted feats of strength and endurance he had demonstrated his rare powers by lifting a full sugar barrel from the ground to a wagon by its chimes.

His sharp straight nose, firm chin, blue eyes and determined furrowed face were physical characteristics that marked him a man of more than ordinary intelligence, quick to grasp a situation and to act with the prompt, deliberate judgment of a born leader. Dressed in the height of business fashion and transplanted to New York's great financial center, he would have been secretly admired as a great money king. But money was not his god; he worshipped at the shrine of three lesser deities—hunting, fishing and horse trading, and he obtained more genuine pleasure out of each of his particular hobbies than the average man could out of unlimited means and a steam yacht.

The Farmer House was the accepted club of the sportsmen of the village and vicinity, and nearly all of Polk's fishing and hunting pilgrimages had their conception and ending there. Early one summer morning Polk was lounging on the porch as usual. He never appeared to sit in a chair, but rather to recline, apparently lulled to sleep by the steady drone of mowing machines and the perfume of new hay drifting down over the village. In reality he was watching through half-closed eyes an unruly horse and its dare devil driver plunging down Summit Hill in a fight for mastery. The driver's soiled shirt rendered him conspicuous and Polk observed him bouncing up and down with every vibration of the rickety buckboard with a growing sense of admiration for his skill as a horseman. By the sheer strength of his muscles he forced the hard-mouth animal to vary his course this way or that as necessity demanded, and with quick, precise judgment threw his weight to right or left as the wheels slid from the narrow roadway into long neglected ditches, yet never for an instant allowing the horse to gain control of his head. Reaching a level stretch near the foot of the hill, the horse suddenly planted all four feet forward, and sinking to his haunches threw his weight against the wagon. The rear end shot violently upward. Instinctively the driver's hand reached out and he threw his huge body backward in the nick of time to avert a serious fall.

"My old Charley hoss, by thunderation!" gasped Polk in amazement. "He's the meanest critter that ever wore a crupper. There isn't another hoss this side of Jericho with a bucking trick like that. When it comes to trading points he is the best appearing hoss I ever swapped, and I reckon Abe Stimpson is driving over here purpose to deal for my roan mare. On account of that bucking trick old Charley ain't worth a dollar twenty-five of a millionaire's money as a swapping hoss in these parts, and I reckon if I hang around here I'm likely to get him, so I guess I'll go fishing. But it's a disgrace to spoil Abe's calculations like this right in harvest time."

Polk hurried home for his tackle, which he always kept methodically arranged in the kitchen bed room. He pulled on his wading boots, paused before the kitchen stove long enough to load his pipe and drop a hot coal on the tobacco, and slipping out the door he disappeared behind the barn, trailing wisps of blue smoke over his shoulder.

He skirted the base of old South Mountain with the steady, tireless, grinding speed of an

APRIL SPORT

From a photograph by F. F. Sornberger.

Indian runner until he reached Panther Gap, a narrow defile in the hills through which turbulent Kenhuragara Creek winds and falls on its way to the valley.

Behind a thin line of hemlock scrub crowning the chasm's rim 300 feet above the stream the remnants of a once great forest spread over the mountain tops. Throughout all that region there is no more difficult stream to fish than Kenhuragara Creek where it passes through Panther Gap, and few of those who fished the Kenhuragara year in and year out attempted to penetrate this labyrinth of pitfalls. To Polk its obstacles were a flaunting challenge to his skill. He adjusted his tackle and making a few preliminary casts wormed his way through the bushes, and wading thigh deep beneath overhanging bushes he cast with consummate skill. Pot holes and swift currents alternately forced him to fish many of the very best pools from shore, yet no matter whether he crouched behind boulders or lay prone upon the ground, each cast was accurately planned and executed. To him it was an art, and he found as much pleasure in forcing the rod to drop the flies in exactly the position he judged to be the most advantageous as most fishermen do in the quick dash, the swirling water and the sharp struggle that sets the blood pounding through the veins.

A noisy rift yielded two ten-inch trout. Six others darted from beneath overhanging banks and rested side by side in Polk's creel. A two-pounder, lying alert beneath a mass of drift, snatched a dusty miller before it fairly touched the water. The fish had every advantage, and for fifteen minutes the contest taxed the veteran's ingenuity before he could use the landing net.

Only one more pool remained to complete the chain through the gorge, a wide backwater bay formed by the channel cutting close to the rock face, and then Panther Gap spreads out into a fertile, timbered valley and the Kenhuragara again rolls in and out among sunny, cultivated fields and fragrant woodlands.

Well pleased with his day's sport, Polk was inclined to fish this last pool and hurry home over the mountains, but his muscular body clamored for rest and a bit of green sward surrounded by skunk cabbage and violets offered an exceptional couch, and loading his pipe afresh he stretched out full length and was lulled to sleep by the murmuring water. Two hours slipped by before he stirred, gazed about and jumped to his feet.

The setting sun reflected its prismatic colors in the pool, and Polk, cautiously parting the bushes, gazed down at the colors. To him nature was supreme proof of God's existence, and from her manifold works he sought and found literal truths for his spiritual and moral guidance. Preoccupied with his study he failed to detect a shadowy form glide swiftly up from the depths until a trout noisily left the water. For an instant its beautiful body seemed poised in the air, then disappeared with a swish of its tail. Polk rubbed his eyes as though loath to believe his sight. Never had a trout of such proportions been captured in the waters about Richmondville. Even Old Adam Weller and Deacon "Hi" Pepper, who seldom lost an opportunity to boast of certain miraculous catches made in the days of long ago when the country was new and big trout swarmed in every stream and rill, would have hesitated to credit a native trout with the proportions of this monster.

Polk feared that his opportunity had passed, and it was only by an effort that he curbed his feverish anxiety to cast. He stripped off his coat and rolled up his sleeves in anticipation of a struggle, then bent on a new leader and flies of a larger and lighter pattern in accordance with a theory of his own, and from an inconspicuous opening sent the flies leaping over the water, but the trout obstinately refused to look at them.

He tried various combinations in which the colors of the cowdung and black gnat predominated and dropped them delicately over the fish to no purpose. Then he abanadoned all theories and went straight through his book, whipping the pool until a dull pain from shoulder blades to finger tips forced him to stop. As he stood swinging his arm backward and forward to ease the cramped muscles, a grasshopper dropped at his feet like a good omen. It was not one of those gourmandizing, red-legged weaklings that swarm over hillside pastures and meadow stubbles, but a lusty sun worshipper—one of those gaunt, thin-shanked gray-backs with black, lemon-bordered wings that spring from dusty roads and blistering rock piles like jack rabbits and fly away with the speed of a bird.

Here was a lure that kindled anew the diminishing spark of hope in Polk's breast, and he slapped at the grasshopper frantically with his hat. It avoided the hat and settled on a twig beyond reach, but Polk finally caught it, spread its wings and let the bait float gently down stream with the current.

The unexpected temptation proved too strong, and the trout rose with a rush and whirled away. With only a few yards of line and handicapped by the bushes, Polk's position was not secure. By a single move the big trout had gained an enormous advantage and was swinging down the pool. If the fish had gained the current at the outlet, the cast must have snapped had not Polk slipped into the pool and crept forward until the water was over his shoulders. He swept the rod to the right and felt the fish yield slowly to the steady pressure.

Polk met rush after rush, cooly applying every atom of drag that the line would stand. He forced the trout back and the fight settled down to a gruelling contest of endurance. Skimming close to the gravel bottom, darting to the right, plunging to the left, breaking the surface with mighty leaps, whirling and jigging, the fish remained master of the situation.

Polk's arms ached under the strain. For half an hour the big trout clung desperately to the current and deep water, then suddenly bolted into a shallow stretch. Polk followed, retrieving a little line. The big fish moved slowly to the far end of the pool and plowed its nose in the gravel. A sharp lift of the rod put a stop to this and he raced down stream in a series of sidelong skittering leaps, then turned on his side and Polk's hand closed over him.

CARL SCHURZ SHAFER.

Illinois Casting Club.

CHICAGO, Ill., March 29.—*Editor Forest and Stream:* The April dinner will be held at Kuntz-Remmler's, 303 Wabash avenue, 7 P. M. sharp on Saturday, April 22. The question considered at the meeting held Jan. 16 that a suitable token be given to the member who stood high in each event, as well as a token for the member making the highest average in all of the events, requiring an amendment to the constitution, will be taken up for final action at this meeting.

The following suggested amendment to Rule 5 has been given consideration by the executive committee and will also be presented for consideration: "To any member making a perfect score in any of the bait or fly events, other than distance events in this club's contests in amateur team contests, in amateur tournaments of the N. A. S. A. C., or in any amateur contests whenever the score is credited to this club, will be awarded a suitable trophy, the cost of which shall not exceed $20. The trophy shall be known as the 'perfect score trophy of the Illinois Casting Club.'"

In accordance with authority vested in the executive committee at the January meeting in the matter of awarding another degree and emblem in bait-casting in scores between 98 and 99 per cent., and the question of giving members who could not attend events on Saturday the privilege of casting their score on the day (Sunday) following, it is agreed to amend the rules covering the subjects as follows: "Amend Rule 4, Clause (d) after the words reading '98 per cent. master bait-caster' by inserting the words '98½ per cent. (senior master) bait-caster.'" Clause (d) as amended to read: "To each member who shall in one season make a general average of 95 per cent. or higher in quarter-ounce accuracy bait and half-ounce accuracy bait shall be awarded one of the following degrees and a token emblematic of that degree. Ninety-five per cent., proficiency bait-caster; 97 per cent., expert bait-caster; 98 per cent., master bait-caster; 98½ per cent., senior master bait-caster; 99 per cent., artist bait-caster."

Note.—The selection of "senior master" was agreed upon after giving the matter thorough consideration and deemed the proper designation for the new degree.

Amend Rule 8 by the addition of the following:

"A—A re-entry shall be made previous to the entry in the regular event.

"B—No more than two scores in any one event shall be cast in one day.

"C—By notifying the captain before April 15, members who are unable to attend contests on account of business may cast off their scores, conditions permitting, on the days following regular contest days."

H. D. WILLIS, Sec'y.

Catfishes.

PHILADELPHIA, Pa., March 30.—*Editor Forest and Stream:* How heavy do catfish get, or what is the weight of the largest caught in the United States? THOMAS KEE.

[The Mississippi catfish, common to all large bodies of water from the Great Lakes to Florida and Texas, and one of the largest of the catfishes, attains a weight of 150 pounds or more. These fish are abundant in the Mississippi and its largest feeders, and catfish weighing fifty to seventy-five pounds are frequently taken, while specimens weighing one hundred pounds or more are captured occasionally. We have no data as to record catfish, but think 200 pounds would be a fair estimate.—EDITOR.]

San Francisco Fly-Casting Club.

San Francisco, Cal., April 3.—*Editor Forest and Stream:* The following scores were made on Stow Lake in Golden Gate Park in variable winds on March 25:

E. O. Ritter, Clerk.

Club Elections.

The Sherwood Hunting and Fishing Club has been organized in Chicago and will maintain a large preserve on the Illinois River. The officers are: President, Jesse Sherwood, Chicago; Vice-President, John Rader, Maples Mills, Ill.; Secretary, A. A. Walters, Chicago; Treasurer, W. A. Kittermaster, Chicago; Directors, Walter L. Darlington, Thomas J. M'Coy, Charles A. Kennedy, Dr. Henry Boettcher and W. A. Kittermaster.

The Niagara County Anglers' Club, which was one of the many that protested against spring shooting, held a meeting recently and decided to apply to the State for game birds and bass and crappie for restocking purposes. John Moon was re-elected President; Vice-President, Fred W. Korff; Secretary, Carl J. Brong; Treasurer, E. A. Fry; all of Lockport, N. Y.

The Gulf Fishing and Hunting Club of Mobile, Ala., has elected officers for the year as follows: President, G. M. Van Liew; Vice-President, A. D. Bloch; Secretary-Treasurer, A. E. White. The membership has increased to 150.

The Egg Mountain Club has been organized in New York City with a preserve on Egg Mountain, in Vermont, not far from Salem, N. Y. Land has been purchased and leased in Bennington county, giving the club control of several thousand acres embracing ponds, streams and covers. The members will be permitted to shoot in Vermont by procuring resident licenses. It is proposed to improve the property by the erection of bungalows for members, by culling timber, planting trees and tapping the sugar maples. George W. Kinney, of Paterson, N. J., is president of the club; Vice-President, J. G. Sherman; Secretary-Treasurer, George W. Dennehy, of New York city; Clerk, George Hawes; Directors, W. L. Race, G. C. Schnitzer and Frank Beatty.

The Baltimore County Game and Fish Protective Association, of Baltimore, Md., has been incorporated by Dr. A. C. McCurdy, County Game Warden; Upton S. Brady, James Kelley and T. Scott Offutt. The association was formed for the purpose of preserving game, birds and fish in Baltimore county.

The Poplarwood Hunt Club has been incorporated and will maintain a small preserve in Forestport, N. Y.

The Kentucky Fish and Game Protective Association, with headquarters in Louisville, has re-elected all of its officers, as follows: President, Joseph G. Sachs; Vice-President, Benjamin W. Folsom; Corresponding Secretary, E. H. Nobbe; Financial Secretary, W. T. F. Fiedler; Treasurer, Emil Pragoff. The membership is increasing.

Mr. Curry's Bugs.

Tenafly, N. J., March 30.—*Editor Forest and Stream:* In your last issue appears an article with the caption, "Bugs For Bass." From the description of the bugs (the specific name of which the writer does not give), I think I recognize them as the ancestors, by evolution, of the swift flying and beautiful dragon fly. Is this right?

A. Bug.

[No. The "bugs" referred to by Mr. Curry belong in that group of crustacea known as isopods, meaning equal-footed, though their numerous legs are not all of equal length. Included are the wood lice and those aquatic insects known as asellidæ. *Asellus aquaticus* was probably referred to by Mr. Curry. It is also known as the water-hog louse, perhaps from its habit of feeding on decomposed organic matter.

Mr. Curry says he knows this insect as the "gribble (*Limnoria terebrans*), family asellidæ," but according to Routledge the timber-boring shrimp or gribble is only about as large as a grain of rice.—Editor.]

THE TOP RAIL.

Greatly distorted impressions are often received in looking through the windows of an express train; the things seen are sometimes astonishing, and there is no time to verify or disprove these impressions.

Take, for example, the glimpse one has in passing of the Passaic River. Once the name recailed all that was beautiful; now it is understood by many people to signify sewer. Its waters below the mill towns are a greasy metallic black, and that they are deadly to all life is shown by the condition of the trees whose roots absorb the fluid. These are less healthy—even in time of drouth—than those standing on higher and dryer ground away from the river.

One March evening I glanced at the Passaic from a car window, and lo! its waters were tinted a bright pink in a band stretching half way across from the west shore, while little tongues of color, wind-blown, were spreading into the black water to leeward. As the sun was setting in a blaze of red, I looked away to make sure that my eyes had not deceived me, but on gazing again, the same thing was seen, and it then occurred to me that silk dyeing waste was being discharged into the river.

Another day the waters of the Saddle River were dyed orange, with a tinge here and there of pale blue. And the Saddle River is stocked with trout every year. Certainly these trout never descend the river, at least beyond a point where pollution commences.

* * *

There is a series of ponds that I pass daily. To look at them from the car window is restful, for the surroundings are pretty. In winter boys skate over them; in autumn I have an occasional glimpse of a man with a gun and a dog, framed in red maples and yellow birches. Once I saw an angler wading one of the ponds, casting a fly. For a long time this puzzled me; in fact, until I worked out the problem for myself. In spring a tiny rill connects the series of ponds with a brook, and trout find their way through the flat lands into the pond. Perhaps that angler thinks his secret knowledge is safe, but if so he showed lack of judgment in fishing while the train was passing.

* * *

As the train passes, all these ponds appear as regular, well-behaved ponds, save one, which seems to be tilted at such an angle that the water should flow out of it. A gentle lurch of the train explains the matter, for that pond is opposite a curve in the track, and the car windows, suddenly tilted away, distort the vision.

* * *

With a friend I was shooting at a target one afternoon in a meadow when two boys came along. Boylike, they were highly interested in the .22 caliber revolver and rifle with which we were practicing, and examined the targets critically when these were changed after each string

of ten shots. They squabbled over the shells that fell into the long grass, and were so eager to recover them that I asked what they wanted them for, thinking it merely a boy fancy to add them to the marbles and bits of string in their pockets. But no; one boy explained that they intended to cut off the heads of parlor matches, put one in each shell, bend the copper mouth down tightly, place the shell on a rock and explode it with a stone. In his imagination it "made a big noise," he confided. And these are the sort of boys so many good people are attempting to train into the belief that a "noiseless Fourth of July" is good for them.

* * *

Two small darkies joined the others. One of them they called "Hound." I asked why. "Show him," urged the white boy, whereupon the black lad loped off through a thicket, yelping in a perfect imitation of a long-eared hound that we had frequently seen on the trail of a swamp rabbit. "Go for 'im," shrilled the white lads; "hunt 'em up, Hound." Later on the black returned, grinning sheepishly and his big eyes rolling, but not without pride in his achievement.

* * *

THE old hound mentioned keeps up his interest in life by chasing a swamp rabbit daily, but the chase always ends in the same way. The rabbit, grown familiar with the hound's habits, correctly gauging his speed, or lack of it, and evidently fond of hearing the music, leads the old dog over the paths and through the swamp thickets until weary, when he makes for a shed behind an old barn. The roof has fallen so that a corner is within a fair jump from a pile of boards on the ground, and here the dog always loses the trail, nor guesses that bunny is laughing at him from his secure perch behind some hay further up the slope. Men who would not hesitate to shoot game out of season know of this, but let the rabbit alone, respecting his ability to cope with his four-footed enemy.

* * *

I CAME on one of these men one day in the close season. He carried a gun and was followed by three rabbit dogs. "Hunting rabbits? No. Looking for a hawk that is after my chickens," he replied to a query. And he was two miles from home and the haunts of the hawk in question.

* * *

ONE of the gunning shantics on the Hackensack meadows is within sight of a road along which I passed the other day. It is frequented by shooters in the wildfowl season, but deserted now. On the truck of the flagstaff sat a marsh hawk, serenely scanning the nearby meadow for a meal, seemingly conscious that it was safe from molestation.

* * *

EVERY camper who takes fire-arms into the woods should make a note of the following wrinkle: Carry with you a little tin box containing a lump of mutton tallow. Instead of smearing oil over firearms, rub a little tallow on the palm of one hand, then rub every steel part of rifle or revolver with that palm. The tallow is very tenacious and repels moisture, but unlike oil, does not soil clothing with which it may be brought into contact. Guns shot over salt water may be preserved in this way.

Revolvers carried into the woods in leather holsters rust easily if the leather has not been water-proofed inside and out, for the spongy flesh side of the leather absorbs and retains moisture. Tallow rubbed in while hot will help. Your little lump of tallow is a good thing, too, for chapped hands and wind-blistered faces, especially on snowshoe trips or in midsummer.

Prepare the tallow by cutting it into small pieces and dropping these into a vessel of boiling water. Let this simmer for a while, then skim the tallow from the surface of the water and put in a convenient small metal box. In this way it remains as white as snow and free from salt.

* * *

THERE are few better rifle cleaners than the knobbed brass rod and flannel patch, but no matter how careful one may be, occasionally the rod will cut through a tight patch, the latter will refuse to be pushed or pulled out, and you are in a predicament. Work the rod until it is loose in the patch, then drop a little oil down breech or muzzle and give it plenty of time to saturate the patch, when it will generally come away or release the rod. In cleaning the popular solid frame .22 caliber revolvers, a patch sometimes sticks at the juncture of cylinder and barrel when cleaned from the muzzle with the cylinder in place, but oil will help to remove the patch. For all .22 caliber arms the cleaning rod should be of hard brass 3/16-inch thick, and the patches rather small, cut from new flannel.

I find that it pays to be very particular about cleaning rods. Soft brass is too easily bent, and any rod smaller than 3-16 gives poor satisfaction. The knob should be about 3-16 inch long, and the neck behind it fully an inch, tapering back slowly, and small enough just back of the knob to permit the edges of the patch to fold down and hold, whether the rod be pushed or pulled. If the ends of the knob be square cut, the patch will hold well. They should not be sharp, of course, so that they will cut through the patch, but rounding them is not advisable.

* * *

IN the light of the failures of twenty years ago to make a satisfactory .22 caliber revolver, one little improvement employed to-day seems marvelous. The old difficulty was to secure a tight fit between cylinder and barrel, but at the same time to permit the cylinder to turn freely. In one of the new .22 caliber revolvers this is accomplished in this wise: While the hammer is being raised and the cylinder turned, there is quite a space between cylinder and barrel. When the hammer is cocked, out pops a little spring-actuated pin which pushes the cylinder against the barrel and holds it there until the arm is fired or the hammer lowered, when the pin is withdrawn It is one of the ingenious simple devices that serve their purpose well, and I for one doff my shooting cap to the inventor.

GRIZZLY KING.

Some News and a Little Gossip.

THE 31-raters, Class P, will be the most popular boats this season. This fleet is divided into two divisions, one racing in these waters and one around Massachusetts Bay. Three new ones are building for each division, and there may possible be more new craft.

Efforts are being made to sail in an inter-city race off Marblehead in August after the disbanding of the New York Y. C. cruise. Last year the Eastern 31-raters Amoret, Mavourneen and Timandra, of Massachusetts, met Cara Mia, Windward and Crescent of these waters in a series of races off the Atlantic Y. C. at Sea Gate and Amoret won.

The new yachts for this class, which is one of the best for racing and cruising, are being built for New York and Eastern yachtsmen, and the racing promises to be of the best. The Manhasset Bay challenge cup has been the incentive in local waters. This cup was won last year by Stuyvesant Wainwright's Cara Mia, that yacht representing the American Y. C., defeating the Windward, of the Indian Harbor Y. C., and Mavourneen, of the Corinthian Y. C., of Marblehead.

Cara Mia will defend the cup again this year and will have to meet a fleet of new yachts. The Seawanhaka-Corinthian Y. C. has challenged, and a syndicate of members is having a boat built at Herreshoffs'. Commodore W. H. Childs, of the Indian Harbor Y. C. is having a boat built at Herreshoffs' to be named Joyant. It is reported, too, that new boats are building from Gielow, Gardner and Mower designs.

In Eastern waters there are the old boats Amoret, owned by C. B. Wheelock; Timandra, owned by J. B. Fallon, Jr., and four new boats building from designs by George Owen. One, named Sayonara, is for Vernon F. West, of the Portland Y. C., and another is for George Lee, who sold Mavourneen. These Eastern boats are after the cup race and will compete in these waters during Larchmont week.

If the New York boats can be induced to visit Marblehead for an inter-city match the races will be sailed off Marblehead under the auspices of the Corinthian Y. C. Aug. 17, 18 and 19.

In the Manhasset cup race the Eastern Y. C. will be represented by J. B. Fallon's Timandra, the Boston Y. C. by George Lee's new boat, the Corinthian Y. C. by C. B. Wheelock's Amoret and the Portland Y. C. by Vernon F. West's Sayonara. The local boats will be Joyant, the new Seawanhaka boat, the Gardner boat and the defender, Cara Mia.

The South Jersey Yacht Racing Association held a meeting at the Yachtsmen's Club, Phila-

delphia, last week, and after a very full discussion, decided to adopt the American Power Boat Association rules to govern motor boat races. The Cape May Y. C. has scales on which the boats can be weighed, and when a boat is measured, a rating card will be sent to the association, and one to each club in the association. H. E. Dantzebacher was chosen as measurer. The schedule of dates is as follows: Stone Harbor Y. C., Saturday, July 1; Yachtsmen's Club, Saturday, July 8; Seaside Y. C., Saturday, July 15; Ocean City M. B. C., Saturday, July 22; Ventnor City Y. C., Saturday, July 29; Ocean City, Y. C., Saturday, Aug. 5; Seaside Yacht and Motor Club, Saturday, Aug. 12; Holly Beach Y. C., Friday, Aug. 18; Wildwood Y. C., Saturday, Aug. 19; Cape May Y. C., Saturday, Aug. 26; Chelsea Y. C., Saturday, Sept. 2.

The meeting was attended by M. E. Brigham, chairman; R. S. Murphy, secretary-treasurer, and the following delegates: Cape May Y. C., Commodore R. W. Starr, Reuben B. Clark; Holly Beach, W. L. Dickel; Ocean City Motor Boat Club, Commodore W. D. Snow, H. D. Le Cato; Ocean City Y. C., Samuel Wood, George Bissler, Jr.; Sea Isle City, Y. C., the Hon. J. J. Coyle; Stone Harbor Y. C., Commodore James Thompson, Fred Biddle; Ventnor City Y. C., Commodore Joseph Thompson, Frank R. Scull, Joseph R. Stubb; Wildwood Y. C., Minor Harvey; Yachtsmen's Club, J. G. N. Whitaker, Richard L. Young and Walter Bibble; Chelsea Y. C., Commodore Joseph Swoyer, Ward Nichol, Edward Liebe.

At a meeting of the Jamaica Bay Yacht Racing Association it was decided to have all regattas on the New Beach Channel course, and a committee consisting of Vice-Commodore Thos. King, Old Mill Y. C., and C. H. Greene, Bergen Beach Y. C., to decide and lay out a course feasible for the waters. The adoption of the Beach Channel course will in no way interfere with any club holding its open races over the established course on the north side of the bay, the special advantages of the former course being that the yachts contesting will have much deeper water in which to sail. It is hardly believed that a triangular course can be established on Beach Channel owing to the narrowness of the channel and the prevalence of sandbars, and it is most likely that a straightaway course will be recommended. The races to be held over this course will be sailed on the handicap system in a series of events, the prizes to be awarded to the yacht having the greatest number of points to its credit. The association will offer two handsome prizes, one for sail and the other for power boats, to be awarded at the end of the series.

Owing to the large number of pleasure yachts that visit Rockaway Point during the yachting season there will be much more interest taken in these events than there was shown when the races were confined to the north side of the bay. President Clarence A. Martin, Canarsie Y. C., was re-elected for another term. The other officers chosen are: Vice-President, Thomas King, Old Mill Y. C.; Frederick Fox, of the same club, Treasurer; William McLaughlin, Canarsie Y. C., Secretary. C. H. Greene, Bergen Beach Y. C., was appointed measurer and official handicapper of the association.

A new class of S boats is being built for yachtsmen who have summer homes at the eastern end of Long Island, and these new boats are to be raced on the southwestern edge of Gardiner's Bay. They will fly the burgee of the Gardiner's Bay B. C., and J. N. Steele, Jr., is responsible for the class. He has induced six lovers of the sport to order boats, and he expects that others will join the class before the season opens.

The boats have been designed by Morgan Barney and five are now being built at the Milton Point Works at Rye. The contract for the sixth will be signed soon. These boats will fit the S class and it is possible that the best of the lot may be sent to Gravesend Bay later in the season to try and win a leg on the Lipton cup, held by the Crescent Athletic Club. They will rate about seventeen according to the measurement rules. Their general dimensions will be 28 feet over all, 18 feet waterline, 7 feet 2 inches beam and 4 feet 7 inches draft. They will spread 375 square feet of canvas in mainsail and jib. They are keel boats and will carry 1,100 pounds of outside lead on their keels. Among those interested in the class are Mr. Steel and Pichmond Levering, who owned the Heather, winner of the Bermuda race two years ago.

A new club house is to be built on the Gardiner's Bay shore, four and a half miles from East Hampton. Tennis courts, a pier and bath houses are to be built and be ready by June 1.

Plans are under consideration at Harvard and Yale for a joint cruise of the yacht clubs of the two colleges. The trip will be under the auspices of the Seawanhaka Corinthian Y. C., of Oyster Bay, L. I. If the plans go through the trip will start from New London the day after the big college crew races, and they will go to the Seawanhaka club on Long Island. Harvard has four 35-footers and six 25-footers, and more boats will be added if the proposed trip is undertaken.

A thoroughly renovated and improved clubhouse will greet the members of the Rhode Island Y. C. when they begin to gather there within the next few days. Repairs and improvements more elaborate than have been attempted during any winter for some time have been going on during the past few months and they are now practically complete.

When the house is open within the next 10 days the members will find one new float, repair to the old ones, a new bridge, an improved house exterior and much painting and finishing on the interior.

Already several of the members' boats are anchored off the club house and others are arriving from shipyards daily.

The official opening of the house will probably take place about May 1 as usual. A breakfast for the board of governors will be provided.

Norna Now a Freighter.

Twenty-seven years ago A. Cary Smith designed the yacht Norna, and she was built at the yard of C. & R. Poillon, Brooklyn, for the late Charles H. Contoit, according to the Herald. She was intended and proved to be a comfortable and thoroughly seaworthy schooner. Her waterline length was 95 feet, her beam 21 feet 6 inches and her draft 12 feet. She was a keel boat. An old school captain commanded her, and she was affectionately known as the "coal schooner." The color of her sails may have suggested the name.

Mr. Contoit was a member of Trinity vestry, and was one of the leading citizens of his day, whose word was as good as his bond.

Owner, builders, skipper made their last cruise years ago. The designer, rich in yachting experience and, what is a matter of congratulation, still active, buoyant as a youth and progressive, is turning out phenomenal schooner yachts for the leading members of the N. Y. Y. C., in connection with his other marine work.

And Norna still lives, doing duty as a freighter somewhere in the waters of the antipodes. Like many other yachts famous in their day her career has been varied, almost remarkable. Her second owner was a yachtsman who had been in the Royal Navy of England, and he kept her up in real navy style. During his ownership, the stern post was raked and the forefoot reduced. The third owner engaged a successful racing skipper, who tried the yacht, set her masts up about eighteen inches and had the new sails made. Behold, the maligned schooner became a fast boat, well able to cope with the Fortuna, at that time the best keel schooner of the day, famous for defeating the renowned Montauk for the Goelet cup of her class, off Newport, in 1885. The day was a bad one and the sea fitted the day.

Fortuna, with her brass quarter rail in the water, showed her heels in such a superb way to the fleet Montauk that the yachtsmen of the N. Y. Y. C. fleet looked on with astonishment. The same day Puritan defeated Priscilla, and all the vaunted heavy cutters found the weather too much for them, and after carrying away bowsprits, gaffs, etc., deemed discretion the better part of valor and retired.

The next owner of Norna went on a long cruise. A trail of mourners was left behind the yacht clear to New Zealand, where she fell into the clutches of the law, and the last news of her is that she was purchased in Sidney and that with the removal of her interior fittings she was turned into a freighter.

Years ago, after a long and successful career, Fortuna was turned into a fisherman, but in her early days her model was sent to an exhibition in Glasgow, when the late George L. Watson told the designer that he had never seen a more beautiful model.

Duxbury Y. C. Schedule.

The regatta committee of the Duxbury Y. C. composed of H. W. King, G. T. Winslow, J. H. Hunt, Thomas Weston, Jr., and C. M. Rogerson, are planning a very interesting racing season for the club. This will open Saturday, July 1, and the racing will close Saturday, Sept. 16.

New courses for this summer's races have been arranged that are better both for the yachtsmen and those that follow the races from the shore.

Racing will be given for 18-foot knockabouts, 15-foot knockabouts, a handicap class and power boats. Prizes will be given by the club to the 15-footers having the highest and second highest percentage for the season and the midsummer series. Also to the 18-footers and the handicap both having the highest season's and midsummer series percentage, and also to the boat having the highest percentage in the ladies' day series.

The schedule for the season follows: Saturday, July 1; Tuesday, July 4; Saturday, July 8; Wednesday, July 12, ladies' day; Saturday, July 15; Saturday, July 22; Wednesday, July 26, ladies' day; Saturday, July 29; Saturday, Aug. 5; Thursday, Aug. 10, midsummer series; Friday, Aug 11, midsummer series; Saturday, Aug. 12, midsummer series; Wednesday, Aug. 16, ladies' day; Saturday, Aug. 26; Monday, Aug. 28, ladies' day; Thursday, Aug. 31; Monday, Sept. 4; Saturday, Sept. 9; Saturday, Sept. 16.

Yacht Sales.

The Hollis Burgess yacht agency has sold the auxiliary sloop Zeruah, owned by W. Chamberlain, of Portland, Me., to James A. Veech, of Connellsville, Pa., who will use her on the Bay of Fundy.

The same agency has also sold the fast Herreshoff racing sloop Virginia, owned by Hollis Burgess, to Charles L. Joy, of Dorchester; the 42-foot motor boat Saracen II., owned by E. E. Synge, of Boston, to George H. Griggs, of Winthrop, Mass; the knockabout Bee, owned by Charles W. Barron, of Cohasset, Mass., to J. W. Merrill, of Manchester, Mass.; and the Sonder Klasse racing sloop Eel, owned by Herbert M. Sears, of Boston, to Commodore E. W. Clark, of the Philadelphia Corinthian Y. C., and has chartered the steam yacht Jule, owned by Benj. P. Cheney, of Boston, to Roger Upton, of Marblehead, Mass.

Motor Boating.

Challenge for Gold Cup.

The Motor Boat Club of America has decided to challenge for the Gold cup of the American Power Boat Association, which is now held by the Frontenac Y. C., having been won last year by Frederick K. Burnham's Dixie III. This trophy is for high speed boats 40 feet in length with unlimited power. The Pioneer started in the race last season and had to withdraw because she hit a sunken log and bent her shaft.

The challenger will be selected from the boats now building for the defense of the British International cup for motor boats, and should the race for the Gold cup be held earlier than the international event, it will help to tune the defender for the big race. The eliminating trials are to begin on Aug. 12 and the international races will begin on Aug. 24.

The Motor Boat Club will have a houseboat for its headquarters this year as usual. A committee has been appointed to select the boat, which will be moored in Huntington Harbor.

Maple Leaf's Fast Time.

THE first race at Monaco last week was won by E. MacKay Edgar's new speed boat Maple Leaf III. In a rough sea she skimmed around a course at the rate of 47 nautical miles an hour. She started again the second day in the Omnium race, but lost her rudder and damaged her propeller. Maple Leaf III. is a hydroplane built to try to win the British International trophy for motor boats now held by the Motor Boat Club of America. She is just under 40 feet in length and is driven by two motors of 350-horsepower each. In a trial on the Thames two weeks ago she showed 49.5 nautical or 57 statute miles an hour. While the speed was regarded as phenomenal for a boat of her size, it did not create alarm among those interested in the defenders. Many boats can go very fast for short distances, but fail to hold their speed over a course of 20 or 30 miles. The trials are made over measured miles, three with and three against the tide. Those who heard of the trial remarked, "Wait until she races."

The course at Monaco is one of the hardest for motor boats. It is generally rough or choppy there, so that a speed of 47 miles in a rough sea is even better than the trial. This is at the rate of 54 statute miles an hour.

Work at Luder's Yard.

SEVERAL interesting motor craft are nearing completion at the yard of the Luder's Marine Construction Company at Portchester. The 60-foot cabin cruiser Kathmar II. for Robert T. Fowler is to be launched in a few days. This boat is equipped with a 65-horsepower motor and is expected to make 13 miles an hour. Seaworthiness and comfort were wanted by the owner. The quarters are arranged to accommodate five persons besides a crew of two. The boat is of the raised deck type forward, with a bridge between this deck and the trunk cabin and with a smokestack, military mast, plumb flaring bow and lean whaleboat stern and is a model exponent of a smart seaworthy cruiser.

John H. Flagler's 106-footer is also to be launched within a few days. This is a two-funnel, schooner-rigged, clipper-bow boat to develop 16 miles an hour with a 300-horsepower Standard engine.

There is under way a 32-foot fast runabout building for Albert Chesebrough, of Northport, L. I. This boat, equipped with a 100-horsepower Sterling engine, is to make 30 miles an hour and will be raced extensively this summer in special classes.

A 32-foot cabin tender of stock model is being built for Johnson de Forest, of New York city, for use as a tender to Mr. de Forest's New York thirty. A speed of 9½ miles an hour will be obtained with a 20-horsepower Bridgeport motor. This boat in her lines is somewhat of a reversion to old-fashioned standards. The boat is being built with a sharp dead rise transom with an easy floor running down to a deep keel with reverse or S framing. The amidship section is to show considerable dead rise and the plumb bow will have considerable flare. The house is to be of the coach or hunting cabin type.

A 24-foot launch, Otter, is being constructed for James H. Hayden, of Washington, D. C., which will be used at the summer home of the owner at Lake George.

A 40-foot runabout for Dr. Edwin Lodge, of Detroit, is also under way. This boat, 6 feet wide, is of solid mahogany and quartered oak finish and is to be powered with a 60-horsepower Jencick motor and is to have a speed of 19 miles an hour. This craft is to be used as a ferryboat between the owner's home on Lake St. Claire and Detroit.

The Fitting Out Season.

Concluded from page 546.

The fuel tank was a frightful trouble. Somehow—probably through the attentions of evil-minded urchins who infest that shore, to the detriment of boat covers (which they use as hammocks) and nicely painted hulls (which they find useful for stone-throwing contests), the fuel tank was at least a quarter full of sand and mud. This discovery, quite accidental, by the way, as we were prepared to take the cleanliness of the fuel tank on trust, explained the continual misbehavior of the engine the preceding season. There was no proper hand hole on the tank, nothing but the outlet and the filling plug on top. It was cleaned out at last by rigging the garden hose on to it and washing it out that way. Then it was washed out with plenty of petrol and replaced—with a hasp and padlock over the filling plug projecting above the fore deck. The petrol pipe was also carefully washed through with petrol as a necessary precaution. The carburetter—the common Lunkenheimer type with a heavy valve inside—was cleaned and repacked round the regulator spindles after the valve had been very carefully ground in a little. Then the fuel system was reinstalled and connected up.

The ignition had, very properly, been left to the last. The coil had to be sent to the makers to be overhauled; the bill it returned with showed that those small motor boat owners who remove coil and batteries from their boats after a trip is finished, act very wisely indeed, and effect serious economy by their carefulness. The battery was in such a frightful state it had to be discarded. The boat was rewired throughout with single 16-gauge, heavily insulated, house wire, run in compo. tubes. Wherever a wire left a tube the end of the pipe was bent downward to allow water or moisture to drip off. It would have been better to have put in a proper "conduit" system, really, but the makeshift used proved quite satisfactory. A special box was made to hold coil and battery; the sides projected some three inches below the bottom of the box, and the switch was placed on the underside of the bottom, through which all the wires led to spark plug, to "earth," and to the engine contact maker. This way the switch was protected in a very simple manner from wet, and any moisture on the outside of the box would collect at the bottoms of the sides and drop off without doing any harm. The wooden cover was made a tight fit to the inside of the box with a rubber grummet, and the edges of the cover also turned down so that the joint was protected. Any ventilation that might be necessary inside the box could come through the holes where the compo. pipes containing the wires passed through the bottom.

The contact maker was carefully cleaned and readjusted. As nasty accidents can occur when starting up after replacing a contact maker, the time of occurrence of the spark was carefully tested. The spark advance lever was placed in mid position (which struck us as about right), the plug removed and laid on some metal part. A wooden rod, inserted through the plug hole and resting on the top of the piston, allowed one to see that exact part of the piston stroke when the spark started to pass. It is not so easy to make a mistake in this connection with a two-cycle engine as it is with a four-cycle engine where the contact maker is generally gear-driven. The gears are marked with punch dots which should coincide when the gears are re-meshed. A back fire is never pleasant, and can be really dangerous. Magneto ignition wants care in reassembling, too. In fact, no two parts should be taken apart without the proper relative positions to each other having been marked. Every engine maker puts such marks in necessary spots, as a matter of fact, but they should be looked for and found. Another point to be observed in taking down an engine is to put all nuts, bolts, screws, and small oddments generally connected with some particular part of the engine, together. It may happen that when an engine has been almost completely built up again that screws or bolts of the wrong length have been used somewhere, and those about to be put in place are too short. A little misjudgment of this kind cost hours in the fitting out of the boat which forms the subject of this contribution.

One of the most important things in fitting up the parts is to insure that all nuts and set screws are properly tightened. This is absolutely vital on moving parts, and cannot be too carefully looked to. If, for instance, the big end of the connecting rod comes adrift while the engine is running (and it could not well do so when the engine is shut down) it will certainly mean a most unholy smash-up. In adjusting bearing surfaces like this the nuts holding the brasses down should first of all be screwed up firmly, finger tight, then eased back the merest trifle. Then the lock nuts should be thoroughly well fastened down over the nuts themselves. In all cases, some preventive means should be adopted to prevent these dropping if ever they should slack off, through vibration, say, or carelessness. The most effective means of all is to put a split pin through the bolt end, then the lock nut cannot slack more than a little, and though the engine will knock, perhaps, nothing can come loose within the crank chamber to damage things.

The experience gained in fitting out a boat completely from stem to stern, as had to be done with the boat described, though entailing a deal of hard and dirty work, is no unpleasant job to a keen motor boatman. He will learn a wonderful lot in doing it, and will have, at least, the satisfaction of knowing that things have been properly done. A really careful man does not take much on trust even when fitting out has been accomplished by professional men. He likes to know for himself that everything is "just so," according to his ideas and tastes. It is a fact beyond dispute that a man who looks after his own boat entirely is at a great advantage when his engine develops any little trouble. He knows exactly the cause, and exactly what remedy to apply. Short of actual breakage, he is the master of his boat, and on really important occasions, when caught out in nasty weather or when racing, for instance, he will find that the feeling of confidence he has both in his boat and his own command over her, is well worth the time and trouble spent in acquiring the necessary experience and knowledge which have given him that confidence.

A Marblehead Racer.

J. B. LINDEMAN, of the Colonial Y. C., is having a 40-foot cruising motor boat built at Simpson's yard at the foot of West 149th street. The boat is almost ready for launching. She is to take part in the race of the Motor Boat Club from Huntington to Marblehead. The plans were drawn by Southmayd Hatch. Mr. Lindeman will name the boat Snapshot.

The model of the yacht shows a boat of exceptional seagoing qualities, with a high bow, considerable flare and good dead rise. The engine controls from the bridge, with an auxiliary steering gear placed aft for rough weather. A military mast is carried for signalling purposes.

The construction is uncommonly heavy and of selected oak, cedar and mahogany. The engine, a six-cylinder, four-cycle, 36 horsepower Von Blerk, turning 600 revolutions a minute, will drive the yacht 12 miles an hour. Gasolene is carried in two separate tanks under the after deck, giving a cruising radius of 300 miles.

Eight persons can be accommodated on board with comfort. The cabin is finished in paneled mahogany, plush curtains and cushions, Pullman berths and there is a pipe berth forward in the engine room for one man. Snapshot III. is 40 feet over all, 10 feet beam and draws 3 feet 6 inches. She will be used for cruising in the summer on the Hudson River and Long Island Sound and for fishing and hunting in the South during the winter.

54-FOOT ELCO DE LUXE POPULAR ON THE LAKES.

Work at Bayonne.

The many vessels contracted for early in the winter are rapidly nearing completion at the yards of the Electric Launch Company at Bayonne. Some have already been launched and some will go in the water shortly. One of the most attractive pieces of work being done there is the building of an Elco plane, as Mr. Sutphen calls it, for A. E. Smith, which is to be a defender of the British International trophy. The construction of this boat is a very fine piece of work, and great things are expected of the craft. There is also a boat for J. Stuart Blackton building for the same races.

The U. S. Navy department has ordered from this company two 40-foot motor boats for use at Newport, R. I., Torpedo Station. These boats are of very substantial construction and will be equipped with 4-cylinder, 25-horsepower Standard motors. The boats are intended for use in towing torpedoes after they have been tried out on the proving grounds off the Government station. After the torpedoes are fired from the gun, they usually carry for a distance of about 5 miles, when they stop running and float on the surface. The motor boat is then sent to find them and tow them back to the station. As each torpedo costs more than $5,000, it is readily seen that the Government cannot afford to lose any in tests they make. These two boats are to be delivered at Newport by May 11.

D. Lorne McGibbon, of Montreal, who is prominent in the rubber industry, has ordered from the Elco people a 30-foot electric launch for use at St. Agathe, Quebec. This boat, which is to be delivered May 1, and which will be named Ethelwyn, is the latest type of electric launch and will be equipped with the most approved electrical apparatus, including the new light weight batteries which have a capacity of 60 miles on one charge.

C. H. Osgood, of Norwich, Conn., owner of the steam yacht Narwhal, will have a 40-horsepower Elco motor installed in the 25-foot yacht tender which is carried on the davits of the yacht. The installation will be made at New London where the Narwhal is now stored.

W. T. Samson, a wealthy resident of Gananoque, Canada, is to have a new 34-foot Elco Express delivered on May 15. This boat is fitted with a 4-cylinder 40-horsepower Elco motor. The boat has been specially designed for Mr. Samson and has 7 feet beam. A novelty in her construction will be a light glass cabin which entirely covers the after part of the seating cockpit. This is designed as a protection against rain and foggy weather. There will be an open cockpit forward of the cabin and the engine will be forward and be protected by a metal cover similar to the usual Elco design. The control levers and steering wheel are to be placed in the forward cockpit.

Cruiser for F. G. C. Lyon.

F. G. C. Lyon, of the N. Y. Y. C., has placed through Henry R. Sutphen, vice-president of the Electric Launch Company, Bayonne, an order for an 84-foot single screw motor yacht. Mr. Lyon intends to use the yacht on Long Island Sound and waters adjacent to New York. The new boat will be called Bettina III., and will be the second boat built by the Electric

YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.

Gas Engines and Launches.
Their Principles, Types and Management. By Francis K. Grain.
The most practical book for the man or boy who owns or plans to own a small power boat. It is motor launch and engine information boiled down and simplified for busy people, and every line of it is valuable. Cloth, 122 pages. Postpaid, $1.25.
Forest and Stream Publishing Co.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE,
TRAVEL, NATURE STUDY, SHOOTING, FISHING, YACHTING.

CORRESPONDENCE.

The Forest and Stream is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copies, $3.00 per year; $1.50 for six months. Rates for clubs of annual subscribers:

Three Copies, $7.50. Five Copies, $12.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Canadian subscriptions, $4.00 a year, $2.00 for six months.

Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's. Foreign terms: $4.50 per year; $2.25 for six months.

ADVERTISEMENTS.

Inside pages, 16 cents per agate line. Special rates for three, six and twelve months. Eight words to the line, fourteen lines to one inch. Advertisements should be received by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices, seventy-five cents per line. Only advertisements of an approved character inserted.

Display Classified Advertising.

Hotels, Summer and Winter Resorts, Instruction, Schools, Colleges, etc. Railroad and Steamship Time Tables. Real Estate For Sale and To Let. Seeds and Shrubs, Taxidermists. The Kennel. Dogs, etc. Wants and Exchanges. Per agate line, per insertion, 13 cents. Three months and over, 10 cents per line.

Solid Classified Advertising.

For Sale. Kennel. Property For Sale. Real Estate For Sale or To Let. Wants and Exchanges. Per agate line, 10 cents. Absolutely no display. No advertisement of less than three lines accepted. Cash must in every case accompany order.

FOREST AND STREAM PUB. CO.
127 Franklin St., New York.

Launch Company for Mr. Lyon, the first one being a 62-footer which Mr. Lyon had built last year.

The new boat will be 84 feet in length, 13 feet 10 inches beam and 4 feet draft. The construction will be of the best. The keel will be of oak 7 by 8 inches, the stem and stern of natural white oak, the frames and floor of heavy oak, shelves and stringers of long length yellow pine and the planking of long leaf yellow pine fastened with copper rivets. An unusual amount of deck space has been provided and the deck will be selected white pine. There will be four watertight bulkheads to insure the maximum of safety in case of accident.

The dining saloon will be forward, and enclosed with plate glass windows dropping into pockets. This saloon will be finished inside and outside in selected African mahogany and fitted with mahogany buffet, china and glass cupboards, oval extension table, etc. The galley and pantry below will connect with this room in the usual manner. The galley is to be most up to date in every detail and will be well lighted.

The owner's quarters are aft of the engine room, and consist of an owner's stateroom with two three-quarter berths. This compartment is the full width of the boat, with full length lockers and mahogany bureaus, drawers underneath the berths. Aft of the owner's stateroom is a lobby with desk, bookcase, transom and seats, a bath is on the port side, with the usual yacht fixtures and bath tub. Hot and cold water is provided for washstands and tubs, flowing by gravity, the hot water being derived from the boiler in the galley. Salt water is provided for the bath tub by use of an electric pump. The guests' stateroom at the after end of owner's quarters is provided with three-quarter berths, folding washstands, bureaus and lockers. The owner's quarters are enclosed with plate glass windows of the hinging type, affording the best light and ventilation. The outside of the houses and companionways will be finished in selected mahogany, and the interior quarters are to be finished in white enamel and mahogany trim.

Aft of the galley, but separated by watertight bulkheads, is the engine room. The power plant will be a 100-horsepower six-cylinder Standard gasolene engine. An auxiliary electric light plant is to be installed. The engine besides operating the dynamo will also furnish compressed air and operate a powerful water pump for deck use, etc. The gasolene capacity is 600 gallons, enabling the boat to cover 600 miles in one filling of the tanks, which are of copper with pans underneath draining outboard above the load waterline.

A most complete electric light plant will be installed with storage battery, auxiliary power powerful electric searchlight, electric water pumps for the pumping system and a powerful electric capstan for hoisting the anchors. The yacht will be steered from the bridge deck aft of the dining saloon. This deck is to be large enough to hold several wicker chairs with a mahogany bridge deck settee. An awning of white and blue canvas will cover the after deck. The signal mast with auxiliary sail rig is provided. Two boats will be carried, a 16-foot power tender with an 8-horsepower gasolene engine and a 12-foot rowing tender. A telephone system will be installed from the owner's stateroom to the dining saloon on deck. The boat will be ready in June.

Vita Wins Southern Championship.

A series of races arranged by the St. Augustine Motor B. C. were held last week off St. Augustine. The racing began on April 4 and lasted four days. On the opening day the water was quite rough, so that only two of the four events scheduled were decided. The first event was a ten-mile handicap, which was won by J. Stuart Blackston's Vita in 28m. 41s. W. A. Macduff's Jack Rabbit was second.

D. C. McMillan's Diana won the ten-mile race for boats having a speed of more than 25 miles. W. F. Coachman's T. and S. was second.

On the second day Ace II., owned by W. W. Trimpi, win the ten-mile handicap, with T. and S. second and Vita third. The second ten-mile handicap race for all boats was won by Vita, with W. B. Nibson's Elise second, Ace II. third and Jack Rabbit fourth. A 20-mile handicap for boats above 25 miles was won by T. and S., with Ace II. second.

Two 50-mile handicap races were decided the third day. Ruth K. won in the morning. Her time was 2h. 27m. 54s. Vita won the afternoon race in 2h. 22m. 57s. These two were to have met on the last day in a 10-mile race to settle the championship, but Charles Smiley, owner of Ruth K., took exception to the action of the committee disqualifying his boat in an early race and declined to start. Vita, owned by J. Stuart Blackton, went over the course alone for the trophy. Vita is a sister boat to Edith II., and was built by the Electric Launch Company.

British Experimental Tank.

On visitation day at the National Physical Laboratory, Bushey Park, an opportunity was afforded for the first time of seeing the national experimental tank which has been built, at a cost of about £20,000, largely by public subscription, for the purpose of testing scientifically the models of ships, yachts, and other vessels, says the Field. Similar experimental tanks are now attached to the navy yards of the world. That of the Admiralty is at Haslar, Gosport, where Mr. R. E. Froude's classic experiments on stability and resistance are made. Mr. R. E. Froude's name is, of course, familiar to all yachtsmen as a prominent member of the council of the Yacht Racing Association, and the representative member for Great Britain on the permanent committee of the International Yacht Racing Union. There are other experimental tanks at Washington, which has hitherto had the best equipment; in France; and in Germany, where the logical development of the idea has taken the form of installing private tanks for the benefit of the greater ocean-going steamship companies. The most typical of these private tanks is that belonging to the Norddeutscher Lloyd Company. Similar enterprise is not without precedent in Great Britain, for Messrs. Denny Brothers, of Dumbarton, have had an experimental tank for many years; indeed, Denny's tank is the oldest and most complete privately owned experimental tank in the world. But the need to a shipbuilding nation like our own of a national experimental tank where problems in shape and size of hulls or in the disposition of rudders, bilge keels, shaft escapes, and other openings and projections on the sides of the hull has long been severely felt. The experimental tank, or rather tanks, at Bushey Park are the response to it; and it may be confidently expected that the experiments, both in pure research and in solving practical problems put to the laboratory's staff by ship builders and yacht builders, will be of the utmost value to the shipbuilding trade and to the community in general.

The mode of operation in an experimental tank during the major number of its experiments may be briefly described. In the tank are floated what we may call tentative or provisional models of the ships or yachts which are to be constructed. These models are made of paraffin wax to scale, and are planed and pared to an approximately exact representation of the projected hull. Their length may be anything from 12 feet to 25 feet. When the model is made, accurate in proportional dimensions to the hundredth part of an inch, the amount of water it ought to displace is calculated, and it is sunk into the water to the required depth by means of little ballast sacks. It is then towed through the water at given speeds by a traveling carriage which runs on rails that are fixed on either side of the tank. The resistance of the model to towing at these varying speeds is recorded by the dynamometers attached to the traveling carriage. These measuring instruments, like the traveling carriage as a whole, are so sensitively delicate that, if the length or the breadth of the wax model were altered in the slightest degree, or even if a sparrow were to perch on the floating hull of wax, the dials would record the difference of the resistance to towing. It follows, therefore, that with such instruments and measurements as the experimental tank as a whole and in its parts afford, the best shape of a hull with a given cubic capacity can be readily and precisely ascertained. From Froude's laws the ascertained resistances of the wax models can be converted into the resistances offered, and the speeds attained by the actual ships of which the models are the representations.

These resistance experiments are naturally not the only ones for which an experimental tank offers scope and opportunity. They afford information, as we have already indicated, of the resistance set up by the additions and alterations of a vessel's hull, which are necessitated by her driving and steering apparatus. By setting up waves in the tank, which can be done by appropriate mechanical devices, the effect of wave motion on the vessel's speed can be ascertained. It is possible also to ascertain by observation and by photography the stream lines of the water which closes about a vessel during its progress through the water. In the sides of the tank at Bushey Park are glazed openings through which photographs of the movements of the water can be taken. Other experiments and observations of an allied character can be made in the subsidiary tank, where by an ingenious arrangement of a rotary pump the model can be placed in a stream of flowing water and its resistance tested in these altered conditions. We believe that this smaller tank is the only one of its kind.

In dimensions the water basin of the larger tank has no superior. This huge concrete basin is 550 feet in length, 30 feet in breadth, and 12 feet 3 inches in depth (the naval tank at Haslar is only 20 feet wide, and is shorter). The tank is provided at the north end with docks for storage, so arranged as to give easy access to the models. At the south end is a shelving beach which stills the waves set up by the models when towed. A suitable sunken screen placed here could be rocked so as to produce waves. The small tank for stream experiments is 58 feet long and 5 feet broad, and the flow stream will be 3 feet deep. This tank has no carriage; but ingenious vibration devices will give the speed or resistance of the models suspended in or towed against the stream.

The traveling carriage on the larger tank is not yet completed in equipment. Its driving motors will enable speeds up to 17 miles an hour to be attained in the towing experiments. The paraffin-wax models are first cast in a clay mould, and are then shaped by cutting horizontal grooves in them on a special planing machine. The final paring is done by hand. The planing or shaping machine will deal with models as long as 25 feet, and a table for measuring the finished model or marking any desired lines on it has been installed.

Canoeing.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—William C. Cregin, 165 Audubon avenue, New York city, by Fred W. Baldwin.

Central Division.—Lawrence V. Stevens, 1172 South avenue, Wilkinsburg, Pa., by S. W. Prosser.

Eastern Division.—Frank E. Berry, 147 Smith street, Providence, R. I., by C. Strawson Barningham; Arthur D. Sylvester, 315 California avenue, Providence, R. I., by F. C. Rexford.

NEW MEMBERS ELECTED.

Atlantic Division.—6195, John V. Mulcahy, 23 Murray street, Trenton, N. J..

Central Division.—6202, Edmund Dietzel, Saranac Lake, N. Y.

Eastern Division.—6196, A. Russell Bowen, Beacon Chambers, Joy street, Boston; 6197, Harold I. Bosworth, 160 Burrington street, Providence, R. I.; 6198, Harlie E. Buckey, 22 Manchester street, Pawtucket, R. I.; 6199, Alfred C. Noyes, 33 Eddy street, Providence, R. I.; 6200, Amos W. Hazard, Jr., 197 Harrison street, Providence, R. I.; 6201, Charles A. Domler, 1125 Broad street, Providence, R. I.

Repeating Shotgun
Solid Breech Hammerless

CHOSEN

—because it is the only bottom-ejecting pump gun.
—because it is built to shoot hard and close.
—because it handles fast and balances perfectly.

Remington-UMC

At trap or blind its short leverage enables the shooter to double without kinking or cramping.

Remington-UMC — **the perfect shooting combination.**

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

April 15.—Roanoke (Va.) G. C.
April 18-20.—Des Moines, Ia.—Iowa State shoot.
April 19.—Springfield (Mass.) Shooting Club Patriots' Day tournament. C. L. Kites, Sec'y.
April 20.—Freehold (N. J.) G. C.
April 20.—Columbus (O.) G. C. Lon Fisher, Sec'y.
April 20.—Jersey City (N. J.) G. C. J. Lewis, Sec'y.
April 22.—Roanoke (Va.) G. C.
April 28.—Temple, Pa.—Hercules G. C. A. K. Ludwig, Sec'y.
April 29.—Roanoke (Va.) G. C.
April 30-May 1.—Watertown (Wis.) G. C.
May 2-4.—Kansas State Sportsmen's Association's tournament, under the auspices of Hutchinson G. C.
May 6.—Roanoke (Va.) G. C.
May 7.—Chicago (Ill.) G. C. second annual interstate team shoot.
May 9-11.—Eagle Grove (Ia.) G. C.
May 16.—Syracuse, N. Y.—Onondaga County G. C.
May 17.—Jersey City (N. J.) G. C. J. Lewis, Sec'y.
May 13.—Roanoke (Va.) G. C.
May 20.—Roanoke (Va.) G. C.
May 23-24.—Dayton, Ky.—Kentucky State shoot, under auspices Northern Kentucky G. C.
May 27.—Roanoke (Va.) G. C.
May 30.—Columbus (O.) G. C. Lon Fisher, Sec'y.
June 3.—Roanoke (Va.) G. C.
June 1-3.—New Jersey State Sportsmen's Association's seventh annual tournament, on the grounds of the Smith G. C., Newark, N. J. Chas. T. Day, Sec'y-Treas.
June 6-8.—Sioux City, Ia.—Soo G. C.
June 6-9.—Columbus, O.—Ohio State shoot. Lon Fisher, Sec'y.
June 7.—Hoopeston (Ill.) G. C.
June 10.—Roanoke (Va.) G. C.
June 10-11.—Milwaukee, Wis.—Wisconsin and Upper Peninsula Trapshooting Association, under auspices of Badger G. C.
June 13-15.—Eugene, Ore.—Pacific Indians' tournament.
June 13-15.—Syracuse, N. Y.—New York State Sportsman's Association. W. E. Hookway, Sec-y-Treas.
June 17.—Roanoke (Va.) G. C.
June 24.—Roanoke (Va.) G. C.
July 4.—Roanoke (Va.) Tournament. E. W. Poindexter, Sec'y.
Aug. 16.—Batavia, N. Y.—Holland G. C. ninth annual tournament, Western New York Championship. Chas. W. Gardiner, Sec'y.
Aug. 22-23.—Fort Dodge (Ia.) G. C.
Aug. 24-25.—Sioux Falls (S. D.) G. C.
Aug. 29-31.—Des Moines, Ia.—The Indians. C. W. Budd, Sec'y.

REGISTERED TOURNAMENTS.

April 22.—North Caldwell (N. J.) G. C. Wm. Kussmaul, Sec'y.
April 25-26.—Spokane, Wash.—Washington State tournament, under the auspices of the Spokane Rod and Gun Club. F. K. McBroom, Sec'y.
April 24-25.—Wamego, Kans.—Big Four League's tournament. Dave Elliott, Sec'y.
April 26-28.—Detroit, Mich.—Memorial G. C. Frank H. Patton, Sec'y.
April 27.—Circleville, O.—Ideal G. C. E. M. Stout, Sec.
April 27-29.—Hutchinson, Kans.—Kansas State tournament, under the auspices of the Hutchinson G. C. C. T. Rankin, Sec'y.
April 29.—Glens Falls, N. Y.—Hudson Valley R. and G. C. John A. Norton, Sec'y.
April 29.—Reading, Pa.—South End G. C. Howard Melchior, Sec'y.
May 2.—Canonsburg, Pa.—Western Pennsylvania Trapshooters' League tournament, under the auspices of the Canonsburg G. C. L. Lautenslager, Pres.
May 4-5.—Camden (Ark.) G. C. J. P. Wright, Mgr.
May 6.—Phillipsburg, N. J.—Alert G. C. Edward F. Markley, Mgr.
May 9-11.—Lawton, Okla.—Oklahoma State tournament, under the auspices of the Lawton G. C. G. A. Horton, Sec'y.
May 9-11.—Charlotte, N. C.—The Interstate Association's sixth Southern Handicap tournament, under the auspices of the Charlotte Gun Club; $1,000 added money. Elmer E. Shaner, Secretary-Treasurer, Pittsburg, Pa.
May 10.—Galion (O.) G. C. U. E. Campbell, Pres.
May 11.—Dublin (O.) G. C. N. J. Dominy, Sec'y.
May 11-12.—Sunbury, Pa.—Sunbury-Selinsgrove G. C. J. W. Schoffstall, Sec'y.
May 13.—Bethel, Conn.—Western Connecticut T. S. L. tournament, under the auspices of Bethel G. C. E. H. Bailey, Pres. W. C. T. S. L.
May 15-17.—Vicksburg (Miss.) G. C. J. J. Bradfield, Sec'y.
May 16-19.—Du Bois, Pa.—Pennsylvania State tournament, under auspices of the Du Bois G. C. U. S. N. Crouse, Sec'y.
May 17-19.—St. Louis, Mo.—Missouri State Game and Fish Protective Association tournament, under the auspices of the St. Louis T. S. A. Louis Ebert, Sec'y.
Week beginning May 21.—Interstate Association's Sixth Pacific Coast Handicap tournament, under auspices of Madera Rod and Gun Club; $1,000 added money.
May 22-23.—Gooding, Idaho.—Idaho State tournament, under the auspices of the Gooding G. C. A. F. C. Bush, Sec'y, Gooding, Idaho.
May 22-23.—Paden City, W. Va.—West Virginia State tournament, under the auspices of the Paden Park Shooting Club. T. M. McIntire, Mgr.
May 23.—Scranton (Pa.) R. and G. C. J. D. Mason, Sec'y.
May 23-24.—Paragould (Ark.) G. C. C. W. Stedman, Sec.
May 23-24.—Sikeston (Mo.) G. C. Wm. H. Tanner, Sec'y.
May 23-25.—San Antonio, Tex.—Texas State tournament, under the auspices of the San Antonio G. C. Dan O'Connell, Sec'y.
May 23-25.—Lincoln, Neb.—Nebraska State tournament, under the auspices of the Capital Beach G. C. T. C. Brownfield, Pres.
May 24.—Stratford, Canada.—Pastime G. C. Wm. Bowles, Sec'y.
May 24-25.—Dayton, Ky.—Kentucky State tournament, under the auspices of the Northern Kentucky G. C. Dr. I. P. Gould, Sec'y.
May 24-25.—Columbus (Wis.) G. C. C. F. Gruhn, Sec'y.
May 26.—Toledo, O.—West Toledo G. C. Geo. Volk, Sec'y.

May 25.—Atglen (Pa.) G. C. Lloyd R. Lewis, Mgr.
May 27.—Belvidere (N. J.) G. C. J. M. Drake, Jr. Pres.
May 30.—Cleveland (O.) G. C. F. H. Wallace, Mgr.
May 30.—York, Pa.—York City G. C. N. M. McSherry, Sec'y.
May 30.—North Lancaster, Mass.—Clinton G. C. W. J. Tedford, Sec'y.
May 30.—New Haven, Conn.—Western Connecticut Trapshooters' League, under the auspices of the New Haven G. C. E. H. Bailey, Pres. W. C. T. S. L.
May 30.—Iowa City (Ia.) G. C. C. Bothell, Mgr.
May 30.—Buffalo (N. Y.) Audubon C. Edw. Reinecke, Sec'y.
June 1.—Tarentum, Pa.—Western Pennsylvania Trapshooters' League. Louis Lautenslager, Pres.
June 1-2.—Jewell (Ia.) G. C. W. S. Hoon, Sec'y.
June 1-2.—Newton (Ill.) G. C. C. M. Frank, Sec'y.
June 1-3.—Newark, N. J.—Jersey State tournament, under the auspices of the Smith Gun Club. Chas. T. Day, Sec'y-Treas. State Association.
June 2-3.—St. Charles, Mo.—Missouri State R. A. C. C. Crossman, Sec'y.
June 3.—West Chester (Pa.) G. C. F. H. Eachus, Sec'y.
June 6-8.—Moberly, Mo.—Annual State tournament of the Missouri Trapshooters' Association, under the auspices of the Moberly G. C. L. R. Hulen, Sec'y.
June 6-8.—Sioux City, Ia.—Soo G. C. W. F. Duncan, Sec'y.
June 7.—Norwich, N. Y.—Chenango County F., G. and G. C. E. D. Borden, Sec'y.
June 7-9.—Columbus, O—.Ohio State tournament, under the auspices of the Columbus G. C. Lon Fisher, Secy.
June 8-10.—Gulfport, Miss.—Mississippi State tournament, under the auspices of the Gulfport G. C. N. H. Paythress, Sec'y.
June 8-10.—Haines Landing, Me.—Maine State tournament, under the auspices of the Mooselucmaguntic G. C. R. L. Spotts, Pres.
June 9.—Pottsville (Pa.) G. and F. A. E. I. Elliott, Sec.
June 9-10.—Columbus, Neb.—Big Four League tournament, under the auspices of the Columbus G. C. Dave Elliott, Sec'y.
June 10.—Allentown, Pa.—Lehigh Valley S. A. Allen Hall, Sec'y.
June 10-11.—Milwaukee, Wis.—Wisconsin State tournament, under the auspices of the Badger G. C. Ed. F. Leidel, Sec'y.
June 12-14.—Hunter's Hot Springs, Mont.—Montana State Sportsmen's Association tournament. C. H. Smith, Sec'y.
June 12-15.—Hickman (Ky.) G. C.; $100 added money. S. L. Dodds, Pres.
June 13-15.—Syracuse, N. Y.—New York State tournament, under the auspices of the New York State S. A. W. E. Hookway, Sec'y
June 13-15.—Huron, S. D.—South Dakota State tournament, under the auspices of the Huron G. C. T. H. Null, Sec'y.
June 14-15.—Montpelier, Vt.—Vermont State tournament, under the auspices of the Montpelier G. C. H. B. Moulton, Pres.
June 14-15.—Nebraska City (Neb.) G. C. F. C. Nicholson, Sec'y.
June 14-16.—Spencer (Ia.) G. C. R. B. Randolph, Sec'y.
June 15.—Milton (Pa.) R. and G. C. S. H. Koch, Sec'y.
June 15-16.—Marshall (Mo.) G. C. E. W. Brown, Sec'y.
June 15-17.—Chicago (Ill.) G. C. E. B. Shogren, Sec'y.
June 16-17.—Redfield (S. D.) G. C. Dr. E. E. Giltner, Pres.
June 17.—Newmanstown, (Pa.) G. C. F. S. Rader, Sec'y.
June 20-23.—Columbus, O.—The Interstate Association's twelfth Grand American Handicap, on the grounds of the Columbus Gun Club; $1500 added money. Elmer E. Shaner, Sec'y-Treas, Pittsburg, Pa.
June 24.—Long Hill, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Hillside G. C. E. H. Bailey, Pres.
June 26-27.—Kenmare, N. D.—North Dakota State tournament, under the auspices of the Kenmare G. C. H. E. Peck, Sec'y.
June 27-28.—Brownsville (Pa.) R. and G. C. H. O. Hornbake, Sec'y-Treas.
June 28.—Oregon (Wis.) G. C. W. H. Dreher, Sec'y.

July 26-27.—Hannibal (Mo.) G. C. Geo. H. Carter, Pres.
July 31-Aug. 2.—Belleville, Ont., Canada.—Dominion of Canada Trapshooters' Association. Mark Sprague, Sec'y.
Aug. 8-9.—Lock Haven, (Pa.) G. C. C. A. Johnson, Sec.
Aug. 8-10.—Omaha, Neb.—The Interstate Association's sixth Western Handicap tournament, under the auspices of the Omaha G. C.; $1,000 added money. Elmer E. Shaner. Sec'y-Treas., Pittsburg, Pa.
Aug. 10.—Berwick (Pa.) R. and G. C. W. I. Shrader, Sec'y.
Aug. 14-15.—Evansville, Ind.—Recreation G. C. G. A. Beard, Cor. Sec'y.
Aug. 14-19.—Denver, Colo.—The Rocky Mountain Interstate Sportsmen's Association's State tournament, under auspices of the Denver Trap Club; $5000 added money. A. E. McKenzie, Pres.
Aug. 15.—Allegheny, Pa.—Western Pennsylvania Trapshooters' Association. Louis Lautenslager, Pres.
Aug. 15-17.—Charlotte, N. C.—North Carolina State tournament, under the auspices of the Charlotte G. C. J. E. Crayton, Pres.
Aug. 16.—Batavia, N. Y.—Holland G. C. Chas. W. Gardiner, Sec'y.
Aug. 16-17.—Pawnee, Okla.— Big Four League's tournament. Dave Elliott, Sec'y.
Aug.19.—Bridgeport, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Seaside G. C. E. H. Bailey, Pres. W. C. T. S. L.
Aug. 22.—Mechanicsburg, (O.) G. C. F. J. Coburn, Sec.
Aug. 22-23.—St. James (Mo.) G. C. R. H. James, Sec'y.
Aug. 24-25—Sioux Falls (S. D.) G. C. J. J. Burns, Sec'y.
Aug. 24-25.—Bradford (Pa.) G. C. A. W. Vernon, Sec'y.
Sept. 4.—Ogdensburg (N. Y.) Shooting Association. J. M. Morley, Sec'y.
Sept. 4.—Waterbury, Conn.—Western Connecticut T. S. L. tournament, under the auspices of the Mattatuck R. and G. C. E. H. Bailey, Pres. W. C. T. S. L.
Sept. 4-5.—Lynchburg, Va.—Virginia State tournament, under the auspices of the Lynchburg G. C. J. D. Owen, Sec'y.
Sept. 5-6.—Charleston (Mo.) G. C. J. A. Howlett, Sec.
Sept. 6-7.—Indianapolis, Ind.—Trapshooters' League of Indiana State tournament. Harry W. Denny, Sec'y.
Sept. 12-16.—Atlantic City, N. J.—The Westy Hogans of America. Bernard Elsesser, Sec'y, York, Pa.
Sept. 13-14.—Omaha (Neb.) G. C. F. T. Lovering, Sec'y.
Sept. 21.—Braddock, Pa.—Western Pennsylvania Trapshooters' Association. Louis Lautenslager, Pres.
Sept. 27-28.—Benton (Ill.) G. C. W. H. Foulk, Sec'y.
Oct. 4-5.—Columbus (O.) G. C. L. Fisher, Sec'y.
Oct. 10-12.—Des Moines, Ia.—Iowa State tournament. C. W. Budd, Chairman Board of Directors.
Oct. 17-18.—Scammon (Kans.) G. C. G. K. Mackie, Pres.
Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

Chicago Gun Club.

Chicago, April 1.—The fairly pleasant weather of to-day induced thirteen shooters to come out to the park to try their skill at the traps.

At times the stiff wind bobbed the targets around so that they were hard to connect with, but at that, quite a number of good scores were made, especially the ones made by MacLachlan and Shrigley on doubles, the former only losing four targets out of the 20 pairs of the club program, and then broke all of five more pairs, which gives him a total of 46 out of 50 doubles.

Shrigley also did fine work on the doubles by breaking 32 out of the 20 pairs, this being the best he has ever done on doubles.

First honors in event No. 1 were carried off by Barto with a score of 44 out of 50, MacLachlan being a close second with 43.

Fosetti and Cramer each landed one frame of 25 straight, Cramer also getting two 23s and one 21.

Sharp made one 23, one 22 and two 21s on singles and finished up by breaking 20 out of 12 pairs.

H. R. Cramer, of Nelson, B. C., tarried long enough in Chicago to have another afternoon's sport with us.

J. E. Wheaton, of Newark, N. J., came out to our park to-day, this being his first time in Chicago, and having read and heard of our grounds, he made it his business to come out and see us, and although he has not shot at targets for years, his scores show up well at that, considering that he shot with a strange gun.

Forsetti had a brand new "pump" which he had just received and was anxious to try out, and when he landed that score of 25 straight, he thought it was just about right.

Dickerman, Folkner and Howell are new at trapshooting, although they have done quite a lot of field shooting.

Hartman had never fired a shot until a few weeks ago when he shot at 25, and his last two scores of to-day gave him considerable encouragement.

Events:	1	2	3	4	5	6	7	8	9.

Event No. 2 was at 20 pairs; event No. 8 was at 5 pairs; event No. 9 was at 12 pairs.

April 2.—Apparently the weather man did his level best to scare out the trapshooters to-day, for early this morniag it started to snow, and long before noon a heavy snowstorm was in full blast and the wind blowing a gale, but, nevertheless, six shooters braved the elements and were not to be bluffed out of their favorite pastime.

A reporter on one of the newspapers remarked that it seems nothing less than an earthquake will keep them all away, and it certainly looks that way.

In event No. 1, Silver walked off with first honors with the excellent score of 45 out of 50, Eck taking second place with 42 from 19yds., while Hlavka, Sharp, Kammerer and Seelig finished in the order named.

Eck took first in event No. 2 at the doubles with a score of 24 out of the 20 pairs, Sharp landing second place with 20, Kammerer getting 19 and Seelig broke 18.

First place in event No. 3 went to Sharp with 22 out of 25, Silver giving him a close race by scoring 21.

Event No. 4 brought out the best score of the afternoon, Hlavka smashing 24 out of the 25, his nearest competitor getting 18.

The last event, at 25 singles, went to Sharp with 21 breaks, with Hlvaka only one behind, scoring 20.

Events:	1	2	3	4	5

B L Kammerer, 16	31	19	18	16	14

Event No. 2 was at 20 pairs.

Trap Season on the Pacific Coast.

San Francisco, Cal., March 22.—At the Golden Gate Gun Club's annual meeting last evening, at which a large majority of the members were present, an active campaign for the blue-rock sportsmen was outlined for this season.

Since the closing of the famous Ingleside trap grounds, one of the best on the Coast in its time, the local smokeless-powder-burners have been without a suitable club trapshooting ground. This drawback has been surmounted by the opportunity to secure a favorably located shooting ground on the Alameda side of the bay. The new grounds are situated on the marsh section, within 100 yards of the junction of Webster street and the line of the proposed boulevard, a point which can be reached within thirty-five minutes from the Ferry building, this in itself being most convenient not only for the local shooters, but for Oakland and Alameda sportsmen as well.

The work of installing sets of traps and erecting a club house, fencing, etc., will be started this week. The regular club shooting days will be the third Sunday of each month, beginning April 16. The other open Sundays will be available for other gun club shoots. It is proposed to have the grounds open for practice shooting at any time desired.

The club program for this season will be a 25-target shoot in the forenoon and a 15-target race—grub shoot—in the afternoon. The club match will be based on the "Dupont trophy handicap system," a target handicap allowance designed to place the novice or ordinary shooter on an even basis with the expert shot. This shedule has been found superior to the class shooting method.

A gold medal and three trophies will be awarded the four high guns for this season, the winners of which will not be determined, owing to the handicap adopted, until the last event for the club season has been shot.

Added money purses and pool shooting have been eliminated from the club's program. This will be an encouragement for the less skillful shooters by reducing the expense and cutting out entrance fees. The club membership is over 50 at present, and it is anticipated this number will be doubled by reason of the new departure on liberal lines for the benefit of the amateur shooter.

The officers elected for the ensuing year were: Tony Prior, President; Clarence Lancaster, Vice-President; Edgar Forester, Secretary-Treasurer; Will Lancaster, John T. Connelly and W. H. Price, Directors. New members elected were: Clarence H. Lancaster, W. J. Lancaster, Hugh E. Poston, Joseph S. French, Lou Hawxhurst, J. G. Heath, W. W. Terrill and J. T. Connelly.

The recent organization in the city of the Exposition City Gun Club by E. Hoelle and other local sportsmen is an other indication of the newly aroused interest in the sport. It is proposed to install several sets of blue rock traps in an eligible site in the Presidio, where a series of regular club shoots will be held.

The Empire Gun Club will shoot this season, it is reported, on the Alameda Junction grounds as usual in past years, the second Sunday of the month being the club day for smashing clay pigeons.

The Pacific Coast handicap of the Interstate Association, the big annual coast tournament, will probably be held at Madera this year under the auspices of the Madera Rod and Gun Club.

Lehigh Rod and Gun Club.

Bethlehem, Pa., April 8.—Five professionals and twenty-three amateurs participated in a registered shoot of the Lehigh Rod and Gun Club to-day. There were ten events of 15 targets each, some 4000 targets being used. In the professional shoot H. S. Welles of New York, was high gun. In the amateur class Englert, of Catasauqua, had the highest score, with Fred Coleman, of Pottsville, 5 points behind.

Professionals: Welles 147, Apgar 146, Hawkins 143, Stevens 140, Lewis 135.

Amateurs: Englert 145, Heil 142, Coleman 140, Ball 138, Fluck 135, Smith 134, Schlichter 131, Miller 130, Schrader 130, Young 128, Dorn 122, Bitterling 121, Kosch 120, Gapp 114, Snyder 113, Bruch 112, Brown 107, Sobers 105, Boengle 101, Grant 80, Keiser 46 out of 60, Jarrett 45 out of 60, Werst 33 out of 45.

Northern Kentucky Gun Club.

THERE was not much of an attendance at the weekly shoot on April 2, owing to bad weather in the afternoon. The sky was obscured by heavy clouds, making it very dark, and in the latter part of the afternoon there was a light mist which still further increased the difficulty of seeing the targets. Scores suffered in consequence, and none of the shooters reached the 90 per cent. mark. Ralph Trimble led the bunch of twelve enthusiasts who faced the traps, with a score of 83, a most unusual hole for him to drop into, and he was the only one to go straight in any of the events. Sampson came next with 75, which is below his average by a number of targets. The conditions may be surmised by the score put up by Holaday, Jr., who to-day established a record such as he has not made since his start in the shooting game. McArdle was shooting a new gun, and it is evidently just about what he needs, for he put up a better score than he has made in a long time. He was obliged to quit because of the poor light. Luverne shot an even pace, though it was a low one for him, getting the same number of targets in each event. Dramer's gun went back on him in the third event and he was obliged to quit just as he was beginning to get the hang of the targets. Schreck was not in good shape, and the combination of poor weather cut his scores way below his mark. Holaday, Sr., can't make a pump gun do the execution that he does with a double, and fell down accordingly. Williams used to be one of the regulars and more than an ordinary shot, but he has not been over for a long time, and his score shows that he needs practice. Irwin was handicapped by the weather and did not shoot his usual pace by many targets. The third of the series of weekly trophy shoots resulted in a tie between McFee and McArdle on perfect scores of 50, including their handicaps. They were tied for high scores of actual breaks on 42 each, and, as McArdle was obliged to leave, the tie will be shot off at a future meet. Sampson was second high with 41, and Trimble came next with 40. The trophy is donated by the club, and professionals are permitted to ocmpete for it. There is no entrance fee. The series of monthly tournaments, given under the Squier money back system will be started early next month, and promise to be more successful than last year. The Kentucky State target shoot will be held on these grounds on May 24 and 25, and will, undoubtedly draw a big crowd, coming so near the date of the Ohio State shoot and the G. A. H.

Dr. I. P. Gould is mourning the loss of his pointer dog, Goober, the official retriever for the club's live-bird shoots. He has been missing for several days, and the doctor is inconsolable.

Siwanoy Country Club.

MOUNT VERNON, N. Y.—The Siwanoy Country Club shoot on Saturday, April 8, was a most interesting one. The club had as its guests several trade representatives.

It was announced by the gun committee that the amateur championship, open to residents of Mount Vernon and the Siwanoy Country Club members would be shot off on May 30 next. Any resident of Mt. Vernon or any member of the Siwanoy Country Club is invited to participate. The entrance fee of $1 will be charged. Practice shoot, April 22, May 6, 20 and 27. All are invited to these practice shoots, for which no entrance fee will be charged. Shells can be secured by the gun committee at the traps, or participants may use their own. Entries for the amateur championship of Mount Vernon can be made by sending name to Capt. Walter Thorpe, 358 Summit avenue, Mount Vernon, N. Y. Enough entries have already been made to insure the success of this occasion.

Practice shoot:

C. G. STONE, Sec'y.

THE ACCURATE AND UNIFORM SHOOTING OF WINCHESTER

Cartridges and Rifles Again Conclusively Proven

The Winchester Rod and Gun Club Rifle Team, shooting Winchester .22 Caliber Long Rifle Cartridges and Winchester Single Shot Muskets, won fourteen straight matches in the recent tournament of the Civilian .22 Caliber Inter-Club League. The average of the Winchester Rod and Gun Club five men team for the entire series of fourteen matches was $984\frac{3}{14}$, the highest possible score being one thousand. This wonderful average would be equal for 100 shots to

$2484\frac{3}{14}$ By the German Ring Count.

G. W. Chesley had an average of 197½ for thirteen matches; Capt. A. L. Laudensack, 196½ for fourteen matches, and Capt. W. H. Richard, $198\frac{7}{9}$ for nine matches. Capt. Richard's average for 100 shots would be equal to

$2493\frac{8}{9}$ By the German Ring Count.

These scores are phenomenal and without a parallel. They tell a convincing story of the wonderful degree of perfection attained in the manufacture of Winchester Cartridges and Rifles.

IT PAYS TO SHOOT THE RED W BRAND

Audubon Gun Club.

BUFFALO, N. Y., April 2.—The shooting by members of the Audubon Gun Club yesterday afternoon was quite good and ties were very common in all classes and events. For instance, Hopper, of Westfield, and Wright, the New York State champion, tied for A class with 20 each, and in the next event again tied with 17 each, and once again with 16, Hopper finally winning by breaking 17 to Wright's 16.

For the Reed handicap trophy, Hopper was again tied by Covert and Ralph Sidway, each breaking 17, from the 20yds. mark, and in the shoot-off which followed, Covert won by one bird. Reinecke won B class by breaking 17 and Charles Rogers, of Lockport won C class.

Jack Talcott and Dr. Wootton tied in events Nos. 3 and 4, and they decided who the contender of the challenge cup would be by shooting off their tie, miss-and-out, Talcott finally winning.

George Fish, of Lyndonville, the present holder of the cup, was not up to his usual shooting form and in his first string of 25 broke 22 to Talcott's 21. In the next 25, Talcott just reversed the scores, making the result a tie, each having broken 43 out of their 50. In the next 25, Fish got down to real business and broke 23 to Talcott's 21, thereby gaining another win, making three in all. It looks as if the boys will have to call on some of the old reliable shooters like Frank D. Kelsey and Harry D. Kirkover in order to keep that cup from going to Lyndonville. Scores:

Events:	1	2	3	4	Shot

At the Larchmont Traps.

Larchmont, N. Y., April 10.—The members of the Larchmont Y. C. have been competing during the last few months for several valuable trophies. These contests came to a close yesterday afternoon. The Commodore's cup presented by Commodore Leonard Richards, the principal event, was won by G. L. Bready with a total score of 199 out of a possible 200, including handicaps. The Sauer gun trophy went to W. J. Elias. In the handicap shoot of 125 targets Mr. Hooker broke 104 clays and won. Mr. Scott smashed 102 targets in the scratch shoot of 125 targets. Mr. Spotts scored 100, finishing second. The scores:

Commodore's cup, 25 targets, handicap:

W J Elias	3	21	A B Alley	5	19
G L Bready	2	24	R L Spots	0	20
S Scott	1	24	F G Pelham	2	22
R A Jackson	3	18	J R Collins	4	17
E A Wilson	0	17	T Lenane, Jr	3	19
K R Hooker	3	23			

Tie between Bready and Scott. Won by Scott.

Sauer gun, 25 targets, handicap:

W J Elias	3	23	A B Alley	5	19
G L Bready	2	19	R L Spotts	0	16
S Scott	0	19	J R Collins	4	17
R A Jackson	3	20	T Lenane, Jr	3	18
E A Wilson	0	21	F G Pelham	2	18
K R Hooker	3	21			

Won by Elias.

Monthly cup, 25 targets:

W J Elias	2	22	K R Hooker	3	24
G L Bready	2	17	R L Spotts	0	22
S Scott	0	21	J R Collins	4	20
R A Jackson	3	18	T Lenane, Jr.	3	20
E A Wilson	0	15	F G Pelham	2	21

Won by Hooker.

Special shoot, 125 targets, scratch:

W J Elias	90	E A Wilson	89
G L Bready	93	K R Hooker	92
S Scott	103	R L Spotts	100
R A Jackson	78	Geo G Jones	76

Won by S. Scott.

Special shoot, 125 targets, handicap:

W J Elias	101	E A Wilson	89
G L Bready	102	K R Hooker	104
S Scott	101	R L Spotts	100
Nicholas, Jr.	90	F G Pelham	81

Won by K. R. Hooker.

Special shoot, 10 targets:

W J Elias	6	K R Hooker	8
G L Bready	7	A B Alley	6
S Scott	8	W E Bemis	4
R A Jackson	6	R L Spotts	8
E A Wilson	6	F G Pelham	7

Tie won by Scott.

Special shoot, 15 targets, scratch:

W J Elias	10	K R Hooker	11
G L Bready	12	A B Alley	7
S Scott	14	W E Bemis	4
R A Jackson	10	R L Spotts	13
E A Wilson	12	F G Pelham	10

Won by Scott.

Special shoot, 25 targets, handicap:

	H.	T.		H.	T.
W J Elias	3	19	A B Alley	5	17
G L Bready	3	23	W E Bemis	4	16

R A Jackson	3	18	F G Pelham	2	16
E A Wilson	0	18	J R Collins	4	22
K R Hooker	3	17	T Lenane, Jr.	3	18

Won by Bready.

Crescent Athletic Club.

Bay Ridge, N. Y., April 8.—The shooting season of the Crescent Athletic Club over its home traps came to a close to-day. There was a good attendance in spite of unfavorable weather conditions.

The club championship at 200 targets ended in a tie between F. B. Stephenson and H. M. Bingham, each having broken 183 clay pigeons. In the shoot-off at 25 targets, Bingham won by 22 to his opponent's 20. The trophy was won last year by Stephenson.

In the shoot for the Montly Cup, J. F. James and W. W. Peabody, Jr., tied with 183 out of a possible 200. Peabody, however won the shoot-off with 24 out of 25 targets. The scores:

Monthly cup, 50 targets, handicap:

	H.	T.		H.	T.
J T James	6	50	C H Pulis	6	43
G Felix	6	50	A Blake	4	43

Atlantic City Gun Club.

Atlantic City, N. J., April 8.—The week-end shoot of the Atlantic City Gun Club was well attended and good scores were recorded. The feature of the afternoon was the 100-target race, which was a close race between Cook and Powers, Cook winning out with a margin of 2 targets. Westcoat had a bad streak in the race, then went over to the new traps and ran straight, as also did Billy Smith. The boys were trying out the new trap to get in trim for the Easter Monday tournament, which is to be held Monday, April 17, and, by the way, be sure and reserve this date, as we always have a big shoot, and the entry will no doubt run over 75 this year, as the shoot is conducted on the Squier money-back system, a program of 150 targets, entrance $15, with an optional sweep of $10; also an extra event of 50 targets for merchandise prizes. All shooting to be from 16yds. Come down and see an Easter crowd on the boardwalk, and stay over and shoot with us on Monday.

Gladney cleaned up on the Western trophy with a total of 15 points.

Targets:	15	15	15	15	15	15	10	25	25	25	H.	50
Cook	14	15	12	15	15	13	10—94	21	23	24	1	49

Travers Island Shooting.

The Yale University team visited Travers Island on Saturday, April 8, to shoot a match with the New York Athletic Club, but were outscored by the club men, and lost by a score of 419 to 385. Weather conditions were not of the best. The light was all that could be desired, but a strong wind that prevailed made good shooting difficult. The club men, more accustomed to conditions at their own traps, led the collegians at the conclusion of the 500-target event by a score of 419 to 385. Two of the collegians, L. S. Morrison and G. E. Dimock, had the distinction of tying for the high gun honors with a card of 88. C. W. Billings, the best of the New York A. C. men, had 87.

In the regular club trophy events honors were well divided. Twenty members competed, B. M. Higginson and A. E. Ranney showing the keenest aim. The former led for the Spotts cup, while Ranney was high score in the Bready trophy event. The summaries:

New York A. C.

C W Billings	22	22	19	24—87
M V Lenane	18	22	18	20—78

Hercules Gun Club.

Secretary A. K. Ludwig announces a target shoot of the Hercules Gun Club on their grounds, "Cotapaxi Swamp," at Temple, Pa., on Friday, April 28. The program calls for ten 15-target events, entrance $1.15 each, and an extra event at 5 pairs doubles, entrance 60 cents. Money divided 40, 30, 20 and 10 per cent. All shoot from 16yds. Target thrown about 50yds. at one cent, included in amateur entrance. Professionals and trade representatives shoot for targets only at 2 cents each. Shoot starts promptly at 12:30 P. M. The "secretary's trophy" will be donated to the amateur making highest score in the ten events of 150 targets.

Audubon Gun Club.

BUFFALO, N. Y., April 2.—The shooting of the members of the Audubon yesterday afternoon was good, and ties were very common in all classes and events. For instance, Hopper, of Westfield, and Wright, the New York State champion, tied for Class A with 20 each, and in the next event again tied with 17 each, and again with 16, Hopper finally winning by breaking 17 to Wright's 16.

In shooting for the Reed handicap trophy, Hopper was also tied by Sidway and Covert, each breaking 17 from the 20yd. mark, and in the shoot-off which followed, Covert won by one bird. Reinecke won Class B by breaking 17, and C. Rogers was the winner in Class C.

Jack Talcott and Dr. Wootton tied in events 3 and 4, and they decided who would be the contender of the challenge cup by shooting off their tie by the miss-and-out system, which was won by Talcott.

Fish, of Lyndenville, who already has two wins on this cup, was not up to his usual good shooting form, and in his first string of 25 broke 22 to Talcott's 21. In the next 25 Talcott reversed the scores, making the result a tie, with each having broken 43 out of their 50. In the next 25 Fish got down to real hard work and broke 23 to Talcott's 21, thereby gaining another win, making three in all in three shoots. It looks as if the boys will have to call on some of the old reliable shooters like Frank D. Kelsey and Harry Kirkover to stop this Lyndenville thresher.

The Auduhons are eagerly awaiting the time for the Bridgeburg shoot at live birds and there will be quite a few who will take part. Scores:

Events:	1	2	3	4	Shot at.	Broke.

Springfield Shooting Club.

THE annual spring tournament of the Springfield, Mass., Shooting Club will be held on their grounds at Red House Crossing on Patriot's Day, Wednesday, April 19. The program of twelve events calls for 200 blue rock targets, $16.00 entrance in the sweeps and $25.00 added money by the club. All shooting will be from 16yds. rise over expert traps, arrranged Sargeant system. Lunch and loaded shells will be for sale on the grounds, which are reached by Indian Orchard and Palmer cars, leaving the city every fifteen minutes.

The shoot will be held rain or shine, the shooting stand being under cover, if necessary. Interstate rules will govern all events and the referee's decision will be final. Shooting will start promptly at 9:30 o'clock and continue all day. Professionals will be allowed to shoot for targets only. Targets included in all entrances at two cents each. Guns and ammunition shipped prepaid to the Secretary, C. L. Kites, 416 Main street, will be delivered on the grounds free of charge. Purses will be divided Rose system, four moneys, less than ten entries, three moneys. Sweeps will be optional, any one may enter any event and shoot for targets only. Programs are now ready and may be had by addressing the secretary.

There will be $75.00 worth of merchandise prizes to be divided among the twenty high guns shooting the entire program, as follows: 1. Huntng coat. 2. Umbrella. 3. Safety ax. 4. Link cuff buttons. 5. Razor. 6. Box of cigars. 7. Vase. 8. Reading glass. 9. Fly book. 10. Umbrella. 11. Safety ax. 12. Box of cigars. 13. Ink well. 14. Brier pipe. 15. Tobacco jar. 16. Umbrella. 17. Compass. 18. Umbrella. 19 Pocket knife. 20. Scarf pin.

There will be a special prize of a genuine French brier pipe with case, for the low gun of the program. High guns to win. Ties shot off miss-and-out. All shooters are cordially invited to attend.

Wilmington Country Club Won Out.

WILMINGTON, Del., April 8.—In a bad light, with a raw northeaster blowing and an occasional rain-and-hail-storm thrown in for good measure, the Wilmington Country Club landed a victory over the team from the Baltimore Country Club in such a decisive manner as to give the Wilmingtonians honors in the series of home-and-home matches arranged annually between the two clubs.

On March 11 last the Wilmington Country Club's team went to Baltimore and came home 15 targets to the bad, the scores being 855 for the Baltimore Country Club as against 840 for the Wilmington men. This gave the home team the task of winning to-day by 16 targets, if they wanted to prove their superior skill at the traps. The hard conditions, strange grounds, poor background and a trap that acted badly, were too much for the Orioles, although it must be owned, the Wilmington team as a rule made good scores under the circumstances and deserved the total of 756 which they hung up as against the Baltimore total of 735, giving the home team the needed 16 targets, and then a few to make good measure.

In each match the teams consisted of ten men, and each man shot at 100 targets per match, or a total of 2000 per team for the two matches. That the teams were evenly matched is proved by the fact that at the end there is only a difference of 6 targets between them, the full totals being: Wilmington Country Club, 1596; Baltimore Country Club, 1590.

L. D. Thomas, of Baltimore, and Ed. Banks, of Wilmington, acted alternately as referee and scorer. For Wilmington the best scores were: Skelly 88, Victor du Pont 3d, 87, J. P. Winchester 85, E. E. du Pont 84, H. Winchester 81. For Baltimore, H. Matthai and D. F. Mallory were high with 80, M. G. Gill coming next with 79. The full team scores were:

Wilmington.		Baltimore.	
J T Skelly	88	H Matthai	80
V du Pont 3d	87	D F Mallory	80
J P Winchester	85	M G Gill	79
E E du Pont	84	E D Nelson	77
H Winchester	81	F Gosnell, Jr.	76
Eugene du Pont	70	W F Goldsborough	72
T E Doremus	69	E L Bartlett, Jr.	71
Theo Rogers	68	B Wagner	70
A I du Pont	64	E E Price	65
W A Lindsay	60—756	O B Bidwell, Jr.	66—735

N. O. SMOKE.

Analostan Gun Club.

WASHINGTON, D. C.—The Analostan Gun Club opened the season for 1911 on April 1. Although the day was raw and disagreeable, with a forty-mile wind kiting the targets "four ways for Sunday," four men toed the firing line. Some good scores were made, notably that of Dr. Harrison, a new member, who scored 91 out of 100. Phil Steubener, Geo. W. Peck, Jr., Wm. Wagner, C. B. Wise and Dr. Stine also did some good work.

We had a most welcome visitor—good old Fred Quimby. We were so busy we did not have to get him off to one side and have an old-fashioned visit with him; but all the boys gave him the glad hand. Our latch string is always out for him, not giving him a chance to pull the string. The weather was so bad, and having no fire, he did not tarry with us long—being a conservationist, he believes in conserving his health and he did right in hunting a warmer place. Following are the scores of April 1:

	Shot at.	Broke		Shot at.	Broke
Harrison	100	91	Drain	50	39
Steubener	100	87	Hawes	50	42
Peck	100	86	Cobey	50	31
Wise	100	84	Green	50	27
Stine	100	84	Toohey	50	28
Wagner	75	65	Bennett	25	19
C S Wilson	75	54	Weedon	25	20
M Taylor	50	45	Coleman	25	18
Kahrs	50	43	McDonald	15	7

April 8.—To-day was another day that was disappointing to our trapshooters. It was raw and cold, misty and windy. Only twelve members came out to the grounds and this was twice as many as the secretary expected. The shooting was difficult and only two members distinguished themselves by making straight scores of 25—our genial president and Dr. Harrison. Dufour gave a good account of himself, scoring 89 out of his 100. Dufour made a run of 32, Mr. Wilson one of 35. The scores:

	Shot at.	Broke.		Shot at.	Broke.
Harrison	150	131	Kahrs	75	45
Dufour	100	89	Wilson	50	46
Bray	125	88	M Taylor	50	43
Monroe	100	81	Kirpatrick	50	41
Wise	100	76	Dr Taylor	50	37
Drane	75	56	*Sibbold	25	11

*Visitor.

MILES TAYLOR, Sec'y.

Marine and Field Club.

FOUR interesting competitions were decided at the Bath Beach grounds of the Marine and Field Club, on Saturday, April 8. Six shooters were present and participated in the events on the program. The scores:

April cup, 100 targets, handicap:

E H Lott	0	80	C B Sayre	7	72
J H Emanuel, Jr.	4	87	C G Chase	16	59
C B Ludwig	12	78	P R Towne	15	57

Trophy shoot, 25 targets, handicap:

E H Lott	0	23	P G Chase	4	21
J H Emanuel	1	23	C B Ludwig	3	20
P R Towne		24	C B Sayre	5	15

Trophy shoot, 25 targets, handicap:

C B Ludwig	3	24	E H Lott	0	20
J H Emanuel	1	23	P G Chase	4	19
P R Towne	4	21	C B Sayre	5	19

Trophy shoot, 25 targets, handicap:

P R Towne	4	22	P G Chase	4	19
C B Ludwig	3	21	C B Sayre	5	19

Stamford Rod and Gun Club.

STAMFORD, Conn., April 9.—N. B. Foster was high gun in yesterday's shoot for the April cup at the Stamford Rod and Gun Club traps. His score was 35 (14) 49. J. M. Carr, scratch man, finished fourth, with 41. Mr. Foster also won the 25-bird handicap sweepstake with 18 (7) 25. Mr. Pitt won another 25-bird handicap sweepstake with 21 (4) 25. J. M. Carr won the 10-bird scratch sweepstake with 9 out of 10. B. B. Brown, Jr., won a 5-bird double with 7 out of a possible 10.

The Southern Handicap.

THE Interstate Association's sixth Southern Handicap tournament will be held at Charlotte, N. C., May 9-11, under the auspices of the Charlotte Gun Club.

Essentially and pre-eminently the foremost city in the Carolinas may be found among the gentle slopes of the Piedmont region, surrounded by a most beautiful spread of farm and forest landscape, traversed by sparkling streams, stirring, hustling, teeming with life and activity; occupying a most strategic position commercially, in a location incomparable in fitness for the building of a great city.

Charlotte, N. C., is noted as the home of the famous Mecklenburg Declaration of Independence, signed May 20, 1775, and has at times been called the Hornet's Nest City, because of the statement of Lord Cornwallis, that he got into a veritable hornet's nest when his troops tried to drive the Colonial militia from Charlotte town in 1780.

From a little place of about 2,000 people at the close of the Civil War, Charlotte has grown steadily, slowly at first, and more rapidly of late years. Numbering less than 12,000 in 1895, and reaching a total in 1910 of 35,000.

The Charlotte Gun Club was organized about thirty years ago, and has maintained its organization continuously through all these years, and boasts to the present time or having the marked distinction of being as enthusiastic for the trap, field and stream and for the protection of game and fish as any organization in our country.

The Charlotte Gun Club's shooting grounds are splendidly arranged with every convenience. The land is level, with a fine background, and four sets of traps are installed. The hotel service is ample, with liberal accommodations of the best; the street cars pass all of the hotel doors every few minutes, and reach the shooting grounds in about fifteen minutes.

The members of the Charlotte Gun Club extend a cordial invitation to all their numerous friends and sportsmen in general to be with them at the coming meet, May 9, 10 and 11, assuring them of a pleasing and jolly good time.

The division of moneys in regular program and double target events, Rose system, ratio points, 5, 3, 2, 1. Optional sweepstakes, percentage system, 40, 30, 20 and 10 per cent., class shooting. Ten entries and under, three moneys, 50, 30 and 20 per cent. To be eligible for the Squier money-back system a contestant must compete in all regular program events. The optional sweepstakes, the special events at double targets and the Southern Handicap, are separate from the regular program, and it is optional with the contestant whether or not he makes entry for them. The Squier money-back system does not apply to the optional sweepstakes, the double target events and the Southern Handicap.

Monday, May 8, will be practice day, shooting to begin 1:00 P. M. Four events of 15 targets each, entrance $1.50 per event. Two events of 20 targets each, entrance $2.00 per event. Rose system, 5, 3, 2, 1. Sweepstakes optional. The Squier money-back system will not apply to the above events.

First Day, May 9, Tuesday.—Ten events of 15 targets each, entrance $1.40 per event, extra entrance Squier money-back system $1.00. Optional sweepstakes extra, entrance $1.00 each. Special event at 25 double targets, entrance $2.00, open to amateurs only. Manufacturers' agents, paid representatives, etc., may shoot in the above events for "targets only."

Second Day, May 10, Wednesday.—Ten events of 15 targets each, entrance $1.40 per event, extra entrance Squier money-back system $1.00. Optional sweepstakes extra, entrance $1.00 each. Special event at 25 double targets, entrance $2.00, open to amateurs only. Manufacturers' agents, paid representatives, etc., may shoot in the above events for "targets only."

Third Day, May 11, Thursday.—Four events at 15 targets, entrance $1.40 per event; two events at 20 targets, entrance $1.70; extra entrance, Squire money-back system, $1.00. Optional sweepstakes extra, entrance $1.00 each.

To wind up with the chief event of the tournament:

THE SOUTHERN HANDICAP.

One hundred single targets, $10 entrance, targets included, handicaps 16 to 23yds., high guns, not class shooting, $200 added to the purse. The number of moneys into which the purse will be divided will be determined by the number of entries. The amateur contestant who makes the highest score will receive a trophy, presented by the Interstate Association.

The winner of first money is guaranteed $250 or more. If first money falls below $250, the difference will be made good by the Interstate Association.

Regular entries must be made at the cashier's office, on the shooting grounds, before 5 P. M. Wednesday, May 10. Penalty entries may be made after Wednesday, May 10, up to the time the first gun is fired in Event No. 6, by paying $15 entrance, targets included. Entries are not transferable, and entrance money cannot be withdrawn after handicaps have been allotted.

Open to amateurs only; manufacturers' agents, paid representatives, etc., may shoot in the above events for "targets only."

Guns, ammunition, etc., forwarded by express must be prepaid and sent to the Weddington Hardware Company, Charlotte, N. C., or to J. E. Crayton, President, Charlotte Gun Club, Charlotte N. C. Mark your own name on the box that goods are shipped in, and it will be delivered at the shooting grounds without charge.

Further information relative to the tournament will be cheerfully furnished by J. M. Barnes, Secretary, Charlotte Gun Club, Charlotte, N. C., or by Elmer E. Shaner, Secretary-Treasurer, The Interstate Association, 219 Coltart avenue, Pittsburg, Pa.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

MR. NEAF APGAR

Cincinnati Gun Club.

NOT for many months have there been so many shooters as attended the weekly shoot on April 9. Over thirty shooters faced the traps, and a big crowd of spectators watched the work of the experts with much interest. The day was about perfect for outdoor sport, but a stiff wind blowing toward the shooters made the targets do unexpected stunts, and kept some of the boys guessing, as may be seen by several of the scores. Only two of the shooters succeeded in breaking all in any of the events, Young doing the trick in two events, and scoring a run of 67 straight, and Hammersmith getting them all in his last time up. The Harrison Gun Club was well represented by Messrs. Francis, Kater, Turrell and Hahn, the latter putting up the good score of 90 out of 100. The two Donalds, Dr. Spiedel, Houghton, Hayden, and Longworth, all of Felicity, O., had no cause to feel ashamed of the showing they made on strange grounds in the high wind, T. E. Donald going a 94 per cent. gait in the last 50. Charlie Young was high man for the afternoon, breaking 96 out of the last 100, and 118 out of 125. He and Gilbert had a close race for first place, the latter being in the lead at the finish of the first 50, and coming out only 2 targets behind. R. Trimble started out well, getting 94 per cent. in the first 50, but after that the wind seemed to get the best of it, and he finished in a tie on 87, with Donald and Payne. Hellman did better work to-day than when he was over last, but was a little short of average. Francis could not keep up the gait he struck in the first event, when he missed but one target, hut he finished with 83, not at all bad in the wind. Sampson is getting back his old skill again, and it will only take a little more practice to put him in his right place with the leaders. The shooting was kept up until nearly dark, the last event being at 12 pairs of doubles, the targets being thrown by hand from back of the shooters. Young broke 24, Holaday 20, and Payne broke 7 out of 6 pairs.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., April 9.—Cantrell and Pierce in Class A, and Keenan in Class B, were the three point-winners in yesterday's monthly point shoot of the Meadow Springs Gun Club, which was shot at Fifty-seventh and Lancaster avenue. Two over a score of gunners participated in the event of the day, and most of them finished with good scores. The rise was 16yds., with a dead bird added handicap. Although Pierce tied with Cantrell for the three points in Class A, with the highest possible score under the ruling, 25 birds, the latter made the best score on the grounds by running his 25 straight. Pierce broke 24, and tied Cantrell when his handicap of 3 was added to his total. Beyer with 24 was awarded 2 points in Class A for second high, while Hogan and Hillpot with one point finished up the A prize winners. Keenan broke 20 of his 25 birds, and with an allowance of 5 added birds, led in Class B. Kirsch, with 22, secured 2 points, and Gothard, with 17, 1 point.

Class A:					
Cantrell	0	25	W Williams	3	22
Pierce	3	25	Henry	1	21
Beyer	0	25	Murdock	2	20
Hogan	0	24	J Emerson	2	20

Columbus Gun Club.

COLUMBUS, O., April 8.—Weather was too bad April 1 for the shooters to show up, hence no report.

April 8 was very little better, but eleven braved it and shot a few. H. E. Smith did the best with 44 out of 50. Chas. Ward, of Asheville was a welcome visitor; he was trying a new gun, so he did not connect with very many. No 25 straight was made. Any amateur that can break 25 straight gets his targets for nothing. The program for April 20 calls for 150 targets, entrance $5, divided 40, 30, 20 and 10; distance handicaps, 16 to 20yds. So the poor shot stands some show of winning. Professionals shoot from 20yds. Everybody invited.

	Shot at.	Broke		Shot at.	Broke

LON FISHER, Sec'y.

The Palefaces.

BOSTON, Mass., April 5.—The Palefaces held their first shoot for the month of April right in style with Jupiter Pluvius on the job from start to finish and no let-up.

Naturally it dampened the ardor of even a regular, and no wonder that only five shooters were present to take part in the festivities. However, the small attendance did not prevent a dandy contest for high average, and it was not till the last event that the winner could be picked with a certainty. Walter Clarke was the final honor winner, and surely no one deserved it any more than he did, as his run of 47 in the first three events was one of those creditable to professional or amateur alike. From that on Walter hardly did quite the consistent work, but kept right up with the band wagon and saved the day for Single Sticker. Frank and Kirkwood were second in line, just a target ahead of Osborne, who made the best of a finish after a half bad start. Pat, however, is used to these things, and when called upon to produce the goods or pay by Clarke, proceeded to bring home the bacon.

Frank with a clean score nosed out Osborne on the added target race, who in turn had a comfortable lead on his nearest competitor.

							Broke.	Hcp.	Total.

Independent Gun Club.

HOLMESBURG JUNCTION, Pa., April 9.—H. E. Perry, captain of the Highland Gun Club, was the individual star of the monthly shoot of the Independent Gun Club yesterday, and captured the handsome silver and cut-glass prize offered as a trophy for the high gun. It was not without a keen struggle that Perry won, for in the big crowd out were some of the best trapshooters in Philadelphia as well as New Jersey. Perry, Joel Davis, Frank J. Hineline, of Camden, and Dr. W. H. Mathews, of Trenton, all tied at 100, that they reached this goal being due to their handicaps. Perry had 18 added birds on the 100 targets; Hineline, 10; Davis, 20; Mathews, 8.

In the first shoot-off Davis and Hineline were eliminated, Perry and Mathews again tying up with a straight with handicap. In the second shoot-off, Perry won, 23 to 21. It was in this latter that Perry displayed his best work under particularly trying conditions. He ran 21 straight before missing a target, and with the prize clinched, he could afford to take it easy, although he tried hard to break straight.

The monthly program yesterday called for four 25-target events, distance handicap and added targets, and so well were both arranged that the shoot was interesting from the time the first man took his stand at the traps until the last man finished his shooting. The scores:

Hudson Gun Club.

JERSEY CITY, N. J., April 9.—There was a slight falling off in attendance at the regular bi-monthly club shoot of the Hudson Gun Club this morning, owing no doubt to the snow-and-rain-storm of the day previous, and the thirty-four shooters that did attend had to contend with conditions of the worst kind. With cold winds to chill the shooters, snow to dazzle the eyes, and a gale blowing, which caused the targets to cut up all kinds of antics, the shooting was very hard, and accounts for only twelve scores of 20 or better being made out of the 145 recorded.

Event No. 2 was the Du Pont trophy handicap, and a leg on the same was won by Billy O'Brien. No. 3 was the Western Cartridge Co. trophy, Wright, Leary and Carl Von Lengerke each winning legs with 23. Event No. 4 was for the Emmons trophy, and with a score of 21 from the 19yd. mark, D. D. Engle carried off a neat little loving cup. Engle was also high gun for the day with 79 per cent., Billy O'Brien being the runner-up with 76 per cent.

On our next shooting date, April 23, we will start the second of the series of prize events, that have become so popular at our club, and we request all that wish to take part in these events to attend our next shoot on the above date. Our annual spring tournament will take place some time next month, details of which will be furnished later.

Everybody is welcome to shoot at the Hudson grounds, so come out and see us. Hot lunch served gratis.

SECRETARY.

Hudson Valley Rod and Gun Club.

GLENS FALLS, N. Y.—On Saturday, April 29, we shall hold our fifth annual tournament, registered, under the Squier money-back system, and judging from the number of inquiries which have already been received, the shoot will be well attended. The idea of the Squier system is meeting with much favorable comment among our fellows, and many of them say that they will now shoot the program through, whereas before they would drop out just as soon as they begun to go bad.

In addition to the regular program of 150 targets we shall put on a merchandise event of 25 targets, added target handicap, and a double event at 10 pairs, a total of 195 targets. Fifteen nice prizes, valued at $75, have been secured for the merchandise event, and more may be added, while a handsome vase will be given the winner of the double target event.

We shall use the old grounds probably for the last time at this tournament, as it is our intention to move the club house and trapshooting outfit about May 1 to the grounds connected with the rifle range which is located just north of the city on the trolley line, where every Saturday afternoon for the rest of the season the boys can use the shotgun or rifle, as they prefer, and still have the advantage of the same club house, which will be much more convenient in every way. The present grounds are ideal for a tournament and have been shot over so much that it feels like home, so that it is with a feeling of regret that we give them up, but as there is no chance to lay out a rifle range there, the change has to be made, as a number of our members are deeply interested in rifle shooting.

We shall try and give our friends a good time this year, and shall be very glad to see all of the old faces as well as many new ones who like the trapshooting game, as we never run our tournaments to make money, but simply want everybody to have a good time and feel that they get the worth of their money while with us.

Programs will be ready for mailing by the 15th, and will be mailed by the Secretary, J. A. Norton, Hudson Falls, N. Y., upon inquiry.

I Want Some of

THE BLACK SHELLS

Tell that to your dealer, and you will get something that will make you happy. The coming of THE BLACK SHELLS is an event for American sportsmen. Here are some reasons. Look 'em over:

The Non-Mercuric primer in THE BLACK SHELLS means a five per cent. better year for you at the traps or ten per cent. in the field. That is some claim. Get it fixed in your head. Say you don't believe it. Say anything you like, but test its truth.

The FLASH PASSAGE is the hole in the head-wad through which the flame from the primer passes into the charge. The larger and clearer this flash passage, the surer and quicker the ignition of the charge.

In THE BLACK SHELLS the flash passage is the largest and clearest by nearly 100%. This feature has a lot to do with hang fire and slow burning. Most ducks won't wait.

WATERPROOFING: Many a sportsman remembers the old CLIMAX Shell and its incomparable waterproofing. That perfect waterproofing is used in the new CLIMAX and in its two brother BLACK SHELLS, AJAX and ROMAX. No ordinary ducking and no extraordinary rainstorm can affect them one iota. They never swell and so jam in the chamber.

These are some of the *niceties* which combine to make THE BLACK SHELLS worth knowing. They are not miraculous, but they are an evolution of one improvement after another worked out with painstaking care and common sense.

Every shooter should send for our free book on shells.

U.S. CARTRIDGE CO

Address Dept. H LOWELL, MASS., U. S. A.

The North Caldwell (N. J.) Tournament.

THE registered tournament of the North Caldwell Gun Club will take place on their grounds on Mountain avenue, on Saturday, April 22. There are ten 15-target events on the regular program, entrance $1.40 each, $1 extra entrance, Squier money-back system; optional sweepstakes extra, entrance $1.

Division of Moneys—Regular program, Rose system, ratio points, 5, 3, 2, 1. Optional sweepstakes, percentage system, 40, 30, 20 and 10 per cent., class shooting. Ten entries and under, three moneys, 50, 30 and 20 per cent.

To be eligible for the Squier money-back system a contestant must compete in all regular program events.

The optional sweepstakes are separate from the regular program, and it is optional with the contestant whether or not he makes entry for them. The Squier money-back system does not apply to the optional sweepstakes.

There will be two sets of traps used at this tournament, and in case of rain, shooting under canvas awning. A full line of first-class factory-loaded shells for sale on the grounds. Luncheon will be served at moderate prices. The grounds are beautifully located on the top of one of the highest mountains in Essex county, and are easily reached by automobile over exceptionally good roads. To go by rail from New York take the 8:50 A. M. train from Chambers street, Erie Railroad to Little Falls. Stages will meet train and trolley. T. A. Quackenbush, North Caldwell, N. J., is the secretary, who will supply further information.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., April 5.—Although the unfavorable weather somewhat reduced the attendance at the Fred Macauly Business Men's Gun Club meeting yesterday afternoon, a considerable destruction of the artificial birds was made. The white fliers were well dispatched on their air flights by William Bennett, who did excellent work at the traps.

The diamond pin donated by C. W. Billings was won by J. F. Jones. J. Fredericks won the tie clasp. Louis Colquitt broke 25 birds straight, which was a remarkable performance, considering the inclement weather.

C. W. Billings had high average, 29¾. B. M. Shanley, Jr., was a close second with an average of 20. Louis Colquitt was third with 19¾.

Next Tuesday four prizes will be shot for. The scores were: Shannon, 19, 15, 14, 18, 23; J. Frederick, 14, 15, 19, 17; Peter Bey, 13, 12, 17, 11, 12; B. M. Shanley Jr. 19, 19, 23, 18, 21; Billings, 22, 19, 20, 20; Jones 11, 14, 21 12; Colquitt, 19, 15, 20, 25; Thompson, 13, 12.

SMOKELESS.

DuPont Gun Club.

WILMINGTON, Del., April 9.—Close to sixty-five devotees of the traps braved the inclement weather yesterday afternoon to attend the weekly shoot of the Du Pont Gun Club at their Newbridge grounds. A cold and chilly wind swept across the traps, making the shooting at times far from desirable. Despite this, a few good scores were made. The surprise of the afternoon was the shooting of Dr. Horace Betts. In a string of 25 birds, he missed but 3, finishing with a score of 22. He is one of the club's newest members, and his friends were well pleased.

In the regular trophy event L. Evans and H. H. Lukens shot remarkably well, tying with but 3 down in 25. Class B in the trophy event was represented by a score of 17, Dr. C. R. Jeffries, Jr., H. F. Davis and S. B. Trott tying in this class. Guy Lambert, J. W. Anderson, Jr., N. K. Smith, W. B. Smith, Jr., S. G. Davis, D. D. Poffenberger and Ward Hammond tied in Class C on 14 out of 25. Class D found three shooters tied on 11 out of 25—R. S. Roberson, J. J. Magahern and H. F. Megaw.

From the ties of the preceding week, Clyde Leedom won the Class B spoon with a score of 19, while the Class C spoon was won by W. S. Gavan with 20 out of 25. W. F. Jensen won the trophy in Class D, breaking 18 out of 25.

The scores in the two-man team championship were: W. Mathewson and D. J. Dougherty 50; Dr. L. Rumford and Dr. S. Rumford 49; E. H. Lambert and Guy Lambert 18; Clyde Leedom and Dr. C. R. Jeffries, Jr., 48; D. D. Poffenberger, J. A. MacMullen 47; Wm. Coyne and W. F. Jensen 47; Thorpe Martin and L. W. Crawford 46.

The scores in the T. Coleman du Pont merchandise event were:

Class A, 14 out of 25—H. H. Lukens, L. Evans.

Class B, 17 out of 25—Dr. C. R. Jeffries, Jr., H. F. Davis, S. B. Trott.

Class C, 14 out of 25—Guy Lambert, J. W. Anderson, Jr., N. K. Smith, W. B. Smith, Jr., S. G. David, W. H. Hammond, D. D. Poffenberger.

Class D, 11 out of 25—R. S. Roberson, J. J. Magahern, H. F. Megaw.

The complete scores were: Clyde Leedom 19 out of 25, H. H. Lukens 22, Guy Lambert 14, Dr. C. R. Jeffries, Jr., 17, H. C. McClane 16, L. Evans 22, Wm. Neely 8, R. Evans 15, E. F. Slear 20, E. H. Lambert 12, H. J. Taggart 16, J. Winchester 20, O. B. Clark 7, Stanley Steel 18, Thorpe Martin 18, H. L. Morgan 15, W. Mathewson 18, R. S. Roberson 11, D. J. Dougherty 18, R. Whitworth 5, J. W. Anderson, Jr., 14, Wm. Coyne 13, C. C. Gerow 15, N. K. Smith 14, Dr. H. Darlington 15, C. Schumacker 4, H. F. Davis 17, H. W. Goodman 19, S. R. Trott 17, R. P. Choate 9, Wm. Wood 9, Dr. A. Patterson 16, Wm. B. Smith Jr., 14, S. G. David 12, J. J. Magahern 11, J. B. McHugh 18, J. T. Robison 15, A. L. Richards 15, W. S. Gavan 20, A. J. Curley 9, S. G. David 14, E. P. Ewing 15, W. M. Hammond 14, L. Crawford 12, D. Lindsay 19, H. P. Carlon 18, R. L. Conner 18, W. A. Casey 16, C. R. Kenworthy 7, P. T. Pennington 7, H. F. Megaw 11, S. Tuchton 15, H. Warren 10, W. F. Jensen 18, R. A. Vance 20, Dr. Betts 8, W. A. Joslyn 16, A. G. Reilly 11, G. White 4, J. H. Mason 6, M. Carel 17.

Ben Martel Gun Club.

GLOUCESTER CITY, N. J., April 8.—Four shooting matches were held at the grounds of the Ben Martel Club to-day. John Hewlings defeated Alonzo Cheesman in a match shoot for $100 a side. In a team shoot Martel, Cheesman and Hewlings defeated Butler, Prickett and Daisey. Daisey won an open shoot and also a sweepstake. Good scores were made, considering the weather. Scores:

Match shoot, $10 a side, 10 blue rocks: John Hewlings, 9; Cheesman, 8.

Team shoot, 15 blue rocks each: Martel 15, Cheesman 12, Hewlings 9; total, 36. Prickett 11, Daisey 10, Butler 9; total, 30.

Open shoot, 10 blue rocks each: Martel 10, Daisey 10, S. Prickett 9, Dawson 9, E. Black 9, C. Prickett 8, F. Butler 8, A. Cheesman 8, Hewlings 7, Strang 6 Munson 5. Shoot-off: Daisey 5, Martel 4.

Open shoot, 10 blue rocks: Daisey 10, Martel 8, A. Cheesman 7, Hewlings 7, Butler 6.

Linden Gun Club.

GLOUCESTER CITY, April 8.—The weather had little or no effect on the shooting matches here to-day. The Linden Club held its weekly shoot. There were two events. The first even for the Dupont trophy had six participants. Each shot at 15 blue rocks and Thomas Gibbons proved the winner and gained three points. The other event was a tie between Hill and Bowe. Summaries:

Weekly shoot, Dupont trophy, 15 blue rocks each: Thomas Gibbons 12, William Bowe 10, Lynch 10, J. Mealey 8, Frank McQuaid 7, J. A. Mealey 7.

Open shoot, 10 blue rocks: Hill 6, Bowe 6, Mealey 5, A. Hill 3, Ashton 1.

Eagle Gun Club.

MANOA Pa., April 9.—Fred Muller was the only gunner on the Eagle Gun Club field yesterday to get a string of 10 birds. He grassed every one of his 10 without the semblance of a miss, but he had to shoot at this clip to beat out Coleman, Felix, Fox and Killian, all of whom brought to the ground 9 of their 10 birds. Scores:

Ten birds, handicap rise: Muller 10, Coleman 9, Aiman 8, Felix 9, Wilson 8, Severn 8, Redmond 7, Jackson 7, Dock 8, Harper 5, Sulzbach 7, Fox 9, Killian 9, Paul 8, Hall 8.

Princeton Gun Club.

THE Princeton Gun Club has completed final arrangements for the season's competitions. The schedule contains four dual contests besides the Intercollegiates, among which is a match with Yale, at New Haven, on May 13, and another with Harvard at Princeton, a week later. The other two contests are with Pennsylvania and Dartmouth, and are both away from home.

A second and new set of traps is now being installed at the University, in order that the Intercollegiate shoot may be held there this spring. Yale won the event last year, with Princeton second. The team's prospects are very promising this year, as only two men, E. H. Wright and E. P. Westenhaver, have been lost by graduation. The members of the gun club now in the University who have taken part in the different shoots are: Capt. C. J. Biddle, S. V. Este, H. S. Day, K. K. Dresser, H. T. Cassar, H. Forbes, and N. R. White.

The management expects to arrange several practice events with school teams, and a dual shoot with some athletic club in the near future.

Philadelphia Y. C. Wins.

PHILADELPHIA, Pa., April 9.—The gun team of the Philadelphia Yacht Club won its second victory over the Beideman Gun Club team on the latter's grounds, at Fish House, N. J., yesterday by the close margin of 3 targets. It was a poor day for target shooting, but the scores made by both teams were excellent.

Walter N. Stevenson made the top score of the shoot, breaking 45 out of his 50. Harry Sloan led the Beideman team with 43, and this score was tied by J. C. McAvoy, of the yacht club's team. There was considerable rivalry displayed, as the Beideman gunners were sure of capturing both the individual and team honors. The teams were composed of seven men a side, and each man shot at 50 targets. The scores:

Yacht Club.		Beideman.	
W N Stevenson...	45	H Sloan	43
J C McAvoy.....	43	W Newkirk	42
J A Ross.....	41	V Parker	40
J D Stinger.....	40	W B Stewart.....	40
E Hallowell	38	A L Oehletree.....	38
F R Macklin	37	Dr W L Jones.....	35
J S Morrison.....	31—275	G W Holloway....	34—272

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending April 8, are as follows:

June 12-14.—Hunter's Hot Springs, Mont.—Montana State Sportsmen's Association tournament. C. H. Smith, See'y.
July 6-7.—Webster City (Ia.) G. C. N. M. O'Connor, See'y.
July 20.—Lorain, (O.) G. C. J. Traxler, See'y.
July 24-27.—Betterton (Md.) G. C. J. R. Malone. See'y.
July 25-26.—Valley Junction, Ia.—Valley G. C. Chas. P. Waldron, See'y.
Aug. 14-15.—Evansville, Ind.—Recreation G. C. G. A. Beard, Cor. Sec'y.
Sept. 6-7.—Indianapolis, Ind.—Trapshooters' League of Indiana State tournament. Harry W. Denny, See'y.
Oct. 17-18.—Scammon (Kans.) G. C. G. K. Maekie, Pres.
Week beginning May 21.—Interstate Association's Sixth Pacific Coast Handicap tournament, under auspices of Madera Rod and Gun Club; $1,000 added money.

ELMER E. SHANER, See'y-Treas.

Cumberland Gun Club.

BRIDGETON, N. J., April 8.—The Cumberland Gun Club held its first shoot of the season this afternoon. A drizzling rain somewhat handicapped the events:

Events:	1	2	3	4	5	6	7
Zeanes	9	9	7	7	8	9	7
M Sooy	9	8	8	8	10	10	6
Platts	9	9	10	8	6	8	6
Morris	8	7	6	6	6	8	4
Hurff	7	6	9	6	8	8	4
Brown	7	9	7	8	7	9	8

In a 25-target event Zeanes made 22, A. Sooy 20, Platts 19, Brown 19, M. Sooy 14 and Morris 13.

The club will hold a shoot every two weeks during the season.

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

DuPont Gun Club, Rifle Dept.

WILMINGTON, Del., April 9.—The scores in the revolver and pistol matches yesterday were:

Fifty-yard revolver and pistol qualification: E. G. Ackart, 90, 82, 79, 77, 75.

Fifty-yard revolver and pistol practice: Wm. Coyne 83, 7; A. G. Riley, 67, 59; S. B. Trott, 53, 52, 37, 34; G. E. Lambert 34, H. H. Lukens 30, 12.

Fifty-yard rifle (.22cal.) qualification: D. Appleby, 81, 77, 78, 75, 72, 69.

Fifty-yard rifle (.22cal.) practice: D. Applehy, 75; S. B. Trott, 73; A. H. Gorsline, 68, 61, 60, 59, 55, 36; A. G. Riley, 62; J. B. Grier, 61, 59, 56, 55, 52, 34; L. C. Weldin, Jr., 59, 51, 51; G. E. Lambert, 57; H. E. Haines, 55, 49; Wm. Wood, 52; J. H. Mason, 47, 42; M. Carey, 39; E. J. McElwee, 17.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

The Marlin Repeating Shotgun

12 GAUGE

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action.

The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hangfires harmless.

All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. Illustration shows Model 24 grade "A" 12 gauge; it has all the features that make for a perfect gun

Send three stamps postage today for our 136 page catalog, describing the full *Marlin* line.

ESTABLISHED 1802 **Wilmington, Delaware**

College Shooting League.

WASHINGTON, D. C., April 8.—Massachusetts Agricultural College and the University of Iowa are still tied for first place in the International Rifle Shooting League, with thirteen wins. Results this week were: Massachusetts Agricultural College defeated North Georgia Agricultural, 1915 to 1732; Iowa defeated Princeton, 1861 to 1703; Washington State defeated Minnesota, 1840 to 1751; Columbia defeated California by default, 1835 to 0; Cornell defeated Arizona, 1782 to 1775; Dartmouth defeated Rhode Island State, 1771 to 1729; Missouri defeated New Hampshire College, 1743 to 1726; Purdue defeated Louisiana State by default, 1727 to 0.

Philadelphia Rifle Association.

PHILADELPHIA, Pa., April 8.—The weekly competitions of this Association were shot to-day on the Arlington range, Lansdowne avenue and Cedar lane, near Llanerch, Pa. In spite of the bad weather, five members showed up and considerable shooting was done. An interesting feature of the day was the introduction of a new match for cups, called the Brochmeyer match. Mr. Brochmeyer, a member of the club, having generously donated a fund for the purpose. It consists of a first, second and third (novice) match in military shooting at 200yds.; Schuetzen at 200yds., and both revolver and pistol at 50yds. Any one who has won a first or second prize in any of the regular matches in these events, is barred from the novice match, in order to give new members a chance. These matches will certainly arouse interest and will be a benefit to the club as well as the individual members.

Brochmeyer Schuetzen match, 200yds., rifle: Dr. G. G. Davis 127, 109; Williamson, 215, 201.

Offhand match: Williamson 219, 215, 209, 203. 203.

Honor target, 3 shots: J. G. Schnerring 66 (silver cup or medal), Williamson 65.

Brochmeyer military match: N. Spering, 44, 43, 42, 40.

Military match: H. A. Dill, 46, 43, 43, 42, 41, 40.

Brochmeyer 50yd. revolver match: Dr. R. L. Dubbs 90, 87, 83, 82, 81, 81.

Pistol match, 50yds.: Wlliamson 75, 74.

Squadron C Revolver Match.

CORP. C. H. K. BLAUVELT carried off the honors of the annual revolver match, which ran through ten days, on the range of Squadron C, in this city, and was concluded on April 5, with the total score of 246 out of a possible 250 for the ten days.

The event brought out a large field, and the tournament was closely contested, many high scores being recorded. Two events were on the program, consisting of five strings of 25 shots in groups of five on a 550yd. range, and the other of the same amount of shots on a 75yd. range.

On the first range the victor turned in a complete score of 25 clean breaks on each of his five times at the range, which netted him a total of 125, and at the longer target he missed only four shots, making a clean sweep in the fourth string, while he missed only one on each of the first, second, third and fifth times at the range, making a total of 121, or an aggregate score of 246.

So close was the competition that the winner was only victorious over Capt. Charles A. Brown, who finished second, by a single shot, and Sergt. S. S. Tumbridge finished third with a score of 242. The scores:

Corp C H K Blauvelt	49 49 49 50 49—246
Capt C A Brown	50 49 48 49 49—245
Sergt S S Tumbridge	48 48 48 49 49—242

Cincinnati Police Revolver Club.

THE fourth, and as it proved, the last of the series of matches for the Roll-Crawford-Brandemour trophy was held on the City Hall range, April 7. The attendance was the smallest in the history of the club, only four members shooting their score. Posey L. Curlis was high man, and this win, his third, gave him the trophy and ended the series. In the slow fire rounds Major Caroll was high man with 148, but Curlis got the best in the rapid fire and finished 5 points to the good, with a total of 174 to Carroll's 169. Ruck, one of the best shots in the club, was not in as good form as usual; his shots were well bunched, but with two or three exceptions were low. He was second high in the rapid fire, but his total was 25 points below that of the match in March. Curlis' total was the same as the one he made in the previous match, but his rapid fire round was much better. It is hoped that the club will be able to enter a team in the Camp Perry matches this fall, but nothing definite has been decided as yet.

P L Curlis	6 6 10 5 8—35 9 7 6 9 8—39 9 7 6 5 8—35 7 6 9 5 7—34—143

PUBLISHERS' DEPARTMENT.

The advertisement of the United States Cartridge Co., of Lowell, Mass., will be welcomed by many of our older readers.

For the Black Shells to be used in the shotgun, which are mentioned in their advertisement, the company claims a number of distinct advantages, in primers, in speedy ignition of the charge, and in water-proofing. All these are points of great interest, and the last-mentioned is not the least, as many a gunner will testify who has sat in the rain in a blind hour after hour and had more and more trouble with his swelled shells as time went by.

The United States Cartridge Co. will send a free book on shells to any one who will address the U. S. Cartridge Co., Department H, Lowell, Mass.—*Adv.*

GAME IN NEW YORK STATE.

Continued from page 578.

greater opportunity of securing convictions for violation of the hounding law than at the present time. Under present conditions the hardest kind of a case the protector has to make is a hounding case. His greatest difficulty is to show in his evidence the connection between the hunters and the dogs. With the law amended as suggested when the illegal hunting was done, the dog would undoubtedly be run with his collar off and no tag, and all that wou'd be necessary to make a case would be to establish the identity of the dog, which is a much simpler proposition.

There can be no doubt that since hounding was stopped there has been a great increase in the number of deer in the State.

The State bird farm, which has been in operation a little over a year, has sent out about 1,200 pheasants for stocking purposes and sixty-five hundred eggs. These eggs and birds have gone into every county in the State. Three thousand eggs were used for hatching at the farm, from which 2,000 birds were reared to maturity. Six hundred breeding birds are retained at the farm, also twenty-five pairs of English partridge and ten pairs of quail. The pheasants reared on the farm include the English ring-neck, the Mongolian and the Hungarian dark-necked pheasants.

The farm has been run economically. It has produced most of the grain used by the birds. During 1910 the farm produced 121 bushels of buckwheat, forty bushels of wheat, 372 bushels of oats and 500 bushels of shelled corn.

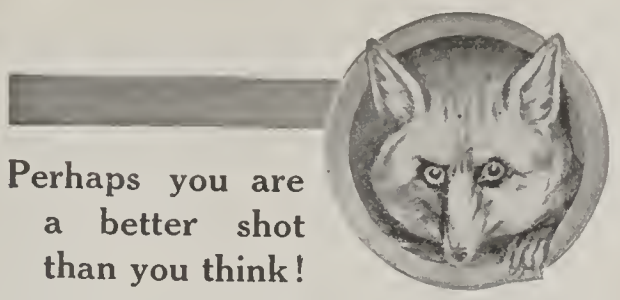
Mr. Rogers has accomplished much by hard and diligent work. The condition of the farm has been improved, the buildings repaired, and a modern plant for the rearing of game birds fully equipped, and this result has been accomplished with a saving of $3,000 in the amount appropriated for the bird farm. Next year from three to four times as many birds and eggs will be shipped as in 1910.

The fact that at the present time there is shooting for pheasants in sixteen counties in the State is chiefly due to an early experiment of the Forest, Fish and Game Commission in raising and distributing these birds for stocking purposes.

The farmers, it appears, have many of them changed their minds regarding the pheasants. It is not long since many complaints were made that the Chinese pheasant was an enemy of the agriculturist and an active agent in the destruction of crops. Now that it has been learned that the bird is more useful than injurious, "no trespass" signs are everywhere in evidence. Under these conditions there is very little likelihood that the birds will be exterminated. In fact, it is reported that they are more numerous in spite of last year's open season.

The season of 1910 was an exceptionally good breeding season for birds and small game in most parts of the State. In localities where the breeding stock had not been exterminated there was a gratifying increase in the number of partridges. The number of sportsmen has increased so greatly, however, that, except in the most sparsely settled sections of the State the outlook for this noble game bird is most gloomy.

The Adirondack elk appear to be steadily decreasing in numbers despite the fact that they seem to be well able to take care of themselves



Perhaps you are a better shot than you think!

The powder you use makes a lot of difference. It may be suited to your needs—perhaps not.

Your judgment in computing distance, angles and speed of bird on target determines your ability to point.

But the results you get depend upon eliminating every possible factor of uncertainty on the condition under which you shoot.

YOU know mallards—wisest and wariest of all ducks Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

THE PISTOL AND REVOLVER.

By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical hand-book for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition—primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

FOREST AND STREAM PUBLISHING CO.

The Indians of To-day

By George Bird Grinnell. Demi-quarto, 185 pages, buckram. Price, $5.00.

It describes the old-time Indian and the Indian of to-day, and contrasts the primitive conditions and ways of living with those of the present. It contains over fifty full-page portraits of living Indians from photographs.

Contents: The North American Indians, Indian Character. Beliefs and Stories. The Young Dogs' Dance. The Buffalo Wife. A Blackfoot Sun and Moon Myth. Former Distribution of the Indians. The Reservation. Life on the Reservation. The Agent's Rule. Education. Some Difficulties. The Red Man and the White.

FOREST AND STREAM PUBLISHING COMPANY

The World of the Dead. Pawnee Religion. The Old Faith and the New. The Coming of the White Man. The North Americans Yesterday and To-day.

FOREST AND STREAM PUBLISHING CO.

in so far as the question of food is concerned. The yearling elk resemble deer and are often unintentionally shot by hunters who mistake them for deer. The experiment of attempting to restock the Adirondacks with elk has been an interesting one, but for the reason above given is likely to result in failure.

One of the most interesting facts with reference to the wild animals of the State is the rapid increase of beaver. For a number of years prior to 1904 it was commonly believed that beaver had been exterminated in the State. As a matter of fact, however, a small remnant of the once abundant native stock still survived. The last stronghold of these beaver was the lake region in Township Twenty, south and west of St. Regis Mountain. A few beaver were on the west branch of the St. Regis River and a few on the Jordan River, which empties into the Raquette River in the town of Hollywood, St. Lawrence county. In all there were probably not more than a score of beaver left.

All told the commission has information of about sixty families of beaver over a widely scattered region, chiefly of course in the Adirondack section. They are breeding rapidly, the law protecting them is respected, and they will soon be a common sight in the northern part of the State.

During the last fiscal year the returns from hunters' licenses were $141,219 as against $134,031 for 1909. Suffolk county again leads the other counties of the State in the number of licenses issued.

It is interesting to note that in the three years that general hunters' licenses have been issued, two counties of less than 100,000 population have led the other counties of the State. These are Suffolk, which has twice stood at the head of the list and once in second place, and St. Lawrence, which has once occupied the first position and twice the second place. Next to these counties Erie and Monroe have contested for the honors.

Some of the leaders of the organized sportsmen of the State believe that the enforcement of the game law has been too severe. The statement is made that the game protector should devote his energies to prevent violations of the game law and not to the prosecutions of the violators. It is said that the protector, under the present system, is judged too much by his record of cases, and that better results would be obtained if he was instructed to make few, if any, arrests, but to warn the violators of the law and to hold his evidence of violations over their heads as a threat to make them mend their ways.

While plausible in theory such a program is highly impractical. Prosecuting people for violations of the law is not pleasant business. The game protector is human and would naturally welcome an excuse to be rid of the most troublesome part of his work. The result could not fail to be loss of discipline and demoralization in the force and increased game law violation.

The attitude which the commission takes upon this matter, and the only attitude which it can take, is that where a violation of the law has been committed the penalty must be met. There is no way of getting around it. Once the commission is satisfied that any provision of the game law has been violated that part of the incident is closed.

For Sale.

Small-Mouth Black Bass

SAM LOVEL'S BOY

Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Treble Wedge Fast Action.—Many methods of uniting the top of the standing Breech and upper portion of the gun barrels have been introduced, but none are so strong and thorough as the Greener Treble Wedge Fast Cross Bolt, which has been proved by actual experiment to add enormously to the safety and wear of a gun.

At the famous London *Field* explosive trials of 1878, a special experimental gun was prepared by the editor of the *Field*, and the following extracts from his report are a remarkable testimony to the strength and efficiency of this device.

"to this action we had a little apparatus fixed as shown in this sketch, by this arrangement a piece of silver paper can be strained between the hook and the screw clip, attached to the barrels so that when any separation takes place during an explosion the paper breaks. We found that in Mr Greener's action no breakage occurred. using any charge of powder which the cartridge case could be made to hold with the bolt in position the paper remained intact up to the last "

In these experiments a charge of 65 grains of Schultze powder and 2 ounces of shot was used without causing the breech to "give" in the slightest degree

See that your new gun carries the Greener guarantee—Life-long satisfaction.
Our free catalog will interest you, we hold a large stock of guns in New York and Montreal.

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, library edition, $3.50.

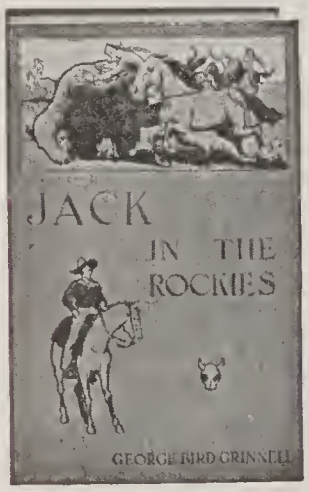
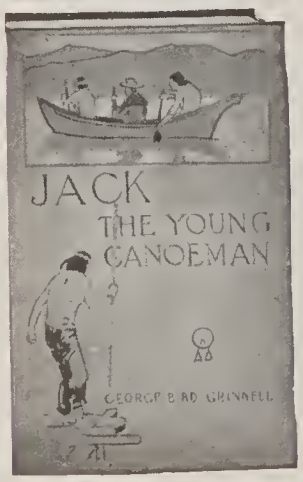
THE JACK SERIES





Best Books For Boys

By GEORGE BIRD GRINNELL

THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

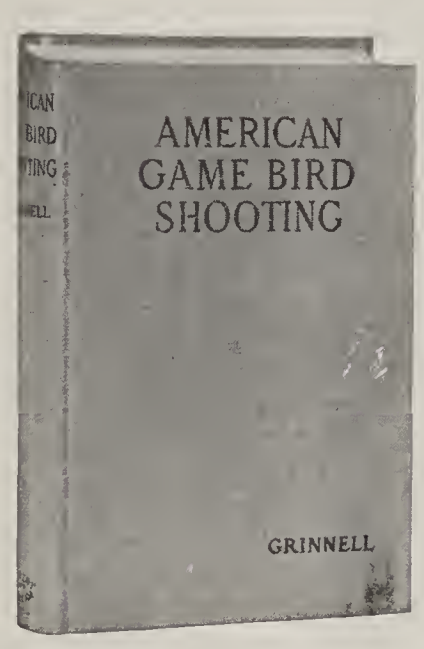
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

National Park Protective Act. Price, $2.50.

Modern Sporting Gunnery.

Written by the well-known English gun expert, Mr. Henry Sharp, and contains 525 pages and many illustrations. It tells of the various makes of guns and rifles, beginning with the early days of the art up to the present time. It deals with the subject of mechanism, boring, effect of different loads, and gives the results of scientific experiments. It tells "why" in entertaining and easily understood language, and is a book every lover of gun or rifle should have in his library. Cloth bound. Postpaid, $1.70.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. This is a collection of papers on different themes contributed to FOREST AND STREAM and other publications, and now for the first time brought together. Price, $2.00.

My Friend the Partridge.

S. T. Hammond. An inimitable study of the noblest of our game birds,following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game. Cloth, 150 pages. Postpaid, $1.00.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. W. Hamilton Gibson. Containing hints on camp shelter and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. Illustrated. Cloth, 360 pages. Price, $1.00.

Jack, the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, $1.25.

George Bird Grinnell. Illustrated. Cloth, 286 pages. Price, $1.25.

Jack the Young Trapper.

George Bird Grinnell. Illustrated. 278 pages. Price, $1.25.

Manual of Taxidermy for Amateurs.

C. J. Maynard. A complete guide in collecting and preserving birds and animals. Illustrated. New edition. Price, $1.00.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

W. T. (Bill) Hamilton. The author was the last survivor of the old race of free trappers. Bill Hamilton was born in 1825, and was on the plains in 1842, trapper, Indian fighter, sign talker, trader, scout and guide so long as the old West survived. This book is the simple unaffected story of his adventurous life, more thrilling and full of personal interest than any romance. Cloth. Illustrated, 223 pages. Postpaid, $1.50.

Nursing vs. Dosing.

S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents: Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Earl, Mange, Nervous System, Colic, Worms. Cloth. Illustrated, 161 pages. Postpaid, $1.00.

Rhymes of the Stream and Forest.

Frank Merton Buckland. A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, $1.25.

Inter-Ocean Hunting Tales.

Edgar F. Randolph. A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint and dealing with every kind of game that falls to the rifle of the American sportsman. Cloth, 200 pages. Postpaid, $100.

The Still-Hunter.

Theo. S. Van Dyke. A practical Treatise on Deer-Stalking. Extra cloth, beveled, 350 pages. Price, $1.75.

The Angler's Workshop. Rod Making for Beginners.

Perry D. Frazer. A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, $1.

The Book of the Black Bass.

James A. Henshall. The standard work on the black bass, comprising a complete scientific and life history of the black bass, together with a practical treatise on angling and fly-fishing, a full description of tackle and implements, and general observations. Cloth. Illustrated. 470 pages. Postpaid, $3.00.

Men I have Fished With.

Fred Mather. Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. Illustrated. Price, $1.50.

My Angling Friends.

Fred Mather. A second Series of "Men I Have Fished With." Cloth, 369 pages, with 13 illustrations. Price, $1.50.

Training vs. Breaking.

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

How to Build a Skipjack.

Complete plans and instructions for building a light draft sloop. Plans and directions easily followed. Cloth. Illustrated. Postpaid, $1.00.

How to Build a Knockabout.

A wholesome boat for all-around cruising and racing; 33ft. O. W., 10ft. beam, 26in. draft. Full working plans and drawings, with instructions for building. Cloth. Illustrated. Postpaid, $1.00.

THE MODERN SPORTSWOMAN.

THE active participation in field sports by women marks a modern development. Fifty years ago no woman would have handled a gun, much less a rifle, or would have dared to beard a lion or a tiger in the field, or have dreamed of a day on the moors all to herself or taken a hunting box with a string of hunters for the winter. Yet women do all these things now. Sport for women is catered for as amply as sport for men; ladies' golf links, championships, rifle clubs and tennis tournaments flourish amazingly, says Lady Violet Greville in London Chronicle.

The number of women in the hunting field increases every year, and many of these Dianas ride as hard as men. Lately they have taken to riding astride and wearing neat breeches and boots, so that it is difficult to distinguish the sexes on horseback, and certainly the thin young girl, looking just like a boy, is a very attractive figure, but she is essentially modern. The girl who walks the moors all day, who climbs hills and brings down her stag with an unerring rifle is rarer, but she exists. Salmon and trout fishing rank next in popular esteem.

Curiously enough, this love, this craze for sport in women synchronizes with the possible extinction of sport, for already it is difficult to keep up hunt subscriptions, barbed wire renders riding unpleasant if not dangerous, and the breaking up of large estates will soon make game preserving impossible. Sport will be confined to fishing or to grouse shooting over desolate and barren districts, where the heather flourishes and the ptarmigan breed. On these lonely hilltops wild birds will still be found when the rest of England is divided into allotments and building estates.

With the women who care for sport it is a very real and solid enthusiasm. They will follow their husbands in Africa in the pursuit of wild game, they will tramp the stubble and the turnip fields all day, they will flog the water unceasingly, they will crawl, scramble, creep, climb and lie motionless for hours on the chance of getting a stag.

In all sport there is a certain element of good fellowship and camaraderie which is exceedingly pleasant, and the friendships of the hunting field, for instance, are among the most enduring and delightful of memories. Even rivalry is good tempered, respect and admiration are experienced for those who are keen and skilful in the sport they prefer. It is a little strange to say the least of it that so many women should be taking up sport, rifle shooting and games at a time when the great mass of men go to look on at contests in which they themselves play no part and of which betting is one of the most objectionable features.

From real sport the element of money getting is entirely absent. Hunting, for instance, is the most democratic of pursuits; the nobleman mounted on his 300-guinea hunter, the doctor, the schoolboy, the farmer and the trainer, all are equal, all interested, all enthusiastic. People may hunt for various reasons, but to the expert majority it is the hounds working and the science of hunting that appeal most keenly. Women probably love the galloping, but it exhilarates and excites them, while their presence has almost entirely obliterated the use of bad language and hard swearing in the hunting field.

It would appear as though the masculine development of women, the sense of rebellion and revolt had driven them to enter the same sports as men, a tendency strongly developed in modern girl schools, where hockey, golf and cricket are more highly appreciated that the ladylike accomplishments and quiet study of our mothers. Needlework is at a discount, but the eye, the ear, the hand and the body are all trained in field sports, and the modern Diana, with her zest, her joie de vivre and her independence has apparently come to stay.

INDIANA'S FISHING LICENSE.

THE new Indiana law contains some provisions of rather unusual interest.

Non-residents who hold licenses to hunt small game in Indiana may also fish in that State without securing special permits; otherwise they must pay one dollar each per annum to fish in Indiana waters, the Ohio River excepted. If a non-resident fishing license holder's wife accompanies him, she will not require a license, nor will children under thirteen years come under the new provisions. Licenses, which are issued by county circuit clerks, must bear a full description of the licensee.

One dollar is not a high price to pay for good fishing, but the possession of a license to fish is no guarantee of success in that uncertain pastime. Indeed, while there is still fair fishing in some Indiana waters, they are far less prolific in fish life than they were in the past, and unless effective restocking and protective measures are enforced, the non-residents who have been in the habit of going to Indiana to fish may hesitate about continuing their visits to that State.

In the consummation of this measure a peculiar state of affairs has been brought about. Advocates of the new license set the shooters against the fishers and in this way secured the moral support of the former. At the same time sportsmen were classified in three groups—those who shoot, those who fish, and those who enjoy both pastimes. To the first and the last it is to be assumed that the new law is not objectionable. This leaves only the anglers to object, and against them and their interests are ranged those riparian owners of Indiana who are opposed to angling. On the side of the anglers, however, are the railway, hotel and resort interests. These partisans of the anglers have one certain means of securing the continued presence of visiting anglers, but it is almost too much to hope that it will be pushed. This is to assist in making the fishing in Indiana worth while.

It is planned to employ more wardens to enforce the new law, and it is to the interest of every non-resident angler to see that the Indiana protectors they are assisting to employ shall perform their duties.

The situation is novel. It remains to be seen how the plan will work out and whether it will merit praise or condemnation. Meanwhile the lot of the fish wardens bids fair to be anything but a happy one during the warm season. The railways send immense numbers of picnickers into Indiana, and a great many of these visitors carry fishing tackle with them. Of these a majority will never have heard of a fishing license fee, and to round up a large party and hale them before the nearest justice of the peace is easier to plan than to perform.

AID FROM A NEW QUARTER.

WITH politics and religion FOREST AND STREAM never meddles, yet it is glad at this juncture to quote elsewhere some remarks about the law governing the sale of plumage taken from the Jewish paper, Die Wahrheit—The Truth—printed in New York city.

The firms in New York which deal in feather millinery are made up chiefly of Hebrews, and that the leading Hebrew journal in New York city holds the views expressed in this editorial is interesting because it exhibits a breadth of view not always to be looked for among sects or races.

Advice from this source should have some influence on the Assemblyman who is responsible for the bill, the purpose of which is to nullify the Shea-White bill passed by the previous Legislature and to go into effect in July, 1911.

The Shea-White bill ought to be upheld by public opinion, and the Legislature should be made to feel the force of this opinion. The growth of this feeling over the whole country is shown by the fact that only last week the Legislature of the State of New Jersey passed a plumage bill similar to the one now in force in New York—a bill which Governor Wilson, of New Jersey, is reported to have promptly signed.

The article in Die Wahrheit is likely to bring to the attention of many Jews a subject on which they have never thought, and in this way may exert an influence very beneficial to the comhunitw, which perhaps could not have been exerted on Jewish Americans in any other way.

THAT leprosy has been caused by eating fish is a thesis advanced long ago by bacteriologists. In an address before the American Association of Pathologists and Bacteriologists, in Chicago last Saturday, Dr. M. Couret, of New Orleans, referred to the fish-eating peoples of Greece, Italy, Sweden and Norway, among whom leprosy is especially prevalent, as proof of this contention. Experiments he had made, he said, showed that leprosy bacilli in fish flourished in both warm and cold waters.

✖

To provide game birds for distribution at moderate cost is the purpose of a bill which was passed last week by the New Jersey Assembly and is now before the Senate. It carries an appropriation of $25,000 with which to purchase and establish a State game farm. Both Houses passed the Audubon plumage bill, which as elsewhere stated has been signed by Governor Wilson. It represents a victory by the Audubon Society over the millinery interests, after a contest covering a number of years. The Assembly's action on the bill to abolish the Fish and Game Commission showed the trend of sentiment regarding the present form of commission as against the proposed single-headed commission. Only a few members favored the proposed change.

✖

ASSEMBLY Bill No. 1447, introduced in the New York Legislature by Mr. Gurnett, and intended to amend the Forest, Fish and Game law in relation to breeders of game and the increase of game and game fish, has been introduced in the Senate by Senator T. D. Sullivan. Its number there is 974. The bill introduced by Mr. Gurnett has aroused not a little indignation among his constituents, and it is reported that he disclaims all responsibility for the measure, saying that it was given to him by Mr. Campbell, reported to be the paid agent of the hotel keepers' association, and he merely introduced it by request. The bill tends to let down the bars on game protection and is opposed by the best sentiment throughout the State.

✖

FROM Chicago comes the announcement that landlocked salmon are being taken in Lake Michigan in the fishermen's gillnets. The first catches were made some time ago off the Indiana shore, and the fishermen did not recognize the species. Since then specimens have been examined by experienced anglers, who declare they are landlocked salmon. If this be true, and the fish remain in the part of the lake where they are now found, a new sport awaits the army of anglers who live in and about Chicago. If they are landlocked salmon, it is possible though not probable that they may be found in the rivers ere long, and it will be interesting to learn whether they are observed in these waters by anglers for trout and bass.

✖

FRIENDS of the Rev. Charles F. Aked may wonder whether his fondness for fishing played any part in his decision to remove from New York city to San Francisco. He bade farewell to his friends in the Fifth Avenue Baptist Church in New York city two weeks ago, and has taken up his new work in the First Congregational Church in San Francisco. Dr. Aked is very fond of angling, and California offers abundant opportunities for that sport.

✖

CALIFORNIA has advanced another step in the conservation of game, in the fixing of a weekly bag limit of fifty wildfowl and better protection for quail.

THE SPORTSMAN TOURIST

Where Insurrectos Insurrect

The Sierra Madre of Mexico—Lion Hunting With Dogs—Turkeys and Grizzly Bears—Lovely and Lonely Hunting Country

By J. A. M. LETHBRIDGE

[The following letter was written and sent out from camp just before the Mexican insurrection broke out. Since then, there have been no opportunities to hear from this hunting camp, and whether the author is still hunting, whether he has joined the insurrectos, in their operations about Chihuahua, or has been conscripted into the Mexican army, no one knows.

We may feel reasonably sure that, if he has taken sides at all, Mr. Lethbridge is doing good service. His experience in wild countries ranges from South Africa to North Africa, and from British Columbia down to Mexico. As a soldier, he fought in the Boer war, and he is abundantly able to take care of himself.

We should like to hear what his partner did with the jaguars in Sonora, and hope that some time we may.—EDITOR.]

MY headquarters are about fifty miles from the railway, in a most lovely valley, away up in the mountains. There is unlimited food for the horses and mules and splendid water. As I write this I am sitting in the shade of a huge pine to keep away from the scorching sun. At this time of the year there is a nice breeze, but the nights are bitterly cold, with thick ice and heavy frosts.

A beautiful stream running down the valley is clear as crystal and chock full of what the Mexicans call black bass. I have never seen a black bass and do not know. The fish do not run very large—from eight to twelve inches—but lower down where the river runs through a large cañon, and where there are deep holes, they are larger. They are good eating. They rise to any sort of fly and do not seem to fear the angler. The air is delightful and it makes one feel a new man. There are quantities of ducks—mallards and bluebills—which make a pleasant change to the menu, and as the winter goes on many more will come in. We have what is called the mountain quail, or fool hen. These one finds almost everywhere in large coveys, and fool hens they are. Unless you kick them up, they will not move, but once on the wing they give very pretty shooting and are delicious food.

In the mountains about a mile from camp one is in a hunter's paradise. I never know what sort of a rifle to take. If one carries a .401 repeater in case of running across bears, and there are big ones here, he promptly runs into a flock of turkeys. The other day I was out with my wife and just as we got within about 170 yards of a flock of turkeys, which at the moment I did not see. As we were riding up a creek, her horse started to buck, she having by some means got the rope under its tail. I had to jump off, at the same moment catching sight of the turkeys. After quieting her horse I had a shot and killed my turkey, but had to pick it up in pieces. In all probability if I had taken a smaller bore, .30-30, I should have, or might have, met a grizzly. It is hard to know which is the best all-round rifle to carry.

Let me digress for a moment and tell you about rifles being brought into Mexico. The Customs officials at Ciudad Juarez for some reason will give one much trouble; in fact, the importation of arms into Mexico from the United States is prohibited, and although sometimes it can be done I think—by means of tips and much politeness—there is always danger of trouble. For instance I came from Chihuahua, but made the mistake of not showing my guns at Juarez on my arrival. When I left Juarez again for Casas Grandes, the Customs officials made a lot of fuss, and although I explained that I came from Mexico and that I had bought the rifles in Mexico, it was some time before they would let me through. One unlucky man had eighty .30-30 cartridges in his pockets. They scented it out and confiscated all of them, whereas via Tampico or Vera Cruez you can bring all you want, and there is no difficulty at the Custom House. So much for bringing arms and ammunition into Mexico. Now, back to camp.

One day I went out to kill deer and was successful not far from my camp. Taking in the saddle, I pegged the forequarters down for bait, as a Mexican assured me there were plenty of lions about. The next morning I left camp early with my wife, who was most keen to see a lion, and we went to where I had killed the deer, taking with us four hounds and four Airedales. These hounds are trained to run only lions and bears, and not to look at deer. I do not say they will not run deer, because on occasions they will, but it is hopeless if they run deer, as these are so numerous that they constantly jump up when the hounds are running a lion, and it naturally spoils all hope of getting the lion if they change. Approaching the kill very carefully I saw a lion, but for an instant only, and he was off. Calling my wife to bring up the hounds, they struck his red hot trail and were off in an instant, the Airedales putting down their noses to the trail like old trained dogs. I was pleased to see this and I know that with a little more training I shall have a pack fit for anything. The Airedales will run deer, and mighty quick, too, but they are under good control and only require a little rating, when they stop.

To follow the dogs on horseback was impossible, for the ground was too broken. No one who has not been in the sierras can have any idea of what the country is. You continually come to places which are quite impassable and which even on foot are very hard to get over. For this reason hunting lions or bears without good dogs is rather hopeless. I told my wife to stay where she was and I would climb up a bit to try to see what was going on. We could hear the dogs running merrily above us, but the scrub oak, dwarf pines and other growth made it impossible to see. They could not have gone more than a mile before the lion found it was getting too hot for him and went up a tree. I could tell in an instant by the change in their music when they had treed him and we soon arrived to see the lion half way up a fair sized pine. The shot belonged to my wife and she made good, hitting him in the head and killing him instantly with the first shot; not so bad for a tyro, because at times we all get nervous.

After skinning out this lion, which was a young male in fine condition, we returned to the kill to try to pick up another lion, and although the hounds feathered and tried their best, they could run only a few yards and then would throw up their heads. Thus we had to give it up as a bad job. The sun was too hot and had practically obliterated all scent. I was quite satisfied, especially over the work of the whole pack, which promises great things.

Next day my partner came up and took three of the hounds and two Airedales. He has gone with a party over the divide into Sonora State to try to kill a tiger or spotted mountain lion—a jaguar. Tigers are very much more pugnacious than is the puma and are terrors on stock. Some people say that hounds cannot make a tiger tree, but this we shall see on his return. He is confident of success, though he told me that on one occasion he had dogs after a tiger, which he eventually shot, because though it would not tree, it kept stopping to fight the dogs, and its hind quarters were all bitten up with their attentions. Notwithstanding this it would not go up a tree. The tiger has a very

beautiful skin and is, I suppose, the most savage animal in the sierras. They will attack people, and although the popular belief is that mountain lions will not, there are said to be exceptions to the rule.

On the trail I saw a wooden cross and on asking a Mexican what it was, he told me that some months ago two Mexicans and a lad of about ten years were driving a burro train, and in the morning the two older men sent out the youngster to fetch in the burros. They waited and waited, but the boy did not return and after a time they started to search for him. They found his body all torn up and partly eaten and realized in a moment that it was the work of a puma. They hurried off for dogs and avenged his death by killing the lion, which was a very old one. Perhaps it is true of mountain lions as it is of African lions. When a lion cannot kill game through old age and infirmity, it is likely to become what one may term in a very minor sense a man-eater. It will take children, rob the farm hog pen and such things. Such cases are rare, but still exceptions prove the rule. There is no doubt about the truth of this story about the Mexican lad. The wooden cross marks the spot where he was killed and everybody knows it. It occurred only about a year ago.

The other morning I saw a beautiful grizz'y, but he was away before I could get in a shot and I had left my one hound at camp. If the dog had been with me I do not for one minute suppose that he would have run the bear alone.

Minor hunts we can indulge in at any time. There are many 'coons, but the skunks which are abundant are a great nuisance. I am trapping a good few and have been successful in getting some foxes. There are not a few wolves, although personally I have not seen any as yet.

I have just been talking to a Mexican who says that many bears do not hole up in the winter in the Sierra Madre. They merely come lower down on the mountains. So much the better for me, as we shall have bear hunting all the winter, and in three weeks, when my partner gets back, there will be something doing. For wild pigs we must go about ten or fifteen miles, just over the divide into Sonora. They are quite good sport, but death on dogs, unless the latter are very careful. On the Sonora side there is a species of monkey which has very fine fur. So far as I know it is the only one of the monkey family in the northern part of this country.

The birds one can describe only as magnificent, of many sorts and of beautiful plumage; in my opinion even rivaling those of Africa and Abyssinia. The woodpeckers and anteaters—or I imagine they are anteaters—especially interest me. They have a very long-pointed tongue and the other day I killed one and found on its tongue several dead ants. We also have in this part of the country the ivory-billed woodpecker, a large black and white bird with a white bill, and as far as I can learn exceedingly rare. This country I refer to—say twenty miles west of here—is practically unknown. Miles upon miles of mountains which practically no white man has traveled through, and the difficulties of transport are such that it will be many years before it is gone into. When I say the mountains are impassable in many places, I mean it. It is sheer up and down. My partner tells me of an animal that I have never heard of, although he swears that an American told him direct that he had seen one in the Sierra Madre Mountains. It was described as a black mountain lion with white or light stripes like an Indian tiger. Whether there is any truth to this or not I cannot say. He tells me a Mexican killed the only one he has heard of being killed, but I cannot trace up the story. I only hope it may fall to my luck, not only to see one, but to secure him.

So far as one can see, sport will last here for many years. On the Chihuahua side of the divide the land in the sierras belongs to private parties, who jealously guard their rights. I have permission to wander over some 200 miles of country so I need not complain. On the Sonora side the land belongs more to the country, and shooting is free, but on account of the distance and the roughness of the country, it is little hunted. This place would make an ideal game preserve for some rich individual or club. It is some 80,000 acres in extent, with the fine river I have mentioned running right through the property. About 1,000 acres are fit for maize; in fact, a Mormon grows corn here every year and the timber on the property should pay the purchase price. Of course, now it is too far from the market. There are adjacent properties aggregating 200,000 acres over which the shooting rights could be secured for a mere song, and it could be made one of the finest preserves on the American continent besides carrying 1,000 or more head of cattle, which should pay running expenses. It is well worth the attention of some individual or club.

Mexico and the Sierra Madre have their attractions; the mountains are full of mineral and only yesterday I ran across some ore that looks well and have sent samples to El Paso for assay. "Quien sabe," as the Mexican says, and if this does not pan out there are lots of others.

To the searcher for prehistoric facts there are the caves of the cave dwellers, and one finds many of their ancient implements around the caves. It surely is a country of many and diverse interests.

I closed this yesterday, but after doing so went out for a look around and ran right on to a fine silver tip, which was in fine condition and as fat as a pig. He did not know I was in the country and gave me an easy shot at about sixty yards, of which I took due advantage. He was grubbing right out in the open. It is always the unexpected that turns up, as I certainly never dreamed of finding a bear where he was.

I shall hope before long to be able to tell you how my partner fared with the tigers and whether he had any luck.

The Novice on the Northern Trails

By THOMAS TRAVIS

THE Deacon was a fisherman to the rod born, though up to now that rod had been wielded for the most part over the turbulent and salty waters of the Jersey coast. He was a tall, distinguished looking man, with gray side-whiskers, luminous blue eyes, and a mouth that constantly wrinkled into a smile as he told some comical incident of days gone by. His comrade was a short man, a doctor, but of that school which deals with philosophies rather than with philters. Also he had a love almost amounting to a passion for the crystal waters and wind-swept wilds. To him the best point of view from which to study life was along the slender tip of a tapering rod.

All day and all night the train had sped away from the big city; all morning again it ran between spruce and poplar forests, till at high noon we stopped at Megantic Lake. The songs of the voyageurs, the musical French of the Canadas, the smell of the wilds were all telling us that the happy hunting grounds were near. Across lakes and over portages we sped by boat and foot, until at last, when the sun was hanging low, we stepped ashore at our camp on Spider Lake.

So eager were we to be out on those b'ue waters that we scarcely waited to greet our guides, Indian Albert, and Leopold, the French-Canadian. We must be out on the lake to watch the sun sink below the mountain and to listen to the angelus of the woods. Lying with eyes half closed we glided over the lake. From the depths of the marsh came the "tonk-a-tonk" of a bittern, for all the world like the sound of an axe on a half-submerged log; "spile driver" Leopold called him, and the name fitted well. A pair of wild ducks went whistling by to lose themselves in the silent glory of the golden west, where over distant lakes and forest the light hung in purple haze.

Looping on a hookless fly we cast softly where the afterglow was reflected under the shadow of the spruces. Immediately the feather was taken and a trout lifted clear of the water by the involuntary strike of the angler. Up he sailed in a graceful curve, his golden sides shining the while, till he disappeared with a splash that sent the wavelets rippling everywhere. Near and far the mirror-like surface of the lake was broken with a score of dimpled smiles where the trout rolled up to suck in the tiny midges invisible to our eyes. The fish were there, schools of them, and eagerly we looked forward to what the morrow should bring.

That night we gathered in the log cabin before a great stone fire-place. Our party was increased by four more. There was Talcott, a man not of parts, but of wholes, some fourteen stone of muscle and bone which required two good men to balance when he took his p'ace in the long canoe. A business man he, from the city of skyscrapers, a canny man and a gentleman withal, a keen lover of sport and a veteran of many trails. Round, robust, with a guttural roar for voice—Cave Man we dubbed him straightaway. With him was his wife, a wooer of the silent pines, a dreamer amid the thickets where the white waters sing their eternal song—Gray Rabbit we named her as we noted her

silent speed on the trail and watched her gray gown melt in the blue-greens of the forest. Then, too, there was Leopold, the French-Canadian guide, a sturdy man with all the picturesque garrulity of the Frenchman toned down with the silence of the trail. Last of all was Indian Albert, big, silent, expert with the rod and paddle as both were with the gun; good guides both as we had often reason to say. It was late that night when we lay down with the rustle of the forest for lullaby, and the moaning of the wind through the spruce forest came to us of the city like the deep diapason of a distant organ.

A fine day and nine miles of lovely trail in to our first fishing stage! Not soon shall I forget that trail—through high, solemn forests, across lonely mountains where mile-long gashes marked the path of forest fires; the cry of the loon lying on the waters with his mate; the deer leaping in the thicket, and at last, just as the sun reached its highest, the glimmer of blue waters through the trees. It was Arnold Pond, made famous by the journey of Arnold to Quebec in the dead of winter.

Indian Albert soon had the canoe ready and the Deacon and Doctor afloat. "What bait shall I use?" asked the Deacon, and Indian Albert looped on one of those spinners with a six-inch sucker. I chose a silver doctor fly. Quietly we glided around the lake some fifty yards from shore, but never a strike did we get. We were beginning to wonder what had become of the fish when I got a strike which bent the rod double in one quick stroke, and seventy-five feet astern the surface was broken by a silvery gleam that leaped up, curled over like a porpoise and disappeared. The dignified Deacon howled, Indian Albert grunted, and I worked the reel. Whatever I had, felt well hooked. He was working away like a puppy at a root. The rod was bent till it dipped in the water and still the Indian kept on paddling till I said: "Albert, stop paddling so I can reel him in." For the first time that day Albert spoke: "Hu, you got salmon; he come slow; don' pull too hard! I row so he don' get slack."

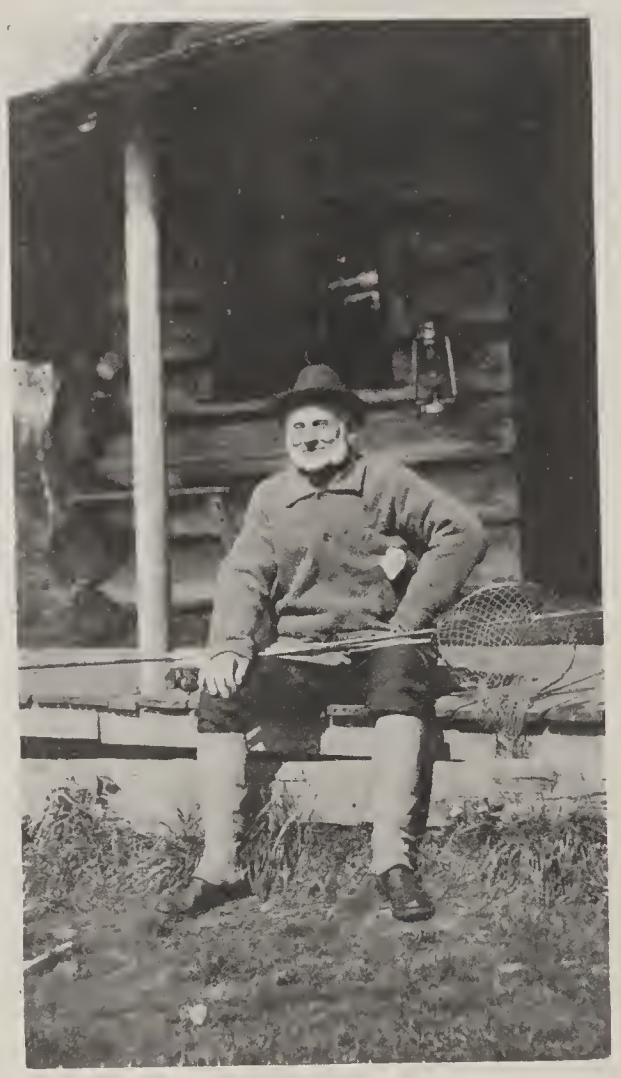
A landlocked salmon! This was the first one I had ever hooked, and the very sound of the word made me thrill with eager desire to land him. Again and again he rose a foot from the water, sometimes skipping along the surface. Again he dove deep down with jerks that threatened to pull the frail hook from his jaws. At last I had him alongside, and the Deacon dipped the net to hoist him aboard, but as soon as the net touched the water, the fish was off again like a shot. But how can a man tell the story of such a fight? The telling seems stale. To the very last he leaped and dove, till tired out he paused a moment and the net drew him home.

There he lay in the canoe, his silvery sides and black spots making a fair picture, indeed. Hitherto I had felt that all this talk about the salmon's gaminess was a little exaggerated, and was prepared to back the black bass, weight for weight, against any fish that swims; certainly against any trout. But I take off my hat to the landlocked salmon; he is a warrior born, and no man may take him without a hard fight.

"Albert," said the Deacon, "is my bait on right? I'm a novice at all this; hadn't we better put a fly on? This thing is enough to scare any sensible fish." To which the Indian answered: "You're all right; wait, we get 'em." And we moved on.

Scarcely forty rods had we gone when the Deacon had a strike. His rod bent like a bow and he began to labor at the reel. Another salmon? Well, if so, he was acting differently. No fin broke the surface, though the Deacon had at least a hundred feet of line out. Rather this fish sought the depths in a dogged, jerking way which brought grunts from Albert and chuckles of joy from the Deacon. "He's a big one; he's a heavy fish; am I handling him right? I'm a novice at this."

"Maybe it's a trout hooked foul," I suggested, but repented the moment I saw the shadow pass



THE NOVICE.

over his happy face. "What do you think it is, Albert?" "Togue," he grunted laconically, and togue it was. Only when pulled by the spring of the rod did he rise to the surface and there threshed about, covering himself and us with foam.

Meanwhile the sky had become overcast and a cold wind sprang up. The rain came down in a steady drizzle, but snugly clad in waterproofs we patrolled the bar where we had caught these two fine fish. Not once that day did we go the full length of that bar without at least a strike. But all the rest were brook trout, caught for the most part on the spinner.

The wind moaned through the big pines and the rain drove hissing in the waters, but only as the faint note of a horn announced supper in camp did we pause for a hasty bite, then back again we went to that fascinating scene. Sheltered now from the wind, we pulled along a thick grove of poplars, and while floating in the gathering twilight, I saw a trail in the water as of some animal making for the other shore. "Muskrat?" I said to the Indian, but he shook his head and replied: "Otter." We pulled quietly toward him until we could distinctly see his head and back. But he saw us, turned, and with a splash that sounded like a brick thrown into a well, down he went, while Albert grunted, "Beaver." There was no mistaking the splash of that tail, and so we waited for others of his kind. Along the shore were abundant cuttings, young poplars and birch cut and grooved as by a stone hatchet or chisel. Five of these bank beavers we saw along this shore alone, and a pair of wild ducks were quietly quacking their good-night song beneath a tangle of fallen trees as we came out in the open lake and pulled back in the gale of wind and rain. But piling logs on the fire, we stretched ourselves comfortably to watch the smoke curl up the chimney and listen to the patter of rain on the roof. In the silence we could hear the sound of the borers in the logs of the cabin, and outside in the darkness somewhere the grunt, grunt and scratching of a porcupine.

It was still raining when we awoke, but the wind had fallen, so out to the lake the Deacon and Doctor went, bundled in waterproofs. There was the minnow trap to be set and perhaps a trout could be taken for breakfast. Hooking a minnow, I cast a few feet out, and at once had a strike vigorous enough to warrant expectations. So, after letting him have it till about fifty feet had run out, I struck, and after a struggle hauled in a water-logged spruce top. Repeated casts brought nothing, so I devoted myself to the minnow trap. A fair amount of suckers ranging from three to twelve inches were caught. Some of the minnows had the black dots of a salmon; several of the suckers were almost as red as a goldfish, and these made an interesting study.

Still the rain fell in torrents, and making for the cabin, we set targets out for a pistol match to be shot from the overhanging eaves of the camp. Leopold made head score and Albert, Cave Man, Gray Rabbit and the Doctor were pretty evenly matched. It was the Deacon who turned the score. "I'm a novice," he said, "and you must show me how this ought to sight," as he held the pistol in hand. A diagram was made. The Deacon polished his glasses, carefully sighted and put a bullet exactly through the center. "That's the way to shoot," he remarked, as he laid the pistol down. Nor could we prevail on him to try another shot. "Why should I," said he, "till someone beats that?" And we wondered whether this was accident or consummate skill.

Meanwhile, Cave Man and Gray Rabbit were out on the lake. We sat before the fire and watched. Suddenly we saw Leopold stop paddling, and the Cave Man's rod go down with a rush. He was fast to a heavy fish. We cheered the struggle from where we sat. Minutes passed but the fish seemed unconquered, though every once in a while a rag of foam floated some twenty feet from the boat. Nearer and nearer the foam came till we could see the spray splatter over into the skiff. Leopold dipped the net and a huge fish flopped from it, while over the water boomed Cave Man's voice, "Togue." It was a large lake trout.

[TO BE CONCLUDED.]

NATURAL HISTORY

The Dignity of the Buzzard.

NEW YORK CITY, April 12.—*Editor Forest and Stream:* One cold morning last December, in Western Mexico, I was preparing to leave the mountains of the Yaqui country where I had been examining some mines, and would start for the plains and thence northward for home. I speak of the cold, not frosty cold, but "shivers." The last word describes it; the feeling is that of

BUZZARDS AT CLOSE RANGE.

a long shiver. The air is full of bracing energy, but the nerves tremble before it, and wait for the sun which will presently come up and make the country warm and the rocks burning hot. Over to the east on one of the mine buildings a turkey buzzard was sitting alone with wings outstretched to meet the sun. I have often wondered why they do this. An old Mexican once told me that it was to dry their wings after the exposure to the night dews, but then I have seen them do the same thing at all hours of the day, yet it is principally in the morning that they sit with wings partially extended. Evidently the buzzard took himself seriously, but he would allow only a reasonable approach, not near enough to secure a picture. The turkey buzzards are tame if they are not noticed, but point a camera at them, and they are off. Sometimes in a tropical city I have walked past a buzzard without disturbing it, but on stopping to look back at the bird, away the ungainly creature would go, to be transformed the next instant to a soaring creature of grace and power, as it circled about with scarce an effort.

The morning when I was leaving the mountains, only a single buzzard was to be seen, and all the way down to a little town called Carbo none was encountered. There seemed to be a dearth of animal life, though the country was wild. It was the dry season, and everything was parched to a degree which is unknown at the North. Practically we were in a desert; that is, after the mountains had been left behind, and we had begun a long drive over a level, dusty plain where mesquite trees on every hand reminded one of a broad apple orchard. A resemblance in outline only, the form was different, and naturally there was no fruit. It was all dust and burning sun, the light developing to a blinding glare by noon time from which a few straggling cattle sought to hide behind cactus bushes, or stood dejectedly under the semblance of shade cast by the withered mesquite trees. Grass was but a brown suggestion that something has been growing on the plain. What was there here even for the turkey buzzards?

A group of jack rabbits started up, and for a time I took them for deer and was well laughed at. The long drive continued till the town of Carbo was reached and we took shelter under the cool veranda of a Mexican house. In Carbo there were a number of buzzards, taking themselves seriously, but not so tame as I have seen them in larger cities.

After a time a group gathered around a pig pen, sitting on the sides and looking regretfully at the animals who had supplies of food which they were unwilling to share. I determined to try for a photograph of the group and walked toward them cautiously, all the while looking intently at the house opposite as if something was there for which I had the greatest interest. In this way I reached a point quite near the birds, and took a dozen snapshots at them, pointing the camera under my arm, and guessing at the position of the birds. I obtained some remarkable pictures of blue sky and two or three pictures of the birds. I tried to take them facing their way, but at the movement all took to flight and went sailing away in the sunshine, objects of interest and utility of such value to the country that all are forbidden to molest them.

FRANCIS C. NICHOLAS.

Confounded Woodpeckers.

CLARKSDALE, Miss., April 10.—*Editor Forest and Stream:* Recent allusions in FOREST AND STREAM to the ivory-billed woodpecker and its habitat lead to me to doubt which of two species is meant—the ivory-billed or pileated.

These species are or were approximately similar in size and general appearance, but were quite different in habits as well as in habitat. Forty or fifty years ago both species were abundant in Central Mississippi and Louisiana, but when every "freedman" became possessed of a cheap shotgun, these birds fell an easy prey to the dusky nimrods and have been practically exterminated in these regions.

The pileated woodpecker inhabited the uplands and was a noisy bird with his loud laughter-like quacking notes, frequently repeated. He also kept up a great racket in the woods by hammering on dead trees and throwing down large fragments of rotten wood.

The ivory-billed was comparatively a quiet

IN THE FOOTHILLS NEAR CARBO, MEXICO.

bird, uttering a single and rather subdued note. He dwelt in the lowlands, the "deep, dark and gloomy swamps" (Audubon) and cypress brakes. I never saw either species invading the geographical domain of the other.

As to the geographical distribution of the ivory-billed woodpecker, Audubon says: "Common in Texas, Louisiana and along the Mississippi to the Ohio. Rare on the latter to Henderson."

The territorial habitat assigned to the pileated woodpecker by Audubon is "from Texas to the Columbia River and along the Atlantic coast, as well as in the interior, to the fur countries. More abundant in the South; resident everywhere."

COAHOMA.

[We have more than once printed the present distribution of these two large woodpeckers.—EDITOR.]

Otters and Muskrats and Spring.

Packerville, Conn., March 30.—*Editor Forest and Stream:* The story of the otter by Mr. Hardy was very good, as are so many of your natural history articles. They all have the impress of actuality and observation at first hand.

I have never seen an otter alive in the North, and not many in Central America, but had formed opinions of their habits, partly from observation and partly from hearsay, slightly different from those expressed by Mr. Hardy. He tells us of a friend seeing an otter chasing trout in a pool and looking like a shadow, and a moment later appearing at the surface with a trout in his mouth. My opinion had been that the otter catches fish much as hawks most frequently catch quail or poultry by chasing them until they hide in the weeds or grass, then getting them almost without an effort. It may be that fish are sometimes caught in a fair chase by an otter, but I believe far more are caught after the fish has tried to hide in the weeds, mud, under the bank or a stone. Every angler has seen fish in clear water, frightened at his approach, trying to find a place to hide in safety, and of course they would do the same with so great an enemy as an otter after them.

Mr. Hardy's description of an otter's method of crossing large ponds under the ice I have reason for believing not quite accurate. Instead of placing the nose against the under surface of the ice, expelling the devitalized air in a bubble, and then rebreathing it, I feel quite certain the otter discharges his breath while some distance below the ice. The air, robbed of its oxygen, rises to the ice, forming a bubble there, but reoxygenized or vitalized by its passage through the water in small bubbles. Air is about one-fifth oxygen and four-fifths nitrogen, while water consists of oxygen and hydrogen, and devitalized air may be revitalized by passing in small particles through water. A friend told me years ago that on one occasion he saw a muskrat going through this process. He had taken an axe and gone on the ice of a nearby brook to kill suckers by striking the ice above them. While looking carefully for suckers he saw a muskrat at the bottom apparently eating something. He watched and presently the rat turned his nose upward and expelled the air from his lungs in small bubbles, which rose to the ice through two or three feet of water, and formed a large bubble, which the rat came to and rebreathed and proceeded to resume his feeding. He watched him repeat the performance several times, always letting the air rise through the water. I cannot believe that breathing it out at the surface of the water would at once improve it greatly. Surely, it would not to so great an extent as if it came through the water.

I have frequent occasion to pass a small pond where muskrats have a home, and when passing in the evening often see them. In the beginning they were wild and at my approach would dive quickly and disappear. From seeing me so often they gradually grew bolder. I learned, too, that they were less likely to be frightened if I came singing loudly, and kept up my singing while watching them. While they would allow me to pass by without being frightened, they would dive at once when I made a stop the better to observe them closely, but when I came singing and continued my song, they would swim about and lie idly on the water apparently charmed by the noise, which action I do not for a moment attribute to the quality of the singing, nor will any of my friends. On two or three occasions after we became on friendly terms, one of the young ones, possibly to repay me for the music, gave an acrobatic performance which was entirely new to me. After lying on the water quite still for a time, he would begin to sink lower and turn around and around like a dog chasing his tail, gradually sinking lower and lower, and ending the feat wholly under the surface, which seemed greatly agitated. Can any of your readers inform me if this is a common performance of the muskrat, or must we attribute it to the singing?

Bluebirds made their first appearance on the 2d, the very day they did one year ago. I have not seen a robin yet, and they came in large numbers ten days earlier a year ago. Some of my neighbors have seen them, however, and the papers have reported them being seen in all parts of Southern New England during the whole winter. My friend Mr. Coster, who lives twenty miles south, says both robins and bluebirds have brightened the winters for six years for him, while none are ever seen here in winter. I am told they are found in some protected places where cedar trees are plentiful, and it may be a matter of food.

Our game birds have had a good winter and should not have suffered any decimation except from foxes and hawks, of which we have too many for the good of the game. I heard late in January of one man and his son having caught sixty foxes, mostly in traps and snares. The shooting of foxes ahead of dogs is a popular sport in this section, and the lovers of this style of fox hunting have as much contempt for the snarer, as those who ride after hounds have for the shooters. E. P. Robinson.

An Extraordinary Disease of Fowls.

Among the various papers read at the Ithaca meeting of the Society of American Bacteriologists last December was one of especial interest to game breeders and to those who are considering the subject of going into game breeding. Most of the papers read at the time appeal only to the bacteriologist, and to the average reader would be somewhat less comprehensible than so much Greek, Hebrew or Sanscrit.

One of them, however, by Leo. F. Rettger deals with a bacteriological disease present in fowls, and of course likely to be present in other gallinaceous birds.

The bacillus or bacterium of this disease has many points in common with the typhoid bacillus. It is present in the intestine, liver, lung, spleen, kidney, heart and unabsorbed yolk of chicks suffering with the disease. Experiments conducted on a large scale demonstrate that the disease may be transmitted to young chicks under three days old through infected food and drinking water. To the layman the most extraordinary thing about the disease will be the statement that chicks may be infected with it before hatching. These two facts explain the rapid spread of the infection among chicks immediately after hatching.

The author declares that the mother hen is the source of infection in the egg. It has been shown that hens producing infected eggs possess ovaries that are infected with this bacillus called *Bacterium pullorum*. Eggs produced by these hens were found to contain the bacillus in various stages of incubation. A method was devised for identifying the bacillus in fresh eggs from infected flocks, and of eggs so tested the bacillus was found in some and not in others.

It appears thus that the laying hen is a bacillus carrier. From her eggs which contain the bacillus are hatched chicks already infected. These infect other chicks, which at the time of hatching may be normal. The female chicks which grow to maturity carry the infection in their bodies, and when they become mature laying hens, produce infected eggs, thus completing the cycle. Persons who are interested in this subject might write to Charles E. Marshall, Secretary, East Lansing, Mich., in the hope of securing a copy of Dr. Rettger's paper.

Alabama Bird Day.

Montgomery, Ala., April 5.—*Editor Forest and Stream:* May 4 is the anniversary of the birth of John James Audubon, who occupies the pre-eminent station of having been the greatest bird lover and naturalist the world has ever known, hence the State Educational Department has set aside May 4 as a holiday to be observed in all the public schools of the State to be devoted to the study of birds, their economic value to man, and the conspicuous part they play in holding in check the destructive insects that prey upon the vegetable kingdom as well as devouring noxious weed seeds, which, if allowed to grow, would stifle out the crops and make the cultivation of arable lands ten-fold harder than it is with the aid of man's feathered allies.

I believe that we should inculcate into the minds of our boys and girls the value of conservation along all lines, so as to prevent the relentless assaults upon nature's storehouse that in the past has been so shamefully vandalized.

John H. Wallace, Jr., Commissioner.

New Publications.

Alongshore, by Stephen Reynolds. Cloth, 325 pages, illustrated, $1.20 net. New York, the Macmillan Company.

The scene of this book is the 'longshore—"where man and the sea face one another." The characters are typical specimens of that sturdy race who live, move and have their being on the briny deep. What these people have to contend with, what to glory in, how they work and play and what manner of life they live from day to day—these are the things which Mr. Reynolds portrays with wonderful sincerity and unconscious picturesqueness. Of course, the sea with all its varying moods is here, and incidentally much sound information is given in a quaint, amusing manner about the winds, the seasons, the clouds, the tides, the running of fish, the management of sails; in fact, about everything which in any way touches the life of fishermen.

Books Received: "Unexplored Spain," by Abel Chapman and Walter J. Buck; New York, Longmans, Green & Co. "The Trail of a Tenderfoot," by Stephen Chalmers; Outing. "Neighbors Unknown," by Charles G. D. Roberts; Macmillan. "The Fine Art of Fishing," by Samuel G. Camp; Outing.

GAME BAG AND GUN

In the Adirondacks in 1858.

LOCKPORT, N. Y., March 30.—*Editor Forest and Stream:* This all happened longer ago than two-thirds of the readers of this issue of FOREST AND STREAM can remember. At Theresa, N. Y., before daylight on the morning of Aug. 17, 1858, a party of eight climbed into a farm wagon and started on a drive of sixty miles into St. Lawrence county for two weeks' hunting and fishing.

The senior member of the party was Franklin Parker, a prominent business man of Theresa; the others were J. D. Moak, G. W. Cornwell and Dr. N. M. Davison, also of Theresa; W. H. Moak and a Mr. Claudius, of Canandaigua, N. Y.; E. J. Benson, of Syracuse, and myself, then of Utica, N. Y. Mr. Benson had come to Theresa to regain his health after a severe illness and had been there a few weeks when I came to spend my vacation. He had passed much of the time fishing for mascalonge and black bass, with good success, for he was an expert angler, but he wanted to have some shooting and had been told that when I came he would get all the hunting he wanted.

We met for the first time the morning after my arrival, and that afternoon I took him over my old stamping ground for partridges. I do not remember how many birds we got, but think it was seven. The next morning when I called on him to go for ducks he was so lame that he could not get out of bed. When he learned that a party was going to the Adirondacks he wished to go with us. I told him that he could not stand the tramp, but he replied that if he died all we would have to do would be to bury him beside the trail. He went, stood the trip and came back as strong as any one of the party.

Our first day's drive brought us to Canton, fifty miles from Theresa. The next morning after getting a barrel of soda biscuit forwarded from Ogdensburg, we started for Colton. Our objective point was Racket River above South Colton. Here we engaged two guides, William Lalancett and Bill Waffles, with three boats, one of which was on the river while the other two had to be drawn on an ox sled two miles through the woods. I now wonder how we ever got those boats and our provisions through those woods. After loading our baggage and provisions in the boats and eating our dinner, we took to the boats and started up the river. After going three or four miles we came to a portage of more than a mile. While the boats and luggage were being loaded on a wagon, I went with the woman of the place to the potato patch to get half a bushel of potatoes. I offered to do the digging, but she insisted on doing it, saying that she was the smartest woman in the whole town. I asked if she was the only one in the town. She said: "Yes." This was the last house we saw until we returned two weeks later.

We made our first camp some four or five miles above this portage. While we were making camp and getting our supper, one of the guides took Benson, the invalid, in his boat to a small brook above the camp. They came back after dark with a nice mess of trout for breakfast. About 9 o'clock they started out again with gun and jacklight and came in at 12 o'clock with a fine deer, a doe. At that time there was no law against hounding and jack light deer hunting. While we were at that camp a party of four men came down the river, going out. They had been in two weeks and had killed thirty-two deer. They said they "could have killed twice as many if the nights had not been moonlight." The second morning we were at this camp

A NEW BRUNSWICK LAKE.
Photograph by S. W. Lippincott.

Benson caught a 2½-pound brook trout and found a dead trout that would have weighed over three pounds.

After five days at this camp we moved ten or more miles up the river to what was called "Big Moose Head," our ideal camping ground.

Our second night here, guide Lalancett took four of the party in the large boat and started down the river, when about a mile below camp we left the Canandaigua boys on a point to watch for deer coming in to feed. After an hour or more drifting down the stream the boat suddenly stopped and the guide asked if we heard anything. A moment later we heard what I thought was an engine whistle on the Potsdam Railroad. The guide laughed and said it was wolves we heard, and that there was no use of going any further that night. When we got to the boys on the point they said they had heard wolves on the opposite side of the river, and when we reached camp the others reported that a gang of wolves had been hanging around camp for some time, and that they fired their guns in their direction, when the wolves left. We heard nothing of them again while in the woods. This was the only time I have ever heard the howling of wolves, although during my boyhood days there were a few about Theresa.

The next night W. H. Moak, Mr. Claudius and guide Waffles went to a small pond two miles from camp to watch for deer and Claudius got a yearling buck. As they were about to start back to camp, Claudius saw three animals playing in the water on the beach. He shot at them, killing one and wounding another. Leaving his gun he walked out in the water to get the one he had killed. As he neared it he began to sink in quicksand and the first thing he knew he was in up to his waist. The guide warned him to keep quiet. There were plenty of small dead spruce trees on the beach. Waffles took one of them, and feeling his way out, gave one end of the tree to Claudius, who by this time had sunk nearly up to his armpits. After getting hold of the tree, he reached for his game and threw it toward the guide who, with the help of Moak, pulled their friend out. The animal proved to be an otter. This was nearest to a tragedy of any event of the trip. Later we had a real farce.

On Saturday we returned to our former camp. Early Sunday morning the two guides, my brother, Dr. Davison, and J. D. Moak, went out to gather blackberries, which were very abundant. The getting of breakfast fell to me, and I thought wheat pancakes would be good for a change. Having been instructed before starting on the trip as to what ingredients I should use, I began to make the batter. The cakes were to be baked in the frying-pan and all went well until I came to the turning over point, when they refused to turn. After using about half of the batter without accomplishing a turn, the berry party returned, and guide Lalancett, seeing my predicament, came to my assistance by asking if I had used warm water in making the batter, and when I said, "Of course," he explained "that was just what was the matter." He then made another batch, using cold water, and began to bake them, and when it came to the turning point, he simply gave the cake a toss and it turned over and came down in the frying-pan. We had all the flapjacks with maple sugar we wanted with our venison steak and coffee.

I did not throw away the hot water batter that was left, as we were to have a venison stew for dinner at 3 o'clock. I thickened the batter and put it on top of the venison and we had delicious pot pie. You will remember that I mentioned our getting a barrel of soda biscuit and may wonder what we did with them. We also had thirty pounds of butter. A combination of biscuit and butter is a good thing to take between meals in the woods. For dessert

after the venison pot pie we made pies of the soda biscuit by warming and softening them and putting the blackberries and maple sugar between them. Just try it when you are in the woods. After our Sunday dinner we all started out for a tramp, going to the highest point, about 500 feet, where we had a good view of the Blue Mountains in Hamilton county.

Monday and Tuesday were devoted to fishing by Benson with good results. The still-hunters had an unsuccessful tramp, while the partridge hunters brought in a few broilers for breakfast. Both nights were given over to jacklight hunting; Monday night without success. Tuesday night the senior and junior members, Mr. Parker and Dr. Davison, went with Lalancett. An hour passed and then Parker's gun broke the silence. The doctor asked him what he had shot at. His reply was, "The eyes of a deer." The doctor said, "I think fireflies were what you saw." They could find no sign of deer. Another hour passed and the doctor's gun belched forth its contents of buckshot. Parker asked, "What did you shoot at?" The doctor replied, "A buck deer." Parker said, "You saw only fireflies," but they found a two-year-old buck dead where he stood when shot.

Wednesday morning we packed the deer in the empty cracker barrel, and with what remained of our stock of provisions and baggage, started for civilization. When we came to the rapids where we made the long portage going up, only two men remained in each boat. At the end of the rapids the boats had to wait for the party of four who had walked over the portage. Below the rapids the guides pointed to two graves where a father and son were buried who had been drowned while running the rapids. We reached the landing place about 11 o'clock, and while the guides went for teams, our party had their last dinner on Racket River.

After settling with our guides and for the keep of our team, we were soon on our way toward home, and but for an incident that happened within an hour we would have been in Theresa on Thursday evening.

The incident—or accident—occurred in front of a house in which the postoffice of South Colton was located. An old man named Hunt, a patron of the postoffice, had left his horse and wagon in the road without hitching the horse, and had gone to the house, about ten rods from the road. The horse commenced feeding on the grass, and as the most palatable was in the corner of the snake rail fence, the animal, to get to the best, had stepped over a small log with his forefeet, which brought the rear wheels of the wagon outside of the wagon tracks of the road, and there was plenty of room for our team to pass. Just as our rear wheels came opposite the other wagon, however, the horse stepped back over the log and the rear off wheel caught into our rear right wheel, and before I could warn Mr. Parker, our driver, the empty wagon was overturned and the horse thrown down. I jumped out of our wagon and got the horse by the head to keep it quiet, while the other boys were freeing it from the overturned wagon. Just as we had got the horse up, the owner came on the scene swearing that he would make us pay well for breaking his wagon. Only one thill was broken.

Mr. Parker was a good Episcopalian and did not like to hear the oaths that came from a man that was over seventy years old, and he ordered us to get back in the wagon, and we drove on our way. We had passed through the village of Colton and were well on the way to Canton, where we expected to spend the night, when we were overtaken by two men in a buggy. As they came up we noticed that one of the men was our old friend, Mr. Hunt. The other man informed us that he was a constable and had a warrant for the driver of our team, unless he settled with his companion for the damage done to his wagon. When we learned that he wanted five dollars damages, which was more than the old thing was worth, we refused to pay, and Mr. Parker told the constable that we would go back to Colton. The constable directed Mr. Parker to get in the buggy with him and told Mr. Hunt that he would have to get out and walk the three miles back to Colton. We invited Mr. Hunt to ride with us, but he would not accept the offer.

When we reached Colton, the inhabitants were all excited over the matter. As we expected to remain over night, we began to look for a place to pitch our tent, when a prominent merchant pointed to a vacant lot near a church on a hill, saying the lot belonged to him, and that we could use it as long as we wished. He also said that the adjoining garden was his, and that we should help ourselves to whatever was in it. When Mr. Hunt made his appearance, the citizens told him that they would pay for the repairing of the wagon if he would withdraw the case. He said that he would if we would pay the expenses so far. This offer we refused and the citizens offered to do so, to which we objected. As Mr. Benson and I had done most of the talking, the complainant seemed to think that we were New York lawyers and began to weaken and finally offered to settle if we would pay half of constable fees of $1.25. This we also refused, but as the citizens did not wish the matter to go any further, we finally concluded to pay the large sum of sixty-three cents, and thus ended the farce already referred to.

By this time the other boys had put up our tent, and we had our supper with cucumbers and tomatoes from the garden of our friend the merchant. In the evening the merchant, the justice of the peace who issued the warrant and other residents came to call on us and we had games of cards and told camp fireside stories into the wee small hours. We got but little sleep after our friends left, for as we had sixty miles to drive that day, we were on our way long before the sun was up and reached Theresa about midnight.

Mr. Benson enjoyed the trip so well that in the following November, in company with H. H. Thompson, of Passaic, N. J., he spent a week or more on the same part of Racket River, deer hunting. I do not know with what success.

All of the first party except myself have passed over the divide. Although I corresponded with Mr. Benson for a number of years, I never met him again after leaving him at Theresa a week after our return from the woods. He died in Binghamton, N. Y., where he was a successful merchant, and known as an enthusiastic angler.

J. L. DAVISON.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Jews and Birds.

Editorial in Die Wahrheit (The Truth), New York, April 3, 1911.

DR. WILLIAM T. HORNADAY, director of the New York Zoological Park, has been kind enough to address to us a marked copy of a journal entitled "Wild Life Call." He desired us to notice an article, "A Call to the Press."

Dr. Hornaday tells us in this article that a bill is now pending in the Legislature at Albany, urging the prohibition of the sale of game birds.

Let us explain to you what this means. There are wild birds that men eat, and those birds are being shot. Some people go on a hunt for pleasure; others do it for business. The man going on a hunt for pleasure shoots as many birds as his family needs, while the other man shoots without limit, since he sells those birds. Should, however, the sale of these birds be prohibited, they would not be destroyed.

What would be the resultant benefit of such birds?

First of all they would devour the harmful worms and insects which destroy the farmer's crops, fruit, gardens and vegetables; and besides, the visitors to the fields and woods would have a chance to see the beautiful birds and hear their sweet songs.

We sympathize with Dr. Hornaday and wish that he may succeed in his noble struggle. But we, as representatives of the Jewish press, can offer him neither help nor harm. The reason is quite obvious. The Jews have very few hunters, and those that are hunters are surely not pot-hunters. Moreover, we know that the great majority of Jews do not buy any wild birds that are shot, out of religious scruples.

What did interest us, however, in Dr. Hornaday's journal is the rather infamous "Milliner's Bill." Let us explain.

There is nothing more beautiful, nothing more impressive in the world, than to observe the multi-colored birds in the woods and listen to their beautiful music. The flesh of these song birds or pretty colored birds is not edible, but their feathers are used to ornament the hats of ladies.

Last year a bill was passed in Albany prohibiting the sale of the plumage of such birds. This law will be in force the coming month of July, and except the feathers of certain wild (game) birds, which the law allows to be shot, the ladies will not be allowed to ornament their heads with the tiny bodies of these songsters.

We frankly admit that we are very much delighted at the passage of such a law, but now we are informed by Mr. Hornaday's journal that some people are planning to destroy this praiseworthy law.

Our interest becomes intensified when we learn that almost all those who take part in the repeal of this law are Jews. Prominent among them is Assemblyman A. J. Levy, of New York, introducing a new bill containing such a "trick" as will make void the law, which is yet to come in force. We are astonished to hear that those behind Levy's bill are mostly Jews. Here are the names of the biggest millinery firms constituting the National Millinery Association: P. Adelson Bros., P. Meyer Co., Lehman Bros., Selz & Levin, J. Engel Co., Lelive Kornfield, G. R. Fisk Co., Klapp & Filton.

Out of these eight big firms six are absolutely Jewish, while the other two may be doubtful.

There is no doubt that for these firms the law would mean an obstruction in their business. They may even lose money, because they bought stocks of birds that would now become worthless.

But all this cannot satisfy the general demand to stop murdering the pretty forest songsters.

Surprising has been the destruction of wild life in this country. Not more than fifty years ago the number of passenger pigeons in this land was enormous. In our neighboring State Connecticut, says an author, the winged immigrants arrived. They had been flying in long rows, covering the skies for two days in succession. They were divided in three flocks. Every flock contained more pigeons than there were human beings on earth; and now? For over two years an award of five thousand dollars has been offered to the one who will locate a nest of these pigeons. So far no one has won the prize. The passenger pigeons have actually been rooted out by the professional hunters.

Our forests still have beautifully colored and charming songsters, but should present conditions continue, then within ten or fifteen years they all will be destroyed.

Let us Jews not participate in this tragedy. We Jews are merciful children of the Merciful. We were the first in the world to preach about mercy to animals. In our Temple there were no other images except those of Cheruvim—birds. Let us help protect these charming forest enchanters.

As Jews, we urge Assemblyman Levy to leave this bill for others, and let himself, as a Jew, help defeat such a bill that is neither Jewish, nor humane, nor just.

Let us hope that the Jewish milliners will finally withdraw this bill, and that the Jewish women will be the first truly civilized, and will refuse as head wear the little dead bodies of the pretty forest songsters.

Minnesota Birds.

Minneapolis, Minn., April 3.—*Editor Forest and Stream:* During the last week the weather has been cold with more or less snow. This has given the ground a good wetting which was badly needed. Several of our summer birds have arrived. The bluebird came March 12, the robin on the 21st, while the crow arrived on the 1st of March. The tree sparrows and the juncos are here in numbers at the present on their journey to their more northern summer home. A few fox sparrows were seen on the 26th.

I am glad to see that the bill to allow spring shooting in New York was defeated. It is a crying shame that men will make an effort to pass such bills.

The passing of a law in Iowa so as to allow boys to hunt without a license is sad. What every State needs is a law to prohibit boys from carrying firearms. The sight of a flock of boys roaming the woods carrying .22 caliber rifles, shooting every animal that comes within their range, is certainly sorrowful to see.

How long are the people going to tolerate this? The boy with the .22 caliber is a more potent factor in the destruction of our smaller birds and mammals than all other causes combined.

The majority of the people are indifferent to the protection of wild life, although many of our wild animals play an important part in our daily life, even in the bread and butter that we eat. For instance, the value that we receive from insect and weed-destroying birds and mammals cannot be overestimated. Let us all do our best to preserve our birds and mammals.

J. W. Franzen.

Big Wolves in California?

Through the kindness of John B. Babcock, Chief Deputy of the California Fish and Game Commission, we have received notice of the reported killing of deer in California by wolves hunting in packs over the snow. This is sufficiently startling, but, while requiring further investigation, the report comes through District Game Warden A. D. Ferguson, and one of his deputies, W. G. Scott, in a report dated Soulsbyville to Tuolumne county, California.

Deputy Scott had been on patrol for about a month, following along the snow line on the mountains. The snow was melting fast and the deer were moving back higher into the hills as it receded. He is quoted as saying about the end of March: "Last week I received word from a trapper who is trapping some twenty-five miles above here to come up and visit his camp. I went there, and when I arrived he told me that what he called wolves were traveling in packs and were killing deer by the dozen. I could hardly credit this, but he took me out and I saw them running deer myself, and during half a day's ride we saw the remains of fifteen carcasses of deer that had been killed by them.

"While I was there he caught one of these animals which must have weighed over eighty pounds. It was gray on the back and along the sides, with tan colored facing on the side of the head and under the belly, and looked to me like a cross between a timber wolf and a coyote.

"He tells me that he has caught twenty of them this winter and has shipped their pelts east."

District Game Warden Ferguson comments on the above by referring to the rarity of wolves in California. He is speaking of the large wolves commonly called gray, timber or buffalo wolves, an animal believed to be exceedingly rare or non-existent in the State. In the high mountains to the north of California and especially in British Columbia and perhaps Washington, wolves in the mountains are not very scarce, but in California they are very rare, so much so that many people believe that they are extinct. On the other hand coyotes are very abundant.

The statements made here are very extraordinary, yet the men who make them are thoroughly reliable and believe the statements made are true. If it were not for their character the story might receive little credence.

Chief Deputy Babcock has given instructions to have the matter looked up as thoroughly as possible, and we may hope that before long something more will be known on the matter.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

California Advancing.

San Francisco, Cal., April 8.—*Editor Forest and Stream:* The California Legislature, recently in session at Sacramento, has framed many new laws of special interest to sportsmen, and it is believed that, taken as a whole, the changes will be for the best. One of the most important of these measures provides for dividing the State into game districts—the result of years of effort on the part of sportsmen and their organizations. The great climatic differences in the various sections of the State made it impossible to establish just game laws for the State as a whole, for in some parts the breeding season is from a month to six weeks later than in other sections. The framers of this law provided only for the division of the State into six game districts, all other matters such as seasons, bag limits, etc., having been left to those framing the so-called blanket bill and the trout bill. The following list of counties will show the manner in which the State has been divided into game districts:

First—Del Norte, Siskiyou, Modoc, Lassen, Shasta, Trinity, Humboldt, Tehama. Second—Mendocino, Glenn, Colusa, Lake, Sonoma, Napa, Yolo, Solano, Marin. Third—Plumas, Butte, Sierra, Yuba, Sutter, Nevada, Placer, El Dorado, Sacramento, Amador, Alpine, Calaveras, Tuolumne, Mariposo, Mono. Fourth—San Joaquin, Stanislaus, Merced, Madero, Fresno, Kings, Tulare, Kern. Fifth—Contra Costa, Alameda, San Francisco, San Mateo, Santa Clara, Santa Cruz, San Benito, Monterey, San Louis Obispo. Sixth—Santa Barbara, Ventura, Los Angeles, Orange, San Diego, Imperial, Riverside, San Bernardino and Inyo.

Prominent among the changes to be brought about by the blanket bill are changes in the seasons for killing ducks, doves, quail, and the withdrawal of protection from sage hens and grouse. Restrictions have been placed on the shooting of cottontail rabbits. The season for ducks will open Oct. 15 instead of Oct. 1, except in districts 1 and 6, where the old date will be in force. The season will extend to the first of March. The reason for making the change in the opening date is that the weather is often warm early in October and thousands of ducks have been slaughtered and allowed to spoil during the open days in the past.

The quail season, which formerly opened on October 1, will not commence until two weeks later, and in all districts with the exception of No. 6 the closing date will be Feb. 15. In Southern California, where quail are getting scarce, the closing date will be Nov. 15. No change has been made in the daily bag limit of ducks or quail, with the exception of mountain quail, only ten of which may be killed in one day. However, through the efforts of sportsmen a weekly limit of 50 has been set on ducks, thus making it difficult for the market hunters to operate at a profit.

For the first time in the history of the game laws of the State a close season and a bag limit have been placed on brush and cottontail rabbits, the closed season being from Feb. 1 to July 31, and the bag limit 15.

The open season on plover, curlew and snipe will be Nov. 15—April 30; limit, 20 a day. Rail are to be protected until Nov. 1, 1912, and following that date are to be shot only during

November. Protection has been withdrawn from sage hens and mountain quail, and a limit of four a day has been set on the former.

The open season for doves will extend from July 15 to Oct. 1, except in districts No. 4 and No. 6, where the season will be from Sept. 1 to Nov. 1, and in districts No. 2 and No. 5, where the birds may be shot only between Aug. 1 and Oct. 15. The open season for deer will be from Aug. 15 to Nov. 1, except in districts No. 2, No. 4 and No. 5, where it will extend from July 1 to Aug. 31, and in No. 6, where it will be from Aug. 15 to Sept. 15.

GOLDEN GATE.

SAN FRANCISCO, Cal., April 7.—*Editor Forest and Stream:* Practically the only hunting that is now enjoyed in California is goose shooting, which is now at its best. In the vicinity of Biggs are to be found countless thousands of geese, and they are doing heavy damage to the growing crops of grain. The large grain growers are compelled to employ herders to keep the geese from utterly destroying their crops, and these farmers welcome the sportsmen who visit their ranches. In some cases they offer to supply ammunition to those who will come and hunt in their grain fields. Food is very plentiful at the present time, and the geese now being secured are very fat. Many weigh ten pounds and some are even heavier. The market hunters are now busy in that section, duck shooting having been closed to them for the season. The Canada geese are now migrating to the northern breeding grounds, and in a short time there will be none of these to be seen. Gray and white geese remain longer, but within a few weeks most of these will be on their way north. A number of professional guides have established themselves at Biggs and Rio Vista and are equipped to take hunters to the fields and can insure a satisfactory bag. Some of them use live decoys, having them confined in invisible wire net cages where they seem content to feed and call their friends who are at liberty. The gunners are concealed in pits flanked by tall grass and behind low shrubbery.

A. P. B.

Dead Goose Struck the Hunter.

A QUEER accident befell Thomas Ajax, tailor and expert hunter of wild geese. The morning was ideal for the sport, with a stiff breeze blowing from the north. Ajax and his hunting companion got to the grounds near Willows early in the morning and placed their decoys and hid in a hole out of sight of the flocks.

In a short time the birds began to arrive from every direction and shooting was brisk. When a particularly large flock came over Ajax arose from his crouching position and fired at the edge of the flock coming from the north, then turned in another direction and fired, wheeling quickly to see if the first shot had been effective. As he turned a particularly large goose which had been killed by the first shot struck him squarely in the face, rendering him unconscious. His face was badly bruised and both eyes blackened by the terrific force of the blow. His appearance would indicate that his face had come in contact with the hoofs of a mule.—Willows Journal.

Dogs at Large.

BOSTON, Mass., April 6.—*Editor Forest and Stream:* I beg to submit to you House Bill No. 287, relative to dogs hunting at large. The hearing on same was held before the committee on fisheries and game recently. I submit the bill as follows:

Section 1. It shall be unlawful for any owner, lessee or custodian of any dog to permit such dog to run at large, with the knowledge and consent of the owner, in woods or fields inhabited by game birds or quadrupeds at any time, except only between the first day of October and the last day of February, both dates inclusive: provided, however, that at all other times during the year, such dog or dogs may be allowed to run when the owner, lessee or custodian is with such dog or dogs.

If a dog has twice been found running at large and hunting within the limits prescribed in this section, and if the owner or keeper of the dog has so been notified on each occasion by the commissioners on fisheries and game, it shall be a presumption of law, if the same dog is thereafter found running at large, that such running was with the knowledge and consent of the said owner or keeper, unless the contrary is shown by evidence.

It shall be unlawful for any person or persons to molest, harass or annoy any game bird or quadruped by breaking, training, or practicing any dog upon any game bird or quadruped during the respective seasons in which the game bird or quadruped are protected by law: provided, however, that it shall be lawful for any person or persons to train or practice dogs upon game birds for fifteen days next preceding the opening of the ruffed grouse, quail and woodcock season in each year; provided, further, that it shall be unlawful for any such person to have in his possession any firearms, or other device for capturing, killing, or injuring birds or quadrupeds, while so engaged in training and practicing such dogs; and provided that at no time shall any dog be allowed to run rabbits at night.

Section 2. Whoever violates the provisions of this act shall be punished by a fine of not more than twenty-five dollars.

The bill, as drawn, could not be fairer to all concerned. It imposes no onerous conditions on the high-bred class of dogs, striving only to eliminate from our covers the habitual hunting dog that makes it a custom to hunt in the night, especially during the months of May, June and July, when the young rabbits fall an easy prey to him.

A large delegation of Worcester county fox hunters appeared before the committee and vigorously opposed the passage of this bill, claiming that it would be onerous for them to keep their foxhounds restrained, that it would be cruelty to the dogs, etc., disregarding the fact that the bill would allow them to take their dogs themselves or have their keepers take them and try them out on the young foxes. Anything, however, that would in the remotest degree curtail the desires of the fox hunting contingent meets with the most vigorous and strenuous opposition in this State.

One ex-Congressman was very loud in his protestations against the bill; talked about the extreme cruelty of restraining the dogs, etc. He evidently overlooked the fact that these self-hunting dogs, running through our covers, chasing rabbits and foxes during the nesting season, disturb hundreds of our quail and partridges and other ground-nesting birds, driving them off their nests in the middle of the night. In practically all cases the mother bird does not come back to her nest until the early dawn, leaving the eggs to be chilled, or if the young birds are out and not over a week old, they perish from the dampness and cold of the night air. In this way thousands of our bird life are destroyed, and this might be prevented by a proper restraint of the self-hunting, prowling, marauding dog.

Not only is such a dog destructive to our bird life, but he is very annoying to the farmer at this period of the year, when he is working hard in the fields and wishes, when night comes, to be allowed to rest, but is not permitted to do so on account of the noise of these unrestrained dogs. I am absolutely positive that these dogs running wild at night have been the cause of many of our best covers being posted.

The fox hunter can take his dogs into the woods Oct. 1 and hunt continuously until March 1, giving him six months to indulge in his favorite sport, and for which it is not necessary for him to pay the State one cent for license. The bird hunter, however, has the privilege of enjoying his particular sport from the 15th day of October to the 15th day of November, and for so doing he contributed some $40,000 last year to the State Treasury, and yet a bill that would preserve our quail and partridge during the nesting season is ridiculed.

Why such fair legislation as this bill represents should be turned down by people who are supposed to be fair-minded is beyond the ken of the writer, who has owned hunting dogs for years. It is a well known fact that a dog left without restraint will soon become unruly and wild, and so far as I have been able to read, there is nothing in this bill that would be onerous or unreasonable to the sportsman dog owner who should be willing to help along a good cause and prevent the unwarranted destruction of our bird life which is now allowed. Without a bill of this kind it will still go on. If it is illegal for a man to hunt and pursue game at certain times of the year, there should be a law that would reach this class of dogs that habitually disturb and destroy game, especially in the spring of the year.

GEORGE B. CLARK.

Weight Estimates.

PITTSBURG, Pa., April 15.—*Editor Forest and Stream:* I have often thought that a rule might be figured out so as to obtain the approximate weight of all large game which is generally killed under circumstances which prevent weighing. Extravagant estimates are made as to its size for this and other reasons.

There are formulas for ascertaining the weight of trout and these could be obtained for salmon, bass, mascalonge and other fish. The following is a rule which gives very nearly the weight of cattle.

Pass a tape around the animal close behind the shoulders, then measure the length in feet from fore part of shoulder blade to end of backbone at tail, vertical with buttock. Multiply the square of the girth in feet by five times the length, subtract one-third and the remainder will be the weight in pounds.

Suppose the girth to be 5 feet and length 4; $5^2 = 25$ and $4 \times 5 = 20$, $20 \times 25 = 500 - 1/3 = 434$ pounds, the weight of the animal. If lean, subtract 5 per cent.; if fat, add 5 per cent. Thus a formula could be worked out for deer, bear, moose and elk which would be approximately correct and far more reliable than guessing. Lions, tigers, elephants and the like are also subject to a like formula. A tape measure is all that is required and a little experiment.

W. F. WISE.

The State Objects.

Raleigh, N. C., April 15.—*Editor Forest and Stream:* The Legislature has taken from the Audubon Society all authority to give permits for the shipment of live game out of North Carolina for any purposes. This action was recommended in the last report of the State Audubon Society. A faise impression got currency that the society was allowing thousands of quail to be taken out of the State for breeding purposes.

A number of the new game laws shorten the open season. Montgomery county has forbidden all shooting for two years. A number of counties have cut the open season down to three months, others to a month.

The State Board of Education has sold a lake covering fifty thousand acres in Hyde county, Lake Mattamuskeet never contained fish of value, but the sale has had the effect of causing the enactment of a law forbidding the sale of any of the lakes in the counties of Bladen, Columbus and Cumberland, where there are fine bodies of water, White, Singletary, Black and Waccamaw. These lakes are clear and contain bass, perch bream, etc. There are some lakes near Havelock, but they are privately owned, having been sold by the State not long after the Civil War, and they are shallow, containing only the commoner varieties of fish.

There has been a great deal of complaint of hounds and bird dogs running at large in the bird-nesting season, and these animals have been heavy destroyers of eggs. Rockingham county, which has taken action in the matter, has secured a law forbidding dogs being at large at any time during the nesting season. Many sportsmen from the North visit that county.

In the course of rambles near Raleigh during the past three weeks I have found a number of quail and flushed a large covey. These birds were more abundant during the past season than in several years past. Very few people have an idea how abundant quail used to be in this section. One of Raleigh's best known sportsmen, Col. Charles E. Johnson, has told me that within a few hundred yards of a chimney of a burned cabin standing in a field of broom sedge, he is sure he had killed more than 500 quail. One afternoon, twenty years ago, he rode out that way, leaving the city at 3 o'clock, was back in about four hours and bagged twenty-eight quail and a wild turkey. I have hunted with a friend who in a day killed sixty-eight birds, out of about eighty shots, thrice getting two at a shot. In those days quail sold for five cents apiece, while now they are more than three times that price.

In a number of States the sale of quail is not allowed, but in parts of Texas they may be had at the restaurants, are ordered as "owls" and are so charged on the bill. In this State the restaurants are heavy buyers and the birds are served on toast at twenty to forty cents.

Chatham county is the headquarters of the rabbits. Siler City is the center of the rabbit business, with quail as a side line. Many a farmers' outfit consists of a hundred box traps, and they are 'tended by him and his children. The result is an enormous catch of rabbits. At Siler City a careful record is kept of the shipments. The figures for the season which ended March 31 show that there were shipped by railway 16,454 rabbits; by wagons, 6,534; consumed locally, outside of the farms, 2,250. Quail shipped during the season were 6,630. Rabbits are generally sold skinned and a carload of rabbit skins has been shipped at a time. Woe to the tenderfoot quail hunter who goes there from another section and starts shooting rabbits. If he keeps it up all day, he will have a wagon load, so the rule is when you are quail shooting to pay no attention to anything on four feet smaller than a deer.

Unquestionably the shooting in North Carolina was better during the season which ended March 31 than in several years past. All kinds of hunting was done, and quail were extremely plentiful over a wide area. Some counties have a very short open season, and this is helping. In some, as for example Wake, it is forbidden to be abroad with dog or gun between March and November, and this has certainly had a very happy effect. The number of deer and bear killed during the season has been above the average. 'Possum hunters have had a glorious time, and one of them here says he bagged 236, getting nine one night.

The number of sportsmen from the North has been as large as ever, and they seem to have been very well treated and to be pleased with their success. The snipe shooting was fair this spring. There is no fall shooting of snipe in this State. Woodcock were not plentiful and no large bags are reported. Squirrels and rabbits have been more abundant than in a long time. The farmers themselves are doing a great part in protecting game, and the rural high schools have carried into the country districts a deeper love for birds and for all of our good friends in fur and feather, and have taught many people to know which are the "sheep" and which are the "goats." This after all is the best sort of education. Fred A. Olds.

Madame Bernhardt and the 'Gator.

New Orleans, La., April 14.—*Editor Forest and Stream:* During the recent engagement of Madame Sarah Bernhardt, in New Orleans, a sensational story was written by the actress' press agent describing the capture by her of a seven-foot alligator in a lagoon a short distance from Chef Menteur. The story was read with interest and every one thought it remarkable that a woman not accustomed to roughing it in the swamps and woods of Louisiana could meet with such good luck. Unfortunately, the story was not true, but was written for advertising purposes. The manager of Bernhardt arranged with some trappers, fishermen and hunters near Chef Menteur to capture a large alligator and take it to a lagoon and mark the place. On the day appointed, Madame Bernhardt and her troupe took automobiles, went to the Chef, then to the lagoon, and securing a small rowboat, went over to where the big alligator should have been, but alas, the saurian had burrowed into the mud several feet, and it was impossible to pry him out with fence rails. Madame Bernhardt had to return to the city without the big alligator, but she paid the fishermen for their trouble and gave directions for them to capture the saurian and ship him to her villa in France. This was done on the following day. The celebrated actress did not fire at a single alligator, but she did fish, without much success.

The State Game Commission has received reports from several farmers in different portions of the State to the effect that they are meeting with success in raising Chinese pheasants. Some months ago the commission distributed several dozen pheasant eggs among different citizens as an experiment to be placed under common chicken hens and the young pheasants to be raised with poultry. When the young pheasants become sufficiently numerous and advanced in age, scores of them will be turned loose in the woods with the hope that they will in a few years be plentiful in Louisiana. The last Legislature passed a law protecting pheasants for five years. It is believed that the climatic conditions in the greater part of Louisiana are favorable to the raising of pheasants, and when they become numerous they will afford entertaining sport for the hunters. Mountain Lion Catching.

An account of mountain lion catching in the Rockies, which is published in a Libby, Mont., paper is vouched for by H. G. Wise, of Auburn, N. Y.

Because of the name lion, the cougar is regarded by most people as a ferocious and very dangerous animal, though persons who have had much experience with the big cat are well aware that the average mountain lion is by no means a dangerous beast and will not fight if there is a possible chance for him to avoid it.

C. E. Ordish has lion dogs trained to follow only mountain lions and bears. This is what the Libby, Mont., paper has to say of his feat:

"Because he had forgotten his climbers, C. E. Ordish, a Montana lion hunter, had to walk back five miles through the snow to Libby after them before he could climb a tree, rope and capture an eight-foot lion which his dogs had tracked five miles.

"When word was received at Libby that fresh lion tracks had been found near Troy, C. E. Ordish and Woody Williams left Libby and crossed on the ice above Kootenai Falls, where Mr. Ordish put his two dogs on the trail one morning about 9 o'clock. He followed the dogs for four miles to where the lion had killed and partly eaten a deer, covering the remaining portion with snow. Within a hundred yards of this place the dogs started and treed the animal. When the hunters reached the tree, Mr. Ordish found that he had forgotten his climbers. Leaving his faithful dogs to guard the game, he walked five miles to Libby and returned with A. G. Beager, Fred Bockman and Dr. Auld, who brought his kodak.

"Mr. Ordish climbed the tree, roped the lion, tied its legs together and dropped the end of the rope to the ground. It was brought to earth, where a collar and chain was put around its neck and the trio started for the sleigh, one of the men holding the animal by the chain and collar, another by the hind feet and the third man held the rope around the body.

"A cage was made when they reached Libby and the lion is now on exhibition.

"The animal, which is a splendid female specimen, will be shipped to the Kansas City Zoological Arena company. Mr. Ordish has captured sixteen lions alive thus far and has shipped fifteen to A. W. Brownlee at St. Paul, and has a standing order for all that he may capture."

The Use of Game.

Albany, Ore., April 5.—*Editor Forest and Stream:* I am interested so far as this State is concerned only in the question of beaver and elk.

I am opposed to the protection of beaver in this State for the reason that great damage has resulted to the farmer and stock men of Oregon by these—I might say—pests. The damage far exceeds the benefit derived from the skins. In Oregon elk should be protected for twenty years. They are very scarce. The idea of domesticating these animals does not appeal to me as practicable, for the reason that when they are domesticated they become like the cow—lazy and of no interest to the sportsman.

These are the ideas I have of the situation in Oregon. J. W. Baker.

New York City, April 15.—*Editor Forest and Stream:* My opinion, gradually formed, seems at the present moment to be fairly well fixed. It is my belief that game should be raised for the market by individuals or corporations so disposed, and that such game should be sold freely, as it is in other parts of the world. It seems also desirable to have game sent to market from localities where protection has allowed a great increase.

Having stated these two points I would qualify them by saying that the time is not yet ripe for any such disposition of game, and our legislation in various States is not adapted to the plan. I seem to feel that we must shut down the market absolutely in every State for every sort of game for a certain period of time, wiping out at one stroke the mesh of legislation with its loopholes occupying larger space than the thread. We can then begin all over again, upon an entirely new basis, which will allow game to be again sent to market for public consumption. Keeping game out of the market has probably been a necessary step in the evolution of the subject, and requisite before we could take the next step in advance, that of allowing the sale of certain kinds of game under proper restrictions. Close seasons for a period of years have been worse than useless in some instances which have come under my observation for two different reasons.

When an area has been protected for a term of years, the balance of nature is maintained by an increase in the predatory birds and animals which live upon such game. When, at the end of a certain number of years, the area is open again to sportsmen, so many go to that particular point that the balance of nature is very much disturbed. A large proportion of the game is killed off, leaving the vermin out of proportion, and the large proportion of vermin then proceeds to wipe out the small stock left by the excess killing of sportsmen. Keeping game out of the market is only partly successful, and does not comprehend the whole question, which must always include attention to the increase of predatory birds and animals.

It is probable that in the end we shall follow in America the plan which has been adopted in older countries, of making a business of raising game, which will be sold freely in the market under proper restrictions.

Robert T. Morris.

Game in the City Streets.

Lockport, N. Y., April 11.—*Editor Forest and Stream:* This morning Maurice Blumenthal, civil engineer, engaged on the barge canal here, brought to me a Wilson snipe that he found under an electric light. It had probably flown against the light during the night. I have sent it to the taxidermist to be mounted. A moment after I had dropped the package in the postoffice, as I was leaving the building, a cottontail rabbit came across Main street and passed within ten feet of me on the cement walk. It did not seem to be frightened. As it came opposite me it turned and crossed Elm street, took the cement walk until it met two boys who tried to catch it, and then took to the pavement until they passed from sight. J. L. Davison.

A Day With the Trout.

The startling ring of the alarm clock caused me to reach peevishly forth in the inky blackness, and having at last found the offending instrument, cram it under the pillow until the whirring mechanism had finally run itself out. A look outside revealed the faintest glow just perceptible above the eastern horizon. The lamp lighted, I was soon clothed in fishing togs —and optimistic hopes.

Breakfast was finished and the inevitable lunch, thoughtfully provided the night before, crowded into the capacious rear pocket of the canvas coat as real daylight dawned. Gathering up my paraphernalia, I opened the door quietly and strode forth into the anticipatory atmosphere of that day among days—the opening day for trout.

What mattered it if the top came from the can of worms and my pocket became a miniature garden bed; enough that I was at last on the trail to the brook. Longingly I had watched its rise and fall for the past few weeks; with impatience I had checked off each day on the calendar in an effort to speed the time toward this auspicious morn.

The scent of the arbutus came to me from the sandy patch of woodland beneath the pines; the spring call of mating crows sounded from reddening hillsides; the fuzzy buds of verdant willows advised me of the arrival of spring, and the skittering of an awakened water spider across some roadside pool reminded me that the insect world was resurrected, and that on such a day the trout should bite.

At length I received the laughing invitation of the beloved brook. What anticipations—born of blessed memories—the soft, soothing sound of the babbling stream awakened in me! Impatiently I forced my way through the intervening thicket of laurel and rhododendron until, rod in hand, I stood at last by the side of my woodland idol. I noted with approval the increased depth of the pool to the right; or again, with some concern, the extension of that offending bar to the left. What! could it be possible? Yes, as sure as fate, a trout rose just below me, and my peaceful reminiscences gave place to feverish activity.

The little rod, so carefully oiled and tended through the long winter months, was soon joined together; the same old line, having been carefully tested the day before, was hurriedly run through the guides; a grass-color leader and tempting fly, of style and variety to please the individual taste, was quickly tied on, and drawing up my waders, I stepped into the water —and paradise.

The first chill of the stream electrified my blood and put vigor into every nerve and muscle as I worked carefully along close inshore toward the exact spot where I noticed that alluring rise a moment before. The sun was now above the hilltops and I stole forward a foot at a time, careful to cast no shadow on that promising circle of dark water. My boots found firm footing on the gravel bottom and everything seemed propitious for the first strike of the season. How the thought of it thrilled me! Rod in one hand, line in the other, I moved toward the desired spot until at last within casting distance. It was fairly open overhead and risking a forward throw, right in the center of that still pool fell the tempting fly; but there was no response and the tense nerves relaxed somewhat with the recovery of the line. It was rather early for this style of fishing, but I was out to beat old records and had never before taken a trout with the fly this early. Besides, I distinctly saw that rise when I first reached the brook; so again the attempt was made.

Ziz—the taut line cut through the water as it circled the pool, fast in the first trout of the season. The pliant rod bent warningly as the gamy captive darted about, seeking cover. By quick work he was turned from a submerged tangle of driftwood toward which he had cunningly headed. Down the stream he went and I dared not check him, for I would not have lost him for a hundred dollars just then. He zig-zagged toward the opposite shore and I fearfully "ap-

plied the brakes." My right hand worked desperately and the reel fairly hummed as I endeavored to take up the slack he was crowding toward me in his headlong dash upstream again. On this race depended the outcome of the battle, and I redoubled my efforts toward "keeping the track clear." He saw me and once more turned aside, but I had him close in and easily held him by the spring of the rod. Like a thing of life, it bent and turned, recording each move and dart of the fish by the vibrations which coursed down its length to my sensitive wrist. Slowly the little warrior tired and I reeled him nearer and nearer the dancing tip. A final dash compelled me to surrender line already gained, but I soon recovered my loss and had him almost at hand. I even had a hasty glimpse of his flashing form as he darted aside, and saw that he was indeed a beauty. The tightened line was cutting narrowing circles through the water just beyond reach of the hand net. A sudden scoop beneath the surface and I had him in the net.

Highly elated I waded ashore, scrambled over a log and sat on a mossy bank to inspect and admire my trout. Just about ten inches long; cold, plump and radiant, he turned and twisted about on the ground as though loth even now to abandon the gallant fight so nobly begun. His struggles I mercifully ended, and gathering a handful of wet moss, folded it carefully about the prize and placed him lovingly in the creel—No. 1, the first of the year.

Lighting my pipe, I again entered the stream, wading cautiously along the picturesque way, casting carefully into each quiet spot or pool, under shelving rocks and near every logjam or drift, the fly floating through the rapids far in advance of my faltering steps. I followed the brook in its windings through an open field of a deserted farm and heard the notes of robins and meadowlarks. A phoebe flitted to a nearby bush and with dipping tail, called, "Pewit; phoebe, phoebe, phoebe." The tinkle of a far off cowbell was borne to my ears on the lazy springtime air, and somehow I seemed unmindful as to whether I caught more fish or not. Everything was just as it should be, and I smoked and dreamed and fished.

In a long smooth stretch of water I decided to try a number of casts in the hope of provoking another rise, but whipped this bit of stream until my wrist was tired, to no avail. There were trout there, and unwilling to lose the opportunity, I changed the fly for a darker one and again cast patiently, but finally decided that they were not rising, so I rather reluctantly substituted the humble worm for the artistic fly, and still hopeful of that dark, peaceful looking bit of water, dropped the wriggling bait into its placid depths, convinced that a big one was lurking within reach. As I drew in for a final cast before traveling on, there was a splash, the rod dipped almost to the water, and the fight was on.

A splendid place to play him that, more like bass fishing. The deep, quiet water allowed full scope for his skillful maneuvers. Across, down, upstream he fought the rod. Twice he snagged me despite my best efforts toward keeping him clear, and each time I gave up hope—and my resolution about swearing. Both times I laboriously cleared him, however, and setting my teeth, determined to keep him in deep water till I had him thoroughly subdued. Unable to get a peep at him, still I believed him to be a good one, and cold shivers ran up and down my back at thought of his escape when the line slackened. Not a bit of it! He was coming fast, and with renewed hope the reel was worked overtime. It appears as though this particular trout was indeed a man eater, for he seemed intent on rushing to grab me by the boot. Suddenly he turned and by luck rushed headlong into a mass of drift. Floundering clumsily forward to save the day, I stepped into water to my armpits and sensed the full delights of a cold morning plunge, so enthusiastically advocated by physical culturists. Heedless of the wetting, I splashed to the brush pile to recover snarled line and hook. The trout had made good his escape. Muttering something about disliking quiet water wherein only small ones lie, I scrambled dejectedly ashore to empty boots and wring clothes. Like the ancient Romans, I had taken my lunch to the bath, but with far sadder results. The soaked paper was peeled from the mushy mass, while the brook laughed in silvery tones at my discomfiture, and an impudent blue jay secure in a high evergreen, joined in heartily. Ashamed of my fleeting grouch, and forcing my feet into the soggy boots, I wrapped the moist but no less appetizing lunch in its soaked covering, and calling good-naturedly to the jay, moved on.

A LONG, SMOOTH STRETCH OF WATER.

Several likely pools were successfully fished and the creel began to drag on my shoulder. The wetting was forgotten in the excitement of the sport, and not until I reached for my tobacco pouch did the awful possibility of a smokeless afternoon confront me. The clammy buckskin bag sealed the doom of the pipe for the present, but the sun was high overhead and it was time to look about for a suitable lunch site. It must be sunny and well sheltered from the breeze, for there was to be considerable drying out before proceeding with the afternoon end of the sport. A sort of natural, grass-grown meadow crowded the forest back from the brook for a hundred yards along its course and shimmering heat waves enticed me to the spot. Climbing the steep bank, I sat down in a bed of early violets, removed the well-filled basket from my shoulders, and again brought forth the lunch, this time placing the entire menu, piece by piece, on stones and stumps to

dry, then spread out the precious tobacco in the hope of getting several pipefuls later in the day, and shed various articles of raiment. Trees and bushes were decorated after the manner of a haberdasher's window, and choosing the sunniest spot, I sat in scant raiment dependent on the sun for food, clothing and a smoke.

There is an indefinable, mystic something in the air of early springtime which appeals to the best that is in us. An indistinct purplish haze hovered lazily over the landscape; the scent of burning brush came from some new made clearing; the inspiring warble of the song sparrow from the red budded maple; the cries of the little "peeper" frogs from the marshland; the buzz of the first honey bee about the early blossoms of the skunk cabbage, and the distant bawling of the plowman to his team. The grateful warmth of the strengthening sun on my back, and, looking up into the azure blue sky above, I thanked God that I was alive—and fishing.

From these reveries I was aroused by the bold pilferings of a red squirrel that had discovered the lunch and seemed intent on appropriating the major part of it. Driven to the fork of a nearby tree, he sat calling me mean, stingy and miserly. The edibles had dried out remarkably well, and, as it was now sometime past noon, the repast looked really inviting and appetizing after all. Donning the more important pieces of apparel, even though they were still damp, I composed myself before an improvised table and did full justice to the plain fare of an honest fisherman, and with the frugal woodland meal imbibed the joy of the brook, the balm of the pines and the peace of the forest; so that when the last mouthful had been followed by a long draft of purest water, I rose refreshed, invigorated and satisfied mentally and physically. By the unstinted use of matches, which luckily were placed in my hat, I managed to partly ignite a pipeful of damp tobacco, and with arms behind my head lay back contentedly, gazing from beneath half closed lids at the few drifting white clouds above. The constant babble of the brook, the soft call of a dove, the odor of bursting buds and blooming flowers soothed and subdued me till I slept.

I awoke with a start after landing a three-pound trout—in a dream. My watch, still going despite its recent bath, thanks to its cheapness, showed that I had dozed for a full half hour. Taking the dream as a good omen, and donning the balance of my effects, I turned again to the stream. With a fairly good catch I could afford to waste some time in experimenting, but was unable to provoke anything, even remotely resembling a rise and again substituted a worm for the fly, and with eager expectancy approached the seething, sud-like pool at the foot of the falls, where I finally pulled a sixteen-inch beauty from that same pool last season. With thumping heart and bated breath I dropped the bait through the crust of foam and waited anxiously, feet braced, thumb on reel, hopeful that some worthy successor had appropriated the splendid feeding ground of the previous victim.

There was a wild commotion in the snow-like spume, a violent tug on the line, and striking, I felt the weight of a good one. Mindful of the former experience at this spot, I played the fish carefully. Forsaking the pool he darted into the curling white-capped rapids, and with the full force of the current behind him, took the line down through that lane of swirling water at railroad speed, to be checked at the very edge of a log jam, and gradually wound in while he fought desperately every inch of the way. The roar of the cascade, the drift of the spray and the surge of the rapids, combined in a proper setting for this battle of the falls.

Once again the trout darted off and fought furiously. Once I had him near at hand, and made a vicious scoop with the net, but he was too quick, and I missed him by the merest margin as he went back into the pool. I roused him, and again by only the hardest kind of work was I able to keep him from snagging, and finally the net was slipped under him and he was lifted from the water exhausted but not defeated. The measuring stick registered 14½ inches, and carefully wrapped in wet moss, he was accorded the place of honor in the basket.

There are larger trout in the streams and lakes of far Northern and Western forests. The little freekled, bare-legged millpond devotee knows that in the bigger lakes and rivers he may catch fish much larger and more gamy than his adored "punkinseed." The same spirit dominated us both; it is the home sense, the spirit of ownership, of familiarity with our surroundings. We know our brook or millpond, as the case may be, in all its moods; we anticipate the view around each turn; we understand its language and learn to love it. It is a bit of our landscape, a near neighbor, a part of our life. We are content with the size and quality of its trout, for to us they are incomparable. I can remember when with alder pole and bent pin I wandered barefoot along its shores. The true angler is a dreamer, and where could I conjure up such pleasant memories of the past, such hopeful dreams of the future, as along the shores of the familiar little well-beloved home brook. It is their associations that endear these homely streams to our hearts, the chance for comparisons that draws and holds us to them despite the insistent call of distant unfished waters.

Bringing my soliloquy to a close, and knocking the ashes and half burned tobacco from my pipe, I again started slowly down stream, satisfied with the number of fish taken and determined to retain only the larger ones taken before quitting time. The slanting shadows were already falling across the water, showing the lapse of time. At one spot I sat for some time on a mossy log, lost in contemplation of the awkward antics of a woodchuck endeavoring to cross the brook on some stones further down the stream. Occasionally I took a trout from some darkened pool or lost one in a tangle of drift, but nothing disturbed me, for I had successfully ushered in the season, broken my record for the same date last year, and landed the second biggest trout ever caught in the brook.

The chill of evening crept along the water and reluctantly I turned to the shore, unjointed the rod and turned through the woods to the familiar trail—leading home.

ELMER RUSSELL GREGOR.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

New Fishing Regulations.

SAN FRANCISCO, Cal., April 8.—*Editor Forest and Stream:* The trout bill has now become a law and several important changes have been made, some of which are not apt to prove popular in certain sections. This is especially true in regard to the weight of the legal catch. This has been placed at 10 pounds and one fish, a reduction being made from the former legal weight of 25 pounds. The idea of the extra fish is to permit the angler to keep an extra large trout he may land in addition to the limit of 10 pounds of smaller sized fish. The new provision applies to all game districts and to all trout except steelheads. In such sections as Kern Lakes and Big Meadows, where large fish are to be found in numbers, this ruling will not meet with much favor. In all of the districts, with the exception of No. 3, trout fishing will begin on April 1 and will last until Nov. 1. In district 3 the opening date will be May 1, as it has been for years. The season formerly closed on Nov. 15.

Steelhead fishing is now open in tide water all year, and the open season above tide water will commence on April 1, as in past years, but will close two weeks earlier, Nov. 1. The limit on this fish remains at 25 pounds or 50 fish. Net fishermen are to operate only between Oct. 23 and Feb. 1, and no steelheads weighing less than a pound may be sold.

Black bass may be taken only with hook and line between May 1 and March 1 of the following year. The limit is fifty fish a day. The season formerly extended from June 1 to Jan. 1.

The new closed season on striped bass for net fishermen is Sept. 17 to Oct. 23, instead of during May and June. The shipment of these fish outside the State is prohibited at all times. Net fishermen are prohibited from taking this fish in Cache Slough, the idea being to make a secure breeding ground out of this district.

The taking of shrimps in bag nets has also been prohibited and this not only means that the rapid depletion of the shrimp supply will be brought to a close, but that the killing of immense numbers of under-sized bass and other fish will come to an end. GOLDEN GATE.

SAN FRANCISCO, Cal., April 7.—*Editor Forest and Stream:* The trout fishing season in the coast territory opened on the first of April and during the first week there was a record breaking attendance of anglers at all of the streams easily reached from this city. This applies to steelhead trout, which is the fish most common in the streams emptying into the ocean. Steelhead fishing is usually good in April, and there has been no exception to the rule this year, reports coming from almost all districts of exceptionally fine sport. Streams are still rather high, but the water is quite clear and this is not interfering with the sport. Last season the coast streams were liberally stocked and the results since the opening of the season have been very satisfactory to those having the work in charge.

Reports that have come down from the Russian River indicate that it has been a long time since so many fine steelhead trout were to be found in that stream and anglers are commencing to visit that favorite fishing ground earlier in the season than usual. One local en

thusiast who was there on the opening day secured ten fine fish, among which was a 17-pounder. Fly-fishing is not yet at its best, most of the big catches being made with the use of bait, preferrably salmon spawn.

Walter Welch, game warden of Santa Cruz county, has given out the following statement in regard to conditions in that section: The heavy freshets of the last winter have cleaned out the rubbish and debris from the creek beds, as they have not been cleaned out in fifteen years past; in consequence there are many clear and unobstructed pools and deep riffles. The water is still a bit high in the main streams, but is clear. However, the main streams should be in fine fishing condition in a short time, and with the continuance of good weather, plentiful catches ought to reward the angler. The streams in Santa Cruz county are easily reached from San Francisco, and will be even more accessible when the Ocean Shore Railroad to Santa Cruz is completed. Boulder Creek is a central starting point for a large number of fine streams, including Bear, Two Bar, Kings, San Lorenzo, Deer, Tar, Waterman and Scott creeks.

In Santa Clara county conditions are also promising and already some good catches have been made in the streams there in spite of the fact that the water was rather high on opening day. When the first heavy rains fell this season many fine steelhead trout were to be seen in the water at the mouth of the bay streams, and the big ones are expected to be plentiful. Fishing will probably be extended over a longer period of time this season than has been the case in many years, owing to the fact that the winter rains were very heavy and the water supply is much more abundant.

Some fine salt water fishing has been had in the San Gregorio lagoon in San Mateo county of late and above tidewater there has been some excellent sport enjoyed since the opening of the season. Before the opening of the season one "sooner" was arrested and paid a fine of $40 for his experience.

Point Reyes is a favorable fishing ground and has been visited by almost as many as usual since the opening of the season in fresh water, so satisfactory have been the catches made there. On Paper Mill Creek, in the Point Reyes district, fishermen have been so thick on the banks of the stream as to be in each other's way and but few fish have been taken there.

The Ocean Shore Railroad is being used by many to get to good fishing grounds and Manager A. H. Otis is looking ahead for next season and will have 400,000 trout fry planted in the principal streams. A. P. B.

Still Cold at Lake Sunapee.

Springfield, Mass., April 15.—*Editor Forest and Stream:* It may be of interest to many of your readers to learn what the condition of the ice is in Lake Sunapee. On April 14 the ice was fully two feet thick and teams were crossing the lake as they have done all winter. The ice will not go out of the big lake much before May 1, if then. The water in the lake is much lower this year than usual, although there is fully two feet of snow in the woods around the lake.

I have kept a record as to when the ice has gone out of the main body of the lake during the past few years, and find it was as follows: 1902, April 9; 1903, April 11; 1904, April 29; 1905, April 26; 1906, April 29; 1907, May 1; 1908, April 25; 1909, April 21; 1910, April 5.

The sportsmen are looking forward to having a lot of sport with the chinook salmon soon after the ice is out. From 400 to 500 of these fish were taken during 1910 and some as large as seventeen pounds.

Many were taken by trolling, and a good many large fish were lost owing to poor tackle. From the rapid growth that these salmon have made since they were first planted in Lake Sunapee in 1904, I fully believe that fish weighing twenty-five pounds will be taken during 1911, and I advise any person going there to first procure the right kind of tackle. Do not spend your time and money to go fishing and then lose your fish on account of having poor tackle.

George H. Graham.

Landlocked Salmon in Lake Michigan?

Chicago, Ill., April 4.—*Editor Forest and Stream:* The following piece of news was published in the Record-Herald to-day in regard to landlocked salmon being caught in Lake Michigan:

"The pleasing discovery was made yesterday that Lake Michigan has been stocked with salmon.

"How and when and by whom are questions to which answers were not forthcoming. Local anglers are satisfied to know that the fish are here, and seem indifferent about solving the mystery of their presence.

"A trio of fishermen took 640 pounds of the strangers in nets near Gary, Saturday afternoon. Neither of them could classify their catch. They knew the fish was not carp. One thought it might be the steelhead trout, but was not certain.

"Ned Moran, who saw them, brought one of the fish to Chicago to get expert advice from Call McCarthy, a fishculturist who recently moved to Chicago from New York. McCarthy pronounced the fish landlocked salmon. The specimen he viewed weighed three and one-half pounds. Some of those taken at Gary weighed up to six pounds." Fred N. Peet.

Chicago, Ill., April 15.—*Editor Forest and Stream:* We had a revelation here recently in that landlocked salmon have been discovered in Lake Michigan. It seems some fishermen set their gillnets off Gary, Ind., and have been taking a fish they did not know. Some hundreds of pounds were caught and sold locally. Someone brought a specimen into V. L. & A.'s, and Richards and McCarthy both classified it as landlocked salmon. At another time later several were brought in and they both confirmed their position. Personally we did not see them and would not know, anyhow. The largest so far is asserted to range around twelve pounds. It is such a stretch of water, about twenty-five miles across here, that one hardly knows where to try for them with rod and lure. We may explore a little when the weather settles some.

E. O. Ritter, Clerk.

A Late Season.

Because of the snow and ice still in the Adirondacks, the early trout fishing may be affected. The snow is melting very slowly, and the ice on some of the lakes is still thick. Lake Champlain was ice-locked on the 11th, when the transportation company expected to begin running boats, and it had waited two weeks longer than usual. Nearly everywhere the early trout fishers found frosty mornings and cold, windy days.

A Fishing Decision.

NEW ORLEANS, La., April 14.—*Editor Forest and Stream:* The fishing season has opened very well, although the attendance at the various fishing resorts for the past fortnight has not been large on account of the busy season with both the merchants and professional men. Striped bass, speckled trout, redfish and small sheepshead are being landed. Shrimp are quite abundant and the fishermen say that there is no trouble to get good bait. The muddy water at the Chef, the Rigolets, Lake Catherine and other fishing resorts has made fishing rather poor. It is not probable that the big crowds will go over to the resorts until after Easter, and that fishing will not be the best until the latter part of April and May.

Attorney A. L. Ponder, of the State Game Commission, has rendered an opinion to President F. M. Miller to the effect that the closed fishing season in April and May applies to fish caught with seine and not with hook and line. Attorney Ponder holds that the Game Commission cannot prevent the shipment of fish into this market caught in the Gulf of Mexico and other salt waters during the closed season, and the board has not the right to prevent the sale of these fish. The law prohibits the sale of bass, or green trout, and fresh water game fish. Mr. Ponder says that all new laws which are considered innovations and drastic should be enforced with the least possible injury to the great mass of the people, and furthermore that when the people are accustomed to certain laws for several generations, it is never wise to immediately enforce repealing laws to the strictest letter, but rather to seek the spirit of the new law and gradually educate the people up to the new provisions, so as to do the least harm. Mr. Ponder contends that the policy he suggests will serve to make the conservation laws popular with the people instead of antagonizing them.

Mr. Ponder says the chief aim of the new law is to prevent seining, and that the seines kill the spawn of fish in April and May, and thousands of fish are thus destroyed. Mr. Ponder's opinion has been hailed with enthusiastic delight by hundreds of fishermen who will now catch fish with hook and line and sell them.

F. G. G.

Big Fish.

ACCORDING to the Anglers' News the record salmon for Great Britain last year was taken by Mr. Impilt from the Tay and weighed forty-eight pounds.

The largest salmon trout was caught in the Avon by Mr. Mills and weighed sixteen pounds.

Michael Molloy, while dapping (skittering) with a fly on Lough Corrib, caught a trout weighing twelve and one-half pounds. Its length was thirty-two inches.

The record grayling weighed two pounds nine ounces. It was taken in the Derwent, by Mr. Holt.

On the Norfolk Broads, G. Chamberlain landed the record pike, a thirty-pounder.

Some News and a Little Gossip.

LAUNCHINGS have begun. Last week three yachts that will be prominent in races during the coming season took their first dips in the water. The largest was the big three-masted schooner built at Staten Island for former Commodore Robert E. Tod, of the Atlantic Y. C. This vessel is just under 200 feet in length, and is the largest sailing craft built on this side of the Atlantic. Some day she may be an auxiliary. Commodore Tod has space left for an engine, but it will not be installed until later. The yacht, named Karima, is to be a sailing craft pure and simple, and her owner, who is an enthusiastic yachtsman, will enter his vessel in races whenever possible. He has already challenged for the Cape May and Brenton's Reef cups now held by the Atlantic, and it is very probable that Karima will take part in the races for the Clark and Norman cups of the Eastern Y. C. The Clark cup will be raced for after the Harvard-Yale boat race, and the course is from New London to Marblehead. The Norma cup is for a race from Bar Harbor to Marblehead, 161 miles.

The other two sailing craft launched were the Flying Cloud, a 48-foot waterline sloop built at Herreshoffs for Russell and Irving Grinnell, and a class S sloop also built at Herreshoffs for D. G. Whitlock, of the Brooklyn Y. C. Flying Cloud, while really a cruising craft, is to be raced in her regular class, and the class S boat which is named Wink will take part in the S class races on Gravesend Bay and try to win the Lipton cup of the Crescent A. C.

The inter-bay catboat races are to be sailed off Marblehead in August. The boats eligible for this series of races will have quite a busy season according to plans made. Beginning with the open race of the Lynn Y. C. off Bass Point on Aug. 5, there will be eight days of racing which includes the Marblehead midsummer series. Then there will be a week of rest. On Saturday, Aug. 19, there is the open race of the Winthrop Y. C. The following Monday the inter-bay match will begin with the Quincy Y. C. It is expected that catboats from Narragansett Bay, Barnegat Bay and possibly the Great South Bay will compete with the Massachusetts Bay catboats for the trophy which was won last year on Narragansett Bay by Dolly III. and Iris. This inter-bay catboat racing was started in 1909 by a match on Barnegat Bay when the Narragansett Bay boats Bother and Ina won. Last year on Narragansett Bay Dolly III. and Iris represented Massachusetts, Ina and Bother, Naragansett, and Virginia, Barnegat.

After the inter-bay series these boats will be able to race in the open regatta of the Hingham Club, the two regattas of the Boston Y. C. midsummer series and the catboat championships of the Boston Y. C.

The Quincy Y. C. has named Aug. 21 to 26 as the dates for the Quincy Cup series of races. This trophy was won last year by Charles Francis Adams 2d's Harpoon. In 1906, the deed of gift was changed to allow Sonder boats to compete for the cup, and that year it was won by the Corinthian Y. C.'s representative Windrim Kid. The next year Sally VIII. was the winner. In 1908, Charles Francis Adams 2d took the trophy to Quincy with Manchester, but the next year Ellen, representing the Boston Y. C., won. Ellen was the defender last year, and the races were sailed off Hull. In this year's match it is expected that there will be representatives of the Eastern, Corinthian, Boston, Manchester, Quincy and possibly some other clubs.

In addition to the two inter-club matches and the annual Y. R. A. and inter-club regatta, Aug. 26, the Quincy Y. C. has announced the following club races: Aug. 27, June 10 and 24, July 6 and Sept. 9. There will also be a club run to Marblehead on Aug. 6.

The Stone Harbor Y. C. members are to encourage dory racing this year. A meeting of the club was held last week at the Yachtsmen's Club, Philadelphia, and after electing Charles A. Farnum as secretary to succeed Edward J. Rankin, the dories were discussed. Twelve of these boats have been ordered and will be delivered by Emmons, of Swampscott, very soon. There will be a series of sailing events among these dories each week, which will finally wind up with a grand regatta, in which the boat scoring the largest number of points for the season will receive a cup from the Regatta Committee of the Stone Harbor Y. C. Those who intend to purchase Swampscott dories are Commodore James Thompson, Vice-Commodore Fred D. Biddle, Rear-Commodore Ernest N. Ross, Secretary E. J. Rankin, David Risley, John Q. Gilmore, Charles A. Farnum, Henry Bassett, William Schuck and Peter Brown, all of the Stone Harbor Y. C. The first event in this class will be held Memorial day.

Fleet Captain James Bishop, of the Stone Harbor Y. C., was delegated to mark Great Channel from the north of the Y. C. down to Hereford Inlet with five barrel buoys, each barrel marked with numbers 1 to 5 and painted in black and white. These buoys are already being placed in position and have been approved by the State Inland Waterway Commissioners.

Commodore Thompson announced that the Stone Harbor Club house will be completed by July 1 of this year. The club will have twenty-four beds installed in the numerous sleeping rooms on the second floor.

At the annual meeting of the Casco Y. C. the following officers were elected: L. G. Cushing, Commodore; A. H. Torricilli, Vice-Commodore; H. R. Alden, Secretary; Willis H. Soule, Treasurer; J. S. Soule, G. W. Soule and M. T. Moseley, Trustees; E. B. Mallett, C. T. Dillingham and J. P. Merrill, House Committee; H. G. Means, W. G. Jones, A. L. Carter, and A. H. Torricilli, Regatta Committee.

The schooner Elena, built at Herreshoffs for Morton F. Plant, will be launched on Monday, April 24. That day will be the 70th birthday of John B. Herreshoff, the president of the company, and the launching is to be part of the day's celebration. Capt. Nat. Herreshoff recently returned from Bermuda in much better health, and has been devoting much attention to the yachts building in the shops.

Contracts have been let for the erection of a new club house at Morris Cove for the New Haven Y. C. The contract price was about $9,000. This gives the members of the yacht club full assurance of having a home at the cove this summer. The plans submitted have been overhauled and some changes made which enable the directors of the company to-day to let the contract.

It is expected that the work on the new clubhouse will be started early next week, so that the building can be put into commission at the formal opening of the season with the yachtsmen on Memorial Day. The club house will be located on Cove street about 500 feet west of the old club house.

The annual cruise of the Boston Y. C. will begin on July 15. It will last for a week and the fleet will visit ports on the coast of Maine between Kittery and Boothbay Harbor. The program is a new one, and it is hoped that it will please the yachtsmen so that they will turn out in good numbers for the annual outing of the fleet. The fleet will leave Marblehead Harbor at 5 o'clock in the afternoon and the first run will be Boothbay Harbor. Saturday night, all day Sunday and all day Monday have been allowed for this long run. If the yachts make it quickly those on board will have lots of time to rest before starting on the next run. It is 103 nautical miles from Marblehead to Boothbay Harbor, 17¾ miles from Marblehead to Thachers, 79 miles from Thachers to Sequin and 7 miles in from Sequin. The racing yachts will pass outside Thachers Island, the Londoner and Dry Salvages and inside Boon Island. The fleet will then proceed by short runs along the Maine coast.

The old-time sloop Venture has been rescued from a muddy grave near the Charlestown navy yard and is being rejuvenated by Jeremiah Bean, of Everett, who purchased the derelict out of respect for her age and record and feeling that there will still be lots more in the old hull. Venture has been up against the hardest kind of luck in hands of many owners since she was youthful. A retired ship carpenter "Down East" a long time ago put her together as solidly as he knew for his personal use, his slogan being that the boat would outlast him—and she has by a wide margin. Something less than a decade ago the Venture drifted into Boston and has been in that vicinity ever since. Four years ago she dragged anchor at Hull and for thirty-six hours pounded against James' wharf, damaging the wharf more than herself. She was brought back to Boston and repaired and continued to carry parties to the fishing grounds and on pleasure trips. Early last summer at the Bunker Hill Y. C. Venture's forefoot rested on a pile of ashes at low tide and wash from a passing tug rolled her over till she filled. For four months the tide ebbed and flowed through the wreck.

She was finally sold, "nothing down, nothing a week," and from the purchaser on such advantageous terms Mr. Bean got her. It cost $5.00 to raise Venture to the surface and the motor boat that towed her to a repair yard in Medford did the work in ice that cut through most of her bottom planking. Mr. Bean has raised the craft's cabin, added a large cockpit, replaced the standing rigging and made so many improvements over the original Venture that she will hardly know herself when launched. Since last Thanksgiving Venture's repairs have been making, Mr. Bean spending all the spare time at his disposal on the job, sometimes laboring in below zero weather, with no protection from the weather. For many years he was employed at the navy yard and is an expert boat builder.

The interstate series between the 18-foot knockabouts of Massachusetts and Rhode Island will be sailed on Narragansett Bay below Conanicut on July 31, Aug. 1, 2 and 3. Vice-Commodore Markham has offered three $50 cups for the winning team and a handsome championship pennant has been offered for the yacht scoring the most points in the series. A new boat built specially for this series, which was won last year by the Massachusetts trio, is the Wanderer IV., a boat designed by Charles D. Mower. She is the beamiest boat ever built in that class, being fully eight feet on deck, with rather full ends, considerable dead rise and an easy turn to the bilges. Mr. Mower evidently has endeavored to incorporate the ideas carried out in Cima, a Sonder boat which he designed last year for Guy Lowell. Cima heels rather easily until her full ends hit the water, when she is practically on her designed sailing lines, which are long and easy. The Flint boat with plenty of ballast should prove plenty stiff in light to moderate airs, especially when there is a little chop on. But when it breezes she can't very well help being a corker.

A FRIENDLY TRIAL ON THE SOUND.

Launch of Karima.

The three-masted schooner Karima, built for former Commodore Robert E. Tod, was successfully launched from the yard of the Staten Island Shipbuilding Company, at Port Richmond, on April 13.

It was an ideal day for such a ceremony, and in spite of the ill spell that is associated with thirteen, the day of the month, everything went off without a hitch. The launching was at 8:30 o'clock in the morning, advantage being taken of the extraordinary high tide which served then.

Commodore and Mrs. Tod went to the yard in their auto, but nearly all the other guests left the Battery on an early morning ferryboat. Among those present were W. Steward Tod, Mr. and Mrs. W. A. Barstow, R. C. Veit, Mr. and Mrs. Phillip Chew, E. Burton Hart, Dr. and Mrs. James C. Ayer, Johnston de Forest, Commodore Frank S. Hastings, of the Scawanhaka-Corinthian Y. C.; L. Vaughn Clark, of the New York Y. C. regatta committee; Mr. and Mrs. Theodore D. Wells, designer of the yacht; William Payson, Richard Outwater, Max Grundner and Wallace Downey.

Everything was in readiness at the yard when the launching party arrived. The big steel hull under a shed was resting easily in a cradle, and as soon as Mr. Tod took a position on the platform at the bow the carpenters began to saw through the sole pieces. Inch by inch the big pieces of wood were cut through. The shores were knocked away, and just as a tremor passed over the hull Mrs. Tod swung the bottle of champagne against the bow and as it smashed christened the yacht Karima.

Very slowly at first the vessel began to glide down the ways, and as she cleared the shed the private signal of Commodore Tod, a thistle, the yacht burgee and ensign were run up on staffs. The stern plunged into the water and a few seconds the yacht was bobbing gracefully on the water courtesying her acknowledgments of the cheers and salutes. The yacht was then hauled into a pier, where she will be moored until her interior fittings are in place and she will be ready for the riggers. After the launching breakfast was served and the yacht and her owner were wished the best of good luck.

Karima is the largest sailing craft in these waters. She is 198 feet 6 inches over all, 150 feet on the waterline, 34 feet beam and 17 feet draft. She has 150 tons of lead on her keel, which was laid last December. She is rigged as a three-masted schooner. The masts are of steel, each 24 inches in diameter, and the truck of the mizzen will be 160 feet above water line. On these three spars the yacht will spread a very large sail area. The hull is a graceful one with the spoon bow and artistic and symmetrical stern. She will be manned by a crew of twenty-six men and Mr. Tod will be his own sailing master, as usual.

The big schooner Atlantic, owned by Wilson Marshall, is 184 feet over all, 139 feet on the waterline and 29 feet beam; the auxiliary schooner Alcyone is 182 feet over all, 140 feet on the waterline and 30 feet beam, and the auxiliary schooner Visitor is 197 feet 6 inches over all, 150 feet on the waterline and 32 feet 6 inches beam. These were the three largest vessels in these waters until Karima surpassed them all.

Karima's appointments will make her one of the most comfortable sailing craft afloat. She is to be equipped with many labor-saving devices, such as a donkey engine to supply power for windlass, pumps and dynamo, a steam heating plant, electric lighting outfit, a wireless outfit and a submarine bell. This latter is unusual on a sailing craft. There is space in the hull for an auxiliary engine, which will be installed later if Mr. Tod wishes to make his yacht an auxiliary, but he is a yachtsman of the old school and prefers sail to steam.

The accommodations are ample. There are two staterooms aft for the owner with a bathroom connecting and four staterooms with two bathrooms further forward for guests. The main saloon is the full width of the vessel and is to be handsomely and comfortably furnished. The space for the engines, the officers' and crew's quarters and the galley are forward and all are well lighted and ventilated. All the

joiner work is of the best and the fittings and furnishings, while governed in the main by simplicity, will be tasteful.

On deck there is a small bridge around the foremast, which is a novelty, but which is expected to prove of utility and be a pleasant lookout sation in fine or moderate weather. There is a half deck house in which is a companionway leading below, where breakfasts and teas may be served.

Commodore Tod has challenged for races for the Cape May and Brenton's Reef cups which are now held by the Atlantic. It is expected that other fast and large sailing craft will enter these races and Karima will have to show her best speed to win. Commodore Tod is an enthusiastic yachtsman. He holds a master's license and is a practical navigator. His first yacht was the yawl Fidelio, which he purchased from the late J. Fred Ackerman. Then he had the schooner Katrina and with that yacht won several long distance races, and in Katrina he first learned deep sea sailing and got to love the sport. His next yacht was Thistle, which took part in the race across the Atlantic for the Kaiser's cup. Commodore Tod was his own navigator in this race and the Thistle sailed the shortest course between Sandy Hook and the Lizard, but she was unfortunate in weather, often running into soft spots and being becalmed.

It will take a few weeks yet to finish Karima, and then she will be tuned up for the season's racing and she will race whenever there is an opportunity. A vessel of her size, however, is not suited to the courses of the ordinary regattas and she will take part mostly in the long races over ocean courses such as the two events of the Eastern Y. C. and the cruises of the New York Y. C. in addition to the two cup races for which she is the challenger.

Carolina Y. C.

THE Carolinas have the distinction of having two yacht clubs bearing the State name. One which has a station at Wrightsville Beach belongs to North Carolina, and the other at Charleston to South Carolina, but each is known as the Carolina Y. C. The club of the Northern State is the older, having been organized in 1853. That of Charleston, S. C., enjoys the distinction of being one of the most flourishing in the United States. It has an active membership of 300, with a waiting list; a commodious, if not very ornate, house with wharf and dock property worth at least $60,000 free of debt, a fleet of twenty-five motor boats, one sail yacht and about one dozen dories. The sail yacht is club property and used on cruises for the accommodation of members.

At present the club is more a motor boat than a yacht club, but its title is read clear by its record and prospects. First as to the latter. Northern yachtsmen on the way to Florida are generally by force of circumstances, if not stress of weather, compelled to put in at Charleston. All seeking the inside route must do so because that route begins there. But many large yachts bound South outside call at Charleston for convenience or pleasure if not by necessity. Visiting yachtsmen are warmly welcomed by the club, glad to avail themselves of its facilities, and as a rule disposed to call again. It must follow that some of these will eventually affiliate with the club, attract others and make Charleston their winter headquarters. As a convenient starting and ending point for cruises to Florida, Bermuda or the West Indies, Charleston's claims are obvious.

The Carolina Y. C. was organized in 1883 and incorporated in 1888. Its first commodore was Charles H. Glidden, a Northern man, who soon after the war came to Charleston and made it his home for many years. He was succeeded by Augustine T. Smythe, a native lawyer, and then by Wilmot D. Porcher, a rice merchant, also a Charlestonian. The present officers, who have just entered into their second terms, are: Commodore, W. Hampton Logan; Vice-Commodore, Alexander W. Marshall; Secretary, G. Lee Holmes; Treasurer, William T. Haskell; Measurer, Louis Y. Dawson; Fleet Captain, John S. Harleston; Solicitor, George H. Moffett; Fleet Surgeon, Hy P. Jackson, M.D.; Boat Master, F. Grange Waring.

The club is an important factor in the social life of Charleston. It gives frequent entertainments during the winter at which the best people of the city gather, while on summer afternoons the spacious piazzas of its admirably suitable house are thronged by young persons of both sexes, especially on race days. The ball given by the club to the officers of the United States battleship South Carolina on April 13, 1910, the anniversary of the battle of Fort Sumter, was a brilliant and notable event, even in the home of St. Cecelia.

The dories afford the only sailing races now held by the club. These begin in May and are continued weekly throughout the summer and fall. They are held over inside courses in full view of the club house and the battery and invariably attract crowds of spectators.

For seventeen years or up to 1901, when the motor boat fashion struck the club, it held annual regattas and frequent special events. Keen rivalry grew up between it and the Savannah Y. C., out of which resulted some remarkable contests. This rivalry began in June, 1889, when the latter sent a squadron to participate in the Carolina club's annual. In the first class Katrinka, junior flagship, Vice-Commodore W. D. Porcher, held the honors secure for Charleston, but in the second class Zinga carried them off for Savannah. There were seventeen yachts in the race, ten first and seven second class. The following year three Charleston yachts, Wild Bird, Katrinka and Flirt sailed to the South for the annual regatta of the Savannah Club at Thunderbolt, near the mouth of the river. Katrinka led the fleet home, but Wild Bird took first prize on time allowance. As Katrinka captured second prize, there was nothing, not even consolation, left for Savannah in the first class.

In 1891 the first interstate match was sailed in neutral waters at Beaufort, S. C. Each city was represented by three yachts. Charleston yachtsmen in anticipation of the contest, which was for a $250 cup besides the glory, had imported a Gardner boat, Manito, which at their first trial had beaten Katrinka on time allowance. Katrinka, by the way, was a Patrick McGeihan model lengthened by the addition of an after overhang. These, with Flirt, a home built boat, went to the line for Charleston. The Savannah squadron embraced Ocean Queen, a Fletcher model; Glance, another Pat McGeihan boat, and El Diva of forgotten design. Savannah was sadly left behind. All of the Charleston boats led her home. Manito took first place, though beaten on actual time by Katrinka.

Charleston held the cup unchallenged for six years, but in 1898 it was captured for Savannah by Titania, a Charleston built yacht owned by a Charlestonian, who had become a resident of Savannah. The race was sailed over the Savannah club's course in connection with its annual regatta. Katrinka, defender for the Charleston club, finished first, but failed to save her allowance. Charleston sent two boats to Savannah in quest of the cup in 1899. Those were Titania and Katrinka, but Dragoon, a newcomer, beat them both. However, the challengers found comfort in the fact that the race was a mere drift. Yet their blood was up and they commissioned Clinton H. Crane, of New York, to build them a new boat for 1900 and stipulated for a match of three races. The new boat, built by Lawley, of Boston, was called Mavis and handled by Commodore Porcher and his brother Francis Y., who had often sailed Katrinka to victory. Mavis easily beat Dragoon two straight, and so the cup came back to the keeping of the Carolina Y. C., where it has remained since. No more matches were sailed. Savannah yachtsmen tried to buy Mavis, but her owners refused to sell. She was laid up instead, remaining out of the water until a few weeks ago, when she was sold for $500, about one-seventh of her cost, stripped of her lead keel, to be converted into a motorboat.

There are indications that the club will return to sailing. At a recent meeting it was decided to build a boat to enter the Sea Island regatta held at Rockville, Wadmalow Island, in August. This is a contest of large batteaux (flat bottom boats) notable for attracing a big crowd of spectators. Hitherto it has been confined to entrants from James, Johns and Wadmalow islands.

Yachting out West.

SAN FRANCISCO, Cal., April 8.—*Editor Forest and Stream:* The San Francisco Y. C., one of the most prominent of the bay organizations, has just arranged its sailing program for the season as follows: April 29, opening day; April 30, cruise in squadron; May 3, members' tournament of indoor games; May 13 and 14, McNear's and return; May 17, members' tournament at club house; May 21, handicap race from the club house through the channel and back to club house; June 3 and 4, handicap race to and from Vallejo; June 7, members' tournament; July 1 to 4, inclusive, Volante, Vallejo and race home; July 5, members' tournament; July 15, Farallon race; July 23, annual regatta; Aug. 2, members' tournament; Aug. 5 and 6, cruise to Petaluma drawbridge and return; Aug. 19 and 20, Vallejo and return; Aug. 27, aquatic sports and handicap motor boat race for club boats only; Sept. 6, indoor tournament; Sept. 16 and 17, cruise to McNear's and return; Sept. 20, indoor tournament; Oct. 4, members' tournament; Oct. 8, motor boat regatta, and Oct. 21, closing day.

Many of the yachts of the Corinthian Y. C. have been taken out of the lagoon at Tiburon, and these are now being prepared for the season, which will soon commence. Among the boats that have been taken from winter quarters are Meteor, W. J. Hogg; Freda, J. F. Tracy; Mignon, G. V. Bieber; Mischief, E. Conley; Gypsie, C. D. Gresham; Moonlight, B. Vincent; Starlight, A. Ballard, and Wawona, owned by G. Stewart.

The Aeolian Y. C. has elected officers for the season of 1911 as follows: Commodore, Louis T. Ward; Vice-Commodore, George Postel; Treasurer, S. D. Wilson; Secretary, Arthur O. Jacoby; Port Captain, Ed. Landgren; Directors, L. C. Knight, E. E. Johnson, Ed. Jones, E. S. de Pierris and the officers mentioned. S. A. Boysen is official measurer. This club now has about fifty yachts registered.

The well known yacht Fulton G. has been disposed of to Walter Zeiss and Louis Holm and will be sailed this season under the colors of the Corinthian Y. C. Some minor alterations are now being made in this craft, and she is expected to make a fine showing in the races in the 44-foot class on the bay this season.

The Sacramento Canoe Club has been organized at Sacramento, Cal., and quarters have been established above the Southern Pacific bridge over the Sacramento River. Frank Osborn has been elected president, and John Chapman, secretary. Other members are G. Faber, A. Putman, H. Neymeyer, T. Schwartz, T. Schlosser, E. Simmermacher, H. Grady, C. B. Oether, C. Bergh and E. Theile.

GOLDEN GATE.

Launch of the Wink.

WINK, a sloop for class S, was launched at Herreshoffs last Saturday, and shortly after taking the water, was tried. This yacht has been built for D. G. Whitlock, a member of the Brooklyn Y. C., and is to race in class S on Gravesend Bay and later in the season will take part in the series of races of the Crescent Athletic Club for the Lipton cup. This cup was first sailed for last season, and was won by R. B. Moore's Blue Bill. It is held by the Crescent A. C. until it has been won three times by the same yachtsman. Wink is 32 feet 4 inches over all, 20 feet on the waterline, 6 feet 10 inches beam and 4 feet 10 inches draft. She spreads 437 square feet of canvas. Mr. Whitlock was present at the launching and expressed himself well pleased with the boat. Wink came west this week. She was tried in a strong breeze and showed herself to be stiff and able. She footed very fast.

Southern Y. C.

NEW ORLEANS, La., April 14.—*Editor Forest and Stream:* The Southern Y. C. regatta committee is preparing for the races during the coming summer, and it is expected the official program will be announced shortly. The contests will be participated in by both sail and gasolene boats. Regattas will be held at Waveland and Bay St. Louis, Mobile, West End in this city, and probably Gulfport. While the regattas are attended by fairly large crowds, still the interest in them is not so great as it was a few years ago.

In an exciting race Sunday the gasolene yacht Mahone and the cabin cruiser Loiterer, from the Northeastern Bridge to West End, a distance of 10 miles, the Loiterer won by about 150 feet. The Loiterer is owned by Captain Ben Walle, while the Mahone is the property of Captain Thomas Cape. The Mahone has challenged Loiterer for another race. Both boats are very fast and another race will be watched with considerable interest. By winning the Sunday race, Loiterer was given a $100 cup by the owner of Mahone. F. G. G.

The Flying Cloud.

A 48-FOOT waterline sloop, built on a cruising model, but with indications of speed, for Irving and Russell Grinnell, of New York, was launched this forenoon at the Herreshoff shops, and will be fitted in a regular class in the New York Y. C. this season. Flying Cloud, of steel frames and wooden planking in construction, is able looking, with high bows and freeboard, and it is expected will make a favorable showing when up. The rig is short, comparatively speaking, and there is plenty of deck room. Her principal dimensions are 65 feet over all, 48 feet on the waterline, 10 feet of beam, and a draft of 9 feet 10 inches. The craft will be rigged by next Wednesday, when she will have a trial under sail.

Yachts Change Hands.

THE following transfers of yachts are reported through the agency of Frank Bowne Jones:

Yawl Polaris sold by the estate of Louis R. Alberger to James O. Heyworth, of Chicago. Polaris is a Herreshoff-built yacht 50 feet on the waterline.

The 82-foot power yacht Milwin sold by Edwin G. Burns to Mrs. George W. Quintard 3d, for use on Long Island Sound.

The 52-foot Herreshoff sloop Butterfly sold by William E. Iselin to John A. Crowley.

The 40-foot power boat Irene II. sold by Stuart Hamilton, of Bermuda, to Edward King, of Newcastle, Pa. Irene II. is now in Bermuda and will be brought here.

Motor Boating.

Work on Cup Defenders.

Two fast motor boats intended as defenders for the British International trophy are building at Bayonne, and they are gradually taking shape. As the challenger for the trophy has set a high speed mark, those interested in the defense of the trophy are doing everything possible to make the defenders reliable in every way. Maple Leaf, according to meagre cable reports, was unfortunate at Monaco. She lost her rudder in an early race and was not able to get going again. The Duke of Westminster is to have a challenger, but what it is to be is kept very secret. It may be an improved Pioneer with two high-powered motors, or it may be a hydroplane.

The work on Albert E. Smith's Elco-Plane is progressing satisfactorily at the works of the designers and builders, the Electric Launch Company at Bayonne. Work has progressed so far that one can get a good idea of how she will appear when completed and her lines denote the best of seaworthy qualities and unusual stability, which is so important in boats of this class that will develop a speed of better than forty miles an hour. The highest grade Elco construction is being employed in the building of the hull. The keel, sheerstrake, planking and engine beds are in one length wherever possible, thus avoiding all unnecessary joints. The hull will be of light but substantial construction to withstand the strains that will be put upon it when running at full speed.

The power equipment, consisting of 600-horsepower, is made up of two 300-horsepower six-cylinder Standard engines of special design. These motors are 75 per cent. completed and Mr. Rioote, of the Standard Motor Construction Company, is pleased with the engines as far as they have progressed and believes that they will easily develop the power they have been designed for. Henry R. Sutphen, vice-president of the Electric Launch Company, is giving his personal attention to the completion of the hull and expects, if no unusual delays occur, that the boat will be in operation very shortly, enabling Mr. Smith, who will drive the boat himself, to become thoroughly accustomed to the handling of it before he takes part in the important races in which he has entered the boat. Mr. Smith will name the boat Yankee.

J. Stuart Blackton, Rear-Commodore of the Motor Boat Club of America, has placed an order with the Electric Launch Company for a 36-foot Fauber hydroplane racing hull, the construction of which is rapidly progressing at Bayonne. Mr. Fauber has furnished the designs for this boat and the power plant is being looked after by Morris M. Whitaker. The hull will be of the multiple step variety as was used in the Duke of Westminster's Pioneer, one of the most successful boats designed by Mr. Fauber. Twin screws will be employed and a large amount of power will be installed, the total weight of the boat being unusually light, which should enable her to develop very high speed.

Rear-Commodore Blackton also is the owner of the Vita, an Elco express tender, which he carries on the davits of his motor yacht Paula, and in a recent letter from St. Augustine Mr. Blackton refers to his experience in winning the Southern championship trophy for high speed motor boats with his express tender Vita. On account of a tie in the first race it was necessary to run a second one for the trophy, which was over a course of 50 miles. The second race was won by the Vita, her actual running time being only 27 seconds faster than the previous day's racing, which is a most remarkable showing for consistent running and in seamanship, in covering the course and making the turns in the most direct manner.

The Motor Boat Club of America will offer valuable prizes for races next year at St. Augustine, which location, on account of the depth of the water, is ideal for motor boat racing.

Long Trip in Motor Canoe.

EMERSON PINKHAM, a mechanician residing at 67 West 69th street, New York, with a companion, contemplates making a trip from New York to the Pacific Coast in a power canoe. They propose starting next summer from the Hudson river for the mouth of the Columbia River, via the Erie Canal, Great Lakes, Illinois, Mississippi and Missouri rivers and tributary branches, through the rockies and to the Columbia River, thence to the Pacific Ocean.

Wreck of Brer Fox III.

WHILE the fast motor boat Brer Fox III. was running from Cincinnati to Louisville last Saturday she ran into some driftwood when three miles north of Warsaw, Ky., and was wrecked. Dr. Harry P. Butler and Engineer Ross, of Newport, Ky., were rescued. The boat was trying for a record and was said to be making 32 miles an hour at the time.

Detroit Motor Boat Club.

THE Detroit Motor Boat Club, one of the largest and most successful on the Lakes, has recently purchased the Klenk Lighthouse Inn, which gives it the finest home of any of the Western clubs. The price paid for this was $90,000, and the inn stands within 300 feet of Windmill Point Lighthouse, which stands on the extreme outer end of the point, just below where Lake St. Clair empties into the Detroit River, with the big government lighthouse and keeper's residence to the left and a collection of picturesque summer cottages to the right, it commands one of the finest land and water views in America.

The club property begins at the south line of the proposed new Riverside boulevard, the route of which was laid out by the city engineers some time ago, 700 feet back from the river line. All the grounds, which a few years ago were under water part of every year, have been drained and graded until to-day they are high and dry.

A lawn which was started two years ago is in excellent condition this spring, and with proper care will present a broad sloping stretch of green before midsummer. Several hundred dollars' worth of shade trees and shrubbery, such as rosebushes of various kinds and other flowers are now two years old and this year should present a beautiful appearance. Several large willow trees, native to the grounds, are scattered about, offering tempting shady nooks when the sun shines warm.

The main building, or club house, is a big frame structure facing on the river. Either from the water or land side it is an imposing structure. It was built five years ago and is in excellent condition.

The main body of the building is 46x75 feet, two stories and basement. It is built in the colonial style of architecture, with four massive columns and four smaller ones supporting the verandas. The verandas, on each of the two stories above ground, extend all along the front of the building. Each is 15 feet wide and 76 feet long. They furnish the coolest spot for a meal or lounging place to be found in or near the city. Enclosed with screens to keep out mosquitoes, one may sit on the veranda in midsummer and watch an average of 85,000 tons of the shipping of the Great Lakes pass almost within a stone's throw, every 24 hours.

The entrance door of the building gives on a reception hall, a 16-foot square. The main staircase leads to the second story out of this reception hall. Easy chairs and lounges, with rugs and draperies comprise the furnishings of the hall. At the left is a ladies' retiring room.

To the right of the reception lobby is a grill or lounging room, 40x30 feet. Two big French windows in front and three smaller windows along the east side make this a bright, cheerful room. This room, like all the house, is finished in antique mission style, with beamed ceiling. In the center of the east wall is an immense fire-place, which adds a quaint, cheerful air to the room.

This main dining hall is of the same proportions and finish as the east room. The fireplace here is even larger than the other. Small tables, seating four or six people, with snowy linen and fine glass and silverware, make an ideal setting for a dining hall.

Both the main dining hall and the east lounging room give on what is known as the service room, finished in white enamel.

The second floor of the building, as now arranged, contains six private dining rooms and the living apartments of the formed proprietor. This latter may be divided into six more private dining rooms, making a total of twelve, with a capacity of from 50 to 75. All the rooms are richly furnished and will need practically no rearrangement when the motor boat club takes possession of the building.

The attic consists of four big wings, each about 20x30 feet, with 10-foot ceilings. The attic is unfinished, but it is the intention of the club officials to fit it up with sleeping rooms for twenty to twenty-five members.

The basement, which is 8 feet high, is half above ground. The foundation walls are of concrete blocks. The rooms are light and airy.

At the southwest corner of the basement is located the Rathskeller 35x30 feet in dimensions. An outside entrance and a stairway from the main reception hall furnish easy access. The buffet fixtures and chairs and tables are of the best quality, and the room is an attractive one.

To the east of the Rathskeller are the boiler room, men's wash room, coal bin and storage rooms. The Ideal boiler furnishes an abundance of heat and hot water for the whole house. An electrically-driven pump in this room gives city pressure on the water works system of the house.

The basement also contains a large storeroom for wines and liquors, house supplies, such as glassware and dishes; large meat, poultry and fish refrigerating room, with an ice capacity of 300 tons; vegetable storage rooms; laundry; kitchen supply room, in which a large stock of groceries and canned goods can be kept; and the gas lighting plant. The latter apparatus was installed only two years ago at a cost of approximately $2,000. The fuel furnished is an 85 per cent pure gasolene gas, which gives a clear, white light such as the gas in use in the city. A big gasolene tank is buried in the ground, 50 feet from the building making fire danger very small, and the fluid is brought into the basement through pipes. There it is washed and mixed with air and a huge weight tank keeps the pressure even throughout the building.

Northeast of the main building a large cottage is provided for living quarters for the help employed about the place.

The big barn, 60x60 feet, located on the grounds, serves as an ice house and automobile garage. One-half the building is given over to ice storage with a capacity of 700 tons. A shed roof on two sides of the building furnishes ample protection for autos whose owners are enjoying the boating.

Along the west side of the property, and included in the tract, Fox Creek furnishes a storage canal for boats the like of which, for safety and convenience cannot be found at any other boat club in the United States. The entire course of the creek is of an ample depth for motor boats but a little dredging of the sand bar will open the mouth to a depth of several feet.

The United States Government has already arranged for the building of a pier from its lighthouse landing, that will prove of immense value to the Detroit Motor Boat Club. The new pier will extend about 200 feet out into the river, straight south. With comparatively little expense, in a year or two, the club could construct an "L" wall, east from the end of this big concrete pier, which would give one of the best and safest harbors for large pleasure craft in the country.

This question of a safe harbor for their craft is one which has been annoying Detroit sportsmen for several years. Because of the danger of night collisions in the stream or tying up to the few docks, unprotected as they are, that are now and have been in the past, available.

With a big, always calm basin, protected by a solid concrete sea wall such as the Detroit Motor Boat Club will have with the building of the government pier and its own "L" wall an excellent harbor from which a handsome yearly revenue would be forthcoming, will be available. And already nearly a score of boat owners have declared that they will contract for storage room for their craft when the basin is ready.

Two Boats By Paterson.

IRVING C. WOOD, of Englewood, N. J., has ordered a 25-foot runabout, which is being built by Julius Paterson, the well-known builder, at Nyack. This boat will be 24 feet 6 inches on the waterline and 5 feet 6 inches beam. It is to be driven by a 17-horsepower 3-cylinder motor which will drive it about 15 miles an hour. The hull will be of fairly light construction and be finished entirely of mahogany.

John Atherton, of this city, is having a 38-foot raised deck cruiser built by Paterson. This boat will be quite heavily constructed and will measure 35 feet 2½ inches on the waterline and 9 feet beam. The equipment will consist of a 25-horsepower 3-cylinder motor which will give a speed of 10 miles an hour. The trim of this boat will be mahogany and when finished she will make a very seaworthy cruising craft.

Sparks.

DESPITE rumors to the contrary, Madison Square Garden has not been sold. The New York Motor Boat Show of 1912 will be held in the famous old structure as in former years. The Madison Square Garden Company, in a recent statement, declared that even should title to the property change hands in the near future, it would be stipulated that the purchaser or purchasers could not assume control until the middle of March, 1912. This would preclude the possibility of any interference with the Motor Boat Show or any of the other immense trade shows which have had their inception, and have grown to their present magnitude in Madison Square Garden.

The Columbia Y. C. will hold races for motor boats off the club house at 86th street and Hudson River on June 10. The contests will be for speed boats, semi-speed boats, cruisers and open boats. The speed boats will go to Ardsley and back, 30 nautical miles.

R. K. Eaton's 25-foot motor boat, building at at Graves' yard from designs by A. P. Homer, is planked.

The ocean race of the Yachtsmen's Club, of Philadelphia, will be started on July 8. The course is to Scotland Lightship, then to Fire Island Lightship and then to Atlantic City.

Dr. Chris. S. Street, of Philadelphia, is having a 56-foot cruiser built from designs by Morris M. Whitaker.

Ursula and Maple Leaf III. were beaten in a handicap race at Monaco by the German boat Lursen Daimler. Ursula was leading by ten minutes when the helmsman fainted. Maple Leaf III. retired early in the contest.

Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

Frontier Rod and Gun Club.

BUFFALO, N. Y., April 10.—A large and enthusiastic lot of gunners were favored with ideal weather, barring a light northeast breeze, which caused a shifty target, at the Frontiers' regular shoot. Eichberg easily won the honors of the day with 83 per cent., breaking 22 from the 20yd. mark in the handicap gun race and gaining another well-earned point, making three points to his credit against one for his nearest competitors. Entries for the gun race will close with the next shoot, on April 23. The points in the cup race were won by Eichberg (23), H. Utz (20), E. Bedell (14). It was suggested that M. J. McKenna, Jr., who broke 70 per cent. on his first attempt, enter in the gun race to stop Eichberg. Scores:

Smith Gun Club.

NEWARK, N. J., April 12.—The match for the State championship cup between Charles T. Day, Jr., of the Smith Gun Club, and R. C. Stryker, of White House, N. J., will take place on the grounds of this club, Bloomfield avenue, opposite Morris Park, on Saturday afternoon, April 15, beginning at 3 o'clock. Practice shooting and optional sweepstake events before and after the match.

On Saturday afternoon, April 29, the Smith Gun Club will visit Jersey City, and shoot the return ten-man team match on their grounds. JAMES SNAPE, Sec'y.

Keystone Shooting League Tournament.

PHILADELPHIA, April 13.—Charles H. Newcomb was the bright individual star of the Keystone Shooting League two-day tournament, which closed yesterday at Holmesburg Junction, again capturing the high gun honors and winning the Keystone championship after a tie with Harry Kahler. Newcomb shot in sensationally consistent form, breaking 146 of his allotment of 150 targets, running straight in seven of them, cracking 97 in the championship event, and in shooting off the tie he broke straight, while Kahler dropped 2 birds. Billy Foord, of Wilmington, finished second with 143, and Butch Landis trailed in third among the amateurs with 140.

Aside from the professional guns, the championship shoot merely whittled down to Newcomb and Kahler. Dr. W. H. Matthews, of Trenton, and George S. McCarty, each with 94, were the only ones to give the winner a run for the title.

As was the case on the first day, the shooters all traveled at a fast clip, and straight scores were the rule, two-thirds of the men who faced the traps getting at least one in some one event, and this, too, in the face of a strong wind that blew directly into the gunners' eyes. This was more noticeable in the morning, as toward noon the wind died down, and many of the shooters retrieved a bad start by cracking them in the later events. So well was the shoot managed that the last event was finished up early in the afternoon.

South Shore Country Club.

CHICAGO, Ill., April 9.—Despite weather conditions yesterday, which made good shooting almost impossible, seven five-man teams faced the traps on the South Shore Country Club in the initial handicap shoot of the series for the Hankey cup. The wind, directly in the face of the shooters, raised the targets, and the overclouded sky added difficulty to the situation.

C. J. Bour, a new shooter, who shot at 16yds., and Joe Barto, who shot at 21yds., led the score, each with 85, a wonderful record under the adverse conditions which prevailed. Honors for the day went to the Chicago Gun Club's first team with a score of 368. The second team of the South Shore Country Club was second with 357.

Individual scores of the two high teams:

Chicago G.C. No. 1, 16yds.		South Shore No. 2, 16yds.	
I R Graham	76	A C Allen	70
J Young	71	F B Stone	59
J Barto	85	C J Birkland	75
Ed Shaw	74	C J Bour	85
J Maclachlan	62—368	Dr Birkland	68—357

Totals of the other five and the handicap of each follow.

Gary G C, 19	347
Du Pont G C, 18	344
South Shore C C, 19	337
Chicago G C, No. 2, 19	292
Arlington G C	283

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., April 10.—The two-day registered tournament was held on the gun club grounds on the 7th and 8th inst, under unfavorable weather conditions, a high wind prevailing, chilling the gunners at the score. Notwithstanding these drawbacks, some good scores were made. Among the amateurs, K. C. Sheperdson was high gun for the two days with 281 out of 300, W. L. Straughn taking second with 272. C. E. Spencer scored first among the professionals with 288. Thirty amateurs and seven professionals were in attendance. The scores:

Bridgeburg Gun Club.

THE opening shoot of the Bridgeburg Gun Club, of Buffalo, was held on the afternoon of the 8th and was successful. The announcement that the feature of the afternoon would be a live-bird event attracted a large audience. Among them being many who used to shoot pigeons in years gone by. Otto Besser, former champion of the city, was present, and showed a clipping which contained the history of the Dean Richmond trophy and the winning teams, of which he was a member on different occasions. A. E. Story, W. R. Eaton, Billy Daw, Johnnie Storck and Joseph Gohn were also in attendance, and many story of trapshooting was rehearsed.

Jack Reed, of the Audubons, proved himself to be some pigeon shot when he scored 15 out of 16. Jack uses both barrels on every bird whether hit with the first barrel or not.

Court, Renn Spaulding and Mayor Reed, of Lackawanna City, were all tied with 14 out of 16.

This was Spaulding's maiden effort, and for a beginner he surely will bear watching.

The Sidways, Clarence and Ralph, also tied with 13 each. Both are excellent live-bird shots, and their score shows several marked dead out of bounds, showing that they had a little of the hard luck.

President Patterson also shot well, and announced that it was the club's intention to hold a live-bird event at least once a month. On Friday next they will have an all-day target-shoot. Summaries:

John Reed	15	R H Rogers	10
S V Spaulding	14	W H Smith	7
B V Covert	11	C F Lambert	6
R H Reed	14	Dr J M Burke	5
C S Sidway	13	T Patterson	4
R H Sidway	13		

Trapshooting on the Pacific Coast.

SAN FRANCISCO, Cal., April 8.—The California Wing Shooting Club held the opening meet of the season at Stege, Sunday, when twenty-seven gunners attended. There were three events on the program, the principal one being the medal shoot, this being the first of a series of seven which will decide the season's championship.

The medal race was at 12 birds, and none of the contestants made a straight string. Seven shooters tied at 11, the high guns being Clarence Haight, E. L. Schultz, R. C. Reed, A. J. Webb, Fred Munday, George Thomas and N. L. Nielsen.

In the purse race at 12 birds, shot in the afternoon, there were three straight scores—Haight, Reed and Ashlin getting 12 each. Naumann and Theed won the miss-and-out shoot at 12 each, the nearest to them being Munday, who went out on his ninth shot.

Haight had the best average for the day, getting 23 birds out of 24 in the club events.

The scores in the medal shoot, 12 birds, were as follows: C. Baumann (32) 10, Tony Prior (31) 9, W. F. Willett (31) 8, W. J. Golcher (30) 10, C. A. Haight (30) 11, E. L. Schultz (30) 11, A. J. Webb (30) 11, R. C. Reed (30) 11, Capt. A. F. du Bray (30) 10, P. J. Walsh (29) 9, W. W. Terrell (29) 10, C. J. Ashlin (29) 10, Frank Turner (27) 9, L. F. Prior (27) 10, R. C. Haas (26) 7, L. Rink (25) 7, E. F. Woolner (28) 10, J. Lee (27) 6, P. C. Sheed (27) 5, H. Stelling, Jr. (27) 8, Fred Munday (29) 11, J. V. Coleman (28) 6, Geo. Thomas (26) 11, N. L. Nielson (27) 11, M. R. Sherwood (27) 10.

This club is the oldest wing shooting club in the United States. Some of the leading shotgun experts in the world have shown their skill in past years at the trap shoots of this organization. The club is on record as an association for the encouragement of the sport of wing shooting, the promotion of field sports with gun and dog, and as a factor in the observation and enforcement of the game laws of the State.

The Exposition City Gun Club has been formed here and will hold its opening shoot at the Presidio grounds on April 23. A McCrea trap has been installed, and the grounds put in fine shape.

The Bay View Gun Club, of Alameda also opened the season on April 2, but the high wind prevailing made shooting conditions unsatisfactory.

Rumson Country Club.

RED BANK, N. J., April 15.—Amateur trapshooters of the Rumson Country Club participated in the club's first Easter shoot this afternoon on the grounds just east of the new club house overlooking the South Shrewsbury River. The shooting was from three traps and was governed by the Interstate Shooting Association rule. The first event was for the handicap club championship, each contestant shooting at 100 blue rocks. The shooting was in squads and the summary follows:

H. B. Dewing, first, with 75; A. Glenzer, 72; J. P. Kellog, 71; A. Dominick, 39; W. S. Jones, 55; F. Achelis, 51; Arthur McClure, 23, and W. B. Potts, 39.

Several handicap sweepstakes followed at 25 birds. The scores and handicaps were: W. McClure (6) 20; H. E. Dewing (6) 21; H. E. Dewing (5) 20; W. McClure (5), 18, and A. L. Ivins (4) 24.

Clinton Gun Club.

SOUTH LANCASTER, Mass., April 7.—Our club will run a registered shoot at our grounds, North Lancaster, on May 30. This is the first under the Squier money-back system, added money, $50 from Interstate Association and $25 or more from club. Programs will be mailed on application, about May 10. Our club has sixty members, and is gradually growing.

W. J. TEDFORD, Sec'y-Treas.

THE ACCURATE AND UNIFORM SHOOTING OF WINCHESTER

Cartridges and Rifles Again Conclusively Proven

The Winchester Rod and Gun Club Rifle Team, shooting Winchester .22 Caliber Long Rifle Cartridges and Winchester Single Shot Muskets, won fourteen straight matches in the recent tournament of the Civilian .22 Caliber Inter-Club League. The average of the Winchester Rod and Gun Club five men team for the entire series of fourteen matches was $984\frac{3}{14}$, the highest possible score being one thousand. This wonderful average would be equal for 100 shots to

$2484\frac{3}{14}$ By the German Ring Count.

G. W. Chesley had an average of 197½ for thirteen matches; Capt. A. L. Laudensack, 196½ for fourteen matches, and Capt. W. H. Richard, $198\frac{7}{9}$ for nine matches. Capt. Richard's average for 100 shots would be equal to

$2493\frac{8}{9}$ By the German Ring Count.

These scores are phenomenal and without a parallel. They tell a convincing story of the wonderful degree of perfection attained in the manufacture of Winchester Cartridges and Rifles.

IT PAYS TO SHOOT THE RED W BRAND

Western Pennsylvania Trapshooters' League.

IN a recent Sunday issue, the Pittsburg Post prints a timely article dealing with the coming trapshooting season in western Pennsylvania, as follows:

In eighteen or twenty towns through Western Pennsylvania there are seen many little animated gatherings in the shooting headquarters. There is heard much discussion as to straight and crooked stocks, bent-up barrels, guns that shoot high or dead center, and especially much talk as to pattern and velocity, speed of primers and much debate as to recoil.

All of which means that on Tuesday, the 2d of May, smiling "Pat" Anthony and Delly Matthews will hang out the welcome sign in historic old Canonsburg and on the new grounds of the Canonsburg Gun Club will stage the first of the five big championship shoots to be given by the Western Pennsylvania Trapshooters' League.

That "Pat" Anthony and Matthews will look after the comfort and entertainment of the visiting sportsmen is sufficient announcement on this subject. A book might be written on the ability of these good sportsmen, but it is not necessary, as they are too well-known to the shooting fraternity to need such eulogy.

RIVALRY KEEN, BUT SPORTSMANLIKE.

Last year the league held six of the best shoots given in the United States. From the start the rivalry was keen and the contest for both team and individual championships was not decided until the last target was broken in the last shoot of the season at Fairchance. With all this close competition there was nothing but the best of feeling shown. No unfair tactics were indulged in and visiting shooters, and especially the professionals, who have the opportunity of attending shoots in all parts of the country, maintained that nowhere they had ever been had they ever seen such a feeling of genuine sportsmanship shown.

The shooters, who have made possible this most successful league, are men who shoot for the love of the game. They know that when they win as individuals, or when their club team wins, it gives prestige to their home towns.

EQUITABLE MONEY DIVISION.

The financial returns to the consistently good shooters have been extremely satisfactory, nearly a thousand dollars in average moneys being paid out last year, but with the plan in use by the league the money was equally divided, so that no matter what a shooter's ability, all had equal chances to win.

The men who led the league did not expect the new beginners and the men who formed the lower classes to pay their way, nor did the men who formed the lower classes expect any charitable contributions from the good shooters, but men of equal skill competed with men of equal skill, and as a result the vast majority were satisfied.

The same system will be adhered to this year and from the present outlook this will be the grandest season the Western Pennsylvania T. S. League has ever known.

Some of the towns which entered teams last year have dropped out, but just look at the way some of the new clubs are coming and the way some of the old clubs are booming.

BROWNSVILLE TO MAKE PACE.

Brownsville, which last year shone with much luster both in team and individual work, is sure one of the shooting centers of Western Pennsylvania.

Not a week goes by but they have a club shoot for some trophy.

It will be safe to predict that this same club will set a pace this year that it will take some shooting to keep them from repeating their last season's performance. They have a galaxy of talent in Moore, Marker, West, Theakston, Morrison, the Crawford brothers, the Thompsons, the Doughertys, Foster, the Provences and a host of others, and especially a bunch of young shooters who are coming fast.

Then the McKeesport and Camden clubs, who will likely concentrate their talent. These boys have been shooting on the Blose cup and they may not be so numerous but they have class. There is Calhoun, Hickman, Aher, Keener, Bradshaw, Cannon, Hardy, Knight, Pitts, Baxter, Pechman, Koch, Noel and these good shooters are developing a few new men, who will help a lot in the struggle for honors this season.

Canonsburg is to be a contender in this season's race. These boys have new grounds, well equipped and handy to the town.

"Pat" Anthony and "Delly" Matthews will form the nucleus of the team, but they have a lot of good, strong men who can shoot a good score. Beck, Scott, Wood, Lease and McNary are all men who, with a little warming up, will figure in the race.

Washington is in the league and with Henry, Pearson, Lawson, Myers, Cameron, Murphy, Hackney and the new shooters they will develop, all will be there with bells on.

Butler, Well, if anyone thinks that the Butler Rod and Gun Club can't put a team in the race, they must have overlooked the fact that up to the last race of last season this team was tied right up for the team trophy. Had they not found it impossible to get to the last shoot last year they might have compelled a post season shoot to decide the race. They have Pape, Purvis, Davis, Young, Elliott, Waldron, Ashabaugh, Coovert, the Craigs, Gillespie and a host of others to draw from.

NEW CLUB MAY BE FORMED.

Herron Hill Gun Club will be in the race. "Yea, bo," it will be there, and if the writer knoweth aught whereof he speaketh, it will be well worth watching. Kelsey, Johnston, King, Rahm, Ponte, Cochrane, Anderson, Gillespie—quantity limitedand quality ace high.

There is a lot of talk about Bellevernon, Charleroi and Monessen consolidating and taking over the beautiful grounds of the Bellevernon Gun Club. The new club would be called the Bel-Char-Non Gun Club and could put a good team into the race. Frost, Phillips, Sanders, Boyd, Grant, Gween, Dale, Van Vorhis, Daly and many others would look after the club interests.

Uniontown is getting stronger and with Higgenbotham, Guyton, Evans, Kraft, Titlow and Dunbar as a foundation could put a good team in the race.

The Coraopolis boys are with us this year, and they are a fine crowd of gunners. With Hahn, P. Brand, J. Braun, F. Chesney, J. Chesney, J. Kable, J. M. Kable, Stevenson, Trimmer and Erving they can count on scoring some good points.

THE OTHER CLUB ENTRIES.

The Pittsburg Gun Club is one of the organizations which is glad to drag along and shoot just for the fun of being in the race. In numerical strength it ranks Z3, but it is prolific in the number of fat entries. Squier, Lautenslager, Shaner, Sr., Shaner, Jr., and Lewis will wear the Gold and Black and will have as much fun as any out of the race.

Tarentum will be with us and Curry, Cotter, George, Hawke, Hill and Dunn, with many new shooters, will represent this club.

If the weather man is good there should be at least eighty shooters at the first league shoot.

There seems to be considerable sentiment in favor of making three moneys in each class where there are fifteen or more shooters to the class. This would make the ratio 50, 30, 20 instead of 60, 40, which is the present division.

YOUNGBLOODS VS. GRAYBEARDS.

The race between these well known and justly popular teams now stands a tie, each team having won a race.

It has been suggested that each team through the captains, Calhoun for the Graybeards, and Moore for the Youngbloods, hand to the man who runs the book at the first league shoot at Canonsburg on May 2, a list of the eligibles on their respective teams and that the fifteen high men in the first 60 targets in the league program on each list shall comprise the team. The team with the highest total shall be declared the winner of the series.

Will the shooters of Pittsburg and Allegheny county go into the team races at DuBois with their strength split up among various clubs or will they join one big club and bring to our city the honor and prestige which our united efforts might obtain?

It is only a question of time till Pittsburg, like Cleveland, Columbus, Cincinnati, Chicago, Boston and other large cities will have to have a central home. Grounds will have to be bought to insure permanency, a large club house erected to furnish comfort and trap equipment installed sufficient to supply the demands of all who desire to shoot. The formation of such a club would not in any way interfere with the prosperity of the smaller clubs, but would give the trapshooting game the standing and prestige in the community it so richly deserves.

With such equipment some of the great national shoots could be handled and both the shooters and our city would be benefited.

S. S. White Gun Club.

HOLMESBURG JUNCTION, Pa., April 16.—Harry Kahler, although not a member, led the S. S. White Gun Club in its monthly shoot yesterday, breaking 98 of the 100 targets that comprised the day's program. He was given a suitably engraved spoon for the feat. On the first 25, with club handicaps, John McKean finally captured a dipper after several ties, while the race for the class cups was particularly keen, the A cup going to Jesse Griffith, B to Howard George, after tossing off a tie with Dr. W. H. Mathews, of Trenton; C. to John B. Fontaine and D to C. C. Watson.

In the shoot for the Eames trophy, W. B. Abbott secured a leg on the prize, and John B. Fontaine captured a leg on the Monitor cup, besides a spoon for having the best score on 50 targets. The shoot for the Monitor cup was the best of the afternoon and, with handicaps, Fontaine and Watson tied. In the shoot-off, Fontaine won by a very narrow margin.

The shoot was divided into four events at 25 targets each. The first event was for the club spoon, the second for the class cups, the total on 50 for the Eames trophy; the third event for the Monitor cup, the total of 75 targets for a spoon, and the net total also for a spoon. Despite a rather strong wind, the shooters made consistently good scores, but, aside from Kahler, whose shooting bordered on the sensational at times, there were few surprises, though Fontaine, Watson, Abbott and McKean showed decidedly better form than last year, upon which scores their present handicap was based. The scores:

	Cl.	H.	B.	Tl.	B.	Tl.	B.	Tl.	B.	Net.
Anderson	B	1	22	23	19	43	20	64	23	84

The Palefaces.

BOSTON, Mass., April 12.—One of the old-time Paleface crowds was in evidence at the regular weekly shoot held here to-day, and it begins to look as though trapshooting was coming in again in this section if we are able to get together a bunch of this sort just for the sport.

It is needless to say that the regulars such as Frank, Clarke, Osborne, Sibley, Charles, Jones, etc., were there with bells on but the new comers with Bob Smith at the head with Steel, Burnes, Hassam, Cook, Keeler and others for side partners surely were welcome and just made up the shoot to the success it proved to be.

With such an array of stars present the high average winner was sure to be a high liner, and the fun began ere the first event was finished. Walter Clarke, as usual, meant business and started the ball rolling with one down in 30, which was only one better than Steele, Osborne and Hassam. This the genial Doc held till the 50 mark was passed, and then, due to the hurry and scurry to get through and take the early train, he passed up no less than 9 targets in the last 50. With such a chance as that offered to him, Osborne had the easiest kind of a time, as he only had to get 43 out of the 50 to win, which was nuts for either one of them shooting in the form which they are at the present time.

Geo. Steele and R. Smith kept plugging and nailed a pile of them, though it looked for a time in the fourth event as if Steele had lost his grip a trifle. However, George is not one of those fellows giving up with a few lost targets and proceeded to demonstrate his right in the class of average winners by annexing enough to make a triple tie for second honors.

Frank and Burnes made a tie for the third position, certainly good work, especially for Bob, who had not been to the grounds since January.

In the added target handicap one Smith and Cook were the candy kids, each getting over the necessary amount, but as Cook had left the grounds before the finish the club rules made it a win for Smith. Jones came within an ace of being in the tie but that last event. Well it sure did hurt. Scores:

Events:	1	2	3	4	5	6	
Targets:	15	15	20	15	15	20	Total.
Osborne	13	15	19	15	14	17	93
W F Clarke	14	15	19	12	11	18	89
R Smith	13	12	16	15	14	19	89
Steele	14	14	18	11	13	19	89
Frank	12	12	20	13	13	17	87
Burnes	12	15	17	13	14	16	87
Chapin	14	12	15	12	13	19	85

Ordway	24	46	Ladd	24	87
Cook	20	103	Williams	24	84
Chapin	12	97	Pearson	20	76
Hassam	12	95			

April 15.—A special tie shoot-off between Frank and Clarke for the possession of a Paleface trophy emblematic of high average for the first quarter of the Paleface year was attraction enough to bring out some twelve shooters at the grounds to-day, and that they were treated to something out of the ordinary the scores will show.

As an additional feature the club put up two prizes, one for the scratch man and one for the high with added target handicap.

However, the Clarke-Frank race held the attention of all both shooters and spectators, of which there were quite a number with a special match between Clarke and Daily for the ownership of a cup that was a beauty (put up between themselves) as a second-liner.

With all these dependent upon good work and conditions that we do not often get in the east, Walter just sails in from the start and gets a lead that does not wilt and comes under the wire with a target to spare on both the matches, being warmly congratulated upon all sides for his clever and consistent work. As it were with Frank and Daly, each tying on 94, even the loser deserves great credit and specially in face of the uphill race, which each had to fight to get within hailing distance of the leader.

In the club race every one was right up with the band wagon, and after the smoke had cleared away, Charles was found high on the handicap with Kirkwood high on the scratch. Sibley and Chapin also had full scores, but withdrawing left the prize to the President without a struggle. Scores:

Events:	1	2	3	4	5	
Targets:	20	20	20	20	20	Total.
Kirkwood	20	19	19	20	20	98

Frank	4	98	Daly	4	98
Clarke	0	95			

New York Athletic Club.

THE second leg of the tri-club shoot between the New York A. C., Crescent A. C., and Larchmont Y. C., was shot at the traps of the Larchmont Y. C., April 15. It resulted in the second victory for the New York A. C., who led the Crescent shooters by 9 birds and the Larchmont gunners by 11 birds, making the total of the two shoots: New York, 816; Crescent, 804; Larchmont, 802.

Hodgman was high for the New York A. C., with 92 out of his 100. Scott took high for Larchmont with 92, and Brigham led the Crescent boys with 89. Altogether it was a most delightful afternoon's shooting, and all enjoyed the hospitality of the Larchmont Yacht Club.

In the fifteen-man team race between the New York A. C., and Crescent A. C., the former team won by 127 birds.

Tri-club shoot, second leg:

N. Y. A. C.		Crescent A. C.	
Schauffler	84	Brigham	89
Billings	86	Piercy	83
Corbett	88	Stephenson	83
Hall	86	Peabody	85

Bready	1 22	1 22	1 20	1 23	84	88

Ten pairs doubles: Schauffler 12, Billings 15, Wilson 8, Lembeck 14, Hall 15.

Event No. 1 was for the Bready trophy and was won by McMahon; No. 2, the April cup, won by Corbett; No. 3, Spotts trophy, won by Hodgman; No. 4, Travers Island trophy, won by O'Donohue.

Orange Gun Club.

NEWARK, N. J., April 16.—Dr. George W. Wakely was the winner yesterday afternoon of a leg on the Western trophy of the Orange Gun Club, at 25 targets, handicap, and President Frank R. Wickes led for the Spirit cup with a clean score at 15 birds, walking. Baldwin and Perkins were the winners of a relay match, 10 birds to the man.

For the Western cup the scores were: Wakely (2) 22, Baldwin (0) 18, Wickes (0) 18, Lockwood (2) 20, Perkins (2) 15, Mosler (2) 18, Gedney (2) 17.

The scores in the Spirit cup match were: Baldwin 10, Wakely 11, Wickes 15, Lockwood 8, Perkins 6, Mosler 10, Gedney 9.

The relay match resulted: Baldwin and Perkins 19, Mosler and Wakely 18, Lockwood and Wickes 15, Gedney and Brown 17.

A 10-bird practice event resulted in a tie between Wickes and Lockwood with 8 targets each. The others made scores as follows: Baldwin 7, Wakely 7, Perkins 7, Mosler 4, Gedney 7.

A handicap merchandise, 25 targets each, gave the following close scores: Baldwin (0) 22, Wakely (2) 22, Wickes (0) 22, Lockwood (2) 22, Perkins (2) 24, Mosler (2) 18.

Illinois State Sportsmen's Association.

THE annual tournament of the Illinois State Sportsman's Association, under the auspices of the Central Illinois Trapshooters' League, was held on the grounds of the Illinois Gun Club, Springfield, on April 11, 12 and 13.

The first day's program called for ten 15-target events, $19 entrance, Jack Rabbit system in all target events, three moneys, 50, 30 and 20. One cent each for all targets thrown in program events to go to high average, $5 each as far as same will go. The State event was the Board of Trade diamond badge, 100 targets, handicap, 18 to 22yds., entrance $7, and $1 Association membership; $2 for targets; $5 to purse, less 10 per cent. to the Association. Five moneys, 30, 25, 20, 15 and 10.

On the second day, there were ten 20-target events, $25 entrance. The State event was the L. C. Smith cup, emblematic of the two-shot championship; handicap, 25 targets, entrance $3; 50 cents out for targets; balance, less 10 per cent. to the Association, to be divided into three moneys, 50, 30, 20.

On the third day there were again ten 20-target events, entrance $25. The State event was the amateur championship at 50 targets, $5 entrance, 18yds, four moneys, 40, 30, 20 and 10, less 10 per cent., to the Association. Winner to receive first money and trophy. Also the professional championship at 50 targets, $5 entrance, four moneys, 40, 30, 20 and 10, less 10 per cent. to the Association, 18yds. rise, winner to receive first money and trophy.

The weather was of a typical April variety. A strong wind blew across the traps and at times exceeded the speed limit, yet some of the contestants were perfectly suited while it rained, hailed, thundered and lightened. Each day grew worse than the previous, yet we finished the program of 250 targets each day before dusk. Scores:

	First Day.		Second Day.		Third Day.

Bergen Beach Gun Club.

FINE weather favored the Bergen Beach gunners at their shoot on April 11. There was an attendance of thirty-six members, and a good afternoon's sport was had. Premier honors were taken by J. H. Vanderveer in Class A; John Gaughen in Class B; Howard Voorheis in Class C. At the club traps Billy De Long was scorer, and Sam Short referee. At No. 2 traps, F. Schneider was scorer and referee. The office was run by L. H. Schortemeier in his usual prompt manner. Over 6000 targets were shot at.

In the main event at 50 targets the scores were:

Dalton, 17	21 21—42	Dr Griffith, 16	21 22—43
Dr Moeller, 16	16 14—30	Kelly, 19	25 19—44
Medler, 18	21 22—43	J Martin, 19	22 21—43

New Orleans: 321 Magazine St. E F. LECKERT, Manager
San Francisco: 608-612 Howard Street. J. S. FRENCH, Manager

Chicago Gun Club.

CHICAGO, Ill., April 8.—Although it was cloudy and dark, several times threatening rain, and a cold, raw wind blowing, eleven shooters faced the traps and enjoyed the afternoon. Stannard was shooting in fine form, for he smashed 48 out of 50 from the 20yd. mark under difficult conditions, and then made the same score from 16yds., going through the last frame of 25 without a miss. Kilpatrick also did fine work by breaking 46 out of 50. Dr. Little took third place with a score of 41, while Shrigley broke 36 from the 18yd. mark. The Roberts brothers came out in full force, and although they had not been here for two years, they had so much pleasure out of it this afternoon, that they expect to come quite often in the future. W. E. Roberts did his first shooting at the traps to-day, as did Mr. H. C. Neff, a friend of the Roberts. Mr. Neff was here on a visit from Sharon, Pa.

Dr. Little, Mrs. Little and Roy Heit (who is a brother of Mrs. Little) had started out in the Doctor's machine for some snipe shooting, but finding the roads so bad they came back here, where they can always find the traps and targets ready for business. Roy is an adept when it comes to bringing down ducks, and he was just getting a line on the targets, so that he can make the Doctor hustle some the next time they come over to the park.

W E Roberts, 16.. 20	

April 9.—The pleasant weather induced twenty-six shooters to come out to the pary and try their skill at the traps. While they do not average very high, quite a number of good scores were made.

J. K. Sharp, one of our new members, carried off the honors in event No. 1 by breaking 46 out of the 50, and tied with two others for first place in event 2 on doubles, also landing second place in a practice event and tying for third place in another event.

Stannard took second place in event No. 1, with a score of 43 from the 20yd. mark, Thomas breaking 42 from 19yds., Taggart making the same score from 18yds., while Ammann tied them with the same score from 16yds.

Mott, Sharp and Taggart tied for first place in event No. 2, at 20 pairs of doubles, each breaking 29. Shrigley landed second place with a score of 28, while Eck broke 27 from 17 yds., Mathews making the same score from 16yds.

In the practice event at 25 singles, Mathews took the lead with 24 breaks, Sharp coming in for second with 23, while Roll, Ammann and Graham tied for third place with scores of 22.

Thwaite showed the way in the next frame by breaking 24 out of the 25, Ammann and Mathews each breaking 23, while Fenstermaker, Sharp and Adams each scored 22.

In a 25 bird race at 20yds., Mathews scored a win with 22, Thomas and Stannard each breaking 21, Roll taking third place with 20.

All hands were glad to welcome Ed. Graham, and it was quite a pleasure to his many friends to see him on the firing line once more after his long siege of sickness.

Roll had not been out since last fall, but expects to get here more regularly. He reports the best duck shooting last week that he has had for years.

Harry Dare and the Porter brothers came over from Blue Island, and we look for them quite often from now on, as they thoroughly enjoyed the sport.

W. G. Lewis came out in his machine, and although he had not done any shooting for over a year, his score of 43 out of the last 50 shot at, shows that it would not take much practice to put him among the top-notchers. Scores:

Invitations have been issued to gun clubs for the second annual interstate five-man team championship and interstate individual championship at targets, on the grounds of the Chicago Gun Club, 123d street and Michigan avenue, on Sunday, May 7, 1911. The card of invitation reads:

"This contest is open to any team of five men from any gun club in the United States, all shooters to be bona fide members of the club they shoot with. Entries must be sent to Mr. E. B. Shogren, Secretary, 840 First National Bank Building, Chicago, so as to reach him not later than Saturday, May 6. Each man will shoot from 16yds. rise, 100 targets each, 500 for the team. 20 targets each time up. Five sets of Ideal Leggett traps will be ready for use if necessary. The contest will begin at 1 P. M. sharp. The entrance is $1 per team, and each contestant pays 2 cents each for targets. A club may enter as many teams as they choose. A beautiful silver trophy cup will be given to each member of the winning team. The individual securing the highest score will be given a beautiful silver trophy cup. An optional sweepstake of $2 for each 20 targets, $10 total, will be part of this event. Money divided 40, 30, 20, 10 per cent., class shooting. A club that cannot make up a team may take part as individuals for the individual championship, which is shot for in the same event as the team championship. The grounds will be open all morning for practice events, a good lunch will be served on the grounds at reasonable prices. Full information regarding trains to grounds, etc., will be given if you will inform us what road you will come in on, at what time you expect to reach Chicago. The Chicago Gun Club may have two or more teams entered. We wish to assure you that no team will have to exceed three 90 per cent. shooters."

Hyde Park Gun Club.

THE weekly shoot on April 15 was fairly well attended, nine shooters taking part. The weather was fine, after several days of rain, but the wind was blowing half a gale, and the way the targets climbed skyward proved too much for the marksmen, not one of whom shot nearly up to his average. Holaday succeeded in breaking but 77, and he's reckoned a 90 per cent. or better shooter under anything like ordinary conditions. Jenkins came over late, and shot in one event, with a borrowed gun, this handicap, in addition to the wind, helped him to miss more than usual. Donnell, of Felicity, Ohio, was the only man who missed less than four targets in any one of the events, and he could not keep it up; he finished two targets behind Holaday. Welch felt rather discouraged at his work, until he saw that there were others who couldn't hit them all. Hill, of Hillsboro, Ohio, and Ruble, of the same town, fell down with the others. The former was trying a new gun, and had his troubles with it, so he could not keep his mind on the targets. Smith got into all the events, and enjoyed the novelty, as he generally has so many other things to attend to that he gets to shoot very little. Frohliger has a habit of scoring his misses on the easy targets, and making good on the extra hard ones. To-day he made a number of especially fine breaks on climbing right and left quarterers. It was certainly good to see Dr. Phillips on the firing line again, and we hope he will join the regulars once more. Between events he was practicing on the revolver range with Schaefer, when Sampson gets settled into his gait he is going to make the good ones travel to keep up. He used to drill with the leaders in the old St. Bernard days, and he's going to be reckoned with again.

The club officials are planning a series of shoots this season, on a plan that will attract the amateur who is not a 90 per cent man, and every effort will be made to have them well attended. A money-back shoot is among the possibilities. Several of the members will attend the big Hillsboro, Ohio, shoot on the 20th, and they have also selected their prizes at the Harrison (O.) merchandise shoot on the 21st.

Northern Kentucky Gun Club.

A LIVE-BIRD shoot was held on April 13, five of the pigeon shots participating. The day was not very propitious, heavy rain fell in the morning, and the sky was heavily overcast in the afternoon, with considerable wind. The birds were an average lot. Walker and Gould tied for first money in the first event, and finished the 25 birds in a tie on 23, for the trophy. The tie was shot off in the third event, Walker winning by one bird, 7 to 6.

In the second event, Payne got first money on a straight score, with Walker and Gould tied for second on 14. A couple of miss-and-outs finished the live birds, and the balance of the daylight was devoted to breaking targets. Penn and Schreck tied on 62 out of 75. Penn shot another 25, making a score of 86 out of the 100.

Event No. 1, 10 birds, $5 entrance:

Walker, 30	1102121211—9	Payne, 31	2122102100—7
Gould, 30	2210111122—9	Schreck, 31	2220101202—7
Robbins, 29	2202202211—8		

Event No. 2, 15 birds, $6.25 entrance:

Payne, 30	112122221121222—15
Gould, 31	112101112111222—14
Walker, 31	222122221121220—14
Schreck, 30	202220120212112—12
Robbins, 29	102212121202110—12

Event No. 3, 7 birds, $3 entrance:

Payne, 32	2121221—7	Gould, 31	2202222—6
Walker, 31	2121122—7	Schreck, 30	1200100—3
Robbins, 29	1022211—6		

This event decided the tie between Gould and Walker for the trophy offered in the 25 birds.

Miss-and-out, 34yds.:

Payne	0	2	Gould	0	2
Robbins	0	2	Schreck	1	0
Walker	0	1

Penn	19	21	22	24	86
Gould	17	21	..	..	38
Hammersmith	23	18	..	..	41

Nine shooters visited the grounds on April 16 to take part in the weekly handicap trophy event. The day was fine, with just a little chill in the air, and enough wind to make the shooting interesting and relieve the monotony of the average target flight. R. H. Bruns wandered down from Brookville, O., and made the other shooters take notice by getting in a tie with Keifer on a perfect score, including the handicaps, and then winning the shoot-off by one target. We would like to have him come down again, and hope he will get a set of the trophy spoons. Keifer has been under the weather for several weeks, but his rest does not sem to have lessened his skill; he was high man in actual breaks with 44, Bruns and Holaday coming next with 41 each. Woodbury was over to-day, and we hope he is going to be one of the regulars again. He can easily get back if he will take a proper amount of practice. Luverne shot a pretty good gait in the wind. When the live-bird shooting is forgotten for a while, he will do like he used to, and get up near the leaders. George Dameron is still unable to do any shooting, but he hopes to get at it in time for the State shoot, and to get a chance at the Grand American. He was over to-day watching the sport. Sampson cannot get used to a double gun, as he has been using a pump quite a little this spring; his scores will improve soon, however, and he will get his share of what is going. Uncle John Dea, was with us and shot a good race in the wind: he's a good loser, and gets all the fun there is in the game, whether his score is at the top or not. McArdle is going to win one of the trophies, and it will not be strange if he gets several of them. His score to-day was a little less than his average, but he made a total of 47; then he has a tie to shoot off yet, and has a good chance to win it. The club will open the series of money-back tournaments on May 7, and will give one on the first Sunday in each month during the season. These were well patronized last year, and the same program will be arranged this year—ten events at 15 targets each.

Trophy event, 50 targets, handicap:

Targets:	10	15	10	15	Bk.	Hcp.	Total.
J B C	10	6	12		6—34	12	46
McArdle	10	8	13		8—39	8	47

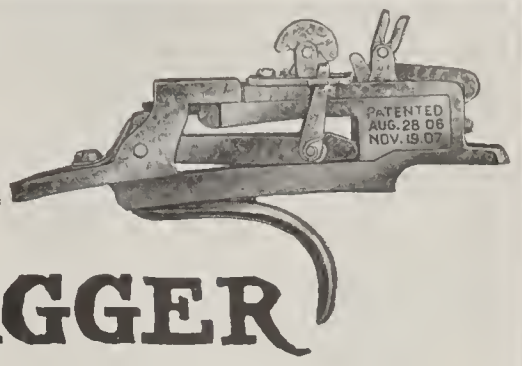
Live Bird Shooting in Pennsylvania.

POTTSVILLE, Pa., April 15.—Fred Coleman, of Pottsville, champion wing shot of the world, for a wager of $200, defeated James Sommers, of Easton, in a live pigeon contest at Tumbling Run Park, this afternoon. It was to have been a 100-bird race, but Coleman killed 95 out of 97, enough to win, while his opponent scored only 88.

After his victory, Coleman officiated as referee at a live-bird match at 20 birds between Elwood Hildebrande, of Minersville and Peter Mowrey, of Mt. Pleasant, for $300 a side. Mowrey won, killing 18 to his opponent's 16 birds.

THE INFALLIBLE SINGLE TRIGGER



THE TRIGGER THAT NEVER FAILS.

Now's the time to have your gun changed. This trigger can be fitted to your gun, no matter what make. You can do better shooting—your second shots kill. You can fire two shots with great rapidity. *Write for Descriptive Matter.*

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., April 16.—Hogan about grabbed all the honors there were to clutch yesterday afternoon at Fifty-seventh and Lancaster avenue, the home of the Meadow Springs Gun Club. Hogan took home two spoons as Easter presents for his ability to beat out the field which participated in the club event, and also the entire program for the afternoon. In the club test he ran a straight 25, outshooting every Class A man on the grounds. In the five other events which helped to swell out the bill to an even 100 targets he also shot a "streak," his total for the day's sport being 96 breaks out of the century of bluerocks. It was one of the best exhibitions of shooting given by a club member this season on "The Hill."

There was another silver offering in the shape of a spoon for the member who cracked the most number of doubles out of 12 pairs. This Alexander captured by breaking 21 of his two dozen of bluerocks.

Keenan led the Class B men in the club shoot with a total of 25 breaks, breaking 20 of his 25, and having a handicap of 5 to reach the high total.

The Club will hold a prize shoot next Saturday. Scores

Hudson Valley Rod and Gun Club Tournament.

ON Saturday, April 29, the above club will hold its fifth annual trapshooting tournament at Glens Falls, N. Y., as registered by the Interstate Association, under the Squier money-back system. The regular program calls for ten 15-target events, $1.40 entrance each, $1 extra, Squier money-back system, making a total of $15 for the ten events. Optional sweepstakes extra, entrance $1 each. The club events consist of a 25-target merchandise shoot, entrance $1.75, added target handicap, ties decided by lot, high guns. Also an event at 10 pair doubles, entrance 25 cents, the winner to receive a handsome vase.

Division of moneys: Regular program—Rose system, 5, 3, 2, 1. Optional sweeps—Percentage system, 40, 30, 20 and 10 per cent., class shooting. Ten entries and under, three moneys, 50, 30, 20.

Under the Squier money-back system the club will add to the $50 already contributed by the Interstate Association, 1 cent for each target thrown in the regular program, which should pay all losses and leave a handsome surpluss to be divided.

The tournament will begin promptly at 10 A. M. rain or shine. A good lunch can be secured on the grounds, also standard trap loads. Professionals and trade representatives are invited and shoot for targets only. Targets, 2 cents each. The club grounds are located on the main line of the trolley road between Glens Falls and Hudson Falls. Mr. A. D. Witt, of the Hotel Cunningham, Hudson Falls, N. Y., will see that guns and ammunition shipped prepaid in his care are delivered to the grounds free of expense. For further information address J. A. Norton, Secretary, Hudson Falls, N. Y. A large attendance is confidently expected.

Clearview Gun Club.

DARBY, Pa., April 16.—Harry Fisher, who was the only Class A gunner on the field, led the Clearview Gun Club members a merry chase for the individual honors in the club's monthly shoot yesterday afternoon. Out of his string of 50 Fisher broke 47. Bonsall, who was the runner-up to Fisher for the high honors of the day, also topped the Class B men by getting 42. Chestnut and Paulson, with 37 kills, tied for the Class C trophy. Of the five visitors who contested, Hill led with 38 breaks. Scores:

Class A—Fisher 47.

Class B—Bonsall 42, Babcock 41, Martin 41, Bockius 40, McCullough 36. Elwell 36, Letford 34, Ferry 33, Clark 31, Krietzberg 31, Hunter 26.

Class C—Chestnut 37, Paulson 37, Beriens 33, Dalton 31, Lohrmiller 31, Ullman 29, Darby 21, Fink 20, Hill 38, Morgan 32, Barthold 30, Beers 29, Williard 28.

Eagle Gun Club.

MANOA, Pa., April 16.—Felix, shooting from the 30yd. mark, was the only man in the squad who participated in the weekly event at Manoa yesterday to get a straight score. Muller, Paul and Murphy tied for second. Scores:

Felix, 30.....2222222222—10
Muller, 30....2221201211— 9
Murphy, 30 ..1211021222— 9

New Jersey State Championship.

NEWARK, N. J., April 15.—Again Charles T. Day, Jr., successfully defended the New Jersey State championship title at the traps. His victim this time was R. C. Stryker, of Whitehouse. Fifty birds each were shot at, both men shooting from the 16yd. line. Day managed to smash 41 against 6 by Stryker. Weather conditions being perfect for a match, a record-breaking crowd turned out. Some interesting sweeps were also shot off, there being almost four thousand birds thrown from the traps during the afternoon.

Considerable interest was aroused over a special match between George Ohl, Jr., and A. Wheaton. In the first string of 25 birds, Wheaton won out by breaking 18 against 15 by Ohl. In the next 25 string, Ohl got back at him by breaking 12 against 11 by his opponent. A third and deciding string was shot off, which Wheaton took by breaking 16 against 13 by Ohl.

Scores made during the afternoon were as follows:

B M Shanley	20	15	19	19	18	22	19	..
R C Stryker	23	21	24	..	..	..	..	..

Next Saturday the Smith gunners will send a ten-man team to shoot a return match with the Jersey City Gun Club. In the first match, which was shot on April 2, the Jersey City gunners defeated the local men by the close margin of one bird. The Smith men hope to turn the tables on them this time.

South End Gun Club.

PHILADELPHIA, Pa., April 16.—In the final shoot of a series of five shoots for prizes at the South End Gun Club over the South Camden traps yesterday afternoon, Frank Hineline captured the honors with a score of 114 out of a total of 125 targets. Robert Fleming and William Wakeman tied for second place with 110, and in the shoot-off, miss-and-out, Fleming won. The spoon shoot at 25 targets, with handicap added, resulted in three ties, but as there was a spoon for the member making the most consecutive breaks, Hineline took the dipper and dropped out of the tie, Newkirk and Johnson fighting it out for the prize, the former winning.

At the annual meeting of the South End Club in the Camden Y. M. C. A., these officers were elected: President, A. G. Soistman; Vice-President, William Cross; Secretary, James Anthony; Treasurer and Captain, Robert Fleming; Superintendent of Grounds, James Newkirk. Owing to the march of improvements, a committee was appointed to look up new grounds with a view of purchase, whereon it is intended to lay out permanent traps and erect a large and commodious club house, the committee to report at the next meeting of the club. Yesterday scores:

Targets:	25	25	25	25	25	Total.
Hineline	22	22	23	22	25	114
W Johnson	20	25	21	19	25	109

Harrison Gun Club.

The Harrison (Ohio) Gun Club will give its second annual merchandise shoot on April 21, shooting to begin promptly at 10 A. M., regardless of weather. The office will be in charge of L. J. Squier, which ensures smooth going in the financial part of the shoot. Fred Gilbert, C. A. Young, Holaday, and several other well known experts will take part in the events, but for targets only. The program calls for five events, four at 15 and two at 20 targets each; $1.00 entrance in single events; $5.00 entrance for the entire program. There are seventy-two prizes, ten in each event of the 10-target events, and sixteen in each of the 20-target events. Three high average moneys, $5.00, $3.00 and $2.00; low gun receives $1.00. Everyone welcome.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., April 12.—One of the largest shoots in this section of the State was held at the Speedway traps yesterday, 4,675 white flyers being aimed at. The weather was ideal for the sport. Three handicap prizes were awarded. The first prize was a pair of gold sleeve buttons, handicap, 4 out of 50, which was won by W. Hessinger. The second prize, a pair of gold link buttons, handicap, 9 out of 50, was awarded to Thompson. The third prize, a gold necktie clasp, handicap, 2 out of 50, was taken by Lembeck. The prizes were contributed by B. M. Shanley, Jr.

Prize shooting will be held at the meeting next Tuesday afternoon, a special feature of which will be a silver cup trophy, for a 100-bird handicap, which will be contributed by Chris. Feigenspan. At the conclusion of the shoot the regular monthly meeting of the club will be held. The scores:

Ossining Gun Club.

OSSINING, N. Y., April 15.—There were four prize events shot on the grounds of the Ossining Gun Club to-day. In the first event, Col. F. Brandreth and C. G. Blandford tied with clean scores, including handicaps, the former winning on the shoot-off in scratch event No. 2. The prize was a win on the Dupont medal and a Thermos bottle. Col. Brandreth awarded the bottle to the next high man in the event, I. G. Washburn being the lucky one. Blandford won a silver tea, cream and sugar set in No. 2. Hyland a fine cup in No. 3 and D. Brandreth a silver tea cream and sugar set in No. 4. Blandford got a fine copper cup for general high average. Add numbers after names to events Nos. 1 and 3 for gross scores. The attendance to-day was disappointing, for the prizes were a fine lot. D. Brandreth was high in a 10-target preliminary event with 9.

Events:	1	2	3	4	5
Targets:	25	25	25	25	25
C G Blandford, 2.....	23	22	25	19—89	23

C. G. B.

Montclair Gun Club.

MONTCLAIR, N. J., April 16.—In the contest for the Du Pont trophy and the monthly cup yesterday afternoon, the former was won by Edward Winslow and the latter event by Y. T. Frazee after shooting off a tie with Winslow. The events were at 25 targets, handicap. Scores:

First event, Du Pont trophy:

Winslow	4	25	Holloway	5	21
Crane	4	20	Thomas	7	21
Boxall	3	24	Frazee	2	22
Bush	3	24			

Second event, monthly cup, third leg, 25 targets, handicap:

Frazee	2	25	Bush	3	20
Winslow	5	25	Holloway	5	19
Crane	4	22	Thomas	7	23
Boxall	3	24			

A two-man team race at 10 targets per man was won by Crane and Holloway, after shooting off a tie with Frazee and Dr. Foster. Scores: Crane and Holloway 18. Boxall and Thomas 16. Frazee and Dr. Foster 18. Bush and Winslow 14.

Shoot-off: Crane and Holloway 19. Frazee and Foster 16.

Next Saturday the Montclair gunners will go to North Caldwell to take part in the annual tournament of the North Caldwell Gun Club.

Newton Gun Club.

GLOUCESTER CITY, N. J., April 15.—The Newtown Gun Club to-day had three shooting matches at its grounds, in the eastern section of the city. The first and main event was won by Powell. The second event, a sweepstake, was won by Wakeman. The third event, miss-and-aut, was won by Jack Healy.

Next Saturday the weekly prize will be a double-barreled gun, the event being open to all gunners. Summaries:

Weekly shoot, 25 bluerocks each: Powell 15, Daisey 14, Juingling 14, Parker 10, Strain 8, Chamberlain 8.

Sweepstake, 12 bluerocks each: Wakeman 10, Rexon 9, Horner 8, Butler 6, Smith 6, Marcus 5.

Miss-and-out: Jack Healey 9, Francis Rafferty 8, Robert Stetser 8, William Wachter 8, Harry Fitzgerald 7, Michael Goldman 6.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

The Marlin Repeating Shotgun — *12 GAUGE*

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action.

The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hangfires harmless.

All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. Illustration shows Model 24 grade "A" 12 gauge; it has all the features that make for a perfect gun

His Best Book

MY FRIEND THE PARTRIDGE

By S. T. HAMMOND

This delightful presentment of the glories of Autumn days with gun and dog in the crisp New England woods in search of the noblest of native game birds, which has already delighted thousands of readers of FOREST AND STREAM, is now ready for delivery in book form.

Mr. Hammond knows his upland coverts as no other writer of the day. He makes no empty boast when he calls the partridge his friend, and, moreover, makes his every reader a friend of this splendid bird. He succeeds in a rare degree, not only in describing the ruffed grouse, its habits and habitat, and the pleasures of its pursuit, but in surrounding his reader with the very atmosphere of the leaf-scented Autumn woods. Mr. Hammond's book is a welcome addition to the library of sport.

Cloth. 150 Pages. Illustrated. Postpaid, $1.00

DUPONT SMOKELESS

Pahquioque Gun Club.

DANBURY, Conn., April 15.—The Good Friday shoot held at the Tamarack traps yesterday under the auspices of the Pahquioque Gun Club, was unusually interesting throughout, despite unfavorable weather.

In the shoot for the Daley challenge cup, F. G. Clark was the winner with a score of 44 out of 50.

In the first 50 targets the shooters having an average of 80 per cent. or better were in Class A, those having less than this average, in Class B. Gregory and Clark tied for first in Class A with 44; Dr. Sunderland was second with 42. In Class B, E. H. Bailey was first with 38; C. K. Bailey and W. B. Judd tied for second prize with 36, and C. K. Plancon third with 35.

The final 50 targets of the program were an added bird handicap with six prizes. Judd won first, making 50 with his handicap of 9; Crane second, with 49, handicap 10; Harkness third with 47, handicap 8; H. Judd fourth with 46, handicap 2; Gregory and Clark tied for fifth and sixth with 45, with handicaps of 1 each.

A special event arranged after the shooting of the regular program, was a distance handicap of 25 targets for a Winchester rifle, in which Dr. Paul U. Sunderland was the winner with 20 from 18yds.

The scores of the shooters for the entire program, 100 targets each, follow: W. A. Gregory 88, F. Clark 88, Dr. Sunderland 82, W. S. Thompson 80, W. B. Judd 79, J. Harkness 76, E. H. Bailey 74, C. H. Daley 73, R. Bennett 70, B. Crane 70, K. Plancon 69, C. K. Bailey 69, Wm. Gannung 65, J. Osborne 60, E. Miller 55.

DuPont Gun Club.

WILMINGTON, Del., April 16.—Lester S. German, of Aberdeen, Md., the professional marksman, made a remarkable score at the weekly shoot of the Du Pont Gun Club yesterday afternoon. He broke 50 straight in the singles and 46 out of 50 in doubles. W. M. Foord, of this city, the amateur State champion, broke 24 out of 25. A. B. Richardson, of Dover, son of Senator Richardson, and former State champion, broke 22 out of 25.

There was a large number of competitors, many from out of town. The scores in the two-man team championship elimination race were: W. Mathewson and D. J. Dougherty, 50; H. J. Taggart and W. F. Jensen 46; Thorpe, Martin and L. W. Crawford 46.

The scores in the T. Coleman du Pont merchandise event were:

Class A, 24 out of 25—W. M. Foord.

Class B, 19 out of 25—W. A. Joslyn, Clyde Leedom, Dr. Samuel Rumford, W. S. Gavan.

Class C, 16 out of 25—W. F. Jensen H. J. Taggart, C. V. Ferriday, T. Brown, J. J. Magahern.

Class D, 12 out of 25—D. D. Poffenberger, S. B. Trott, R. S. Robinson, G. L. Naylor, F. H. Megaw, Dr. C. R. Jefferis, Jr.

The winners of silver spoons in the shoot-off of ties made the previous Saturday were: Class A, H. H. Lukens, 22. Class B, Dr. C. R. Jefferis, Jr, 17. Class D, W. M. Hammond, 22. Class D, J. J. Magahern 16.

The complete scores of the day were as follows: Guy E. Lambert 14 out of 25, D. D. Poffenberger 12, Dr. H. Darlington 11, C. Schumacher 6, W. A. Joslyn 19, A. B. Richardson 22, L. S. German 25, H. H. Lukens 22, Dr. S. Steele 20, T. C. Doremus 21, Eugene du Pont 17, Clyde Leedom 19, H. M. Hammond 22, S. G. David 18, W. F. Jensen 16, Thorpe Martin 18, Samuel Rumford 19, Dr. Lewis Rumford 18, J. A. MacMullen 15, N. K. Smith 20, E. H. Lambert 10, L. Evans 20, W. E. Husbands 18, S. B. Trott 12, R. S. Robinson 12, P. S. Gregg 16, Wm. Foord 24, J. T. Roberson 21, D. A. Grier 21, D. J. Dougherty 22, H. J. Taggart 16, L. C. Lyon 18, J. B. McHugh 20, Wm. Wood 8, J. W. Anderson, Jr., 18, W. W. Baun 9, A. J. Curley 7, L. R. Beauchamp 22, C. D. Prickett 17, C. V. Ferriday 16, J. E. Ewing 21, W. Mathewson 20, W. S. Gavan 19, J. G. Kellum 2, J. W. Burns 21, H. P. Carlon 20, R. L. Conner 21, P. T. Pennington 9, J. Winchester 20, T. B. Rogers 20, J. T. Skelly 22, Dr. H. Betts 13, George Sheafer 9, C. A. Patterson 8, W. F. Harrington 8, W. M. Moore 21, T. Brown 16, H. Masten 16, J. J. Magahern 16, E. F. Hawk 11, G. Spiedel 11, D. Lindsay 20, T. W. Keithley 22, L. W. Crawford 15, M. E. Rose 23, C. O. Williams 22, W. B. Smith, Jr., 9, G. L. Naylor 12, F. H. Megaw 12, Dr. C. R. Jefferis, Jr., 12, S. Tuchton 15, W. A. Casey 14, A. H. Lobb 23, H. C. McClane 14, Dr. A. Patterson 14, Leslie Mathewson 12.

Siwanoy Country Club.

MT. VERNON, N. Y.—The first annual championship at trapshooting for Mt. Vernon and the Siwanoy Country Club, which is to be held on Decoration Day, May 30, has every indication of being a complete success. Over twenty entries have been received to date.

The contest for the Du Pont trophy begins on April 22, and it becomes the property of the winner after he has won it three times.

The following scores were made at the practice shoot on April 15:

	Shot at.	Broke.	Average.
C B Holmes	126	97	76.9
J G Wintjen	45	37	82.2
L G Bond	35	27	77.1
E W Valentine	65	57	87.6
H V Morgan	90	62	60.8
G A Wylie	115	96	82.9
E C Vanderbilt	35	13	37.1
W Thorpe	126	100	79.3
H D Lent	65	34	52.3
Dr W E Barnard	105	65	61.9
Wm M Wylie	116	61	52.5

C. G. STONE, Sec'y.

Analostan Gun Club.

WASHINGTON, D. C., April 16.—The Analostans had a good afternoon for their third time out this spring. A lively breeze from the northwest made high targets, but the boys seemed to like them, and made good scores. Emory Storr, a trade representative, was in good form after his first 30, and finished the afternoon with 186 out of 200. Uncle Billy Wagner and Dr. A. B. Stine led the amateurs with 92 out of 100. Dufour distinguished himself by breaking 47 out of 50. Following are the scores made during the afternoon:

	Shot at.	Broke		Shot at.	Broke
E H Storr	200	186	A Reeside	100	64
Wm Wagner	100	92	J M Green	100	64
Dr A B Stine	100	92	D W Dulaney	95	67
Phil Steubener	125	106	F Kahrs	75	51
C S Wilson	100	84	Miles Taylor	50	46
Dr M Harrison	130	111	Everett Dufour	50	47
Geo W. Peck	100	79	Walter Wilson	45	30
R T Bray	100	75	Geo Talbot	25	18
Dr A Parsons	125	98			

Eastlake Gun Club.

WILMINGTON, Del., April 16.—R. Coffin was high man at the Eastlake Gun Club's regular Saturday shoot on the club grounds, Thirty-fifth and Monroe streets, yesterday afternoon, breaking 17 out of 25. Fourteen contestants were out. The scores were:

	Shot at.	Broke		Shot at.	Broke
R Coffin	25	17	H Kirby	40	16
W Jones	50	30	L Beatson	50	21
H Black	40	23	W Fincher	50	21
C Haverheck	40	23	K Davis	35	18
E Porter	40	22	J Spring	25	11
W Gray	45	27	H Jones	40	14
W Beck	50	21	J Lloyd	10	3

Haddonfield Gun Club.

HADDONFIELD, N. J., April 15.—The Haddonfield gunners met on their home grounds to-day in the bi-monthly prize shoot. The day was unfavorable to big scores, a stiff south wind blowing in the face of the gunners, making the targets take erratic flights. Eyster and Pierce tied for first prize with full scores by the aid of their handicaps. Bergen, Beideman and Tompkins tied for second prize with 24. Jamison with 23, captured third prize, a pair of silk suspenders. Eyster easily won the tie with Pierce for first prize, a pair of neckties. Tompkins outshot Bergen and Beideman by a single tar-

get and took second prize, a hunting scene. Bergen did the best shooting of the day.

S Bergen	3	24	Tompkins	5	24
Eyster	5	25	Logan	2	22
Beideman	2	24	J Peacock	1	21
Pedlow	5	21	Jamison	7	23
Pierce	6	25	Lye	10	22
Holloway	0	18	Statford	3	22

W. A. Shreve, Sec'y.

Indianapolis Gun Club.

Indianapolis, Ind., April 15.—In practice, Denny and Moller led with 80 per cent. broken. In the trophy event, Moller and Hymer tied on 43 out of 50, Moller being credited with one score of 24, which was noteworthy, in view of the fact that the wind blew at the rate of forty miles an hour across the traps.

Practice:

	Shot at.	Broke		Shot at.	Broke
Denny	60	48	Hymer	85	61
Moller	85	68	Golden	60	32
Parry	85	65	Neighbors	40	31
Lewis	85	58	Britton	20	10
Dixon	85	63			

Du Pont trophy, 50 targets:

Dixon	29	Hymer	43
Parry	31	Golden	27
Lewis	32	Neighbors	36
Moller	43	Smoke	42

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C Crossman, Sec'y.

Illinois State Rifle Association.

Announcement was made recently by Major Clinnin, of the Illinois State Rifle Association that instead of the big indoor shoot, which was given at the International Amphitheater last year, the organization would stage an indoor team shoot at the First Regiment armory April 26, 27 and 28. No individual competition will be held. Although the meet last year was considered a success from the standpoint of competition the expense was far heavier than the association felt able to bear again, and for that reason the tourney will be run on a smaller scale this year.

The events will be for regimental, company and high school rifle teams and police and regimental or company revolver teams. In the rifle matches 22-caliber guns will be used. The shooting will be in three positions—standing, sitting and prone—all at fifty yards.

The regimental shoot will be for six-man teams from any regiment of the Illinois National Guard for the John T. Spoor trophy, which was won last year by the Second Infantry. The company team match will be for the Edward G. Leonard trophy, open to three-man teams from any company of infantry, cavalry and artillery.

The revolver contest will be open to five-man teams from any police body of the Chicago department or any regiment of the I. N. G. The marksmen will shoot for the Captain C. E. Black trophy, won last year by the Chicago Police Department team.

High school teams will consist of five men, any school being eligible to competition. The high school lads of the county have expressed considerable interest in the shoot, last year's event having worked them up to appreciation of the contest.

Two youngsters, who had not yet been informed of the date, called upon Major Clinnin to learn if there was to be any competition for them this year and were happy when they received the information. They predicted that there would be a large entry list of prep lads at the armory and said many of the boys were working hard to get in good conditions for the match.

The Philadelphia Rifle Association.

Philadelphia, April 15.—The weekly competitions of this association were shot Friday, April 14, all day, and on Saturday, April 15, on the Arlington Range, Lansdowne avenue and Cedar lane, near Llanerch, Pa.:

April 14.—Military A—N. Spering, 47, 46, 45, 44; H. A. Dill, 44, 41; Dr. G. G. Davis, 41. Brochmeyer (military)—N. Spering, 47, 46, 45, 44; H. A. Dill, 44, 41; Dr. Davis, 41.

April 15.—Honor target, 3 shots—J. Geo. Schnerring, 59; Williamson, 52. Off-hand match—J. Geo. Schnerring, 219, 210, 208, 207, 204; Williamson, 219, 214, 210, 207, 203. Military match—H. A. Dill (A), 45, 45, 44, 44, 43, 42; Dr. Davis (B), 45, 41, 40. Brochmeyer (military)—H. A. Dill, 45, 44, 43, 41; Dr. G. G. Davis, 43, 41, 40.

Remington Gun and Rifle Club.

Ilion, N. Y., April 17.—The annual meeting of the Remington Gun and Rifle Club was held here on April 11. The following officers were elected for the ensuing year: President, M. A. Mulvey; Vice-President, Charles Gammage; Secretary and Treasurer, W. H. Grimshaw; Captain, R. H. Tomlinson; Collector, J. J. Jackson; Directors, Charles Jenne, Forest Banker, W. F. Lawrence, J. I. Van Doren.

It was decided to donate a Remington .22 cal. repeating rifle to the New York State Sportsmen's Association and a resolution was passed in favor of the Payne bill prohibiting the sale of game birds in New York State. It was decided to hold an open shoot on May 30.

W. H. Grimshaw, Sec'y.

SMITH GUNS
HUNTER ONE — TRIGGER

THE mechanical precision of the adjustment of a Hammerless Smith Gun approximates perfection. By reason of it a Smith Gun cannot shoot loose. The longer you shoot it the tighter it gets. And so by far the greater number of your gun-troubles are eliminated.

NEVER in the long history of gun-making has there been made so great an improvement as the *Hunter One-Trigger attachment*, which can be put on all Smith Guns. It stands for the greatest accuracy—and is helping to make world's records. Your dealer should be able to tell you all about it. So will our new and handsomely lithographed Catalogue, which you may have on request.

The latest product exemplifying Smith Gun perfection is our *20-Gauge Hammerless*—just out—and almost as light as a feather. In reality it weighs from 5¾ to 7 lbs. It shows what can be done in making a fine gun at a low price. It is simply *all gun and no frills.*

The World of the Dead. Pawnee Religion. The Old Faith and the New. The Coming of the White Man. The North Americans—Yesterday and To-day.

FOREST AND STREAM PUBLISHING CO.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING COMPANY

Life and Sport in Labrador

NAPOLEON A. COMEAU.

In "Life and Sport on the North Shore of the Lower St. Lawrence and Gulf," Mr. Comeau has made a valuable addition to the literature of rod and rifle—and more. It is a book of engrossing personal interest to the sportsman or general reader, and of rare value to the student of wild life.

The author describes the events and experiences of fifty years, spent in the cause of humanity and science in one of the most interesting and least known sections of Canada. He writes as one sportsman to his fellows, detailing his experiences with the wild things of wood, shore and sea, with plenty of stirring experiences with big game and gamy fish.

Illustrated, 450 pages. Paper. Postpaid, $2.50.

Interscholastic Rifle Shooting League.

WASHINGTON, D. C., April 15.—De Witt Clinton High School, of New York, still leads the Interscholastic Rifle Shooting League with eleven wins and one loss. Results this week are:

St. John's Military, Delafield, Wis., defeated Polytechnic Preparatory, Brooklyn, N. Y., 888 to 790; Culver (Ind.) Military defeated Ogden (Utah) High, 916 to 804; Morris High, New York, defeated Central High, Philadelphia, 893 to 812; Decring High, Portland, Me., defeated McKinley Manual, Washington, D. C., 924 to 900.

De Witt Clinton High, New York, defeated Marist College, Atlanta, Ga., 945 to 817; Harvard School, Los Angeles, Cal. defeated Kentucky Military, Eau Gallie, Fla., 903 to 814; Western High, Washington, D. C., defeated Harry Hillman Academy, Wilkesbarre, Pa., 993 to 636; Salt Lake City (Utah) High defeated Baltimore Polytechnic, 893 to 799; Portland (Me.) High defeated St. Matthew's, Burlingame, Cal., 880 to 0 (by default).

Intercollegiate Rifle Shooting League.

WASHINGTON, D. C., April 15.—With only one match to be shot in the Intercollegiate Rifle Shooting League Massachusetts Agricultural College and Iowa State University still are tied for first place with fourteen victories. Results this week were:

Massachusetts Agricultural defeated Purdue, 1909 to 1795; Iowa defeated Louisiana, 1874 to 0 (default); Missouri defeated North Georgia Agricultural, 1787 to 1750; Washington State defeated New Hampshire 1765 to 1707; Princeton defeated Rhode Island State, 1718 to 1701; Dartmouth defeated Arizona 1763 to 1721; Minnesota defeated Columbia, 1763 to 1760, Cornell defeated California, 1,752 to 0 (by default).

Albany Rifle Club.

AT the annual meeting of the Albany Rifle Club the following officers were elected: President, Charles Greff; Vice-President, H. L. Bradley; Secretary, F. P. D. Jennings; Treasurer, G. V. Cameron; Directors, Charles Caul, H. R. Collins, William C. Gomph. The club adopted a resolution opposing the A. J. Levy Assembly bill 359, to permit the sale of birds' plumage.

Revolver Score Tied.

BUTTE, Mont., April 15.—In the shoot for the indoor revolver championship of the United States the Butte rifle team last night tied the score of the Winchester team, of New Haven, Conn., with a score of 990.

PUBLISHERS' DEPARTMENT.

The "Summer Homes" book of the New York, Ontario & Western Railway is out, and every trout and bass fisher and every person who is contemplating a vacation in the nearby mountains, should secure a copy. A great deal of information will be found in it. A set of good maps is attached, and a great number of the best-known points of interest are illustrated from excellent photographs. Apply to the company's branches, or to the general offices at 56 Beaver street, New York city.

SAM LOVEL'S BOY

Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.

16 Westbrook, Conn.

To the Fisherman Who Knows:

Fishing rods may be bought from 75c. to $30.00, the first price being too low to expect any real worth and the latter price representing a fictitious va'ue. Many pay $30.00, however, for fear they won't get the best, and the object of this advertisement is to request the privilege of showing

The Orvis Fly Rod at $15.00

A better rod cannot be had, no matter what price you pay, and if you want the same quality with not quite so fine a finish and heavier by perhaps an ounce, the $10.00 "Orvis" is recommended. We sell other good rods at $5.00, or even less, and fair quality rods at $1.00. So, fisherman, no matter what the size of your pocketbook, you will receive good value here.

AGENTS FOR "KINGFISHER" LINES

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Facile Princeps Action.—"Facile Princeps" is a Latin phrase meaning **'Easily First,'** and no better name could have been chosen for a gun that has been winning the principal shooting events of the World for three generations. The 'Facile Princeps' is easily first for strength, reliability and simplicity. The lockwork consists of a hammer, a scear, a lifter and a spring, the weight of the barrel cocks the tumbler, everything works smoothly with the minimum of friction, and the striker is just a fraction of a second quicker in its blow than any other type of mechanism; this point alone should be sufficient to secure its adoption by the man who knows.

Have you ever calculated how fast a bird travels? If instead of being able to pull the trigger (*i.e.* fire the cartridge) in 1-200th of a second, you need 3-100ths of a second, the bird will have flown 16 inches further. Think this over, it may account for some of those 'lost' birds.

The "Box" action of the "Facile Princeps" gun is perfectly watertight, yet easily get-at-able for cleaning purposes, only one screw has to be removed to expose the lock mechanism.

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

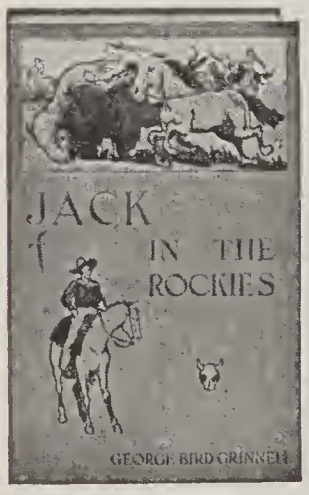
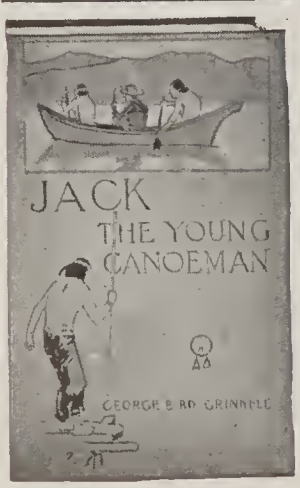
THE JACK SERIES





Best Books For Boys

By GEORGE BIRD GRINNELL

THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

$1.25 per volume, postpaid. $7.50 per set

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

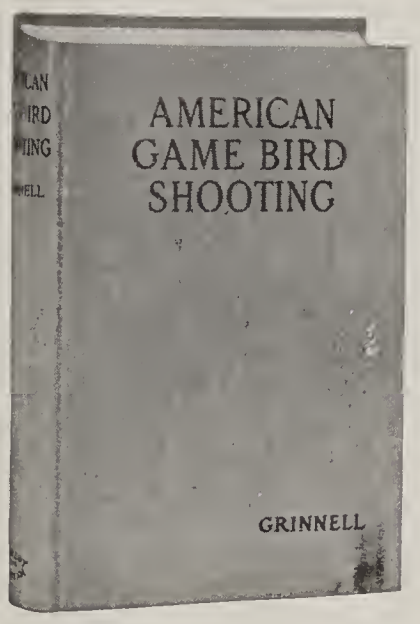
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Book Catalogue Free on Application.

Sam Lovel's Camps.

Rowland E. Robinson. Another charming story of life in innermost Yankeeland. Quaint and delightful stories of a delightful life. A splendid book for boys and scarcely less pleasing to their elders. Cloth. Illustrated. Postpaid, $1.00.

American Big-Game Hunting.

The Book of the Boone and Crockett Club. Theodore Roosevelt and George Bird Grinnell, editors. Narratives of white goat hunting, elk hunting, old times in the Black Hills, prong-buck coursing, nights with the grizzlies, buffalo days, blacktails in the Bad Lands, notes on forest reservations and game refuges. Contributors: Theodore Roosevelt, George Bird Grinnell, Owen Wister, Winthrop Chanler, Col. Geo. S. Anderson, Col. Roger D. Williams, Archibald Rogers, F. C. Crocker, Dean Sage, and others. Cloth. Illustrated. Postpaid, $2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. This is a fourth and by far the largest and handsomest of the club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics. 490 pages and 46 full-page illustrations. Price, $2.50.

American Duck Shooting.

George Bird Grinnell. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Cloth, 630 pages. Price, $3.50. Edition de luxe, price, $5.00.

Inter-Ocean Hunting Tales.

Edgar F. Randolph. A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint and dealing with every kind of game that falls to the rifle of the American sportsman. Cloth, 200 pages. Postpaid, $100.

The Art of Shooting.

Charles Lancaster. An illustrated treatise on the art of shooting. Illustrated. Cloth. Price, $1.25.

The Gun and Its Development.

W. W. Greener. With Notes on Shooting, Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Choke-boring, Gun Trials, Theories and Experiments. "The Gun and Its Development" is the standard work of the age on projectiles and all relating to them. Fully illustrated. Cloth. 770 pages. New edition. Price, $4.00.

Domesticated Trout.

Livingstone Stone. Contents: Trout Breeding Works, Ponds, Buildings, Hatching Apparatus. The Nursery, Taking the Eggs, Hatching, Care of Alevins, Rearing the Fry, Growing the Large Trout, General Observations. Cloth. Illustrated. Postpaid, $2.50.

Modern Fishculture in Fresh and Salt Water.

Fred Mather, author of "Men I Have Fished With." with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chaper on the Pike-Perch by James Nevin. Illustrated. Price, $2.00.

Familiar Fish and How to Catch Them.

Eugene McCarthy. A Practical Book on Fresh-Water Game Fish. With an introduction by Dr. David Starr Jordan, President of Leland Stanford Junior University, and numerous illustrations. Price, $1.50.

Training the Hunting Dog for the Field and Field Trials.

B. Waters. This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority. Cloth. 281 pages. Price, $1.50.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

Pocket Kennel Record.

A handy book for immediate record of all events and transactions, relieving the owner from risk of forgetting important kennel matters by trusting to memory. Morocco. Postpaid, 50 cents.

Diseases of the Dog.

By Hugh Dalziel. A handbook for amateurs. Treats of the causes of disease in dogs, symptoms and treatment, modes of administering medicine, treatment in cases of poisoning, etc. Paper. Postpaid, 40 cents.

The Spaniel and Its Training.

F. H. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Pheasants; Their Natural History and Practical Management.

W. B. Tegetmeier. New, enlarged edition. 16 plates. Cloth. 237 pages. Price, $3.50.

Woodcraft.

Nessmuk. No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm. Cloth. 200 pages. Illustrated. Postpaid, $1.00.

Houseboats and Houseboating.

Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is $3.00 net. Postage, 34 cents.

How to Build a Motor Launch from Plans.

Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty, stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, $1.50.

Manual of the Canvas Canoe.

F. R. Webb ("Commodore"). Many illustrations of designs and plans of canvas canoes and their parts. Two large, full-sized working (24x38) drawings in a pocket in a cover. Cloth, 115 pages. Price, $1.25.

Canoe and Boat Building.

W. P. Stephens. Contains plan and comprehensive directions for the construction of canoes, row and sail boats and hunting craft, directions that the amateur with tools can follow. Fifty plates and working drawings in separate envelope. Cloth. Illustrated. 264 pages. Postpaid, $2.00.

Canvas Canoes and How to Build Them.

Parker B. Field. The book gives very precise instructions by which a man with ordinary mechanical bent may build a serviceable canoe at slight cost—a plan and all working directions. Paper. Postpaid, 50 cents.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

A Revolver Record.

Newark, N. J., April 23.—A Newark Police Department record for marksmanship with the revolver was established yesterday when Patrolman Frank Drastel, of the Sixth Precinct, shooting in the trials preliminary to the match next Tuesday between the Department and the Park Police, made two straight strings of 48 out of a possible 50, or a total of 96 out of a possible 100. His achievement brought him hearty congratulations, which he took modestly, and assures him a place on the Department team.

The trials were held in the Essex Troop Armory on various days during the week. Among those who distinguished themselves, in addition to Drastel, was Sergt. Wm. Stucky, the Department instructor in revolver shooting, who made an average of 90 in four successive turns at the target. He shot on different days, scoring as follows: 88, 92, 90, 90.

The Newark police will hold further trials to-morrow, and afterward the five-man team will be selected. Those who appear to be the most likely candidates thus far are Drastel, Patrolman Joseph Burns, of the First Precinct; Patrolman Thomas McEvoy, of the First; Patrolman Frank Oppel, of the First, and Patrolman John Haller, of the Fifth. It is probable Stucky, as instructor, will not seek a place on the team.

Among those who made a good showing yesterday was Burns, with 94 out of a possible 100; McEvoy with 91, and 87; Oppel with 87 and 88; Haller with 88 and 85, and Sergt. Chas. A. Lindner, of the Sixth Precint, with 82 and 84.

Tuesday's match will be held in the troop armory at 3 in the afternoon. Admission will be free to the public. There is much speculation as to the winner. Three years ago the Park Policemen won by 29 points. Two years ago they were defeated by 4 points, and last year by 16 points. There is every indication that this will be bettered this year by both teams, and those who have seen the trials on both sides look for a hot contest.

Up to last week the "Parks" had been shooting in the First Regiment Armory. Since then, they have used the armory in Roseville, in order to accustom themselves to the surroundings. The shooting is at 25yds., at a target with a 3⅜in. bullseye.

Midshipmen Victorious.

Annapolis, Md., April 22.—The Midshipmen opened their rifle shooting season to-day by winning from the team of the United States ship Louisiana by 1522 points to 1381. The shooting was at the 200 and 600yd. ranges, with slow fire, and at 200yd. range using rapid fire. At all three ranges the Midshipmen had a slight advantage, this being largest with the rapid fire. The match was also to include ten shots for each man at the 1000yds. range, but owing to the rain this range was dropped.

Under the conditions of rain and wind which prevailed to-day and the earliness of the season, the shooting was excellent. Midshipman Want was high gun, getting a total of the three ranges of 137 out of a possible 150. Midshipman Saunders secured 136, and Midanetaoinetaoinetaoineta oinshrdlushrdlushrdlushrdeil etn shipman Kerr 134. Williams, with 132 points, had the best score of the visitors.

On next Saturday the Midshipmen will shoot against the team of the United States ship Nebraska, the champions of the Atlantic Fleet. On May 6, they will have the team of the District of Columbia National Guard, as their opponents, and on May 13 they will contest in their annual match with the representatives of the Seventy-first Regiment of New York.

Intercollegiate Championship.

Washington, D. C., April 22.—The State University of Iowa rifle team won the intercollegiate rifle shooting championship of the United States by the narrow margin of one point, from Massachusetts Agricultural College in the fifteenth week's shoot, the two teams having been tied for first place with 14 wins and no defeats when they came together in the last match. Iowa scored 1891 points to Massachusetts' 1890. Cornell and Washington State tied for third place. Columbia won the special trophy for non-military colleges, defeating Dartmouth by one match.

PUBLISHERS' DEPARTMENT.

At New London, Conn., April 14, Mr. W. W. Rice, scored 130 out of 150, winning second amateur average, and Mr. Neaf Apgar 136 out of 150, second professional, both using Peters factory loads. At Greenville, O., April 17, Mr. C. A. Young, shooting Peters factory loaded shells, made the highest score ever recorded on the grounds of the Ideal Gun Club, 97 out of 100. At Atlantic City, N. J., April 17, Mr. Neaf Apgar, using Peters factory loaded shells, won high professional average, 138 out of 150. At the regular shoot of the Houston Gun Club, Houston, Tex., April 16, Mr. E. F. Forsgard won high general average, 98 out of 100, with Sam Forsgard and H. A. Murrelle tied for second, 94 out of 100, all using Peters shells.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness Out-of-Sorts Dam. Puppies. Diet. Other Foods. Kennel and Exercise. Common Ailments. Teething Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

BIRD MIGRATION STUDY.

THE work of marking birds by means of rings attached to their legs has now been going on for two or three years, and may very well lead to discoveries of extraordinary interest. Several times within the past year or two, ducks wearing metal bands on their legs have been killed by gunners, though it is not known who is so marking them. A year ago we told of the formation of the American Bird Banding Association—the first systematic attempt here to mark birds so that they may be identified wherever found.

In Europe the work of marking—or as it is called in England, ringing—birds is much older. There are records of birds marked in the summer of 1906, and the work has grown from that time on. In Great Britain three different sets of people are so marking birds, besides some shooting proprietors and one or two ornithologists. In the year 1909 the publication known as "British Birds" so marked 2,200 birds, while in the summer of 1910, 7,900 birds were marked. Of these a large number were black-headed gulls, which were found to migrate south from Cumberland down both the east and west coasts of England. They crossed the channel, and rings were sent back to England from two points in France. Marked terns were killed in Spain and Portugal.

The Germans at their station at Rossitten, on the Baltic, began the work before it was undertaken in Britain, and in connection with the Danish and Hungarian stations at Viborg and Budapest, respectively, have secured most interesting results. Thus the migration of the white stork has been traced from Europe south into Africa, the line passing through Tunis in North Africa, Lake Chad in Central Africa, through Basutoland and Rhodesia to Natal in South Africa. Rings with the stamps of the Rossitten and Viborg stations have been returned from different points along this route. Other storks travel further eastward, through Austria, and into Asia Minor, passing into Africa through Egypt, as is indicated by rings returned from Syria and from the Soudan. The distance covered in this migration is very great—not less than 5,500 miles in a straight line from Prussia or Denmark, where, as nestlings, the birds were marked, to their winter quarters in South Africa—a journey thither and back of not far from 11,000 miles.

In Denmark there has been some marking of ducks, Herr Mortensen having marked 102 in 1907 on the island of Fanoe, in South Denmark. Of these up to the end of 1908, twenty-two had been recovered in great Britain, France, Holland and one each from Spain and Italy.

The smaller birds have not been neglected, but from the very nature of things are less likely to be reported on. A woodcock marked in Ireland was killed in Portugal and one marked in Yorkshire was taken in Scotland. In a number of cases of small birds nesting about houses, it is seen that the birds return year after year to the same spot to rear their young. In many cases birds which are to be seen in any locality all through the year are supposed not to migrate, but it is now known to ornithologists—and this knowledge has been confirmed by these marking experiments—that most birds are migratory, and that most of those of any species that are with us in winter are birds from the north, which in spring return to their summer home, to be replaced by other birds of the same species which come up there from the south.

These experiments in the marking of birds will certainly teach us a very great deal about migration of birds and the routes and the distances which they travel.

A UNIVERSAL ANGLING ASSOCIATION.

Now that the representative angling clubs of France, Australia, England and the United States are being drawn closer and closer together under common bonds, the time is ripe for the formation of an international association of angling clubs.

The New South Wales Anglers' Casting Club of Australia is now affiliated with the British Amateur Fly- and Bait-Casting Club, and these organizations are of national importance. The Casting Club de France has wide influence. The American National Association is composed of about twenty influential angling clubs. Members of all these organizations are carrying on correspondence related to their common interests. The French and British anglers exchange visits and take part in the contests held near Paris and London. A fraternal feeling and a desire for competition, either side by side on the same waters, or in widely separated countries under common rules have fostered in each country the growth of a widespread interest in the doings of the anglers of other countries. The next step is the formation of an international association, and action looking toward this might well be taken at the tournament to be held near London next summer. The British club under whose auspices it is to be held is supported in a way by the Fly-Fishers' Club, many of whose members are affiliated with it, and at this meeting it is probable that a large number of residents on the continent and possibly some Americans will be present. It would be difficult to choose a better time for considering the question.

Fly- and bait-casting competitions are of sufficient interest to attract and hold the attention of anglers. They are instructive in themselves. They draw together anglers who are more or less influential in their own localities, and these men return home and spread the gospel of the theory and practice of the gentle art as it is practiced to-day. For the modern conception of fishing is constantly undergoing changes for the better, and the teachings of Walton are sinking deeper and deeper into the hearts of men whose physical and mental wellbeing demands the recreation and the relief from care that are to be found on the water and in the woods.

Each of the organizations referred to above has made concessions in the matter of rules in order to comply, as far as possible, with the practices of other similar organizations, and at the present time these rules are more nearly in agreement than was believed possible ten years ago. There is room for the further harmonizing of conditions, and this would properly come under the jurisdiction of an international body. Records are much sought after. To be recognized as international, a record should be made under universal rules, in open competition under the auspices of an organization of importance. This spells competition worthy the name, for atmospheric influences, air currents and temperature are so variable that they are not taken into account in the result to be attained in such trials of skill, though it is only fair that they be referred to, for purposes of information.

Distance need be no obstacle to the formation of the association suggested, for the mails are swift and sure, and matters of importance to all organizations interested could be acted on through correspondence.

SOME excellent provisions are embodied in the new Kansas game laws. Only shooting on the wing will be permitted at wildfowl, waders and upland birds, for the law prohibits the shooting of game birds on the ground or on the water, although we assume that the killing of cripples will be permitted. Eagles are to be protected always, and deer, antelope, beaver and otter for ten years. Chinese and English pheasants and Hungarian partridges are protected for six years. The traffic in bird plumage is illegal, no matter where taken. Offsetting these meritorious provisions—except as to otter—the shooting of wildfowl, plover and snipe will not close until April.

THE school children of Newark, N. J., will plant 50,000 trees on Arbor Day this year. One-year seedlings to this number have been given them for the purpose by a Newark firm, together with circulars containing instructions.

THE SPORTSMAN TOURIST

The Novice on the Northern Trails

Leopold's Visitor—Exploding a Loon Myth—The Priest's Shod Moose

By THOMAS TRAVIS

Concluded from page 610.

AFTER noon the rain cleared, but the wind was blowing almost a gale, so Cave Man, the Doctor and Leopold started for a little pond hidden away in the forest from the sweep of the wind. A short trail along a roaring stream and we were at Mud Pond. Again and again we circled, edging where the stream poured in swirling eddies over the rocky entrance and foam hung in wreaths over ideal pools. Cave Man did his best and that few can better. Like wisps of milkweed, down the flies flew, curved and settled, but no fish rose to the lure, though that little pond was full of them. Coax you may when the fish God sulks, but he will answer only when it sees him good.

So we moved to Horseshoe Pond, three-quarters of a mile away, and found the trout there crowding to the fly. At every cast they leaped, sometimes in couples or in threes. One I remember under a pine log with snags spread abroad to catch the veering fly. Again and again he rose, and always I missed him till a gust of wind threw my fly over the log. Then he rose superbly, took the dropper and freed me. When he came reluctantly to the net, we freed him again with thanks, only to have the fly taken by a landlocked salmon. There was no mistaking this fish. Up in the air and under the boat, in water and out of it he proved himself a fighter, till gathered with the net, we turned him loose as a badge of courage.

But here we saw something that for a time eclipsed even the fishing. Beavers were everywhere in evidence. Here was an old lumber dam built up by these industrials until it threatened to topple over. Trees by the score had been cut down; some more than a foot in diameter. Houses, chips and runways were all about. And those houses were a remarkable piece of work, too. With a great deal of labor we penetrated to one of them. A big wagon would scarcely hold all the lumber of this one house. Sticks two to four feet in length composed it, and these were all peeled and gnawed as by some prehistoric man with a rude, though sharp stone tool. Careful and cleanly animals, too, these are, as Leopold pointed out the special places for toilet purposes. Several of these cuttings we considered worth carting home. One of them was a rough spiral piece of gnaw work that took the shape of a bust, crudely executed, yet clear even to eyes, nose and mouth. We named it Beaver Man. Perhaps some Darwin would see in it the dawn of idol worship. Who knows? Perhaps even these furry watermen have their gods, and what more natural than that they carve them after the pattern of these strange beings that hover about their homes waving wands futilely in the air, or who smite with fire sticks at a distance, or how down great trees far beyond the beaver brother's strength?

With the wind howling through the forest, the crack and roar of the great trees, we made our homeward way. Over the trail Leopold would bend from time to time and mutter "Chevreaux" as he saw the dainty prints of deer feet clearly marked; again we would raise our eyes where streaks of red showed against the spruce tops, and when the sun had set we came to camp with our spoil, piled the logs up until the fire roared, and sat in comfort listening to the noises of the wilderness ere we drew the blankets over us and sank in dreamless sleep.

The sun was shining brightly when we awoke. All traces of the storm had passed, so we determined to take the trail further in. Many a deer trail we crossed, more than one sapling gnawed or rubbed at the height of some sturdy buck, many a fox spoor left dog-like on the mossy stones, but save where a squirrel chirred or a nuthatch talked, silence unending. As we took the canoes on the stream through Massachusetts bog, Leopold told me of an incident that happened there. "I was with a fellow hunting bear, un we see him right ther in the brush. The fellow took a shot, but only wounded the bear, un he jump in stream. The water was ver' low, un I see a big log lying under the surface. I says to m'self: 'He will come up there un I'll wait till I get good shot when he's all out of water.' Sure enough he put for that log un catch it with his paws. Then he heave up an' I sighted along rifle. Soon all his body's out un I fire. He roll over in water shot through the spine.

Waiting at the end of the water trail for Gray Rabbit and Cave Man, we caught a few trout in the deep pools. I had a brown butterfly on and was coaxing a nice trout when I saw a yellow snake after a frog. Slowly he gained, though the frog was swimming his best. Th ugly head was drawn back for the strike wh the Doctor determined to take a hand. Drav ing his pistol, he fired. The snake opened i red mouth in one long yawn, curled up in heap and slowly sank, while froggie dove f the shelter of the roots and mud.

It was just noon when we reached Northwe Pond that looks for all the world like a pictu from some Christmas book. Far away in t background a great, towering mountain capp now with snow in May; the pond hidden spruce forests that come right down to t water; a line where the ice king has shav with his keen razor the lower branches th almost touch the lake; and far off on the oth edge of the pond—a snug log cabin.

Late that afternoon the water lay smooth glass, but as the sun began to sink, it was up with a rosy glow and dimpled with a sig few fishermen are given to see—everywhere tr "boiling up" or leaping after the sailing cad flies. Never have I had such trout fishing all my life. Always when I glanced at the oth canoe either Cave Man or Gray Rabbit had fish, and even as I struck a trout I could h the splatter where the other canoe held one the net, or catch the quick expiration of Deacon as he hooked a fish or missed a stri Not singly, but in twos and threes they ca Once the Deacon had four on his line, ev fly from the Little Injun dropper to the Parn cheenc Belle at the end seized by a hung trout and dragged to the depths. In vain cast them tenderly back; others rushed to t their places. And in the sunset, flaming o the forest and mountain, coloring the high clo with vermillion fire, we drifted campward, our evening meal, lit the big camp-fires and s tled down to smoke the calumet of peace.

Ours was a log cabin, an old timer, as the scriptions showed. Here was the outline o big trout drawn on a sheet of bark, the na of the catcher underneath, the weight of the and the fly that proved his lure. Two insc tions I yet remember, one a three-fingered h with a cross beneath, which Leopold explai was a memento of a hunter who shot his mid finger away and had to perform the rest of operation with his hunting knife; grim remin that twenty hard miles lay between us and village doctor. The other was a poem by s voyageur or guide—

"Toi qui vas cherchant
Au soleil couchant, Fortune
Est comme un enfant
Qui demanda en pleurant la lune."

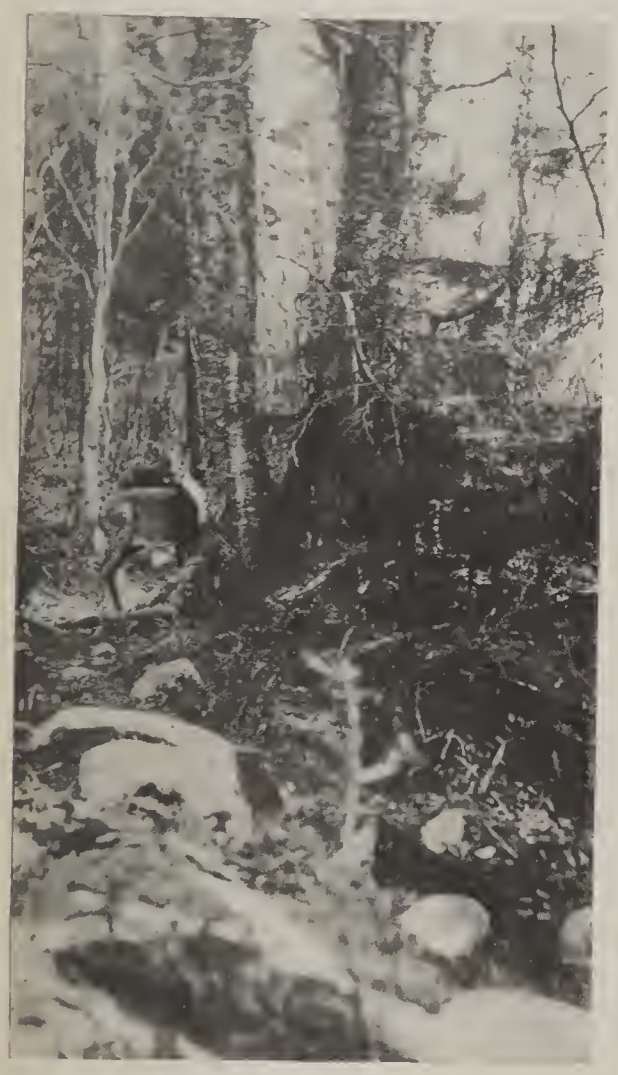
Thou who journeyest toward the
Setting sun, searching thy fortune,
Art like to an infant weeping even
As he demands the silver moon.

Evidently some peasant of sunny France

sailed across the big ocean in search of his fortune and never found it, but drifting across this trout-filled lake in some flaming sunset was content to stay here.

While we watched the last light die from the sky, Leopold told us of an experience he had in this very cabin: "It was a ver' hot night, un I lef' de door wide open when I went to bed. I was ver' tired un mus' have slep' ver' sound. Suddenly I were wide awake; something was on the bed with me. I lie still un listen careful. Den I hear, 'Grun, grun' un rattle lak de wind in brush when de ice storm come. Den I know that it is Porc-ep-pic, what you call porcupine. By Gor, I war scared; I don' dare move lest he stick me with his quills, un dat's no joke. I have a dog stuck with quill un dey come out right through his neck so I have to kill him. I don' want that with me, so I lie still.

"He's big and heavy porc-ep-pic, un he walk all over me. He sniff an' sniff, he grun' an' grun', then by Gor he come up on my face un I draw de blanket slow over my head. He sniff my face un I think what I do if he begin chew? But I lie still as a fox. He walk over me an' root in de bed, un bye'n bye he jump on de floor. Right off I jump, too, un hit him with a big branch of wood—biff! un dat's all. But



LOOKING PLEASANT.

next mornin' when I look at that stick, it's full of spines sunk half an inch in de wood. By Gor, I don' want another porcupine in bed with me."

A hot breakfast, a gray sky and a two-mile trail through the woods to our next camp. Indian file, we marched. Fox signs were everywhere, and as we rounded a boulder there stood one in the trail, his little ears erect, his pointed nose questing our scent, one paw raised. He watched us and then like a shadow faded among the undergrowth. Here and there we came across little balls of fur and feathers, the disgorgings of owls, signs of many a tragedy as the strong claws swept a birdlet, mouse or rabbit from the trail of its earth life. Then at Grant Pond we came across both beavers and deer.

It was pouring in torrents when we worked our way through a chaos of granite boulders to the shore of Big Island Lake. While the Deacon and Gray Rabbit went on in the canoe, Cave Man and I sat under the spruces watching the rain columns sweep like charging batteries across the water, grazing its surface to foam. But bundled up in our rain coats, all was cosy and warm, and the hissing waters only emphasized our comfort as we embarked and made camp with its delicious dinner and its leaping fire.

The storm cleared the sky and made the air taste like something good to drink, so we started off to L Pond nearby, the most northerly lake of the Rangeley system, I believe. As we launched our canoe on its surface, a pair of woodducks flew by, low down, a fine shot, but a finer picture of feathered beauty better far alive than dead. Then a muskrat paddled by, his tail arched like a playful cat's, or again, stuck straight up as though it were a trolley to speed him faster on his quest.

The trout in this little lake rose splendidly, no mere roll but a leap, an arching crescent, and the fly taken on the downward plunge. In less than an hour I had eighteen, though only five were kept and their coloring was superb. I counted thirteen full-formed spots on one side and twenty on the other of my finest fish; golden the background, and then the bright vermillion dots surrounded by lavender that shaded off into forget-me-not blue.

That night we foregathered with several old fishermen around the camp-fire. One had a collection of all the butterflies and moths the region afforded, and trout flies made to match them. Then the conversation turned on strange meals the people of forest and stream make.

"There were four of us on the West Branch of the Moose River," said the Doctor, "when we noticed a frog which seemed to have something the matter with its paunch. Two of our number being medical men, we decided to hold a post mortem. The stomach of the beastie was swollen and hard as a stone. On cutting him open, what do you think we found? A crawfish swallowed whole, and it was almost two-thirds as large as the frog. Whether he swallowed it alive I do not know, but if so there was a tremendously prickly lively time in frog town that night."

"It is strange what these wild creatures will eat," said a bronzed old hunter who sat behind the fire. "I was fishing off the coast of Florida one summer, and we had great sport. Why, the way those huge jewfish fight is amazing. It was while we were lying off a reef that we saw an enormous shark swirl slowly beneath the boat, and we determined to get him. We rigged a tarpon hook with a copper wire line and baited with a chunk of meat. Soon we had him going and when we brought him ashore, this is what we found in his stomach: two whole tins of corned beef, three shin bones of a cow, a horse's head and a piece of ham with the bale cloth wrapper still on it."

"By the way," another fisherman broke in, "did you ever actually see a shark attack a man? I know a hotel proprietor on the Florida coast

SIXTY MILES TO CHESUNCOOK.

who offered $500 reward for proof that a shark had devoured a man."

"Well," was the answer, "I never actually saw a shark devour a man, but I'll tell you what I did see. We were off the coast of Cuba one summer night—you know what nights they have there—the moon was so big and bright that we could read very well with its light. Indeed, the objects near at hand seemed as clear as they could be in daylight. Well, some of the sailors started in to swim and soon there were half a dozen splashing near the boat.

"I was watching the coast line where a couple of palm trees rose against the sky, and I was wondering vaguely why there was such a surf running, the spray flying in white clouds, while out where we were the sea seemed smooth as glass, save for the heave of the swell. Just then I caught a swirl on the top of a wave nearby and saw a vague shadow dart away. It was just such a swirl and shadow as you see when a pickerel darts from a distant lilypad. Then the swirl came nearer. I could catch a glimpse of some big fish through the top of the swell. Suddenly one of the swimmers let out a piercing scream, threw up his hands and disappeared.

"We were over the spot in an instant with the boats, but when we got there, all was quiet. A

streak of red curled for a moment, and then blended with the dark green. Now, I can't say that I saw a shark take the man, for really I don't know what it was, but I saw the swirl and the shadow, the stain in the water, and the arms of the man thrown up as he disappeared. So I put two and two together. Other men may doubt that sharks attack men, but I take no risks, thank you."

There was a quiet little Englishman present and I saw he had something to tell; the following: "I was fishing Mer Meer in Cheshire, England, for pike. I had a gudgeon on for bait and got a strike. But when the fish came near I saw it was a good-sized yellow perch. I let him have his way for I was not anxious about him, anyway, so he ran out about twenty feet of line. Suddenly I felt a strong pull and struck smartly. After a ten-minute battle I landed an eighteen-pound pike. The hook had projected from the mouth of the perch and thus caught the pike when he took my catch. When we cut him open he had two young birds, whether duck or marsh hens I could not tell; also there was a quantity of half-digested fish which I took to be gudgeon. And another one we caught that day had a full grown pigeon, not our small kind, but those big European ones in whose stomach we found whole ears of wheat, not the grain, but the whole ear, and acorns with cup and all. Some of the acorns were almost as big as his head, and how he got those hairy ears down without tickling himself to death I do not know."

So the conversation ran of roosters that swallowed mice, of snakes so full of eggs that they positively popped when smitten with a club, but when the Deacon started on the classic of the fish that swallowed a Jew and then a box of lemons, only to be found later with the Jew inside, selling the lemons two for five, we broke up the party and turned in with a sigh of bliss.

Over the boundary mountains the clouds were piled up in great masses, through the rifts the stars twinkled, and far off o'er the tall crags a comet blazed. Thus lying cosily beneath the blankets I floated off to dreamland with my last conscious moment occupied in listening to a porcupine scratching industriously at the logs and grunting whenever he came to a knot.

Next morning the Deacon and the Doctor started with Albert for the top of Snow Mountain, while Cave Man and Gray Rabbit fished Big Island Lake. We were climbing steadily up the hard trail, sometimes with hands as well as feet, when Indian Albert pointed to a thicket and grunted. We could hear a strong rustling, and as we turned aside, out from the brush there broke a great black animal which started up a tall spruce, the chips flying from the dry bark as he climbed. "Bear," shouted the Deacon, and with his empty hands he started after the beast. But as it turned and showed its teeth, he paused to meditate. By the time we came up the animal was perched high up among the evergreen boughs, and a big, bristling mass he looked indeed. "Wait a minute," said the Doctor, drawing his pistol. "Let's have a shot at him, anyway." "Crack" went the pistol, the beast gave a heave that sent my heart beating as I thought he was going to jump, but he only clutched a limb with his long claws, and began to haul himself still higher up in the forest tops. Thinks I, he's a big bear cub, surely. Again the pistol cracked and yet again. Then with a tremendous crackling of branches the shadowy mass hidden in the foliage came down with a bump, and we rushed forward to find a huge porcupine lying in a heap, while silent Albert grinned; that was an Indian joke.

Poor beast, he put his ungainly black paws to his face and sobbed out his last breath, while a wave of pity went over us. The Indian laughed at us and affirmed that porcupine was as good as any mutton, but we digged a hole, and after plucking some quills, Albert buried him solemnly, while we determined never to shoot another one of these interesting creatures unless he got in bed with us.

But all our regrets were forgotten when we waded through the last snow and reached the peak. Far as the eye could reach in every direction, great mountains towered, and hidden away in the forests scores of lakes glimmered. Not a human habitation could be seen. Everywhere crags and peaks, forests and streams, and behind them all more mountains and sky.

When we reached camp again, Gray Rabbit and Cave Man had the finest trout so far, a landing net full of two and three-pounders. So off we went to scour the brush for trails. A rabbit or two, a covey of grouse, and again two or three deer started up; in fact, we approached so close that any hunter could have shot them, but the law was on and we were not out for game, so we took a photograph of a year-old buck.

Next day we started to fish Big Island Lake on a wager that the Deacon, though "a novice" would catch most fish, and he did, for at evening he had a string of two-pounders to his credit while none of us had more than one. Going over the record of our catches, which we always kept carefully on special blanks, I found that so far he was both "high line" and "biggest fish," so I said to Cave Man: "What do you think of this? The Deacon casts a line as though he would lasso a fish. Is he doing it to fool us?"

"Beginner's luck," growled Cave Man in his guttural bass, and to that he stuck, so I said: "Well, to-morrow we will change boats and guides; do you go with the Deacon and I'll bet a cooky he catches more fish than you do."

As we started, a pair of woodducks flew up from the shallows. Far off in the clouds an eagle was wheeling, and soon I had the trout rising. One big golden-hued fish rose just as you see in pictures. A splash first warned me of his presence, then out of the green waters of the lake he rose, shook the water from his gills, turned gracefully over and took the fly as he disappeared. It was ten minutes before he came to the net, a two-pounder.

Thus out of the wind, under the lee of the woods, we fished while Leopold entertained me with stories of his distant home:

"Der's an Indian lives near here, Indian Joe. By Gor, he has black hair like pig bristles, un drink—he do anything for drink. Why, one day he come to de pries', M. le Curé, un say, b'caus, Indian Joe un'stand a lil' French: 'M. Curé, voulez vous acheté un quartier de moose ferré? Dat is, you un'stand, he ask de pries' if he want buy some shod moose. 'Oui, oui, avec plaisir,' says de pries'; 'et il bon, et gros?' So de pries' say he glad to buy moose if it good un big.

"'Oui, M. le Curé, très gros et très bon.' So Indian Joe, he bring de quarter of moose. The curé, he ver' glad un sen' some to his frien's also de boardin' house man, Boston Joe, bu some, too, un fed his boarders with it, un al say dey lak ver' much.

"Nex' day Indian Joe see de pries' un ask 'De moose ferré, monsieur, et il bon?' 'Ou oui,' says de pries', 'très bon.' Dat is, you un 'stand de pries' say de moose very good. Bu jus' den Boston Joe come un say he foun' shoe on his moose, un what dat mean? Gosh, de cur war mad un won't speak. But Joe, he hur about railway trac' un find a horse broke h leg, un find, too, dat half de horse gone. De he remember he find funny hair on his moos un den he know what de matter is. He tell d pries', un de pries' call Indian Joe. But India only laugh un say: 'M. le Curé, je vous par de moose étais ferré' ('Ah tol' you dis moos war shod'). But de pries' remember dat he giv de hors' to his frien's, un by Gor, he's ver' ma He say: 'Indian Joe, you bad Indian. Ain't give you work plantin' ma potatoes? Un air you plant one row un den t'row de res' in ho un cover 'em all up when I give you de money Un ain't I 'stonished when I find my potato come up in one line un den one big boonch Un now you sell me horse for moose—you b Indian.'

"But Boston Joe don' care; he fed it to h boarders un dey say it war good. Un sure, I dian Joe don' care either; he's got his whisk all right, un he don' care."

By this time the wind was swooping down a I noticed Cave Man's canoe toiling up with t Deacon, smiling. Cave Man had noticed a tro flopping on the surface and netted him only find that it was hanging from the mouth of two-pounder which the net brought in, too. T big fish had attempted to swallow the smal one and was having such difficulty that bo were caught.

After we landed, I interviewed Cave M about the Deacon. "Well," said he, "I stumped. We put out there and the Deac had all the luck. He made a cast and aw went my hat, hooked through the brim; anoth cast took Indian Charlie on the cheek. The dian just grunted and pulled the hook loo But just the same the Deacon got the fi When the wind came up so strong we put to change from paddle to oars, and would y believe it, while we were changing, the Deac merely trailing his flies in the water, got strike, and after twenty minutes pulled in biggest trout so far."

I went over to view the catch. Cave M had only the two-pounder and the eight-ou trout caught in the hand net, but the Dea had half a dozen fine ones and the prize of a three-pounder. "What do you think of ginner's luck now?" said I. "Didn't I tell you would 'wipe your eye'?" But to all my jok Cave Man merely shook his head and tur away with a grunt.

After an early breakfast we started on trail for Chain-of-Ponds, seven miles away. passed two small lakes with ducks padd among the weeds and beaver houses hidden the marshes. We came across a porcupine tent on his day's work, and when disturbed t wrinkling his brow in puzzled discontent, stupidly climbing a tree to wait until we disappeared. On the trail somebody had ki one of these meddlesome creatures, for a t

branch covered with quills buried half an inch in the green wood, lay nearby. We saw several deer and Albert pointed out places where he had met bears. As we descended to the valleys the trees grew greener; red and white trillium and little bluets made the trail lovely. And then we struck into a deserted lumber road marked, "Sixty miles to Chesuncook" where the finger pointed through the deep forests.

Soon Chain-of-Ponds lay before us, and as we drew to the landing I pulled out the minnow trap set the night before. In it we found a dozen suckers and a huge eel. I asked Albert if he would eat it, but he simply grunted. To the same question Leopold said: "Gor, I'd as soon eat snake." In vain I told them the charms of eel pie. They cast the big writhing fellow out on the bank where I found him some twenty minutes later with his skin all dry and wrinkled from the sun. Just to see what would happen, I cast him back in the water. He gave a few erratic whirls and then made off.

Then we started out trolling. The wind roared through the gap in the bare mountains, but we had many strikes, though somehow none took good hold, so we concluded that they were small trout with mouths too little for the huge spinner we had on. We saw a couple of deer on shore while ducks and loons dove in the far waters. Just then I spied—was it a snake? Calling Albert, I said: "There's a snake swimming toward us; let me get a shot at it." We pulled over and then we saw it was—a red squirrel chased into the cold water by some swift enemy on the bank. He was pulling sturdily for the opposite bank a quarter of a mile away. We were right in his path, but he came straight for us. His toes scratched along the paddle we stretched out for him, then along the boat, and finally, as we passed, he struck out for the distant rocks with might and main.

The vapors were hanging in veils along the mountain and lake as we started next morning. A buck and a doe walked out of the birch thicket and two waterfowl were sporting some 250 yards away. "What are they, Albert," said the Deacon. "Ducks?" But just then they told us by their cry. They were loons making an early meal on trout. I had read much of the difficulty of shooting these lightning divers, and when the Deacon asked if my automatic pistol would carry that far, I took the hint not to kill, but only to see them dive at the flash. The first shot sent the water showering over them, but they did not dive. Up on their tails they sat, shook their wings and sent out that looney laugh as if to say: "Never touched us." The next shot struck right between them and this time they went down like a flash, but only for about two seconds. A third shot showered them once more, but they did not dive at the flash. Perhaps the smokeless powder made no flash visible at that distance; perhaps the echoes from the mountain prevented them from locating whence the shot came, we were so far away. At any rate they only flapped their comical wings and sent out their shrill, mocking laugh. But at the fourth shot Indian Albert said: "Got him!" As far as I could see they were still untouched, but when we rowed up, one dove while the other floated. It proved to be a male, shot right through the head, and so beautiful was his plumage that we decided to carry him out and have him mounted.

On we went to anchor and fish in a round pond that joined the lake. Here the trout were big and gamy and many came to the net. But the time had come for us to separate. Cave Man, Gray Rabbit and the Deacon were to stay longer, while the Doctor took the trail homeward. But while the guides prepared a luscious dinner, Cave Man took the Doctor out for his last try, with a Parmacheene Belle and a Little Injun on as flies.

Then things began to happen. Almost at the first cast a landlocked salmon took the fly, and the trout followed as fast as we could land them. It seemed as if the fish were out to say good-bye. Even as the dinner call came, they were rising three at a time.

The loon was packed in a cornucopia of birch bark with the smooth side in. Farewells were said, the Doctor and the Indian took the trail, while the others waved God-speed till a bend hid them from view. Mile after mile we plodded, now stopping to take a pistol shot at a hawk, now gazing in silence where deer jumped from the thickets or ran along the trail ahead. Now a beaver colony appeared and just as the sun was setting we reached Arnold's Pond again in time for the Doctor to cast a line athwart the lingering shadows, and to play a fine salmon in the afterglow; the last fish, as the first one on the trip, being a salmon.

At sunrise the trail was again taken, and at 4 P. M., after a long tramp where squirrels chattered, deer leaped and foxes furtively watched, the Doctor stood at the gangplank to say farewell to Indian Charlie and the Northern trails. The trip was ended, but not the memory of it. Still in feverish nights and busy days the Doctor goes over the trail again and hears the leap of the fish, the song of the birds and the roar of many waters. Often the dimpled smile of still pools broken by the trout's rush, after the glow of the camp-fire and the days of fellowship spent with sturdy hearts come back again, and he sees once more Cave Man, Gray Rabbit, Leopold, the Indian and the sly smile of the Novice on the Northern trails.

THE TOP RAIL.

Why is a wolf always "a gaunt gray timber wolf" when referred to by writers of popular stories? A greyhound and the pony on which the wolf hunter rides are equally gaunt, but these characteristics are seldom mentioned. Why, too, is a grizzly bear photographed by flashlight while following the trail to the garbage heap always described as "infuriated," his eyes gleaming "balefully" and reflecting "hatred"? Then there is the man whom the police catch with "a smoking revolver still clutched in his hand," despite the fact that nitro powder develops little smoke, and that this is instantly dissipated. "Automatic revolvers" is another misnomer frequently employed, although in the automatic pistol there is nothing which revolves. There is an automatic revolver, but it is made in England and is so clumsy and crude that it does not appeal to Americans, whose home manufacturers stand alone in revolver and pistol making.

Britishers are objecting because London policemen are to carry American automatic pistols, but those responsible for the selection of these arms knew a thing or two about merit in firearms. Our army officers will shortly be equipped with pistols of the same type and make. As a matter of fact, these arms are only semi-automatic, in that the trigger must be pressed for each shot. The recoil merely ejects the spent shell, loads the weapon and leaves it ready for the firing of another shot by pressing the trigger. Still it is the popular belief that all one need do to maintain continuous fire is to press the trigger once and hold it. Persons who have shot these arms stoutly assert that this is true, and the only explanation occurring to me is that the novelty of firing several shots made them forget that their finger muscles had been exerted at all.

* * *

A sufficient number of shooters continue to write to the London papers to keep alive discussion on the alleged danger of mixing 12 and 20 gauge cartridges. The Field says all 20-bore cartridges should be made from black paper, and some of the manufacturers are putting out black cases of this caliber, while others refuse to do so or print a ring of 20's around cases of other colors but of this gauge. All of which, in my opinion, relieves Missourians of the stigma of being the only people who must be "shown." Even a Britisher, who is assumed to be unable to keep 12 and 20 bore cartridges separated, will, after a few days' sojourn here, be able to distinguish, by the sense of touch alone, the difference in size and weight of our quarter and half dollar silver coins. This is scarcely greater than the difference in the two cartridges referred to. In fact, when a 20 is placed alongside of a 12, the size of the latter appears much greater than it really is, and the difference in weight is considerable. Therefore, I for one cannot understand how any man who knows where the chambers of his gun are situated, will put a stray 20-gauge shell into one of them, and then, thinking he had imagined the act, jam a 12-gauge shell on top and fire the two.

* * *

Here on the top rail is no place for women, bless 'em, for it is a perch they seldom attain unaided. One of the expressions in a recent book, therefore, is mystifying to a mere man, for it refers to attempts on the part of the fair sex to "sit over a fence" while evolving the theory and practice of equitation for women. If the woman who wrote this book ever finds herself in the Rocky Mountains, and meets the numerous women who accompany their husbands and brothers on horseback trips to the hunting and fishing grounds, she may revise her opinions as to the merits of the side saddle, for riding astride is, in the hill country at least, popularly regarded as the safer if not the more graceful method. But the top rail is no place for discussions of the merits of either method; at least not by

Grizzly King.

NATURAL HISTORY

The Newly Discovered Elephant Seals.

We have already spoken of the expedition on the Albatross sent out by the American Museum of Natural History, and under command of Dr. Charles H. Townsend, Director of the New York Aquarium, of its extraordinary success in discovering a herd of elephant seals, of the capture of six of the young animals which were sent from San Diego by freight to New York and are now to be seen in the Aquarium here. A few weeks ago Forest and Stream printed a photograph of these young elephant seals.

This animal is one of the true seals, and thus is more like the ordinary harbor seal of our coasts than it is like walrus, sea lion or fur seal. On the other hand it is like the cared seals in the fact that the male greatly exceeds the female in size. There are two species, one found only in the Antarctic Ocean and adjacent sea, while the other occurs on the west coast of North America, but did not reach south of 24 degrees north latitude. The two forms are very much alike. The largest males reach eighteen or twenty feet in length, and specimens are said to have been taken which measured twenty-five feet. The northern form has for years been supposed to be extinct, and we can fancy hardly any greater zoological surprise than to have discovered a considerable herd, as did Dr. Townsend. We recall that about the year 1878 some sealer discovered a small group of these animals on the Southern California coast, perhaps the Santa Barbara Islands, and killed them all. Some young specimens were brought to the Atlantic coast and one or two secured by museums.

MALE AND FEMALE ELEPHANT SEALS.

In the old days, after whaling became unprofitable, through the practical extermination of the whale, the whalers from many lands, but especially from the New England ports which had furnished generations of whalers, sailed away after the fur or the oil of seals—anything to load their vessels.

The story of the extermination of the southern fur seal has often been told, but while the elephant seal did not yield a profitable fur, it has a thick layer of blubber, which produces much oil. In the Antarctic Seas and on the west coast of America these animals were slaughtered in great numbers, and the herds were so reduced that it became unprofitable to make the long voyages required to get them. As a consequence the sea elephants re-established themselves after a time—and not a very long time either. In 1874 Captain Scammon's book speaks of the sea elephant on Heard's Island being nearly exterminated, and says: "There were remains of thousands of skeletons here. Bones lay in curved lines like long tide lines on either side of the plain above the beaches, marking the rookeries of old times, and the tracks of the slaughter of the sealers." Yet again, in 1880, we know that vessels were sailing from New England for Kerguelen, Heard's Island and the Crozets.

In the year 1882, Forest and Stream printed an account of the adventures of a sealing crew cast away on Heard's Island. Their ship went aground during a storm, they landed on the island, saving some provisions, and in the early morning the wind shifted, their ship was blown off and went to sea without a crew. During the eighteen months that they remained there they devoted themselves to killing sea elephants and making oil, for they expected to be taken off by a companion vessel which had promised to look out for them if they were not heard of by a certain time. That the sea elephants were plenty there, we may feel sure, since the crew gathered 500 casks of oil in the time that they were there.

Dr. Townsend having left San Diego in the Albatross, Feb. 25, proceeded to Guadalupe Island, which lies 250 miles off the coast of San Diego. On March 6 the vessel had returned to San Diego to announce the result of its cruise, and Dr. Townsend's letter, printed in the Museum Journal, to whose courtesy we owe also the illustrations of the sea elephants printed herewith, says: "Our success at Guadalupe Island was quite beyond expectation. In addition to work on the birds and plants and various land collections on the island, we captured alive six sea elephants for the New York Aquarium and the Zoological Park, and succeeded in getting four skins and two skeletons of adult sea elephants for the American Museum.

"The three old males were monsters sixteen feet long with proboscis as long as the head. We have one skull two feet long. We wound up the young seals in nets so tightly that we could handle them like bales. The skins of the old bulls were very heavy. Each one flensed and salted was packed in a full sized barrel which it completely filled and that without the skull."

Queen Charlotte Island Caribou.

New York City, April 15.—*Editor Forest and Stream:* I note with interest in your issue of April 15 the communication of C. de B. Green relative to the Queen Charlotte Island caribou, *Rangifer dawsoni.*

Mr. Green's theory of the origin of these caribou may be plausible, but it should only be regarded as a speculation.

The reasons given as "conclusive objections" against the theory that these caribou are descendants from a herd on Graham Island before it was cut off from the mainland do not appear to me to be valid. Instead of the Queen Charlotte Islands being a country of "suitability" as a habitat for the genus *Rangifer,* they are in environment, climate and food supply utterly unfit. There are not a few examples of animals degenerating when forced to remain in a habitat distinctly uncongenial to them. On these islands the lichen, the favorite food of caribou, is extremely limited in supply. The intense humidity, the heavy rainfall, the temperature are wholly different from the natural conditions under which caribou thrive. These factors, together with in-breeding, would surely produce degeneration.

Horses imported to the Falkland Islands in 1764 ran wild, and Darwin, in 1834, found them greatly increased in numbers, but degenerate both in size and strength. He attributes the degeneration to lack of suitable food and humidity. On the other hand, cattle introduced into these islands improved. Many similar cases of degeneration might be quoted. It is quite possible that caribou once ranged over the whole of Graham Island, but gradually dying out, the few that remained maintain a restricted range near Virago Sound. It may also be true that food conditions are not so favorable elsewhere on the islands.

That black bears are abundant on the islands, and that wapiti are abundant on Vancouver Island are facts not pertinent to the case of the caribou. Both the bears and the wapiti find abundant food everywhere, and the conditions

are suitable to their existence. But the conditions on Graham are absolutely unfavorable to the caribou.

I have hunted both the wapiti in Vancouver Island and the caribou near Virago Sound. It was quite clear why the wapiti should thrive, and equally clear why the caribou shou'd not. My own and the more recent observations of Francis Kermode lead to the belief that the caribou on Graham Island are on the verge of extinction.

Their origin must remain a mystery.

CHARLES SHELDON.

European Widgeon on Long Island.

BAYSIDE, L. I., April 22.—*Editor Forest and Stream:* J. C. Phillips' article on widgeons of Europe and America, in FOREST AND STREAM of April 15, and the two good drawings of the axillars of the two varieties, are interesting and useful. I had the good luck to kill a female European widgeon last winter while shooting with F. Augustus Schermerhorn at Gardiner's Island. There was a good sized bunch of our American widgeon in one of the island ponds, some of which we killed, and I shot this bird as it was passing the decoys high in the air and alone. I have this specimen well mounted by Rowland who said it was an English widgeon and rare. I find the axillars are exactly like the one in the drawing of the European widgeon. In fifteen or more years of shooting at Gardiner's Island only two or three European drakes have been shot and this is the first female recorded.

ROBERT C. CORNELL.

A White Robin.

TERRE HAUTE, Ind., April 14.—*Editor Forest and Stream:* An albino robin (*Turdus migratorius*) was taken yesterday about five miles west of Terre Haute. The bill was bright yellow, the feet and a few feathers on the wings a pale ash color, and a few scattering feathers on the breast, the regular robin red. The specimen is to be preserved.

R. B. STIMSON.

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

The Crow's Nest.

THE snow is not melted when the female crow begins to look to her nest. If it is a new nest to be built, a tree is selected with the utmost care—the taller and more branchless it is the better—and a particular fork or crotch decided upon only after the most mature deliberation. If it is an old nest to be repaired, the bird spends several days in critical examination of it. Sometimes you will see her seated on a limb gazing intently at the little pile of sticks; again she will be all activity, hopping and prying here, there and everywhere. Evidently the occupation affords her the greatest interest and pleasure. During this time the male is seldom in evidence. At length the examination is completed and Madam Crow proceeds to operations. If the gales of winter have endangered the foundations of the nest, she will practically demolish the structure and then rebuild it. But this is seldom necessary, the foundations of a crow's nest being made to last. As a rule a little trimming here and there and adding to the upper stories will suffice, but the inside is completely refurnished. The old lining is thrown out and new roots and grasses are introduced. While this is being done, the male is more often seen, but his function does not appear to be so much to help as to scare off thieves, for the nest builders love to pilfer from one another. The perpetual din of cawing which is heard in a rookery is no doubt occasioned for the most part by this habit of pilfering, being either notes of warning or angry cries of protest.

Generally a couple of weeks will see the nest completed. Then follows an interval of two or three weeks more for love making, and though it must be confessed that this is not very poetical, it is doubtless perfectly satisfactory to the participants. By April 1 the eggs are laid and incubation commences, so that ere winter is well over, the world is full of young crows.

An interesting question suggests itself here: Are crows increasing? The farmer will say yes, but he is not a very trustworthy authority, for when he sees one or two crows, especially in seeding time, he is apt to think he sees a flock. Ornithologists are of the opinion that the race is diminishing slowly but surely. Nor is it to be wondered at, seeing the distribution of fire-arms in these times and the universal enmity in this case which prompts their use. But the day is far distant when the crow will have taken its place with the great auk, for of all the feathered family he is probably the most subtle and cunning.

FRANK MOONAN.

Expedition to Laysan.

THE Laysan Island expedition, sent out by the State University of Iowa to investigate the rookeries of Laysan, sailed from San Francisco April 5. Its members traveled on the U. S. Army Transport Sherman, the vessel by the way which carried Gen. G. S. Anderson to the Philippines.

Professor Homer R. Dill is in charge of the expedition. Chas. A. Corwin, of Chicago, is the artist and Horace Young and Clarence Albright the assistants. The expedition is to remain on the island of Laysan for about two months and is to furnish to the U. S. Biological Survey a detailed report as to the bird rookeries there, with special reference to the raids made on them about two years since by Japanese feather hunters. The members of the expedition have been appointed to act as game wardens during their stay, for the island is part of a bird refuge created by President Roosevelt. They will secure material for groups exhibiting the bird rookeries for the Natural History Museum of the University.

OLD MALES READY TO FIGHT.

AN OLD MALE ELEPHANT SEAL.

New Publications.

THE GRAND CANYON OF ARIZONA, by George Wharton James. Cloth, 265 pages, illustrated from photographs, $1.50 net. Boston, Little, Brown & Co.

To attempt to describe the marvelous grandeur of this wonderland is beyond the power of most mortals, but Mr. James is different; he lives on the rim of the cañon. Furthermore, he does not waste words in description alone, but gives the sportsman-tourist all the information needed in order that he may see all that is to be seen. All who have read Helen Hunt Jackson's "Ramona" and Mr. James' "Through Ramona's Country" need not be told that still another treat is in store for them in this volume. The photographs are excellent, the text is indexed, and there is a map of the cañon.

GAME BAG AND GUN

The Rearing of Pheasants.

It is not my object to go into a detailed account of the natural history, habits, food and treatment of the various species of pheasants. That would take too much space and would lead me too far. I will, therefore, give a short, but comprehensive description of the management of pheasants in aviaries and include such birds as are best adapted for preserves in North America.

A majority of our foremost sportsmen seem to be somewhat shy and doubtful when it comes to breeding pheasants on their preserves. It is not the initial outlay that such an undertaking requires, but they fancy it is impossible to breed these birds in their particular locality. The fact is that neither the severe heat of our Southern States nor the severe cold and the blizzards of our Eastern and Western States are drawbacks to the successful rearing of pheasants as game birds. The pheasant is here to stay and in future will have first place as the handsomest and gamiest of all our game birds, and will be considered so by all classes of sportsmen and by the general public.

At the outset I want to mention that pheasants raised for aviaries are generally birds of gorgeous plumage and exquisite beauty. Best known among them are the golden pheasant (*Thaumalea picta*) and the silver pheasant (*Euplocamus nycthemerus*). Of late years several other species have been liked, such as the Lady Amherst (*Thaumalea amherstiæ*) and the argus pheasant (*Argus gigantius*).

Pens for pheasants should always be located on high and dry soil with plenty of air and sunshine. The top of the fence should be at least four feet high and should have an area of at least 14 by 14 feet or better still 16 by 16 feet. The more ground the better, but 16 by 16 feet is sufficient.

The posts, of which there are eight, should be driven into the ground eighteen inches. A ditch or trench some eight inches wide should be dug all around the pen on the outside, and at least six inches deep. Then a strip of half-inch mesh wire twelve inches wide is doubled over in the center, one-half nailed on to the post, the other half bent so that it lies solidly on the floor of the trench. As soon as this is done, the dirt is replaced in the trench, and a simple but effective barrier is presented to any vermin that may try to dig into the pens. In nailing this wire to the posts, care should be taken to have the edge extend just a little above the surface of the ground, so when the boards are nailed on to the post, the lower one will overreach the edge of the wire at least one-half inch. The pens are boarded up all around for a height of two feet, just leaving room enough at one corner for a two-foot gate.

After the boards are all put on, half-inch mesh wire is nailed to the posts all around the pen. Care again should be taken to extend the lower edge of the wire at least one inch over the top board. Wire of the same mesh is also stretched over the top of the pens, care being taken not to stretch it too tight. If pulled too tight the birds may injure their heads or even kill themselves when flying up against it. On the inside and in the center of the pen a pole five feet high and four or five inches in diameter is placed upright. This will raise the wire netting on top about one foot in the center and keeps it from sagging. To this pole nail a smaller one six feet long and an inch or inch and one-half in diameter. This is fastened horizontally and affords the birds a roosting place, which is much better than having them roost on the ground, especially in wet and inclement weather.

If the birds are pinioned or one wing is cut to keep them from flying, a little brush should be placed in the pens in such shape that they can easily walk up or down. In the corners of each pen place some small brush or a shield made of lath and tar paper, leaving an opening on each side right above the ground for the hens to go behind. Hen pheasants while laying their eggs want seclusion and they do not like to be disturbed by the cock pheasant, which is sometimes very troublesome. However, the hens, while using these prepared places for their nests, will often lay their eggs anywhere on the ground. Pens, as I have described here, are absolutely safe from intrusion of vermin, but are somewhat expensive. In my opinion the cost is of no consideration so long as your birds are perfectly secure from harm of any kind, and you can lie down at night without thought of trouble for your charges.

Many sportsmen employ movable pens. These are made of common lath and are called hurdles. Each side of the pen represents one or more sections of hurdles. While this sort of pens are of course much cheaper and easily handled and carried from place to place, they are not nearly so safe as the pens I have described and I have seen hundreds upon hundreds of pheasants killed by weasels and minks in hurdle pens, and yet they may be used to advantage in localities where small vermin has been killed out.

In contrast to these breeding pens are the aviaries proper, which are nothing more nor less than the pens just described, only much larger, so that they give one the opportunity of showing one's stock on hand and the different species one has bred, or to breed from. An aviary may also be open, or a piece of ground some acres in extent, but only inclosed on the sides. In these, pheasants may be kept either pinioned or full-winged, the latter of course having free access and egress.

While the construction of pens is easily understood by anyone, the laying of eggs and the hatching of the birds present a much more difficult problem, which is in fact the stumbling block to many beginners. This is where experience counts for much, if not for all.

In the latter part of March the breeding stock is placed in the pens, one cock pheasant and five or six hen pheasants to each pen. One should never give more than six hens to one cock, as that would decrease the fertility of their eggs. The hens begin to lay in April, and at this time their keeper should see to it that they are not disturbed beyond the ordinary. No strangers should be allowed near their pens; no dogs or cats—in fact, anything that may frighten the birds should be rigorously kept away from the neighborhood of the pens, for such alarms would tend to do untold harm to both the birds and their eggs.

The food of the birds should be very carefully looked after during the laying season, as this has very much to do in fecundating the eggs and securing strong and lively chicks. While there is no hard and fast rules to the amount of food one should give, I will say this without hesitation: Never feed more than the birds will eat up clean. By careful watching the keeper will soon know what quantity to give. The food should be of the very best quality and should be varied as much as possible. Use one kind of grain one day and another the next, but never feed too much cracked corn or buckwheat, as these are too fattening. Hens which are too fat will lay but few eggs, and of the number laid, few only will be fertile. The rest will be of no use for hatching and some of them will be soft shelled. In my long years' experience as a practical keeper and breeder I have always obtained a good and sometimes a very high percentage of fertile eggs, ranging always above 75 per cent. and increasing to 94 per cent. This high percentage can of course only be reached with eggs laid during April and May. June eggs will be somewhat lower, July eggs still lower, and considering that the birds are kept laying for a term of three successive months, it is only natural that there should be a lowering of the percentage of the fertility of their eggs. Pheasant hens kept in confinement will lay from forty to sixty and even more eggs. This is in consequence of the removal of the eggs as soon as deposited, and because the birds are not permitted to sit and hatch. In the wild state a pheasant hen only produces from nine to fifteen eggs. It is therefore obvious that by breeding these birds in confinement one can rear them in much larger numbers than nature would otherwise permit. Often, of course, a hen will breed twice during the summer, but her second brood, on account of the advanced season, will very often come to grief.

To return to the food best adapted for birds in breeding pens, I have always fed in the following way: In the morning, Spratt's game meal with a little fine dried meat and bonemeal mixed twice or three times a week, adding a little chopped beef heart dried and made fine, which keeps the birds in good condition. In the afternoon I feed either wheat, cracked oats, barley, buckwheat, cracked corn, sorghum, pease and so on, but as I said before, cracked corn and buckwheat should be given sparingly, three or four times a week only. Green food, especially clover, cabbage, lettuce and beet tops should be provided plentifully, but always fresh. Plenty of fresh water, preferably running water, should be provided. This, too,

is almost absolutely essential to keep the birds in good health. Bad water as well as impure and stale food will soon spread disease, and it pays much better to look after these things and prevent sickness. "An ounce of prevention is worth a pound of cure" is very true as to the breeding of pheasants, and it is essential that scrupulous cleanliness should be observed. The pens should be provided with oyster shells, plaster, lime and gravel. The first the birds eat for the formation of egg shells, the last for digestion. Gravel is absolutely neeessary to keep the birds in good health. A little white sand or ashes in which to bathe will be appreciated by your charges and will keep them clean. The ground in the pens should be turned over every few weeks and air-slacked lime mixed with it. This keeps the ground from contamination and in this way one can use the same pens for a number of years without any danger to the health of the birds.

While in the employ as keeper of the Jekyl Island Club, at Brunswick, Ga., I used the same pens for five years in succession, keeping them pure and clean in the way just mentioned, and a healthier and more vigorous lot of birds one could not find anywhere.

The eggs should be collected several times every day because if they are not the cock—and sometimes the hens—will form the egg-eating habit. One can in a measure prevent this evil by placing china eggs in the pens, but one must be careful to select them so that the birds cannot detect the difference. They must be of the same size, shape and color as the genuine pheasant egg. The color, by the way, varies greatly. Some may be grayish-green, some white or nearly so, others of bronze shade, still others grayish blue, and yet others almost brown. I used to place the pseudo eggs in the pen nearly two weeks before the hens started to lay, and if any of them did start to peek at them, they were soon discouraged, and when the real eggs appeared they did not bother them. However, if you have no china eggs, you must find the culprit. In most instances this will be the cock, and if he is not taken out at once he will teach his mates egg-eating, which, looking at the value of the eggs alone, will constitute a severe loss, and at times be almost ruinous. The bird, cock or hen, may at first not intend any harm. They begin to push the egg about with their beaks for want of something better to do, as the small inclosure does not permit of much exercise. Finally they peck and break the egg, and once the contents are tasted and eaten, the ruinous habit is formed forever.

While some breeders claim they have remedies to break offenders, I do not believe in them much. Some advise to cut the beak. Others fill an empty shell with soap, etc. I think, however, that the main and only remedy lies in prevention. Do not let your birds form such habits. In my twenty years' experience I have had little or no trouble with egg-eating birds.

I now come to the collection of eggs. As I mentioned before, eggs should be removed several times a day. They should be kept in a cellar if possible. Fill a box with bran and put the eggs point down into this. They should never be placed on their sides. Every night they should be turned over, from the pointed end to the blunt end, and vice versa. This should never be neglected, as it is very important not to displace the yolk, for if it is done, it will ruin the fertility of the egg. I have always found that eggs kept as described will be in good condition for hatching, because bran absorbs a lot of moisture and by keeping the eggs therein they also will retain the required moisture. I can tell at a glance whether or not an egg will hatch by simply looking at the shape, color and formation of the shell.

Having collected from sixty to eighty eggs, the hatching can be commenced. The eggs are hatched under ordinary barnyard fowls. I have used almost any kind of chicken to hatch my pheasant eggs, and of them all I find the brown Leghorn and a medium sized Plymouth Rock hen the most careful and best of foster mothers. Many breeders use the white Leghorn and game chicken, but I have found them too wild, breaking many eggs. The little bantam hens are very good, but being so small, one need hardly consider them in pheasantries where one expects to rear several thousand pheasants.

An ordinary barnyard fowl is given fifteen eggs for a setting. I have always used a house built for the purpose of hatching. It should be located in a cool, shady place, providing at the same time for plenty of fresh air. Have all the air come in from above, so that there will be no draft on the floor of the house. The size of such a hatching house of course depends on the number of eggs one expects to hatch. Invariably I have built mine ten by sixteen feet and twelve feet high. I divided this into three compartments with a door leading to each of them from the outside. The house should be floored and made tight generally, to keep out rats. On all sides in each compartment I arrange my setting boxes, making each box 14 inches square to afford the setting hen plenty of room. With the exception of a baseboard four inches wide, the front of the box is left open. This baseboard is placed there simply to hinder the eggs from rolling out on the floor. The opening in front of the box is provided for by a removable frame made of light boards and half-inch wire netting. When in place they not only keep the hens from leaving the nests, but also keep intruders out. The floor of each setting box is covered with a solid piece of turf cut to fit. The center of this is lightly hollowed out, filled with leaves or chaff, and the eggs put on this. Hens should always be set on the nest after dark, and it is best to put the eggs under the hen after you put her on the nest instead of putting in the eggs first and the hen on top of them.

When you first commence to handle a setting hen, she is liable to be restless and resentful of any interference, and while in this mood she may break some eggs. Hens with feathered and scaly, scrofulous appearing legs should never be used in a pheasantry, as they will spread the same disease among your birds.

Charles Brinckmann.

[To be concluded.]

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

Sale of a Great Gunning Marsh.

The sale of one of the largest and best of the gunning marshes in North Carolina has recently become known. These are the Baum marshes, long leased by the Palmer's Island Club, which have furnished and still furnish some of the greatest duck shooting in North America.

Ever since the Civil War, Currituck Sound has been famous as a favorite winter home for ducks, and of the marshes bordering on that sound those owned by Josephus Baum were among the most important. Mr. Baum owned a great area of the beach which separates Currituck Sound from the ocean. On the seaward side this is a hard sand eternally pounded by the ocean. Back of this lie the dunes above the beach which once bore trees of considerable size, which in some places were even forests, but now have in other places been buried deep by the shifting sands. On the sound side, grassy marshes and meadows, cut up by a thousand narrow leads and dotted with as many shallow ponds, furnish attractive resting and feeding grounds for the fowl. In these leads and ponds, and often in the shallow water close to the marsh, grow in great profusion those water plants on which the ducks feed, and which give them the delicious flavor for which birds killed in this sound are famous.

Many years ago Josephus Baum sold to the Currituck Club of North Carolina a great stretch of marsh lying at the northerly end of his holdings on this outer beach, but—himself a gunner and with boys who in time might become gunners—he reserved for himself the southerly end of these marshes, which he believed constituted the best ducking ground of his holdings. This tract is vaguely spoken of four miles long by perhaps a mile wide, and in the winter season it is all of it more or less thronged with birds. Shoving through the narrow leads and ponds one constantly sees ahead of him, sitting on the water or resting on the shores, hundreds, if not thousands of ducks and geese, which rise on wing as the skiff approaches, and take their flight to other resting places where they will not be disturbed. To many gunners who have been over the property it has always seemed an ideal marsh. So it was considered by its owner who a few years ago held it at $60,000—surely a great sum to pay for a shooting ground.

In old times, before shooting became so popular, Josephus Baum raised on this beach some horses and cattle, and banker ponies bearing his brand no doubt still wander up and down there. Afterward he leased the shooting to the Palmer's Island Club, which enjoyed it for many years and had great shooting, but during the last years of its lease was greatly troubled by poachers who so persistently followed night shooting as to drive the fowl away. So at last, seven or eight years ago, the Palmer's Island Club gave up its lease, its various belongings were auctioned off and the club disappeared. Soon after that the property was leased to a Mr. Simpkins, of Boston, who had it for five years, and now for the last two years it has been shot over by Mr. Baum's sons.

The price paid for this great marsh has not been announced, but it may be assumed to have been somewhere near—though probably less than—the asking price above mentioned.

To the Connecticut Legislature.

SANDY HOOK, Conn., April 18.—*Editor Forest and Stream:* I wish to plead through your valuable paper to every member of the Connecticut Legislature, its committee on fish and game, and for the influence of every sportsman to give more protection to that noblest of all our game birds, the ruffed grouse or partridge, which, under the present law, is fast becoming extinct. When the present law was passed it was thought to afford sufficient protection, and that grouse would increase, but in the last two or three years, with the increase of sportsmen, of rapid firing guns and last but not least of the automobile, have shown that the present law does not suffice to keep up the supply. The automobile is one of the most destructive of all these agents. It enables the sportsmen to crowd three or four days' shooting into one, and then return home at night for dinner.

These are some of the reasons why the partridge has decreased from one-third to one-half in the last two or three years.

The Legislature must act and act at once. Talking alone will not do, if it hopes to save this noble bird that cannot be restocked. In all probability the Legislature will not come together again for two years and I fear then it will be too late to save this bird. I plead with the legislators to give it more protcetion before adjournment. Take ten or fifteen days off the last end of the season, when the leaves are off and the birds are getting together in swales. You can kill more partridges during the last fifteen days of November than in a'l the rest of the season. Also cut the number that may be killed during the open season to ten or fifteen and establish State game refuges. I think such action will give them the desired protection. Do not make a close season for a number of years. That would be worse than folly, for there is a class of pot-hunters that will steal in with some trap, snare or device, and in that way cause more destruction than if permitted to shoot for a short season. Besides, there would be no fund to fight or prosecute them with. To cut off the shooting is to cut off the license fees, and so the money to be used in protection. This tax or fund eomes from where it belongs, from the men that carry the guns. Those who do not shoot pay nothing—which is right.

The partridge is not a bird of song; neither—while he is a beautiful bird—will he parade himself before you to show his beauty. His habits are secretive. He likes the dense cover far from all mankind. It is not for his song or his beauty that he was given to us. Our Crcator gave man this noble bird to enjoy, but not to annihilate. You must protect if you wish to propagate; you cannot eat your good cake and save it, too.

If you put a thousand dollars in the bank at 4 per cent. it will draw $40; in a year you can spend that and still have your principal left.

Each year lately instead of killing 40 per cent. we have becn killing sixty to eighty, thereby cutting down our stock to an alarming extent. Suppose we use half of our income and leave the other half to add to our principal. The result would be very gratifying to all. It cannot possibly do any harm. For when the birds increase and the sportsman's pleasure also increases, everybody is happy, even the pot-hunter. I wish to give to the birds 60 per cent. and to the sportsmen 40. Then they arc bound to increase.

By shortening the season fifteen days on the last end, and reducing the number to be killed to ten or fifteen during the season, and by the establishing of State game preserves, this increasc will be aecomplished. I sineerely hope the Legislature will so amend the present law before it adjourns.

Let us suppose that the partridges in Connecticut had become extinct—entirely wiped out—and it were possible to restock them this spring. We would need fully as many as are now left to restock with. Is there a sane sportsman living that would advise letting the birds be shot for two months this fall and leaving the limit to kill at thirty-six, as the law now stands? Can you eall that protection? The Legislature will make a great mistake if it does not amend the present law before it adjourns.

I am pleading for the noblest game bird that ever spread a wing. He cannot plead for himself, nor even appear before the Legislature, which is the jury, in whose hands his life is. Save him by amending the present law.

E. TAYLOR.

The Use of Game.

KETTLE FALLS, Wash., April 10.—*Editor Forest and Stream:* The question of the preservation of the remaining wild game of the United States is one now squarely confronting its people and one demanding immediate attention.

To the old timers of a now fast fading generation—particularly those of us who for the past thirty years have been side tracked in the mountain gorges of the Pacific coast region—the question is suggestive of deep sadness as we recollect the situation in long gone days when buffalo, elk, antelope and deer swarmed on plain, valley and mountain slope which we remember to have seen when they could have been numbered only by hundreds and by thousands. But how the scene changes with a varying point of view. I well remember when, in 1854, I, an eager boy, infatuated with the love of the great wilderness, stood by my father's side on the then far frontier of Western Iowa listening to the wild prophecy of an enthusiastic neighbor whom the whole little settlement regarded as wildly visionary, who declared his firm conviction that the child was then born who would live to see a railway built across the great plains and mountains clear to the Pacific coast.

It seemed as absurd to the listening group as the fancy that game animals would really become scarce in the great wild land to the west of us during the life time of some of the listeners. Yet the question is shaped into just this form to-day—that what is to be done must be done quickly if any hope of preserving the wild game animals of America be entertained.

To me it appears plain that the national parks and forest reserves should be made permanent refuges for the wild game animals adapted to the different localities, and the starving elk of Wyoming; indeed, all the overflowing life of the game animals of the Yellowstone National Park should be maintained during winter at the expense of the general Government.

What American worthy the name would begrudge the few cents of his additional taxation to preserve this magnificent relic of the abundant animal life of the plains and mountains in the long ago days, "The days of old, the days o gold, the days of '49?"

Preserve the beaver? Yes, but with a provisc A very interesting little creature is the beaver but sometimes very destructive. Keep him se cure on the park and forest reserve ground and outside of those regions when he does no trouble too much. Let the unnecessary ones b trapped by experts alone—by men who ca catch the old males with the largest pelts an which are the pioneers in aggressive movements i their small emigrations in scarch of new territory

I learned to trap beaver from the reading c an old time book from the pen of Captain Jame Smith who was taken prisoner by Indians a fe miles east of Fort Duquesne about a week be fore Braddock's defeat, and who remained prisoner with the Indians of Ohio for five year

So completely did he describe the India method of taking the beaver that when I fo lowed his careful directions, sueeess came in mediately, and the first beaver I ever saw took from my own traps.

If I have not forgotten all I knew in the o trapping days, I ean do this trick of taking th old males and leaving the others. Doubtle many of the old timers can be depended on do this.

ORIN BELKNAP.

Early Wildfowl Slaughter.

DWELLERS along the New England coast the eighteenth century were industrious a thrifty people and lost no opportunity of ma ing money. Many of them had a hard time get along, but those who made the best of the opportunities, usually lived comfortably and l something to their families. Many a man h a trade which he practiced when he could, farm which he cultivated at the proper seasc and in winter he voyaged to the banks for fis

In his "Genealogical Notes of Barnstal (Mass.) Families," Amos Otis speaks of method of earning money which has probal been altogether forgotten by this time, and e cept for some casual mention such as this mig be wholly lost sight of. He is speaking Josiah and Edward Child, somewhere abc 1750, and of their pursuits, and says that:

"Both in early life went on feather voyag a term which few at the present time w understand. About a century ago vessels we fitted out for the coast of Labrador to coll feathers and eiderdown. At a certain season the year some species of wild fowl shed a p of their wing feathers and cannot fly or o for a short distance. On some of the barr islands on that coast thousands of those bi congregated. The crews of the vessels wo drive them together, kill them with a sh club or broom made of spruce branches a strip off their feathers. Millions of wildfo were thus destroyed and in a few years th haunts were broken up by this wholes slaughter and their numbers so greatly minished that feather voyages became unpro able and were discontinued."

The story as it reads might refer to sea du of various sorts, but on the other hand so thing in the account seems to suggest that may possibly refer to wholesale destruction the great auk. If this could in any way be monstrated the fact would be one of ext ordinary interest.

Opposed to the Sale of Game.

Utica, N. Y., April 14.—*Editor Forest and Stream:* The annual meeting held April 12 was largely attended, and great interest was manifested in the proceedings. The officers chosen for the ensuing year are as follows: President, Tom W. Johnson; Vice-President, W. E. Wolcott; Secretary, W. S. French; Treasurer, George L. Bradford; Executive Committee, Messrs. Johnson, French and Wolcott; Directors, Dr. J. G. Kilbourn, George L. Bradford, Tom W. Johnson, Harry Lancaster, N. L. Hayes, W. E. Wolcott, Major H. J. Cookinham, W. S. French, C. W. Keeler.

A resolution was unanimously adopted requesting the secretary of the association to communicate with the Senator and Assemblymen from Oneida county and urge them to oppose the passage of the bill which proposes to amend the State constitution so as to permit the flooding of State lands in the Adirondack forest preserve for the establishment and maintenance of storage reservoirs.

Major H. J. Cookinham, chairman of the legislative committee of the New York State Fish, Game and Forest League, spoke of the Long Island spring duck shooting bill which failed of passage by two votes. He also referred to the Bayne bill to prohibit the sale of game, and asked the association to do all in its power to secure its passage. Reference was made to the bird plumage bill, which, it is now thought, will be defeated. Dr. F. H. Peck, Dr. F. S. DeLong and Secretary French also spoke concerning the Bayne bill. Thereupon the association endorsed the Bayne bill and directed the secretary to write to the Senator and Assemblymen of Oneida county, requesting them to advocate its passage.

Dr. Peck spoke in favor of scientific forestry in New York State. Dr. C. R. Weed expressed the belief that placing a bounty on foxes, skunks, red squirrels and owls would do more to protect the grouse than any other measure that could be adopted.

John Teesdale told about a blue heron found with ten trout in its stomach, two of them nine inches long and the others ranging down to one and one-half inches, and yet this bird is protected by law. He also told about a number of partridges killed near a potato patch in the vicinity of Lyons Falls, which, when dressed, were found to have nothing but potato bugs in their crops.

The matter of game refuges for Oneida county, where nothing can be shot for a term of years, met with favor. It is probable that in the near future a number of them will be established.

At a meeting of the Remington Gun and Rifle Club, of Ilion, held April 11, the following officers were elected: President, M. A. Mulvey; Vice-President, Charles Gammage; Secretary and Treasurer, W. H. Grimshaw; Captain, R. H. Tomlinson; Collector, J. J. Jackson; Directors, Charles Jenne, Forest Banker, W. F. Lawrence, J. J. Van Doren. The club passed resolutions condemning the wholesale slaughter of game by market hunters and expressing the belief that the prohibition of the sale of game is the only practical means whereby the game birds of the country may escape total extermination within a few years, also favoring the passage of the Bayne-Blauvelt bill prohibiting the sale of game in New York State at all seasons and requesting that Senator Heacock and Assemblyman Bridenbecker do all in their power to assist in the passage of the measure.

The Mohawk Fish and Game Protective Association held its spring meeting April 12, the attendance being large. A resolution was passed favoring the Bayne-Blauvelt bill prohibiting the sale of game birds in New York State at all seasons. Copies of the resolution will be sent to Senator Heacock and Assemblyman Bridenbecker with the request that they do all in their power to further the passage of this measure.

W. E. Wolcott.

The New Kansas Laws.

Topeka, Kans., April 20.—*Editor Forest and Stream:* Herewith is a summary of the new Kansas game and fish laws, which embody the requests and work of the better and more progressive sportsmen of the State in all but two items:

Tree squirrels (fox), Sept. 1 to Jan. 1; no open season on gray and black squirrels. Muskrats, skunk, mink, raccoon, opossum and civet cat, Nov. 15 to March 15. Beaver and otter. Antelope and deer, unlawful to kill or capture for ten years. Wild geese, brant and ducks, Sept. 1 to April 15. Plover, Aug. 1 to April 30. Snipe, Sept. 1 to April 30. Grouse or prairie chicken, Oct. 1 to Nov. 1. Quail, Nov. 15 to Dec. 1.

It is illegal to shoot at or kill game birds sitting on ground or on the water; to kill game birds earlier than one hour before sunrise or later than one hour after sunset, and to shoot at birds from a motor boat, nor use live ducks as decoys. Bag limit for one day—Snipe, 12; prairie chicken, 12; quail, 12; plover, 12; wild ducks, 12; wild geese, 6; wild brant, 6.

No protection is given the English sparrow, bluejay, crow, blackbird, great-horned owl, Cooper hawk and sharp-shinned hawk.

The eagle is protected, and may not be killed or captured. For six years no Hungarian partridges or English, Mongolian or Chinese pheasants may be killed. No part of the plumage, skin or body of any bird protected by this act shall be sold or kept in possession for sale, irrespective whether said bird was captured or killed within or without the State.

The bill requires owners of artificial dams to construct fish ways, under the direction of the fish and game warden over such dams.

The use of seines having three-inch meshes is permitted, except during the spawning season.

No person is permitted to use more than one trot line and such trot line shall not have attached to it more than twenty-five hooks, nor shall it be set within 3,000 yards of a dam nor within 200 yards of the mouth of a creek or river.

The season on migratory wildfowl should close Jan. 1, and the use of seines with meshes three inches in diameter, which is the panacea for our fish supply, urged by our game and fish warden, Prof. Dyche, who claims that the large and overgrown bass, giant crappie and catfish, by their size and activity, keep down the increase in the fish supply, and that they should be taken out of the streams for the protection of the smaller sizes; and that only by seines can the carp and buffalo be kept within bounds.

W. F. R.

Breeders' Bills.

Considerable hostility to the bill which forbids the sale of game has been manifested by wealthy men—and some not so wealthy—who are more or less engaged in the breeding, under domestication, of wild game in New York State. Some of these breeders have declared that they would fight the Bayne bill to the death, unless it were so amended as to give the breeder the right to kill, and sell under certain conditions, game that he had reared in confinement.

The passage of the Bayne bill forbidding the sale of game, whether killed in the State or out of the State, has seemed so important to many game protectors that they were willing to make great sacrifices to get it through. On the other hand it is only just that breeders—actual breeders be it understood—should have the privilege under proper conditions of disposing of the game that they had bred.

Within the past week or two a number of conferences have been held in New York city between the breeders and the supporters of the Bayne bill in the effort to find a common ground on which they could work. Two weeks ago a conference was held and a bill was drawn which was sent to Albany to be introduced as an amendment to the Bayne bill. It did not satisfy a number of game protectors, for it is reported to have given special privileges to the owners of preserves which many people think they ought not to have. On Tuesday of last week another conference was had, and Senator Bayne was asked to withdraw the amendment.

At this same time a bill relating to pheasants was considered and approved. It is reported to permit the killing of bred pheasants only during the open season for wild pheasants, and to provide that such killing may take place only in the presence of a warden or justice of the peace, and it must be limited to birds which have never been released. Thus it is wholly a breeders' bill, enabling the breeders to put pheasants on the market as food. The question of deer bred in captivity was brought up a little later, and a bill was agreed on to permit the killing of bred deer from the beginning of the open season to Feb. 1. The killing of such deer will be controlled by the general law during the open season, but after the close of the open season bred deer may still be slaughtered up to the date mentioned, but only in the presence of a warden or a justice of the peace and not hunted or shot.

There remains the question of the breeders of wildfowl, and it is proposed to treat this very much in the same way as the pheasants are to be treated. It is thought that this series of bills will cover the whole problem, and will receive the support of breeders and hotel men.

At present there is only one breeders' bill before the Legislature, that introduced by Mr. Gurnett in the Assembly and Mr. Sullivan in the Senate. It is the one prepared by Mr. Campbell of the hotel keepers' association. It is declared that this bill has no prospect of passing.

Andrew D. Meloy, president of the Fish, Game and Forest League of the State of New York, has been very active in this matter, trying to bring together and arrange a proper compromise between the most extreme partisans.

A hearing on an amended Bayne bill containing these breeders' provisions was held in Albany on Tuesday last.

Conditions in the Adirondacks.

REMSEN, N. Y., April 21.—*Editor Forest and Stream:* I know both viewpoints as regards the work of the Forest, Fish and Game Commission. Looking at it from the outside I have seen the conditions which existed a few years ago, and as an employe of the commission I learned the difficulties under which a man labors when endeavoring to enforce the laws.

Fortunately I have in large measure the confidence of many friends who know the woods up the West Canada Creek, in Herkimer county. They talk to me now as freely as they did before I went into the forestry department. Things that I do not know of personal knowledge I hear about as much as ever, probably more.

Neither Rawson L. Hayes nor "A Sympathizer" is all right nor all wrong in his views. No doubt there are violations at intervals in all parts of the Adirondacks, but I doubt if these writers are justified in taking such a melancholy view as they do of existing conditions.

There are several classes of violators. First, those who violate "because everybody does"; second, those who violate when they think it is safe; third, habitual violators for profit, psychological or coin.

The instant game protectors discover a bad condition of affairs and make arrests all of the first class stop their violations. These simply want their share of game. The second class, however, violate on opportunity. Their activities are curtailed half at least and sometimes more on the first suspicion of danger of capture, for they are cowards at heart. The third class never stop violating, except when they go to jail, and if "A Sympathizer" and Mr. Hayes will look up the records, they will find that many of these habitual violators have ceased their activities for months during sojourn in jail. Every protector keeps special tab on them and on known members of class two.

One great difficulty is the fact that so many men who should set good examples set very bad ones instead. This applies to summer visitors, leading residents, politicians and "rich fellers." One game hog will make a hundred other men angry enough to shoot deer or catch trout. Within a year or two a prominent man was caught with his valises full of venison which he was taking to market. Certain smart sets do not hesitate to serve venison or trout at special dinners when the law does not allow. This is done in the presence of guides or other employes, and these guides dare not protest. Guides are even expected to furnish the meat or fish for the feasts.

There is not a guide in the Adirondacks who does not know that, generally speaking, if the "party" does not kill a deer then the guide must do it. Perhaps one or two guides kill the six or seven deer of a party. These are often men who boast of killing the deer and who claim to be sportsmen. If a man is not able to kill his deer, a hunter or guide in the party will kill it for him. There are dozens of little sportsmen's clubs, and often members chip in to defend some law breaker friend who "happened to be caught." They even try to influence the officials. Thus the very men for whom the game is preserved—the guides and the hunters—join hands in exterminating it by illegal methods. Hotels are often hotbeds of illegal work and some who shout loudest about violations are themselves closest to the actual work done, know it from experience as well as observation.

What Mr. Hayes says about using the telephone is true. Protectors are often headed off by warnings sent by telephone. A protector often goes into a locality and finds not one man, woodsman or visitor, willing to lend him a helping hand or give him a tip. He works blindly half the time. Yet in spite of all odds the protectors cut violations down to the minimum. They undergo real hardships, go hungry, travel through the back ways of the woods, and the result is that there are not a quarter as many violations now as there were a few years ago. The fact that the protectors get more cases now than before simply shows that their efficiency is many fold greater than ever before.

The law breaker is obliged to adopt stratagems and tricks not needed a few years ago. In spite of this he is caught sooner or later. The hundreds of cases pressed to conviction by the department is proof that the law is being enforced. If greater proof were needed, it is found in the numbers of deer in places where a few years ago they were scarce. Deer are scarce when killed off; plenty when laws are enforced.

From one hotel forty deer were killed last year. For years hunters had killed few from that place. Years ago hunters from one village had to go thirty or forty miles to get their deer. Now they can go a few miles, camp beside the road and get as many deer as they need.

If an analysis of the department records were made, it would probably show that a portion of every sort of woods visitors are violators. Judges have been offenders, and protectors view with suspicion lawyers, doctors, preachers and visitors of all kinds. The protectors know the natives. Having more frequent opportunity, perhaps the woodsman is more destructive to game, but when woodsmen see the law enforced against some of the outrageous summer visitors, they are kindlier toward the game and more friendly toward the game protector. Every woodsman hates the hypocrite who cries for game protection from everyone but himself.

The six-inch trout law is violated, but not so frequently as of old. The hundreds who have been haled to court with small trout realize that it is a real law. There is a good deal of law-abiding sentiment stirred up by the fact that even a fish hog hates to be caught with fingerling trout. The little clubs could do much toward saving fingerling trout by refraining from saving all their legal trout to carry out while they eat the trout they would be ashamed to have a protector see.

When they get into the woods in parties men are often like a crowd of boys. If they are law-abiding, well and good, but if one of them makes fun of the law and violates it "just for a joke" he leavens the lump with evil. This is especially true when the violator is a capable woodsman, a first class shot and fisherman and the life of the party. He kills the first deer generally, then kills a deer for the stick of the party, and another for the unlucky man. It would take courage to protest against the violations of such men, and many of the little clubs are deficient in courage. "Oh, well, you couldn't violate the law if you tried," the able woodsman says, and the protestor, having less skill but more morals,

(*Continued on page 677.*)

New York Legislature.

ALBANY, N. Y., April 24.—*Editor Forest and Stream:* The Assembly has passed these bills: Assemblyman Shannon's, in relation to the open season for fishing on Lake Keuka. Assemblyman A. E. Smith's, providing for the protection of forests from fire. Assemblyman Sullivan's, in regard to the open season for lake trout and white fish. Assemblyman Sullivan's in relation to taking English snipe in Erie and Chautauqua counties. Assemblyman Waring's, in relation to quail in Dutchess and Ulster counties.

Bills introduced:

By Assemblyman Evans, of Sullivan, providing that the open season for deer in the town of Neversink, Sullivan county, shall be from Oct. 16 to Oct. 31, both inclusive.

E. C. C.

Migrating Wild Geese.

EARLY in March last, as Charles Greer, of Rye, N. Y., was standing by his wildfowl pond watching his Canada geese, he heard geese talking far off and looking skyward saw passing over a large flock, numbering perhaps 25.

The tame geese called vigorously to the wild ones, and presently the migrating flock turned, swung around once or twice, and at last most of them alighted in the pond with the tame geese. For some time they stayed there, and then a part went away, no doubt to continue their journey; but there were six of the wild that remained with the tame geese for some weeks. These seemed to lose all shyness, following anyone who walked along the margin of the pond scattering corn, much as the tame wild geese did.

On one occasion when Mr. Greer saw his retriever on the opposite side of the pond and whistled to him, the dog jumped into the water and swam across, and these wild geese followed the swimming dog with the appearance of the greatest curiosity, sometimes coming up to within nine or ten feet of it. About the 10th or 12th of April, however, these six wild geese disappeared and have probably before now reached their breeding grounds in the North.

Notes on Protection.

PRESIDENT TAFT recently set aside more than 300,000 acres in Humboldt county, Cal., as a national forest to be called the Santa Rosa National Forest.

The Minnesota Legislature, recently adjourned, enacted a forestry bill for that State.

The cold storage bill passed not long ago by the New Jersey Legislature was signed by Governor Wilson, April 21. The bill limits the period during which food stuffs may be kept in cold storage to ten months. It is expected to work a revolution in cold storage methods and to do not a little for the public health.

For Commissioner.

AT the last monthly meeting of the Springfield Fish and Game Association, George A. Graham, its secretary, was strongly endorsed as a candidate for the vacancy in the Massachusetts Fish and Game Commission, or for commissioner, if the Legislature decides to substitute one head for the present commissioners.

SEA AND RIVER FISHING

Trout Fishing at Spring Brook.

"Hello, Charles, are you there? Hello, the House!"

These words greeted me one morning in July as I sat at my solitary meal in my country home.

I knew the voice to be that of my old chum, Lyman, and I jumped from my chair to greet him.

"Hello yourself, Lyman. How are you? What's up?"

"Oh, I'm pretty peart, as the saying is, but what are you going to do to-morrow?"

"Nothing in particular. I am keeping bachelor's hall now, you know."

"Yes, I know, and that's the reason I called to ask if you would go trout fishing with me to-morrow."

"Certainly I will. What time will you be around?"

"At six sharp, so be on the lookout, as we have a drive of twenty miles before us, and the roads are heavy."

"All right, I'll be ready, and be sure you have plenty of bait."

"I always look out for that," said Lyman with a smile, and mounting his horse he rode rapidly away, leaving me to get my tackle in order and such other seasonable articles as my experience dictated would be essential to the trip.

The next day at the appointed hour Lyman dashed up to the house with his jump-seat wagon and two mettlesome steeds, and stowing away my traps I seated myself beside him, and with a crack of the lash we were off, bowling over the roads, which we found to be in better condition than we expected, at the rate of a good ten miles per hour.

Between eight and nine we arrived at our destination, handed over our horses to our friend Faunce, at whose residence we stopped, and giving directions as to the disposition and feeding of the horses, donned our fishing coats and rubber boots and proceeded to the meadows through which the wide and winding stream flowed with its rippling waters and dark overshaded pools.

Our lunch was safely stowed beneath some pines in a neighboring grove, together with our spare tips and rod cases, and we hastened to the stream, Lyman going toward the head of the meadows to fish down to a bridge at which I was to commence. At the bridge we were to meet and compare notes and decide according to circumstances whether to keep on fishing, or to go to the cranberry bogs above where usually a few good ones could be secured by those conversant with the course of the stream and best places for fishing.

I baited my hook with a large angleworm and threw into a wide pool just below the bridge. At the first cast I had no response, and withdrawing the line I cast again. The bait had scarcely touched the water when it was seized and I saw the line rapidly running out down stream. I struck and knew that I had hooked a good one and for a few moments he gave great sport, fighting gamely at every inch as I reeled him in, till at last I brought to bag a three-quarter-pound fish, the first of some half dozen that soon followed after him. I then

ON OPENING DAY.

threw down my rod, lit my pipe and seated myself on a knoll to rest.

On looking up in the direction of the bridge I saw a man with a face as weazened and puckered as a baked apple. He was apparently about seventy-five years old and his long gray hair gave him quite a patriarchal appearance. As he drew near I hailed him, but received no reply. "The old fellow is deaf," I thought, and waited until he was near at hand and again accosted him.

"Good morning, friend; how are you to-day?"

"Purty well, purty well, thank'ee. How be you yourself?"

"All right, I guess. I suppose there's no objection to fishing here?"

"Oh, none at all, none at all. Fish all ye want to. But mind, I hain't no ownership over this here medder, and am goin' a-fishin' myself. I guess nobuddy will disturb ye."

And with a grin he waved his hand and departed in the direction whence he came, which, as it now occurred to me, was toward the spot where I had deposited my spare tips and lunch.

I watched the patriarch as he departed, thinking that I had wasted my ammunition in vain, and in this I found subsequently I was not mistaken.

Having rebaited my hook I continued fishing, following the windings of the stream with an occasional nibble, now and then a bite, and once in a while hooking a good half-pounder, so that when about noon I heard Lyman's voice in the distance calling me, I responded with a good, loud whoop, and reeling up my line began to retrace my steps in his direction. I had gone perhaps eighty rods when I saw Lyman coming around a bend toward me, and from the rapidity with which he was walking I knew something was up. Upon meeting me he said: "Charles, did you not place our lunch in the brush heap in the pines on the knoll together with the spare tips of our rods in their cases?"

"Yes," said I, "I did."

"Well, they are not there."

"Not there! Why, they must be, for I covered them up carefully, and no one could have seen them."

"Well," said Lyman, "I can't find them, and you had better come and see for yourself, for it is about noon now and I am beginning to feel hungry."

Together we proceeded to the grove. I went to the spot where I had deposited the lunch, tips and cases beneath the pines and covered them well with brush, and removing the same found to my astonishment that they had all been abstracted.

"That is the work of the old rogue of a countryman. I heard him moving around here for some time after he left me. I believe he has taken them. You go back, Lyman, and continue your fishing and I will make further search for them, as it is possible they may have been rehidden nearby."

So saying I commenced a careful search of every bush and covert around for a long time without results. But at last I came to a great heap of pine brush, the tops of fallen trees which had been thrown down into a depression in the ground that in the wet season was filled with water, but was then dry. Proceeding down the declivity to the brush, I looked carefully therein and espied something at last which seemed to my eyes like the case of my rod. I pulled

away the brush and lo and behold, there were not only my rod tips, but Lyman's, and the dinner basket as well.

"Well," said I, "this is a rum go."

I removed the rest of the brush, and in doing so eame aeross a long birch pole, painted red, besides my own property. Carefully breaking the red pole into sections of about eight inches each, I replaced these and covered them with brush and made it look the same as before. Then, drawing my revolver, I fired the whole six charges as rapidly as possible and set up a howl fit to raise the dead, crying, "Lyman! Lyman! eome here quick!"

Lyman, who was fishing, although his appetite was increasing with greater rapidity than his fish creel was filling, heard my cry, and giving an answering shout in reply, started off toward me as hard as he eould jump.

From my plaee of espionage in the pines I could see him coming and could not help laughing at the figure he cut. His hat had fallen off and his hair seemed standing on end, as with his heavy hip boots he came wallowing through the mud and mire of the meadow, ever and anon yelling out: "Hold him! Keep him till I come!" until I fairly rolled on the ground with laughter.

Finally when he reached me out of breath and almost ready to drop, he exclaimed, "Where is he; where is he?" I pointed to the pile of fish rods and supplies and said: "I have got them."

"Well done," said he, "but where is the countryman?"

"Oh," said I, "I haven't seen him."

"Haven't seen him! Then what did you shoot for? I thought you had got in a fight and was getting the worst of it and had plugged the scoundrel!"

"Oh, no," said I; "I merely fired to attract your attention."

"Well, I made good time to get here," said Lyman, "and am satisfied to have done so, now that I know you have been successful in your search, for I went all over the ground here and found nothing."

"Oh," said I, "I have been so accustomed to hunting and fishing in the fields and the woods for years that I can see the sign of footprints plainly when not a trace would be visible to an unpracticed eye." Then I escorted Lyman to the brush heap and showed him where I had found our stuff concealed and also showed him how carefully I had restored the red rod of the farmer and covered it with brush and fern fronds as before.

Lyman laughed long and heartily at the sight, and then we sat down and partook of our refreshments, and our subsequent efforts were reasonably rewarded by a total capture of ten pounds of fine trout. PISCATOR.

Kansas City Bait- and Fly-Casting Club.

KANSAS CITY, Mo., April 19.—*Editor Forest and Stream:* Inclosed find seores made at our first meeting which was held April 16 at Troost Lake. The accuracy fly and distance fly events were postponed on aecount of weather conditions.

Aransas Pass Tarpon Club.

AKRON, Ohio, April 17.—*Editor Forest and Stream:* This club has headquarters at Tarpon Inn—formerly Tarpon, Texas, but recently changed by the Government to Port Aransas—Texas. The membership has greatly increased the past season and the interest taken in tarpon fishing by the fraternity in general, not alone in the United States, but in foreign countries as well, has been very encouraging. Much of this interest, of course, has been stimulated by the club's aggressive eampaign and attractive list of prizes which are offered and awarded for landing tarpon on light tackle, namely a linen line not to exceed nine threads and a wooden rod not shorter than six feet over all, the tip of which is to be not less than five feet in length, and to weigh not more than six ounees.

Wonderful skill with the tarpon is being demonstrated by many of our anglers and what was considered a few years ago a physical impossibility, is to-day an aecomplished faet. I have just received adviee from our secretary, that Mrs. W. H. Dilg, of Chieago, the wife of an enthusiastic sportsman, has broken the woman's record on light tackle by landing a tarpon six feet 2½ inches in length, whieh entitles her to the Wilcox diamond brooch as a prize. Many have competed for this honor and failed and it speaks well for Mrs. Dilg's skill in winning it. The club's president, Mr. Hooper, had the honor of breaking the record by landing a tarpon six feet seven inches in length on light tackle.

The tarpon season at Port Aransas opened March 1 and ends Dec. 1, and I am already receiving reports of catches which are made. Port Aransas is situated on Mustang Island, a very pleasant and interesting trip of about three hours by boat from Rockport, Texas. During the hottest months of the year, July and August, it will always be found agreeable on account of the trade winds which prevail, beginning with March 1 up to December. It is a most delightful and healthful resort and can truly be called a sportsman's paradise. While everything is strictly first-class, it is not a resort where extravagant prices are charged and advantage taken of the tourist and sportsman. The Government has appropriated large sums of money to improve the harbor and channel at Port Aransas and has purchased large tracts of land on which to build fortifications. Much of the ocean traffic passing through the Panama Canal will be routed through this port. While tarpon fishing is the main attraction, there abound quantities of other fish which afford good sport, as follows: Spanish mackerel, jewfish, red snapper, sea bass, redfish and sea trout. Mustang Island has a fine beach on the gulf side over eighteen miles in length where surf bathing can be indulged in.

The club has now ready a large and attractive list of prizes which will be awarded for the season of 1911, and judging from the manner in which the season has already opened, we believe that 1911 will be the record breaker.

For the benefit of any who may feel an interest in this sport, will say that railroad transportation can be had very reasonably from any of the Northern States by taking advantage of the tourist rates which the railroads offer. Secure your ticket routed to San Antonio, Texas, at which point you will make connections with the Aransas Pass Railroad and go to Rockport, Texas. At that point you will find a boat awaiting with good aceommodations to transport you to Port Aransas. The trip down the bay takes about four hours and is most delightful. I would advise, however, to first get into communication with the club's secretary. J. E. Cotter, of Port Aransas, Texas, care of Tarpon Inn, and arrange for hotel accommodations, guide and boat.

J. E. PFLEUGER, Cor. Sec'y.

Illinois Casting Club.

CHICAGO, Ill., April 15.—*Editor Forest and Stream:* I furnished you with eopy of Secretary Whitby's seore report for 1910, and in preparing this copy I find that I made a typographieal error, and I am very desirous of having the same correeted. This has been called to your attention heretofore by O. C. Wehle, a member of our club. The two errors in question occurred in the report of the score. First, in the report of the delicaey and aeuracy fly, which should have read as follows:

"In the delieacy and aeuracy fly event L. E. DeGarmo exeeeded our previous club record (held by him) and raised our club record (on Aug. 6) to 99 2/30 per cent. The score of F. N. Peet (of the Chicago Fly Club) of 99 21/30 per cent., previously the record, was exceeded by F. C. Kierulff who (on Aug. 20), casting for the San Francisco Fly-Casting Club, raised the record to 99 24/30 per cent."

Second error occurred in the report of the salmon fly, which should have read as follows:

"Salmon fly. Our record of last year, 120 feet, made by L. E. De Garmo, was broken several times the past season, L. E. De Garmo casting (in club contest) 133 and 135 feet and W. H. Ball 138 and 139½ feet, which latter distance is our club record. In the national tournament of 1910, W. H. Ball established a new world's record by casting 140½ feet, with a regulation (fifteen feet) rod, slightly exceeding E. J. Mills' cast of 140 feet, made in 1908."

H. D. WILLIS, Secretary.

Deep Sea Fishes.

AT a recent meeting of the Paris Academy, Prince Albert of Monaco announced his intention of commissioning a new steamship for the purpose of earrying on deep sea dredging work.

He spoke also of the invention of a new dredging apparatus, by means of which many hitherto unknown examples of the life of the intermediate depths of the ocean had been secured. This apparatus consists of a net which may be dragged at any desired depth at a rate of about nine miles an hour. Using this apparatus, the steamship Princess Alice at a depth of more than 15,000 feet brought to the surface a dozen new kinds of fish in about as many days. Arrangements have been made for taking instantaneous eolor photographs of the speeimens as soon as they are out of the water.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Opening of Trout Season in Vermo nt

Rutland, Vt., April 22.—*Editor Forest and Stream:* The trout season opened in Vermont April 15 with conditions so unfavorable that it was almost impossible to take a fish even in the most early streams. For years the first or middle of May has seen the opening of the season, but the last Legislature, on petition of anglers from the two southernmost counties of the State, Bennington and Windham, fixed the initial day four weeks earlier than under the old statute and cut out August fishing.

With conditions such that it is neccssary to reach under a shelf of ice to get one's line into the water, to clamber over a snow bank to reach the bank of a stream, and to put on a half-ounce of lead to sink a bait, the folly of attempting to fish in Vermont during April is well demonstrated.

It was a common thing on opening day, which happened to be one of the warmest for some days, to see men along the streams wearing heavy overcoats and with hands gloved; those who had far to drive to reach the fishing grounds finding fur coats a necessity. So discouraging did the snowbanks in the woods and ice-clogged streams look that many anglers who had traveled long distances before daylight to be on the streams for the first fishing returned home without even putting their rods together.

In meadow brooks where one might hope for early fishing the waters were so swollen that they overflowed their banks and nothing could be done. Even in the Battenkill and Otter Creek, Vermont's favorite low country streams, nothing could be done because of the extreme cold. Whenever an occasional trout was caught it was found to be so thin that it was unfit for the table.

The snow has scarcely started in the mountains where lumbermen say it is three feet deep, and no fishing can be expected in this State for at least four weeks. E. White.

Berlin, N. Y., April 23.—*Editor Forest and Stream:* Unusually cold weather and high water have made the trout season thus far uncomfortable and unprofitable. But few brook trout have been taken, and none of any size. The only large fish caught have been brown trout, of which more than usual have been captured, and their average weight must have been over one pound. At least one four-pounder was taken and several others were about two pounds in weight. Ice has formed almost every night during the past week, and there is still considerable snow on the mountains. The wind has been generally from the north, and as there is still much snow and ice beyond us, our days have been more than cool. Fishermen here believe that the trout will not move up toward the headwaters until it becomes much warmer.

Sandy.

ON A VERMONT TROUT STREAM ON THE FIFTEENTH OF APRIL.

As to Trespass.

The anglers of New York State are strenuously objecting to the passage by the Legislature of Senator Fiero's bill, relating to trespass. It amends Section 32 of Chapter 24 and reads as follows (matter in italics is new; matter in brackets is old law to be omitted):

"Sec. 32. Fish and game protected. No person shall take or disturb fish, birds or game on any private park or private lands, or trespass thereon for that purpose, [after notice as prescribed in this chapter] *without permission of the owner of such private lands, or the owner or person or persons having exclusive right to hunt and fish in any private park.* A person who violates any provision of this article is guilty of a misdemeanor and *in addition thereto shall be subject to an action for* exemplary damages [in the sum of] *not exceeding* $25 for each [offense or] trespass *so committed* [to be recovered by the owner of the lands, or hunting and fishing rights thereon, with costs of suit,] in addition to the actual damages *sustained* [, all of which may be recovered in the same action. The consent in writing of such owner to hunt or fish on said lands during the open season shall be a defense to a prosecution under this section.]"

Sections 28, 29, 30, 31 and 33 are repealed, and Section 102 amended as follows:

"Sect. 102. Taking game *on certain lands* [in Westchester county]. Game shall not be taken in a public highway, or on lands of a railway or lands purchased or condemned [for the Croton aqueduct within the county of Westchester] *by any municipality within the State for the purpose of supplying such municipality with water and protecting the same from pollution or contamination.*

"Sec. 4. This act shall take effect immediately."

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

YACHTING

Some News and a Little Gossip.

ELENA has been launched. She was put overboard at Bristol last Monday afternoon, and Commodore Morton F. Plant and several of his friends were present. It was the 70th birthday of John B. Herreshoff, the president of the company that has turned out so many famous yachts and the launching was a part of the day's celebration. Mrs. Plant christened the yacht Elena, which is the name of the Queen of Italy, after whom Commodore Plant has named the yacht. Elena is a handsome craft and her construction is a very fine piece of work. She is 96 feet on the waterline and will sail in Class B against Irolita, formerly Queen, Corona, Westward and others. Capt. William Dennis is to be her skipper, and he was on hand with several of his crew ready to rig the vessel and get her ready at once. She will have a trial next week.

The defender of the Fisher cup, now held by the Royal Canadian Y. C., is being built by Hodgdon Brothers at East Boothbay, Me., from designs by George Owen. The Rochester Y. C. has challenged for a race and will send Seneca to Toronto next August to meet the best of the Canadians. The new boat fits Class P, and this is the third boat of the class built at that yard this year from the designs of George Owen, the other two are for the Massachusetts Bay class. The latest boat, unlike the other two, is not built to freeboard, cabinhouse and scantling restrictions, but will be rather an out and out racer.

After being launched and tried out at East Boothbay, by Mr. Owen, the yacht will be taken to Bath and from there shipped by rail to Toronto. The crew of the racer will have all summer for tuning up of the yacht, as the cup match is scheduled to commence Sept. 2.

The Fisher cup races constitute the only international yachting event to be sailed this season in American waters. The Rochester Y. C. will depend on the Herreshoff sloop Seneca, owned by Eric C. Moore, which probably will be sailed by Addison G. Hanan, who won the Canada Cup in 1907, with this yacht.

Class Q will be one of the most attractive in the racing on Gravesend Bay this year. Last year's champion, Grayjacket, will be out again, and Soya and Spider, built respectively for W. A. Barstow and Hendon Chubb, are having some alterations made which are expected will improve their speed. Two new boats are being built, one for Commodore Edgar F. Luckenback, of the Crescent Athletic Club, and one for Gherardi Davis, of the Atlantic Club. The former is from designs by Charles D. Mower, and the latter from designs by William Gardner. These new boats are almost ready and will be in commission early for their tuning up. One of the first important events for which they will be required will be the Childs' trophy. Commodore Childs, of the Indian Harbor Y. C., intends to challenge early and try to take the trophy to the Sound, but he will find that he will have to win from a hot bunch of boats on Gravesend Bay.

Class S, too, has received quite a boom. Since this class was boomed four years ago, when the Bensonhurst won the first Lipton cup, the class has been popular and last year there were ten starters in the Lipton cup series. The boats of this class are well suited to afternoon sailing and require only two men and the helmsman to handle them. Twelve S boats were built for yachtsmen who live in the vicinity of Glen Cove, five for Manhasset Bay yachtsmen and members of other clubs took kindly to the class. More boats are being built for this year's racing and the Lipton cup is again the incentive. D. G. Whitlock, of the Brooklyn, Y. C., has had a boat built by Herreshoff, and Dr. C. L. Atkinson, of the Bensonhurst and Crescent clubs, has had one built from Gardner designs. The Herreshoff built boat has been named Wink and is now at anchor in the lower bay. She was sailed up the Sound last week by Mr. Whitlock's son and reached Bridgeport last Thursday. The new boat for Dr. Atkinson will soon be launched and got in racing trim as fast as possible. These two new boats with several of the older ones will boom the S class again.

There is likely to be some lively times at the next meeting of the Brooklyn Y. C. The Board of Governors has passed a resolution suggesting to the members that the name be changed from Brooklyn to National Y. C. Many of the older members of the club will oppose the change. They have belonged to the club chiefly for its old associations and stood by it in all its varied troubles. They will bitterly oppose the change of name. The Brooklyn Club is the oldest incorporated yachting organization in the country. It was incorporated in 1864, or one year before the New York Y. C. was incorporated. The New York Y. C. was organized in 1844, but was not incorporated for twenty-one years. The Brooklyn Club was organized in 1857 and was incorporated seven years later. In point of age, too, the Brooklyn Y. C. is one of the oldest in the country. The dates of organization of the oldest clubs are: New York, 1844; Royal Bermuda, 1844; Southern, 1894; Royal Canadian, 1852; North Carolina, 1853; Brooklyn, 1857.

The Atlantic, Gravesend Bay and Bensonhurst yacht clubs all sprung from the Brooklyn Club, and while of late years it has not been very successful, its offspring are all very healthy.

The racing season of the Fall River Y. C. will open May 30 with the customary open regatta at Fall River. The other dates are as follows: June 20, water carnival, Fall River; July 8, club, Tiverton; July 13, club, Tiverton; July 22, club, Tiverton; July 27, club, Tiverton; Aug. 3, club, Tiverton; Aug. 10, open race week, Fall River; Aug. 19, club, Tiverton; Aug. 24, club, Tiverton; Sept. 2, club, Tiverton; Sept. 14, open, Fall River. The races at Tiverton are for power boats, but also for sailing yachts if the classes fill.

At a largely attended meeting of the Bay State Y. C. last week it was decided definitely to take advantage of the offer of the company erecting the new building at Elliott Circle, Revere, to provide quarters for the club. These quarters will be on the ocean end and southerly side of the head house on the pier. A large lounging and assembly room will occupy the center of the easterly end, and opening from this will be a smoking room. The lockers are on the same level as the clubroom and the location is exceptionally good, as the outside row opens to the ocean. From the club floor is a stairway which leads to a piazza on the wharf level, which is for the exclusive use of club members. The floats will be placed along side and in such a position as to be of easy access, and so protected as to be in smooth water in all conditions of the weather. The anchorage is amply protected by the breakwater built a few years ago by the State at an expense of $55,000 and is of sufficient area to care for a large fleet of boats. There is good water for yachts drawing up to eight or nine feet. The membership of the club will be limited to such a number as can be properly cared for in its new quarters in the belief that the comfort of members is more essential than a large membership list.

A case of interest to yacht owners was decided by Judge Elliott in Baltimore recently Dr. Albert H. Braecklein won a suit against C. Durm & Son, yacht builders, which ends one of the most interesting cases that local yachtsmen have ever watched. In the fall of 1909, Dr. Braecklein contracted with Durm to have a 50-foot power boat built. The contract stipulated that the boat was to be complete, with the exception of engine and interior joiner work, and that all material and workmanship were to be first class.

By the late spring of 1910 the hull was nearly complete and all of the contract money had been paid in. Durm, however, then declined to put any more work on the yacht and also declined to surrender the vessel as it was.

Dr. Braecklein obtained possession of the boat by means of a replevin, to which Durm filed a legal reply, claiming that there was yet due on the boat for extras a considerable sum. The case was heard in the City Court some weeks ago and on Thursday last the judge handed down his decision, which was in favor of Dr. Braecklein with damages of one cent.

The interesting feature of the case as far as yachtsmen are concerned is on the extras feature. Every one familiar with the sport knows that extras are the little things that cost much. In building these extras make their appearance, so that on a basis of a contract reading "complete boat" Judge Elliott has established a precedent that is much appreciated by yachtsmen.

Yachtsmen May Lose Home.

THE city of New York has brought suit against property owners at Sea Gate to recover several acres of land and rentals amounting to almost $1,000,000. Papers in the case have been filed in the County Clerk's office, Brooklyn, by A. R. Watson, Corporation Counsel. The property in question is a strip of water front at the extreme western end of Coney Island, where many prominent New York men have summer homes and where the Atlantic Y. C. is situated.

Mr. Watson, in explaining the situation, says:

"It is not our intention to try to get possession of all Sea Gate for a public park. The present case involves only a few broken strips of land which was originally under water and which has been filled in.

"A great many years ago the Town Board of Gravesend granted land to various property owners. It is alleged that they granted certain privileges which it was not within their legal power to give. Now, owners of water front property are entitled to all land which accrues, that is, land which is made by the action of the sea or other natural agents. In the present case property owners have a clear title to land which has been formed rapidly within the last few years by the washing of sand by the ocean. Some of them have, however, anticipated this accruing of land and have built retaining walls and filled in to a distance further from the original shore line than has been reached by the natural growth of their property.

"For instance, where a man has built a retaining wall and filled in to a distance of twenty feet beyond the original shore line, and the ocean has deposited sand each side of his property to such an extent that his artificial land does not project beyond the new shore line, thus created, we cannot bring suit against him. He is within his rights. Where this artificial land juts beyond the natural shore line we claim we are entitled to the ownership of the land.

"That is the only property involved. The

case has not progressed far enough as yet for there to be any controversy., It may be that we shall reach an amicable settlement."

The defendants in the suits are the Sea Gate Association, the Atlantic Y. C., Alice B. Bartram, Alrick H. Man, James and Ella Heyman and Walter Tompkins. The city will endeavor not only to gain the property itself, but will sue for accumulated rents on the land, ranging in amount from $1,500 to $30,000.

Similar suits were won some years ago by the city against property owners on Jamaica Bay. Counsel for the defendants have not prepared their case.

Dinner at Crescent A. C.

Many members of the yacht clubs of the Gravesend Bay Association dined at the Crescent Athletic Club house last week. It is an annual custom with these yachtsmen to meet just before the opening of the season to meet each other and become better acquainted before the racing begins.

Commodore Edgar F. Luckenback, of the Crescent Club, presided, and among those present were Commodore Fred B. Dalzell, Vice-Commodore E. P. Foster, Rear-Commodore William L. Lowden, Capt. Elmer W. Davis, Capt. Frank E. Wicks, M. A. Woodman, J. W. S. Harding, Jr., F. B. Dalzell, Jr., R. J. Ireland, Mortimer Palmer, C. J. Duryea, Rutger Bleecker and Edward Bleecker, of the Unqua Corinthian Y. C.; Walter H. Sykes and F. L. Durland, of the Atlantic Y. C.; Commodore George R. Le Sauvage, Vice-Commodore C. L. Atkinson, of the Bensonhurst Y. C.; L. S. Tiemann, Cecil Platt, of the New York Canoe Club; E. H. Griffen, of the Brooklyn Y. C.; Charles A. Kelly, H. L. Leggett, D. G. Whitlock, F. W. Roloff and O. W. Ostrom.

The outlook for the season was discussed, D. G. Whitlock and Dr. Atkinson, who have had Class S yachts built to win the Lipton cup, talked of their hopes. Commodore Dalzell told of the Great South Bay. Walter H. Sykes extended the hospitality of the Atlantic Club and other speakers made the outlook for the season on Gravesend Bay very promising.

The prizes won in the Crescent regattas were presented to the successful yachtsmen and all had a most enjoyable time.

Bermuda Sail Race Conditions.

Entries for the annual race for sailing yachts to Bermuda will close on May 15. This year's race is to be held under the auspices of the Boston Y. C., and the St. George's Y. C., of Bermuda. The race will be started off Castle Island by the Boston Y. C. on June 3, and the finish will be off St. David's Head, where the St. George's Y. C. will be in charge.

The distance for allowance will be 696 nautical miles, as reckoned by the U. S. hydrographic office. The time allowance will be 45 minutes to the foot, and no allowance will be made for rig.

Measurement for allowance is the length over all, measured on deck from the fore side of stem to the after side of the stern board or transom. Fiddleheads and ornamental pieces or boards attached to the stem are not to be included in this measurement. Yachts will rate for allowance from the closest full foot.

The race is open to cruising sail craft belonging to any organized yacht club. Yachts to enter must be bona fide cruising craft, of substantial construction and rig, having full decks and watertight cockpits. Yachts having fins or bulb keels, or balanced rudders, are barred. There will be no restriction as to the number or character of the crew, but the person in charge of the navigation of the yacht must be an amateur.

Rules governing the equipment will be practically the same as those of former Bermuda races, and will be announced in the official circular.

The first entry to be received was that of Harold S. Vanderbilt's schooner Vagrant. Another entry is that of the schooner Sunshine, owned by P. L. Carmichael, of New York. Francis M. Whitehouse, of the Manchester Y. C., has declared his intention of entering his auxiliary schooner Iris, formerly Oonas. The Boston city council has appropriated $500 for a trophy for this race.

In races of former years, the contestants have proceeded to Hamilton after the finish off St. David's Head, but this year the St. George's Y. C., a new organization, asked to have the yachts proceed to its anchorage, which is much nearer the finish line than Hamilton. The racing yachtsmen will be guests of the St. George's Y. C. during their stay in Bermuda, the club having a new house under construction, which will be finished before their arrival.

The special committee on the race is composed of the regatta committee of the Boston Y. C. and Mayor John F. Fitzgerald, representing the city of Boston, and Thomas Fleming Day and Hollis Burgess representing the St. George's Y. C.

New York Y. C. Cruise.

The announcement of the details of the annual cruise of the New York Y. C. is pleasing to all who take part in that big event, and the yachtsmen are taking very kindly to the new program, as it gives some change from that of previous years. For a long time the fleet has gathered at Glen Cove and ran to Morris Cove, New London, Newport, Vineyard Haven, New Bedford and Newport. Once in a while a slight change has been made, cutting out Morris Cove and visiting Huntington, and every five or six years the fleet goes around the Cape to Marblehead or Bar Harbor. Some yachtsmen object to Glen Cove rendezvous, but the majority of the yacht owners think the fleet of the New York Y. C. should gather somewhere near its home port, although the winds in August are not favorable to sailing yachts through the Sound.

This year the fleet will gather at Glen Cove off the station that was the first home of the club. There will be the usual ceremonies there and dinners and entertainments will be the feature of the evening. Then the fleet will proceed to New London, stopping on its way at Morris Cove. There will be a rest over Sunday at New London, and on Monday the run will be to Fort Pond Bay, a distance of about 20 miles. It is probable that the regatta committee in arranging the course for this run will send the yachts around certain marks in order to give them a little longer test of their speed. Some years ago when the fleet finished in Gardiner's Bay a turning mark was placed lengthening the course, and it made the race a most satisfactory one. There is little for the yachtsmen to do in Fort Pond Bay. That part of Long Island is very desolate. Montauk Point looms up in the distance, but they can see the place where it has been suggested the Atlantic liners should land their passengers and freight if New York does not give them proper docking facilities. The entertainments there will consist largely of dinners on some of the big yachts and a reception on the flagship.

From Fort Pond Bay the fleet is to run to New Bedford. The distance is about 70 nautical miles and as the winds are usually from the southwest and often fresh in that section the run should be a fast and interesting one. The course takes the yachts north of Block Island and on past West Island to the entrance to Buzzard's Bay. New Bedford is a quaint old town.. It has always been a popular visiting place with the yachtsmen on this cruise. Vineyard Haven is not popular any more. For several seasons the run through Vineyard Sound has been the most unsatisfactory of the cruise and often the wind has fallen so light that the yachts have just drifted into harbor late at night. The run to New Bedford will be a fine opportunity for the big yachts such as Karima, Atlantic, Enchantress, Elena and others to show their ability to sail fast.

From New Bedford the fleet will run to Newport and off Newport the races for the Astor and King's cups will be sailed. It is often very hard to hold the fleet together for the whole cruise. Yachtsmen like Newport, and when they touch there early in the cruise they are apt to stay there. By making Newport the last harbor visited, it is hoped that the fleet will be kept intact until the end of the cruise.

The regatta will shortly issue the sailing directions and more elaborate details of the cruise, which at present is as follows:

Aug. 3—Rendezvous at Glen Cove.
Aug. 4—Run to Morris Cove.
Aug. 5—Run to New London.
Aug. 6—At New London.
Aug. 7—Run to Fort Pond Bay.
Aug. 8—Run to New Bedford.
Aug. 9—Run to Newport.
Aug. 10—Astor cup races.
Aug. 11—King's cup race.
Aug. 12—Fleet disbands.

Brooklyn Y. C.

At a special meeting of the Board of Governors of the Brooklyn Y. C., held at the residence of Commodore Hearst, the question of changing the name of the club to the National Y. C., which has been under consideration for some time, was brought up for action, and the resolution unanimously approved, to be submitted for final action at a general meeting of the members of the club, to be held on May 1. The present colors of the club will be retained.

The present officers and committees of the club have arranged plans to make it the chief yachting club of the country, not alone in local yachting affairs and its ocean races to Halifax and Cape May, but will take the initiative to promote the sport generally which is enjoyed so much by those who love the water.

With this end in view, in addition to the races which have already been announced, and to introduce new features in water events, Secretary John G. Faist has been authorized to bring to a final conclusion the negotiations had with Mr. Glenn H. Curtiss to introduce the aeroplane in yachting. Mr. Curtiss having offered to race against the motor boats of the club with his new machine which rises from and alights on the water as easily as on the land, which event should attract world wide interest. The race will take place off the club house at Bensonhurst.

The club has made many additions to its magnificent club house and will go into commission on Saturday, May 20, at noon.

The race to Halifax for motor boats is assured to be a big success, as ten entries have already been secured by Chairman Peter Bently, of the regatta committee.

Commodore Soper has purchased the new Vincent III., a 50-foot power yacht, and will race her under her new name, Sim.

William Gardner, the well known designer, is now the official measurer of the club.

Commodore Hearst has made the following appointments: Mr. William P. Kiggins, Fleet Captain; Dr. John A. Voorhees, Fleet Surgeon; Rev. John A. Lane, Fleet Chaplain.

Launch of the Sovereign.

The fast steam yacht Sovereign was launched from the yards of the Gas Engine & Power Company at Morris Heights on Friday, April 21. The yachts is built for M. C. D. Borden, who has owned several fast vessels, and was christened by Mrs. B. H. Borden. Sovereign will be the fastest steam yacht in the world. She has been built from designs by Charles L. Seabury, and is 165 feet over all, 158 feet on waterline, 4 feet 6 inches draft and has a beam of 16 feet. She has twin screws and is to make 35 miles an hour. This speed mark has never before been attempted in a vessel of this type, and its achievement will become a record in the naval architecture and marine engineering. As the same designers and builders have built a large number of successful yachts and torpedo boats, they are sanguine that the speed of 35

miles an hour for the Sovereign will be shown without difficulty.

The new yacht will have four smoke stacks, giving her the distinctiveness in this respect that no other pleasure craft in this country possesses, and in other ways her appearance will attract much attention.

She has a tobin bronze keel. The stern is of steel with tobin bronze bushings and the stern post is of a steel plate, flanged and fitted to the shape of the counter. The frames are of galvanized steel, the floors of steel plate, the garboard strake and bilge plating of tobin bronze. The sheerstrake and side plating of steel, as are on the keelsons, stringer plates, breast hook, deck beams, bulkheads, side stringers, butt straps, engine foundations, etc. The machinery will consist of two Seabury triple expansion engines of the latest design and the steam will be generated by two Seabury watertube boilers. The Sovereign will be fitted with steam steering apparatus and will be handled from the bridge on the top of the forward deck house.

This deck house will be of mahogany and will be used as a dining room. The after deck will be substantially the same as the forward house and will be used as a social hall. The officers and the crew's quarters and the galley forward, the latter being connected with the dining room by a dumbwaiter.

The owner's spacious stateroom is aft and connects with a bathroom of liberal size. The guest's stateroom and toilet room will be of comfortable and convenient dimensions, and the saloon below deck will be a model apartment. All the rooms in the yacht will be handsomely finished and appropriately furnished.

The yacht will be lighted with electricity. Light and ventilation throughout the vessel have been given special attention by the designer. Every modern improvement and every convenience that years of experience have suggested will be embodied in the construction of the hull and machinery and the fittings of the new Sovereign.

Seawanhaka Corinthian Y. C. Schedule

The regatta committee of the Seawanhaka-Corinthian Y. C. has issued its schedule of events for the season. This season opens on May 27 and closes on Sept. 16. Series races, special events, a cruising race and open regattas are to be sailed. The schedule follows:

Saturday, May 27—Open day, special races for N. Y. Y. C. 30-footers, Class P, S. C. Y. C. 15-footers.

Tuesday, May 30, Decoration Day—Special races for N. Y. Y. C. 30-footers, Class P, S. C. Y. C. 15-footers.

Saturday, June 3—First race, first series for S. C. Y. C. 15-footers.

Saturday, June 10—Second race, first series for S. C. Y. C. 15-footers.

Saturday, June 17—Third race, first series for S. C. Y. C. 15-footers.

Friday, June 23—Special spring races for the more active racing classes.

Saturday, June 24—Annual open races for all classes. The Robert Center cup, to be competed for by the S. C. Y. C. 15-footers. The Leland Corinthian challenge cup, to be competed for by N. Y. Y. C. thirties owned by club members.

Saturday, July 1—Harvard-Yale yacht clubs' cruising race, New London to Oyster Bay. Fourth race, first series for S. C. Y. C. 15-footers.

Tuesday, July 4—Special race for S. C. Y. C. 15-footers.

Saturday, July 8—First race, second series for S. C. Y. C. 15-footers.

Saturday, July 15—Second race, second series for S. C. Y. C. 15-footers.

Saturday, July 22—Third race, second series for S. C. Y. C. 15-footers.

Saturday, July 29—Ladies race for S. C. Y. C. 15-footers. First and second prizes presented by Commodore Hastings.

Saturday, Aug. 5—Fourth race, second series for S. C. Y. C. 15-footers.

Saturday, Aug. 12—First race, third series for S. C. Y. C. 15-footers.

Saturday, Aug. 19—Second race, third series for S. C. Y. C. 15-footers.

Saturday, Aug. 26—Third race, third series for S. C. Y. C. 15-footers.

Friday, Sept. 1—Special autumn races for the more active racing classes.

Saturday, Sept. 2—Annual autumn open races for all classes. The Alfred Roosevelt memorial cup to be competed for by N. Y. Y. C. thirties owned by club members.

Monday, Sept. 4. Labor Day—Special Race for S. C. Y. C. 15-footers. One race in the morning and one in the afternoon; boats to be assigned by lot, also helmsmen and crews, the latter to alternate morning and afternoon, full details to be announced later.

Saturday, Sept. 9—Fourth race, third series for S. C. Y. C. 15-footers.

Saturday, Sept. 16—Open date for postponed or special race for the S. C. Y. C. 15-footers.

Race Committee—C. Sherman Hoyt, Chairman; Victor I. Cumnock, Eliot Tuckerman, Franklin Remington, George E. Roosevelt. Secretary, 33 Wall street, New York city.

Eastern Y. C. Plans.

With no international yacht race in these waters on their hands this year the officers of the Eastern Y. C. have planned for considerable sport off the New England coast during the summer. The club's yachting range will extend from New London to Winter Harbor and will include two ocean races, two open races off Marblehead, the annual regatta and the annual cruise.

The first ocean race was contingent as to its date upon the Harvard and Yale rowing regatta at New London, but that latter event having been fixed for June 30, the former event will follow the next day. In this first yachting event it is expected that the big schooners, three of which are new this season, will furnish a lively race for the Clark cup, while the larger sloops and yawls will also have a good contest for the Ramrill and Armour cups. This ocean race will start from London and finish at Marblehead, while the same day the smaller yachts of Massachusetts Bay will be entertained with an open regatta off Marblehead Rock. With the customary southwester off the elbow of New England, the finish is expected at Marblehead Rock some time on July 2.

The annual regatta will be held on Independence Day, and three days later the fleet will continue on to the eastward on the initial run of the cruise to Portland. The fleet will, as usual, make Penobscot Bay the principal scene of its activities, but the visit to Burnt Coat Harbor, far down on Swans Island, will be omitted, while instead the yachts will race up the bay around North Islesboro and then down Egg Maggin Beach to Billings Cove, halfway down the beach. Bartlett's Cove will be visited and then the yachts will run around into Winter Harbor, to the eastward of Bar Harbor. The cruise will end at Bar Harbor on July 15 with the annual banquet, and two days later will come the second ocean race for the Norman cups.

The program for the season follows:

Friday, June 30—Ocean race, New London to Marblehead, for special cups presented by Commodore Clark, Captain Rumrill and Captain Armour.

Saturday, July 1—Special open regatta for yachts not over 46 feet rating.

Tuesday, July 4—Annual regatta, 11 A. M., racing trim.

Friday, July 7—Race, Marblehead to Portland lightship to Peak's Island, 85 miles.

Saturday, July 8—Race, Peak's Island to Boothbay, 28 miles.

Sunday, July 9—Proceed at will, Boothbay to Tenant's Harbor, 25 miles.

Monday, July 10—Tenant's Harbor, around Old Cilley bell buoy, then to Cambden finish at the Graves, anchor at will, 30 miles.

Tuesday, July 11—Proceed at will to Fox Island thoroughfare, 12 miles.

Wednesday, July 12—Race, from entrance Fox Island thoroughfare up the bay around Turtle Head to Billing's Cove in Eggemeggin Reach, 36 miles.

Thursday, July 13—Proceed at will, Billings Cove to Bartlett's Narrows, 18 miles.

Friday, July 14—Race, Bartlett's Narrows to Winter Harbor, 26 miles.

Saturday, July 15—Race, Winter Harbor around mark to the southward to Bar Harbor, annual dinner, 21 miles.

Monday, July 17—Bar Harbor to Marblehead for Norman cups, 161 miles.

Monday, August 7—Special open regatta for yachts not over 46 feet rating.

To Measure New York Y. C. Vessels.

Professor William Hallock, the measurer of the New York Y. C., has issued the following notice:

"Weather permitting, I shall be prepared to measure yachts on the following dates at the places specified: Wednesday, May 10, City Island, Jacob's Yard; Wednesday, May 17, City Island, Jacob's Yard; Tuesday, May 23, Larchmont Y. C.; Wednesday, May 24, City Island, Jacob's Yard; Thursday, June 1, Larchmont Y. C.; Friday, June 2, City Island, Jacob's Yard; also at other times and places by appointment.

"Owners will confer a great favor upon the measurer by informing him as far ahead as possible of the date, place and hour desired for measurement.

"Full details concerning any yacht will be furnished the owner or designer upon application, so far as they are on record in the measurer's office."

Yacht Sales.

The Hollis Burgess Yacht Agency, has sold the Sonder class sloop Skidoo, owned by J. H. Smith, Jr., of New York, to Dean K. James, of Cohasset, Mass., and the cruising yawl Olyn, owned by R. H. Chesbro, of Brookline, Mass., to Cyrus K. Small, of the Boston Y. C.

The same agency reports the sale of five of the Cohasset Y. C. one-design class, Nereid, Matkah, Pippin, Tortoise and Delta, to members of the Bridgeport Y. C.

Motor Boating.

Motor Boat Club Affairs.

The Motor Boat Club of America will this year control nearly all the first-class racing in eastern waters of motor boats. There will be some other races under the auspices of other clubs, but the Motor Boat Club's program is one full of interest. Chief among these will be the contest for the Harmsworth trophy, better known as the British International cup, which will take place on Huntington Bay, Long Island, on July 24, 25 and 26.

The deed of gift, as amended last year following the race off Larchmont, in which Dixie II. successfully defended the cup for the Motor Boat Club of America, provides for three races, but in the event of a boat failing to win three events other races shall be run until the trophy is decided.

Members of the Motor Club of America say that more than $300,000 will be spent this year in defending the cup against the team of three English challengers. Six prospective defenders are being built at the present time, the majority of which will be of the semi-displacement type of hull, but J. Stuart Blackton, Rear-Commodore of the Motor Boat Club of America, is having a 36-foot Fauher hydroplane built by the Electric Launch Company of Bayonne, N. J.

The Harmsworth trophy race is considered the blue ribbon event of motor boat racing on both sides of the Atlantic. The indications are that the fastest time ever made by a gasolene driven craft in competition will be attained during the Huntington series. It is the opinion of

YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.

American and English designers that the cup will be won by a boat showing an average speed of 50 nautical miles an hour. Theoretically the more exaggerated type of hydroplanes will leg off even sixty miles, but at all events the series undoubtedly will be the greatest the motor boat world has ever known.

The six defenders now being built will meet in the elimination trial races off Huntington on Aug. 16, 17 and 19 to select the team to race against the British challengers. The boats making the fastest time and exhibiting superior mechanical equipment will be selected because it is appreciated that the English purpose sending to this country the fastest craft that money and brains can provide. Maple Leaf III., owned by E. Mackay Edgar, one of the English aspirants, has already rattled off 57 statute miles an hour. She is a Thornycroft hydroplane fitted with two 12-cylinder engines of 760 horsepower.

Other events that will be handled by the Motor Boat Club of America are the races for the National Motor Boat Carnival, beginning on Labor Day, Monday, Sept. 4. The club will also have charge of the Marblehead race for motor boats, which will be started from Huntington on July 14.

Much time is being given by Commodore Melville and his associates to the forthcoming Bermuda race, which will be started from a point on Gravesend Bay, New York Harbor, on Saturday, June 17, for the Bermuda challenge cup and a cash prize of $1,000 donated by James Gordon Bennett.

Several handsome trophies will be presented by the Motor Boat Club of America to be contested for in different parts of the country for the purpose of stimulating interest in motor boat racing and also for the building of new gasolene driven craft.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

New 99-Foot Cruiser.

AN order has just been placed by Cox & Stevens with the Nilson Yacht Building Company, of Baltimore, for a large twin-screw cruising motor boat for a member of the New York Y. C., which will be called North Wind and will be delivered to her owner in the fall, when she will immediately proceed to southern waters.

The dimensions of the boat are: Length over all, 99 feet; beam, 17 feet; draft, 4 feet; these being the limiting dimensions of the Erie Canal locks, so that the owner will be able to take the vessel to the Lakes as well as along the Atlantic Coast.

In appearance this vessel is of the small steamer type, having the straight stem, elliptical stern, with the body of the boat carried all the way aft at the waterline to secure the maximum running length and increase the accommodation space as well. The vessel has a very full deck line associated with a pronounced flare forward, thus giving the maximum amount of deck room and at the same time improving the seaworthy qualities of the boat. While on account of her limited draft the sections amidships are rather flat, the lines show the vessel with a good clean run and sufficiently sharp forward sections to make her comfortable and easy in seaway.

The vessel is flush deck throughout, has a large deck house forward, a stack for ventilation and engine exhaust amidships, and two pole masts on which sails can be set if desired.

The construction of this vessel is to be of the very best throughout, the keel, keelson, deadwood and frames being of white oak, the planking of yellow pine carefully selected, the deck of clear white pine, the deck house, companionways and skylights, plank shear, rails and other deck bright work to be of teak. All the fastenings are of copper or composition. The interior of the dining saloon is to be finished in paneled mahogany, and the finish in the owner's quarters below will be Colonial, the doors, furniture and trim being of mahogany, and the bulkheads and sides of the vessel, as well as the deck overhead being finished in white paint.

The motive power consists of two 100-horsepower six-cylinder Standard engines, of the air-starting, reversible type, which are placed in a compartment separated from the rest of the vessel by watertight steel bulkheads. This compartment also contains the usual tanks, which are of copper, three in number, of a total capacity of 1,500 gallons; an electric light generator, driven by an independent gasolene engine of sufficient capacity to light the entire vessel and run a powerful searchlight, this engine also driving an air compressor and bilge pump. In the engine compartment are also the quarters for two engineers.

The owner's and guests' quarters are aft of the engine space. The owner's stateroom is the full width of the vessel, directly aft of the gasolene tanks, and contains a built-in double bed on port side and extension sofa that may be used as a bed on the starboard side. This room of the owner's connects directly with a bathroom on the starboard side of the ship. On the port side of this passage, next the owner's room, is a small single stateroom, and abaft this on the port side another bathroom. At the aft end of this passage are arranged two single staterooms, each having a built-in berth. The extreme after portion of this space is occupied by a double stateroom, full width of the ship, having a built-in berth on each side. On the starboard side of the lobby is a single stateroom, with built-in berth.

The deck house contains at its forward end a large dining saloon capable of accommodating fourteen guests. The pantry is at the after end of the dining room, on the port side, communicating with it and having a dumbwaiter running down to the galley which is below. On the starboard side of the deck house, opposite the pantry, is a room for the sailing master. The galley is below, forward of the engine space, extending the full width of the vessel.

FOXY QUILLER, NOVEL SPEED BOAT ON OHIO RIVER.

Foxy Quiller a Fast Craft.

A CURIOUS departure in motor boats has just been christened on the Ohio River. The boat has been named Foxy Quiller and is a new wonder in motor boats, traveling at a speed of 27 miles per hour with a Fox De Luxe Aero motor of only 24-horsepower.

When going at top speed, fully two-thirds of the length of the boat is entirely out of the water. This little speed marvel is only 20 feet long with a beam of 3½ feet, and is owned by Edward Henshaw, of College Hill, Ohio. The hull was built for the Dean Mfg. Co., of Newport, Ky., in order to test out one of their new style aeroplane motors. On an officially measured course a speed of 26.7 miles per hour was developed the first day. Her engine is a 4-cylinder 3½ by 3½ developing 1600 revolutions per minute. It is expected that a speed of 30 miles per hour will be finally attained, a feat heretofore considered impossible with only 24 horsepower.

The bottom planking of this boat is no thicker than cigar box wood, for it is dressed to ⅛ of an inch. Owing to its extremely light construction, riding in the Foxy Quiller is dangerous, and members of the crew wear life preservers at all times, for if she struck a floating or sunken obstacle of any kind, even a small log or snag, Foxy Quiller would be torn to pieces.

The new boat will be seen in the Ohio River motor boat races this coming summer, and will be shipped East to compete for the manufacturers' cups during the National Motor Boat Carnival, to be held the week of Sept 4 to 9 at Huntington, L. I.

Another Peter Pan.

THE famous Peter Pan III., which hung up a record in the race to Poughkeepsie and return (about 133 miles) last September of 5 hours, 22 minutes and 43 seconds, winning the fastest time prize in this event, will not be seen in local waters the coming season. She has been sold, and a new Peter Pan is being built for James Simpson. Peter Pan IV., now under construction for Mr. Simpson by The Reliance Motor Boat Company, is a 26-foot mahogany run about with a beam of 4 feet 9 inches, and is to be equipped with a 40-horsepower Continental motor. It is hoped, however, by her designer and builder, that she will show greater speed than her famous predecessor. She will seek honors in handicap races. It had been rumored that the fourth installment of Peter Pan, or in other words, Peter Pan IV. would be a hydroplane seeking honors in the big event of next August—the defense of the Harmsworth cup. This is denied. There are some two or three hydroplanes being built in the shops of the Reliance Motor Boat Company at 210th street and Harlem River, but it is said that they are only of modest aspiration, and none of them intended as possible cup defenders.

Edwin Trowbridge Hall has now under construction, and nearing completion, at the works of the Reliance Motor Boat Company, New York city, a 40-foot mahogany runabout in which is to be installed a Scripp's motor of 100 horsepower. This boat, while of ample carrying capacity, with a large passenger cockpit fitted and furnished very handsomely, will be nevertheless a speed boat making 26 to 28 miles per hour. She is of fine racey lines with a beam of 5 feet 9 inches. Mr. Hall's summer home is at Riverside, Conn., and the boat will be used on Long Island Sound.

Canoeing.

Kiowa C. C. Officers.

THE annual meeting of the Kiowa Canoe Club was held in Providence recently and the following officers were elected: Commodore, Fred Streeter; Vice-Commodore, Lyman Parmelee; Secretary, Ernest Brown; Treasurer, D. Robarge; Captain, Raymond Otto; Lieutenant, William Hardie; Board of Governors (for three years)—Frank Means and Ernest Brown, (for two years) Raymond Otto and William Hardie, (for one year) Arthur Hobson and Arthur Jones; Membership Committee—John Hawthorne and Bert Alger; Racing Committee—Arthur Jones, Trey Jones and Arthur Hobson.

Philadelphia C. C. Plans.

THE Philadelphia C. C., of Wissahickon, announces that its fifth annual regatta will be held on the Schuylkill River, opposite its home (Colony Castle), on Saturday afternoon, June 17. The races will be followed by a supper at 6:30 o'clock and dancing in the evening.

The committee in charge of this regatta consists of A. Milton Klop, chairman; Forrest E. Altemus, Eugene H. Hunter, G. Ashton Barker and Joseph W. Blair.

New Canoe Association.

To promote river sports, particularly canoeing, the Susquehanna Canoe Association has been formed at Williamsport, Pa. At a meeting of canoe enthusiasts from five different towns, the officers were elected as follows: R. M. Moorehead, of Williamsport, Commodore; Horace F. Hanna, of Lock Haven, Vice-Commodore; G. Bruce Kerns, of Jersey Shore, Rear-Commodore; F. R. Campbell, of Williamsport, Secretary, and A. M. Wrigley, of Renovo, Treasurer.

Canadian Canoeists.

THE Western Division meet of the Canadian Canoe Club association will be held in Toronto. Either the Parkdale or the Toronto Canoe Club will handle the affair. The Canadian Canoe Association final class to decide national championships will be held in Ottawa.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Eastern Division.—Wallace C. Ray, 485 Elmwood avenue., Elmwood Station, Providence, R. I., by Fred C. Rexford.

NEW MEMBERS ELECTED.

Atlantic Division—6208, William C. Cregin, 165 Audubon avenue, New York city.

Central Division.—6211, Lawrence V. Stevens, 1172 South avenue, Wilkinsburg, Pa.

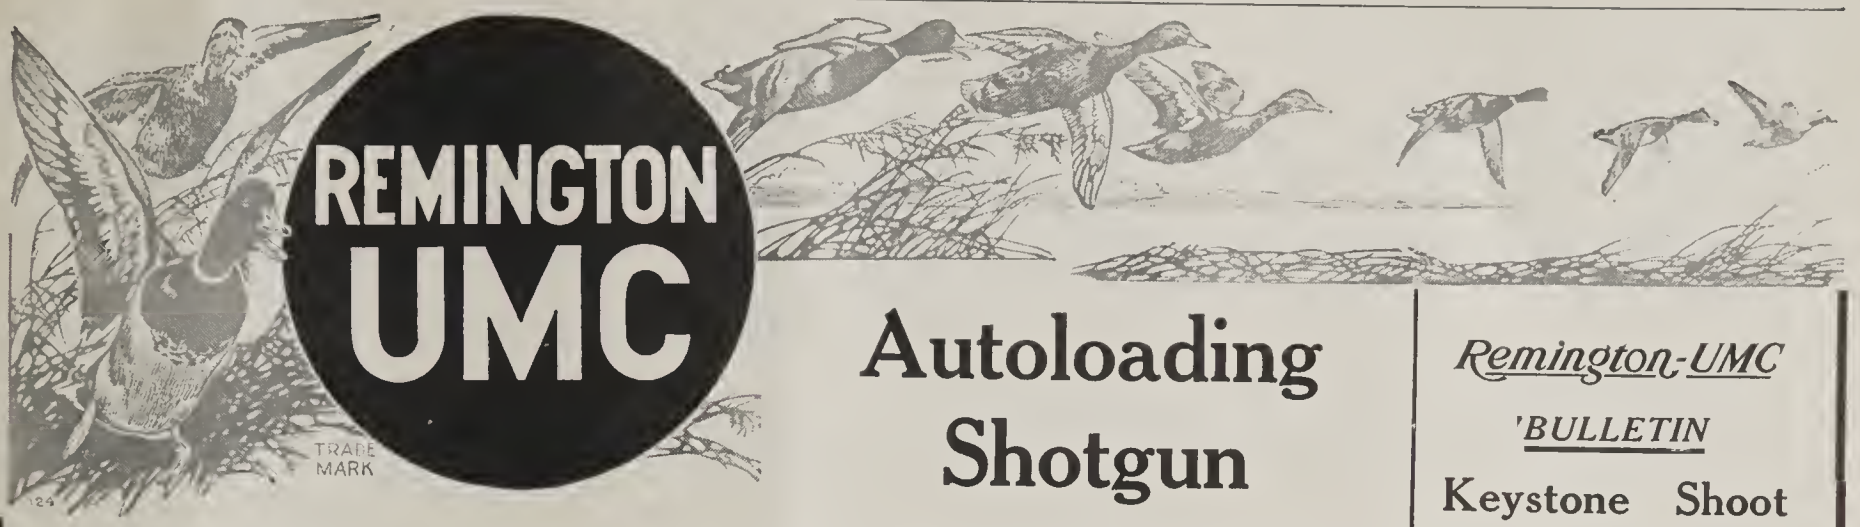
Eastern Division.—6209, Frank E. Berry, 147 Smith street, Providence, R. I.; 6210, Arthur D. Sylvester, 315 California avenue, Providence, R. I.

MEMBER RE-INSTATED.

Central Division.—2912, Alger A. Conger, 972 Anderson avenue, New York, N. Y. (Gouverneur, N. Y.).

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

MAPLE LEAF III.—CHALLENGER FOR BRITISH INTERNATIONAL TROPHY.



Autoloading Shotgun

Five shots all under absolute control—three to get the cripples.

The action is simple, powerful and sure.

The trigger pull is smooth and easy.

The hammer is light and quick.

Part of the recoil, ordinarily absorbed by the shooter's shoulder, is utilized to operate the mechanism. Not one single ounce of muzzle energy is lost.

Handles the heaviest loads with ease and safety.

Solid Breech, Hammerless, Safe.

Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.

Sunbury-Selinsgrove Gun Club.

THIS gun club, of Sunbury, Pa., will hold its sixth target tournament on the shooting grounds at Rolling Green Park on May 4 and 5. Shooting will begin at 10 A. M. sharp on Thursday the 4th, and at 9 A. M. on Friday. This is a registered shoot, to which the Interstate Association has contributed $100 as a part of the Squier money-back special fund. The program calls for ten 15-target events, $1.40 entrance to each event, and an optional sweepstake of $1.00 in each event. There is an extra entrance of $1.00 in the regular events for the Squier money-back system, and to be eligible for this system, a contestant must compete in all regular program events. The Squier money-back system does not apply to the optional sweeps. The division of moneys will be: Regular program, Rose system, ratio, 5, 3, 2, 1. Optional sweeps, percentage system, 40, 30, 20 and 10 per cent.

Special events for first day: Aldine trophy, three-man team race for three silver cups, one for each of the winning teams, 25 targets, entrance $1.00 per man, including targets. Teams must be bona fide club members; entries to be made before regular program is finished. Twenty-target handicap (added dead targets), for a $25 hammerless double-barrel gun. Entrance $1.00, including targets, handicaps based on scores made in first 100 targets of regular program; ties at 25 targets, extra targets 2 cents. Ten-target miss-and-out, 35 cents entrance, including targets, re-entries unlimited. Targets 2 cents, and the remainder of the 35 cents forms a purse to be divided equally among the straight scores. If you make four straights you get 4 times as much as the shooter with only one straight. Shoot as often as you wish, the more straights you make the bigger your share of the purse. This event will run all day.

Special events for second day: Event 1, 10-target event, entrance 50 cents; targets thrown 65 to 70yds.; 30 cents of each entrance forms a purse which will be divided three moneys, 50, 30 and 20 per cent. Event 2, 10 pairs doubles, entrance 75 cents, of which 35 cents goes to form a purse which will be divided 40, 30, 20 and 10 per cent. Event 3, 25-target handicap, for another $25 gun. Conditions will be the same as on the first day.

Guns and shells shipped prepaid to H. N. Brosious, Sunbury, Pa., or A. H. Siegfried, Selinsgrove, Pa., will be delivered free at club house. Further information from J. W. Schoffstall, Secretary, Sunbury, Pa.

The club is anxious to secure the 1912 State shoot, and says concerning it:

"The Sunbury-Selinsgrove Gun Club is working for the State shoot for 1912, and respectfully asks the support of the shooters in obtaining the same. We have the facilities for handling it, and can offer just as many advantages as any other club. Being at the center of the State, our location cannot be surpassed. The fact that this year the shoot is in the western part of the State, and last year was the extreme southeast, is an additional reason for holding it in Sunbury next year, as we have an ideally central location. And it is a very good center of railroads, making it extremely easy to get to. The P. R. R., P. & R. and D., L. & W. all have good train service to Sunbury. We have ample first-class hotel accommodations and can guarantee the rates will not be raised for the shoot, should we get it."

Death of Herman B. Sayles.

INDIANAPOLIS, Ind., April 18.—The Board of Directors of the Indianapolis Gun Club sent the following resolution to Mrs. F. F. Sayles, mother of Herman B. Sayles, late a member of the Club:

Mrs. F. T. Sayles, 1307 N. Meridan St., Indianapolis, Ind
Dear Madam:

At a meeting of the Board of Directors of the Indianapolis Gun Club, Saturday, April 15, the following resolution was adopted and ordered spread upon the minute of the meeting:

Resolved, That, whereas the Great Field Marshal, in the exercise of His Infinite wisdom, has summoned our beloved comrade and fellow club man, Herman B. Sayles, to the ceaseless chase that lies beyind the Great Divide, we therefore, in testimony of our high regard for him, do record here our humble tribute to his memory.

Imbued in a high degree, as he always was, with the spirit of fair play, and with ideals of honor than have never been excelled in the ethics of sportsmanship, possessed of a kindly disposition, generous and hospitable almost to a fault, Herman B. Sayles carved out for himself in the esteem of his sportsmen associates a place such as few ever enjoyed. With him no personal service was too menial, no task too difficult, and no sacrifice too great, if thereby an uplift in sportsmanship among his fellows could be accomplished.

We mourn our loss, and we extend our kindly sympathy to his bereaved mother and sister.

BOARD OF DIRECTORS,
Indianapolis Gun Club.

North Dakota State Sportsmen's Association.

THE annual amateur registered tournament of the North Dakota State Sportsmen's Association will be held at Kenmare, N. D., on June 26 and 27. The Interstate Association has contributed $100, and the Kenmare Club $150 for the Squier money-back special fund. The regular program on both days consists of the usual ten target events, entrance $1.40 each, $1 extra for money-back fund. Optional sweepstakes extra and separate from regular program, entrance $1.00 each. Purses will be divided as usual: regular program, Rose system, 5, 3, 2, 1; optional sweepstakes, percentage system, 40, 30, 20 and 10 per cent., class shooting. In order to benefit by the money-back system, contestants must compete in all regular program events. Shooting to begin promptly at 9:30.

On the first day two State events will be competed for as follows: No. 1, four-man team event for North Dakota State championship challenge trophy, special conditions, 25 targets per man—100 per team; no handicap; entrance $10 per team. First prize, State championship challenge cup and 50 per cent. of entrance money; second prize, 30 per cent. of entrance money; third prize, 20 per cent. All ties to be shot off, five targets per man until decided.

No. 2, two-man team event for North Dakota, 25 targets per man, 50 targets per team, no handicap; entrance $5 per team. Moneys will be divided the same as State event No. 1, and same conditions as to ties. Any club may enter as many teams as they have members present. Teams must consist of members of the same club, and residents of the same city, town or post-office. The Association will present a handsome trophy to the winning team.

On the second day the State Championship event for members of North Dakota S. S. A. only, will be shot at 50 targets, in frames of 25 each. Entrance $2.50; no handicap. First prize, gold badge, value, $50, and 50 per cent. of the money awarded in this event in the 1911 tournament. The 1910 winner of this event will receive 50 per cent. of the money awarded in this event at the year's tournament; balance of money divided among other high guns, 30, 25, 20, 15 and 10 per cent., and ties will be decided by a miss-and-out shoot, loser dropping to next place below. In event of ties for first place the money, 50 per cent. of the 1911 purse—will be divided equally, and ties for badge shot off at once, 5 targets per man until decided. The winner of the badge holds it until the next annual meeting of the Association, when it must be returned, to be again competed for. The meeting of the North Dakota Sportsmen's Association will be held at 8 o'clock P. M. on the second day, June 27—at the club house.

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending April 22 are as follows:

July 17-19.—Wellington, Mass.—Massachusetts State Trapshooting Association's State tournament, under the auspices of the Palefaces. F. E. H. Sheldon, Sec'y.
Aug. 1-2.—Cedar Rapids, Ia.—Hawkeye G. C. A. J. Smith, Pres.
Aug. 5.—Sheboygan, Wis.—Sheboygan R. and G. C. John H. Look, Mgr.
Aug. 22-23.—Fairmont, W. Va.—Fairmont G. C. Ed. H. Taylor, Sec'y.
Sept. 7.—Downs (Kans.) G. C. W. H. Charles, Sec'y.
Sept. 13-14.—Cainesville (Mo.) G. C. G. D. Davis, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Bergen Beach Gun Club.

THE next regular monthly shoot of the Bergen Beach Gun Club takes place on Tuesday, May 9, at 1 P. M. Weekly shoots take place every Saturday in the year except July and August at 1 P. M. All visitors are welcome to participate. The grounds are situated at Avenue N and Seventy-first street, Flatbush, Brooklyn. A lively season is expected.

L. H. SCHORTEMEIER, Sec'y.

WINCHESTER

Shotguns and Shotgun Shells

Corral the Capital Prizes at the Louisiana State Shoot

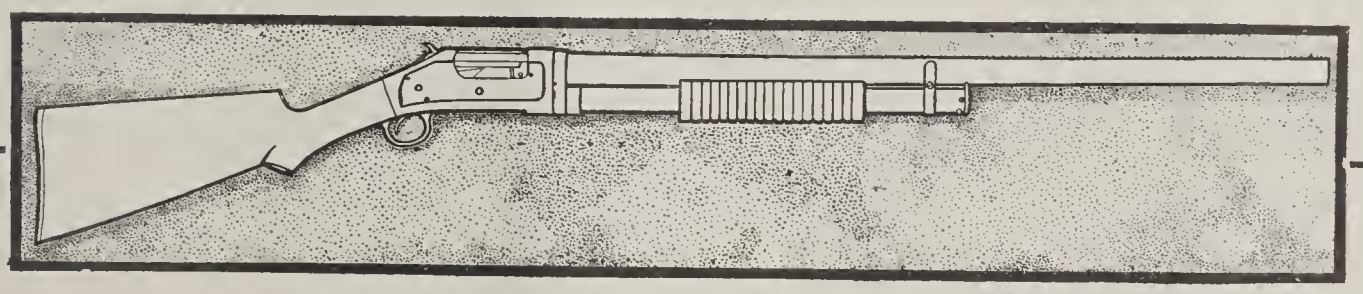
Individual State Championship: Won by Mr. J. W. Gardiner, of Lake Charles, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. **Runner Up:** Mr. L. F. Lallande, of New Iberia, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells.

State Team Championship: Won by Capt. W. F. Coyle, of Farras, and Mr. W. F. Cocke, of New Orleans, both shooting Winchester Loaded Shells.

High Amateur Average: Won by Mr. J. W. Warren, of Birmingham, Ala., shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score: 426 x 450. **Second:** Capt. W. F. Coyle, of Farras, shooting Winchester Loaded Shells. Score: 422 ex 450. **Third:** Mr. J. W. Gardiner, of Lake Charles, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score: 421 ex 450.

High Professional Average: Won by Mr. Walter Huff, of Atlanta, Ga., shoting Winchester Loaded Shells. Score: 437 ex 450.

Better Shoot The Red W Combination at Charlotte



Audubon Gun Club.

Buffalo, N. Y., April 16.—George N. Fish, the Lyndonville thresher, is bound to become the sole possessor of the Audubon challenge cup, on which he now has four wins to his credit, unless the Audubons can call out some new stars.

President Cox and Frank D. Kelsey responded to the urgent call for help to put a stop to Fish's winning, but both went down to defeat with the rest, and it is now suggested that A. E. Conley, of Hohocton; Tomlinson, of Batavia, and Spencer Kellogg, Jr., will come out as a last white man's hope and try conclusions with Fish.

Yesterday B. V. Covert, of Lockport, was again the challenger, being high in events 3 and 4 with 37 out of 40 to his credit, but the result was the same, as Fish again was the victor, rather easily, by 4 targets, scoring 44 to Covert's 40.

Frank Kelsey was right on edge in the badge event, and won it with the only straight made in the regular events. Frank was also the high man of the day, with 70 out of 80. Jack Talcott was right up with one more miss, and would have had an excellent score had he kept up his shooting in the third event.

Will Imhoff again cleaned up in Class B and has that particular badge pinned on his vest with the inscription of champion of Class B.

Charley Rogers, of Lockport, again won Class C, making his second win in succession. Dr. Burke will have to attend quite regularly hereafter in order to stop Rogers.

Charley Lambert did some very pretty shooting when he scored 18 from the 20yd. mark, thereby winning the Reed handicap trophy in anything but fair weather conditions. When that event was on there was a regular blizzard toying with the targets, which made shooting rather difficult. Al. Kelly, who has been compelled to absent himself from regular competition for some time, made his appearance, but rather late for qualification, and it is to be regretted, as Al.'s shooting in the extra events was far better than Fish's, and had he been the one to shoot against Fish, the result might have been entirely different. He will have revenge in May, and threatens that Fish will have to extend himself. The Audubons were honored by the presence of Messrs. Atwater, Moore and Ward, of the Lockport Gun Club.

W. G. Simon and Ed. Reynolds also put in appearance, and both shot quite well, considering their long absence from the traps.

The Fred Macaulay Business Men's Gun Club.

Newark, N. J., April 18.—It was an enthusiastic crowd of marksmen that gathered yesterday afternoon at the Speedway traps, to compete in the regular weekly shoot of the Business Men's Gun Club. It was a prize competition, which partly accounts for the twenty-five gunners on hand and ready to contest for the silver loving cups that were offered in two of the events. The silver cup given by C. W. Feigenspan was captured by A. E. Ranney, a new member of the club, who made his initial appearance yesterday. A tie between Capt. Frank Mihlon, of the Business Men's Club, and William Hassinger, of the Smith Gun Club, resulted in the shoot for the Du Pont cup.

In the Feigenspan trophy event, Ranney turned in a total of 100, including his handicap. In this event John Geiger was the scratch man, and turned in a score of 93. In the Du Pont cup shoot, Hassinger and Mihlon tied with 50 breaks apiece. The shoot-off will be held next Tuesday afternoon. C. W. Billings, the scratch man, missed but one of the 50 disks that he shot at.

The 25-bird match between George Ohl, Jr., and Peter Bey resulted in a win for the former, who broke 20, which is 10 more than his rival smashed. The scores:

Springfield Shooting Club.

Springfield, Mass., April 20.—The Patriots' Day tournament of the Springfield Shooting Club at clay targets, which was held on its grounds at Red House Crossing all day yesterday, was fairly well attended, thirty shooters taking part in the various events, twenty-nine shooting the entire program, which called for 200 bluerock targets, $16 entrance in the sweeps and $25 added money to the purses by the club. As a rule, the scores ran high. The weather, though quite cool, was favorable for shooting, the dull light at times caused the targets to show up in fine style, while the absence of any wind to speak of greatly favored the shooting.

The trade was unusually well represented, there being present Jack Fanning, Harry S. Welles, H. H. Stevens, George Chapin, F. E. H. Sheldon, D. T. Cowing, T. H. Keller, Sr., and Jr.

Amateurs were present from Chicopee Falls, Hartford, Leominster, Albany, N. Y., Greenfield, Brattleboro, Vt., Holyoke, Pittsfield, Northampton and New Haven, Conn.

Professionals were allowed to shoot for targets only.

A feature of the shoot was a run of 47 straight by W. W. Rice, of the New Haven Gun Club.

There was $75 worth of merchandise prizes for the twenty high amateurs shooting the entire program of 200 targets, and there were more prizes than amateurs competing. Totals follow

The Pacific Indians' Tournament.

WHILE making up our forms for the issue of the 22d, the following letter was received from F. C. Riehl, Herald-Custodian:

I take pleasure in handing you under separate cover a copy of the annual booklet and program of the fourth tournament and pow-wow of The Pacific Indians, to be held this year early in June, in the beautiful little city of Eugene, Oregon.

It is expected that, in the absence of an Interstate Pacific handicap this year in the Northwest, this tourney will in a measure take the place of that classic event. We confidently expect the biggest attendance ever recorded for trapshooting in this part of the West.

The program conforms to the Interstate regulations, with additions of a number of special events, and the added money, together with the money-back system to be used, makes it one of the most attractive prospects ever offered Western shooters at the traps.

Eugene is one of the prettiest towns in all the big West, and its good people will spare no pains to entertain all comers on this occasion. The shooting grounds are the very best to be found anywhere, with a sky background in all directions.

This is the culminating event of a circuit of four important tourneys in the Northwest, including the Washington State, Idaho State, annual Northwest and the Indians, the latter concluding just in time to give those who wish ample time to proceed to the Grand American at Columbus.

"The Book of the Pacific Indians—Compiled by Frank C. Riehl, Herald, by authority of the Tribe," did not reach us until the following day—and we were glad of it, for in originality of conception, quaintness of style, and quiet elegance of mechanical execution, it surpasses anything we have ever seen in this line. We deem it a privilege to lay its contents, almost complete, before our readers. The initial letters and tail-pieces are most cleverly drawn, making the text very attractive throughout. We quote:

HERALD.

'Tis a far call, Fellow Braves, from the mid-continental plains, from the fair hills of Allegheny, and the country north of Niagara, to the sunny slopes of the Pacific; yet not so distant that what is good for the warriors of the older lands may not be better for those following the newer trails. Therefore it is as natural as the rapids of our own pure mountain streams that The Pacific Indians should associate themselves together under these fairer skies to emulate the worthy achievements of their kindred over the Great Divide.

Wherefore, acknowledging our inspirational debt to The American Indians, yet acting independently in our own premises, we have met and passed the pledge to rear the tepee and light the Council Fires of The Pacific Indians. To all that has signalized the great success of this central idea of mutual good-fellowship among the lovers of the gun, rod, and kindred outdoor sports, we assign allegiance. We will welcome to the circle every warrior who walks upright in everything before his fellow men, and who follows the trail, not for slaughter, but for the love of the hunt. To pass muster before his fellows the candidate for Chieftainship must bend a fair and honest bow, and speed the shaft of comradeship true to the mark. This, as judged by his peers in annual conclave assembled, shall be the sole test of individual fitness either for admission, or retention of his Tribal name and insignia.

Within the Council there shall be recognized no grade or class—except that duly elected or appointive officers shall be deferred to when acting within the limits of the prerogatives of their positions. In all competitions each and every contestant shall stand on the same basis, except in so far as individual prowess may enable him to excel. Neither shall mercenary motives, commonly known as trade interests, be countenanced or have any part in such competitive events as the chief advisors may arrange.

These principles being spoken and approved; the undersigned Original Subscribers, hereby do associate themselves together under the following:

CONSTITUTION.

The name of this association shall be The Pacific Indians, and each member in good standing shall be designated as Tyee—this being the Chinook word for chief.

Any white male person of adult years residing within or west of the Rocky Mountain Range, who can pass muster in the Council of his peers, is eligible to membership in The Pacific Indians.

The Tribal Lodge shall be established wherever the Chief Advisor may decide, at any time, to fix same, or to hold the official conclave.

The object of the organization shall be the fostering of good-fellowship among its members and with the world at large; promoting true sportsmanship as directed toward a higher standard in marksmanship and the conservation of the natural game and fish resources of the territory which it represents; and to this end holding fixed tourneys at intervals not exceeding twelve months apart, and taking an active interest in all matters pertaining to the craft within the scope of this declaration.

The officers of this association shall he elected annually in open Council, and shall hold office until their successors are chosen and qualified. The officers shall be as follows:

Tyee Sachem, who shall preside at official conclaves, appoint special and standing committees and be ex-officio, a member of same.

Makst and Klone Tyee Sachem (1st and 2d Vice), whose duties shall, successively, be those of the Tyee Sachem in the absence or inability of the latter to act.

Tyee Tsum Chickamin (Herald-Custodian), who shall, under approved bond, collect, hoard and disburse as directed, all moneys (chickaman) and appurtenances of the Tribe; also keeping an official record of all transactions; conducting official correspondence and rendering full and complete reports at the annual conclave, or oftener if deemed advisable.

There shall also be a board of Chief Advisors (Tillikhum wawa—Talkers for the People), elected annually, which shall be composed of one representative from each State or Province represented in the membership of the order, who will be expected to speak in behalf of their respective communities on important matters of general interest to the Tribe.

Official councils may be called at any time by five or more members in good standing, but no number less than one-fourth of the total membership shall constitute a quorum for the transaction of important affairs except at the annual conclave.

No officer shall receive pecuniary compensation for his services, except the Herald-Custodian, who may be allowed not to exceed 5 per cent. of the total amount collected annually in payment for his services.

Every candidate for election shall pay into the tribal cache chickaman to the commercial value of $10 in gold, which amount the member proposing must advance.

Every member must pay annually an associate fee equivalent to Ten Dollars in Gold. This amount shall be due and payable not less than three moons before the time of the annual conclave and tourney; and failure to pay such sum after due notice by registered mail shall be accepted as the equivalent of resignation, and so recorded without action.

Any candidate for election to Tribal honors must personally attend the tourney next preceding the conclave at which his name shall be submitted by not less than two friends in the Council. At each such meeting the number of new members to be chosen shall be fixed in advance. All names shall be submitted and each member may vote for as many as will fill the list—if there are so many candidates. These votes being canvassed, the names shall be submitted in the order of their precedence in the popular, open vote, and again voted on by secret ballot. This shall be taken in a sealed receptacle, and for ballots a legal copper coin of the realm and preferably bearing on its face the head of an Indian in profile, shall be considered an affirmative, elective ballot, and any coin of other metal shall be counted a negative vote. A clear ballot shall elect. If one ballot is found for rejection the Tyee Sachem shall so announce, and call upon the brave having cast same to state in open Council his reasons for so voting. If no reply is made, the candidate shall be declared elected; but if the Chief having voted against the candidate so desires, he shall rise and state his reasons, and ask that his vote be sustained. A second ballot shall then be taken, and if more than one adverse coin appear, the candidate shall be declared rejected, but if one or more, he shall be elected. No candidate rejected may be voted upon again within a year from that time; and in case of such rejection the membership fee advanced shall be immediately returned. A candidate rejected one year, need not necessarily attend the following tourney to be reconsidered and again voted on.

The official outward sign of membership in The Pacific Indians, shall be a miniature arrow or spear head, surmounted by the head of an Indian in profile, the whole made from solid gold and adapted to be worn as a lapel button. Each new member shall, upon election and admission to the Council, be furnished with this emblem. If, however, a member is dropped from the Tribe, for any act of delinquency or misconduct, he shall be in honor bound to return to the Herald-Custodian his tribal button; and any member may challenge the button when worn by anyone not in good standing in the organization.

There shall be printed—and reprinted in amended and extended form from time to time as thought necessary—a compact handbook of The Pacific Indians, containing Constitution and By-Laws, Records and other matter of general interest. Also for each annual conclave and tourney an attractive program, with names and photos of all members in good standing at the time of the meet.

These articles may be extended or amended by a two-thirds vote of all members present at any annual conclave.

Adopted and confirmed by the following Original Subscribers: Maurice Abraham, Ed. C. Garratt, W. E. Carlon, Harry R. Ellis, C. A. Haight, E. Hoelle, R. C. Reed, Geo. D. Morss, P. J. Holohan, J. T. Hillis, J. T. Dillon, E. J. Chingren, T. B. Ware, E. C. MacColl, Geo. H. Garrison, Chas. McA. Logan, Frank C. Riehl, Jesse E. Envart, C. C. Nauman W. F. Willett, D. W. King, W. A. Hillis, H. Justins, K. L. Hart, E. E. Ellis, J. E. Cullison, T. D. Barclay, A. E. Guist, P. H. Purdy, W. A. Robertson, Geo. P. Wells, L. R. Barkley.

BY-LAWS.

The native language or jargon of The Chinook Trihe of Indians, which was mostly widely used among the native tribes on the Northwestern Coast, is hereby adopted as the official source and basis for such Tribal names, designations and native vernacular as may be used within the organization of The Pacific Indians.

The election and business meeting incidental to each annual tourney may he fixed by the Chief Advisors on such date or time during that week as may be at the time deemed most convenient.

There shall be no shooting for targets only by amateurs at any Pacific Indian tournament.

Only bona-fide shooters, who participate in and take an active interest in the sport, shall be eligible to membership.

[Then follow the records of the annual meeting of 1908-9-10.]

CONDITIONS GOVERNING THE CHINGREN CHALLENGE TROPHY.

This trophy is donated by E. J. Chingren, to be held permanently as a challenge trophy, under the following rules:

It shall be shot for in each and every competition at 100 clay targets thrown regulation distance, eighty singles and ten pairs to each contestant, Interstate rules governing in all other respects.

This trophy shall be shot for at each annual tournament of The Pacific Indians, as a feature of the regula program; and as much oftener as may be arranged. shall never be won for a period longer than ninety days and at the expiration of such time, if not challenge for, shall be turned back to the Herald of the Tribe who may then offer it again in open competition whe thought advisable to do so.

Meantime, whenever the trophy is in the hands of an individual winner, it shall be subject to challenge h any sportsman in good standing, who may wish to con tend for its possession, and challenged party must the name a mutually convenient time and place, withi thirty days from date of challenge, when the match i to be shot.

Entry fee for contesting for this trophy shall at al times be $5 for every one except the present holder the same. This money shall be disposed as follows: I all contests the price of targets for all contestants sha first be deducted from the gross purse. The net purs remaining shall be allotted, in the open tournament, per cent to present holder, and balance divided on hig gun system at the rate of one money for each thre contestants or fraction thereof. When the trophy shot for in a challenge match, challenger shall put u $5 to pay for targets for both contestants if only tw participate; however, if others wish to declare then selves in on challenge matches they shall have th privilege by each putting up $5, and when three or mor thus compete, defender of trophy shall take dow the fees in excess of target money of every con testant whom he has defeated in that particular contes while if he fail successfully to defend the trophy, th winner thereof shall receive the trophy, and other co testants who may have tied or defeated the hold shall take down their fees in excess of target money.

The winner of trophy shall always be holden pe sonally responsible to The Pacific Indians in the sum $100, for the safekeeping and return of the same, und the above rules and regulations.

[We are then introduced to the Tyees, if not in perso at least by means of most excellent counterfeit presen ments, arranged on pages embellished with tomahaw arrow and "pipe of peace," four portraits on each pag with name and Indian title of each member.]

Call of the Tyee Sachem.

KO-PET.

"Speed away with the word," spake the Sachem of Old
To the Herald who marked his command,
"That a Council of Cheer we are minded to hold,
Of all Chiefs who abide in the land.

"It is well that betimes every warrior should vie
With the bravest who follow the trail
In those tests of endurance, of hand, nerve and eye,
Where the surest and best shall prevail;

"Therefore go thou and say we are minded to know
Of our braves, through this tourney of skill,
Who can hurl the true javelin and bend the strong bow
And the stranger may come if he will.

"Yes, the Kloochmen and Qualim are wanted as wel
For no Indian is happy alone—
To forget the home labors and worries, and spell
A brief season of joy all their own.

"Bid them come to our conclave, from every tepee,
To contend in the fair, bloodless fray;
From the rocky Divide to the sands of the Sea,
To the North, to the South, speed away."

AL-TA.

By fair Willamette's rippling stream
To gather in our own tepee,
Once more to feel, to speak and dream
Of joys that were—and are to be.

Come, brothers, cast your cares away
To perish in the hills afar,
And join with us this happy day—
A sharer in the joys that are.

The Interstate Association for the Encouragement Trapshooting, has contributed two hundred dollars a part of the Squier Money-Back Special Fund.

The Call.

Lokit Kil Kokumel pee Mimaloose Illihe Ku kula

(Fourth annual gathering and slaughter of clay bir

To be holden at Eugene, Oregon, in the full of th Sixth Moon, to-wit, June 12, 13, 14, 15, 1911.

By special invitation of the good people of the city of Eugene, in the Land of the Willamettes, fourth annual gathering, pow-wow and tourney of Pacific Indians will there convene on the dates ab cited.

All Pacific Indians in good standing in the Tribe hereby commanded to attend, and all paleface brot who follow the trail for the love of true sport sportsmanship are invited to join in the week of tivities.

Also, it is urged that as many as may be of squaws and papooses attend and entertain the w and daughters of visiting friends.

Accommodations are of the best, and our h promise many happy entertainment features aside f those of the general program, which follows:

The regular schedule of events each day on the In state money-back program, is as follows:

1—15 targets, entrance $1.50.
2—15 targets, entrance $1.50.
3—15 targets, entrance $1.50.
4—15 targets, entrance $1.50.
5—15 targets, entrance $1.50.

6—15 targets, entrance $1.50.
7—15 targets, entrance $1.50.
8—15 targets, entrance $1.50.
9—15 targets, entrance $1.50.
10—15 targets, entrance $1.50.

Total, 150 targets, added money-back, $1.00.
Total entrance, $16.00.

First and second days. $15 added to each event; third day, $10 added to each event.

Program will be increased 50 targets daily by adding: First day, first half, consisting of 40 singles and 5 pairs Chingren challenge trophy; second day, second half, consisting of 40 singles and 5 pairs on challenge trophy; third day, the annual class Honor contest at 50 targets per man (price of targets only) for all who have shot through the regular program.

THE PURSES.

The Squier money-back system of division of purses and refund for losses on regular events, as prescribed by the Interstate Association, will be used in this tournament; all purses being divided Rose system, ratio points, 5, 3, 2, 1.

In the challenge trophy event entrance will be $5, the net purse divided as provided in special rules elsewhere printed.

In extra or other special events moneys will be divided as may be decided on the grounds by mutual agreement of the contestants.

All targets will be trapped at 3 cents each, this amount being deducted from the gross purses.

Thus it will be noted that the total entrance for the regular program amounts to $48, of which $13.50 represents targets, $3 the individual contribution to the money-back system, and $31.50 the net purses. Adding $8 for the regular special events, the total entrance for the week is $56.

THE CONDITIONS.

To be eligible for the Squier money-back system, a contestant must compete in all regular program events.

Entrance for the regularly scheduled special events is optional with the shooter.

The Pacific Indians add $500 in cash and sterling trophies besides guaranteeing to every contestant who comes and participates in all events his money back, less the price of targets. In other words, every participant who fails to win $31.50 in the thirty regular events will at the conclusion of the tourney be paid his total winnings, plus whatever amount may be necessary to make up that sum.

Contest for the Indians' class average honors on the last day will be for three sterling silver trophies of equal value. Those who averaged 92 per cent. or better will shoot for the Delate prize; those who averaged 88 per cent. to 91.9 per cent. will fight for the Skookum, and those who averaged below 88 per cent. will contend for the Kloshe prize.

There will also be offered incidental to the program a number of special medals and trophies donated by individual sportsmen and members of the tribe.

THE ARRANGEMENTS.

The grounds are located on a natural promontory offering a clear sky background, and birds will be thrown from three automatic Leggett-Ideal traps.

Trap loads in all standard makes of shells will be stocked by the local dealers and offered for sale at regular prices on the grounds.

Those wishing to secure any particular load can do so by addressing, in time, either the Eugene, Hill's or Kay's gun store, Eugene, Oregon.

Further information as to local arrangements can be had by addressing Secretary Eugene Gun Club, or F. C. Riehl, 4018 N. Baltimore avenue, Tacoma, Wash.

Grounds will be open for practice several days before opening date.

Official headquarters for the meet, The Hotel Osborne.

THE PROSPECT.

Kloshe Tum-tum Mika Chako—which is to say, Welcome.

And this is what we offer you—doesn't it look good?
A splendid program.
Big added money.
Beautiful trophies.
Excellent accommodations.
A week of fine sport.
The best attendance ever.
The glad hand of fellowship.
Much to win; nothing to lose.
Are you coming? Surely! It is well.
P. S.—Be sure to ask your ticket agent for special return fare certificate!

Mt. Airy Gun Club.

MOUNT AIRY, Md., April 17.—The registered tournament of the gun club was held here to-day. The attendance was good, considering the cloudy, misty weather conditions, and every one seemed satisfied. G. W. Leister was high amateur with 118 breaks out of 150; J. J. Hawkins high professional with 134. Scores:

	Shot at.	Broke		Shot at.	Broke
G Baughman	150	99	S Day	150	119
J Reifsnider	150	98	D Hirshey	150	98

Beaver Crossing Gun Club.

BEAVER CROSSING, Neb., April 17.—Following are the scores made at Beaver Crossing, Neb., April 11 and 12, the first shoot under the Squier money-back system in the State of Nebraska. We have tried all kinds of systems for dividing money to please the shooters, but we can say more for the Squier money-back than any of them. The fund we had on hand amounted to $255.30, and $104.20 paid back the losses. This left for the high guns ranging from $27.50 to $4.50 per man. This looked good to some of the boys, as most of them did not expect to get any average money back. The weather was perfect the first day, and nothing short of a tornado the second, which accounts for some of the low scores on the second day.

	First Day.		Second Day.

J. C. EVANS, Sec'y.

Harrison (Ohio) Gun Club.

THE second annual merchandise shoot of the club was held on April 21, and was a success in every way, except that the attendance was below expectations. For this the weather clerk must be blamed, as he started the day in with a heavy rainstorm, which kept many of the out-of-town shooters from starting for Harrison, and by the time the rain had ceased, it was too late. J. G. Francis and A. M. Turrell had worked hard, and everything possible was provided for the comfort of the visitors, but the weather was beyond their control. However, it was not at all a bad day after 10 o'clock, barring the wind, which caused the targets to jump and duck unexpectedly, with the effect of cutting some of the shooters' scores below their average. The grounds are located on the banks of the Whitewater River, the targets being thrown toward the water. Some of the shooters were bothered by a row of willows on the river bank, but, on the whole, the background is very good. A couple of practice events were shot in order to give the strangers a chance to get a line on the targets, as well as in the hope that more shooters might arrive by later trains.

The program was started at about 11, and was finished before 3, a recess being taken at noon for lunch. Over 200 of the town people, including a number of ladies, were present, and showed much interest in the sport. The program consisted of four events at 15 and two at 20 targets each, a total of 100 targets; entrance $1 in a single event, or $5 for the entire program. Ten prizes were offered in each of the 15-target events, and 16 in each of the 20-target events, ranging in value from 50 cents to $8 each. The three high guns received $5, $3 and $2, and the low man was given $1. Fred Gilbert and L. J. Squier shot a very close race all through, being tied at the close of the fifth event, with only 3 misses each. In the last event they both went up in the air, Gilbert not reaching quite the altitude attained by Squier, and finishing 1 target in the lead with 94 to 93. Both scores were extra good under the rather hard conditions. Ralph Trimble was third high man with 86. O. J. Holaday, the remaining professional, could not seem to locate the clay birds with his usual skill, and only accounted for 79. High average money was won by C. B. Woodbury, of the Northern Kentucky Gun Club, on a score of 82. Charlie always seems to do better away from home, although he has made higher scores than he did to-day. He took home home a nice pack of the prizes. Second money went to R. H. Bruns, of Brookville, O., on a score of 81. E. H. Hahn was third high amateur. M. H. Johnson fell down badly, and is looking for the answer. Perhaps he may get back to the 90 class when he quits monkeying with his gun, for he surely can and has many times put up good scores. H. R. Irwin did not go home prizeless, although he was not doing his best work by a good many. M. J. Welsh was another visitor who could not seem to reach his mark; strange grounds and the wind were probably accountable for his fall. Turrell and Francis, of the club, refrained from breaking any more out of regard for their duty as hosts, and to be sure the visitors should have the best of the sport; at least, there is no other conceivable reason for their not breaking a good many more than they did. The two Donalds, of Felicity, O., are getting to be familiar figures at the shoots around here, and they are certainly welcome every time. T. E. Donald put it over his dad again to-day, and is getting to be some shooter, though neither of them broke so many as usual. The new club in the East End, Cincinnati, was represented by A. N. Dietrich. He is a new one at trapshooting, and this was his first shoot away from his home grounds, so that he need not feel at all ashamed of his showing. J. A. Payne, J. E. Schreck, H. S. Connelly and Dr. R. L. Bird, of the Cincinnati Gun Club, came over the road in the former's car, and the hardships endured on their voyage over the muddy roads, must be held responsible for their low scores. Still they all had a chance to step up to the cashier's office several times and select one of the prizes. Squier got the best of Fritz after all, beating him by one target, including the practice event, in which he broke 24 to the latter's 22, making the totals read: Squier 117, Gilbert 116. On the day's program Holaday and Gilbert agreed to do up Squier and Trimble. Their intentions were good, but they failed to carry out their plans, as the latter team finished with 6 targets to spare, 179 to 173. Several of the contestants treated the crowd to an exhibition of double-target shooting, with the following results: Gilbert 20, Holaday 14, Schreck and Payne 12 each out of 12 pairs; Woodbury, 17 out of 13 pairs; T. E. Donald, 8; Kater, 4; Bruns, 8 out of 6 pairs; Cleaver, 3 out of 3 pairs. The office was in charge of L. J. Squier, and it is needless to say that everything went smoothly, and that the prizes were all awarded promptly at the conclusion of each event. The prizes were divided high guns, those in a tie drawing for choice of the list in that event. The club has very good grounds, and a comfortable house, and the best of it is that the firing line is only a short distance from the steam and traction cars. Few clubs are so well located.

Los Angeles Gun Club.

A REGULAR program tournament will be held May 20 and 21 by the members of the Los Angeles Gun Club. At that time trapshooters from the entire State of California and Arizona are expected to be seen on the Venice grounds, breaking bluerocks. Handsome trophies, with additional cash prizes, it is believed, will form an inducement that will attract many outside gun men to contest at the shoot.

C. W. Clement, secretary of the club, believes that by the time the tournament will be held, the Los Angeles shooters' eyes will be in the best of shape.

"Then men will be classified on a basis of 250 birds," said Mr. Clement. "By the time they have shot at 250 targets, a fair estimate of their shooting abilities at 250 targets a fair estimate of their shooting abilities can be had. There is no doubt that the men will improve with each string of 250 birds they shoot at. They will be moved along on the list as fast as they show improvement.

"Six members were signed by us because of our informal shoot last Sunday. If we are able to maintain this proportion, our numbers will soon be large. We now have more than 175 members.

"Trapshooting throughout the United States is booming. It is one of the cleanest sports in the country, and it is backed and encouraged by the United States government. The more men who become accustomed to guns in the United States the better off it will be in case of war.

"A telephone is being installed on the grounds and any member desiring to shoot during the week can call up the keeper and inform him to have everything in readiness.

"At our first shoot the out-of-town people did better work than the local men. This was because they had more practice. Now that the club has started, the men will improve quickly."

Hyde Park Gun Club.

APRIL 22 was a nice spring day, with just a trifle too much chill in the air for the comfort of those watching the shooting. A strong westerly wind blew in the faces of the shooters, causing the targets to climb or duck and do other puzzling stunts, and cutting off several per cent. from the total scores. Sundy, of Williamstown, shot a close race with Holaday for first place, and was only one behind at the finish. He used to be one of the best shooters around here, and although he has been practically out of the game for a long time, has not yet forgotten how to point. Under normal conditions, he is good for better than 90 per cent. Kerry, a few years ago, was one of the regulars at St. Bernard, and is having a slight attack of the shooting fever again. We hope it will prove severe enough to bring him back into the game. His score of 60 per cent. in to-day's wind was a very creditable performance. Frohliger had to leave early, and did not finish his 100. Dr. Leighner was beaten by the wind, nothing else could put him in the 70 per cent. class. De Mar shot his gait in his third event, in the others the targets climbed a little too fast for him. Some of the members will attend the trophy shoot across the river.

SEMI-SMOKELESS

Again proves its Superiority over other Rifle Powders, of whatever kind.

In the final shoot-off of the Inter-Club Matches, under the auspices of the National Rifle Association, the Rocky Mountain Rifle Club Team of Butte, Montana, won from the New Haven Team, with the wonderful score of

992 out of a possible 1000

In this series of matches the Butte Team did not suffer a single defeat; this is the SECOND SUCCESSIVE YEAR they have won the .22 CALIBER TEAM CHAMPIONSHIP OF THE U. S. In the two years they have won 23 out of 24 matches, using exclusively

Peters .22 Cal. Ammunition

Thus in the most important .22 Caliber Competition of the year, SEMI-SMOKELESS CARTRIDGES are convincingly shown to be more accurate and more uniform than any others; they are clean and throw a very thin, vapory smoke; they may be fired indefinitely in the finest rifle barrel without cleaning and without injuring it; they have a record of achievement which has never and probably will never be equalled. Glance at this list of their winnings:

.22 Cal. Indoor Championship TWELVE SUCCESSIVE YEARS
Score of 2481 out of 2500—for years a World's Record
Inter-Club 5 Man Team Match TWO SUCCESSIVE YEARS
Inter-Scholastic Match for 1910
WORLD'S RECORD in 20 yard Pistol Shooting, 100 out of a possible 100

WORLD'S RECORD SHIPMENT—7 Carloads, one order, one shipment—one customer—all 22 Cal. Cartridges

Ask Your Dealer for PETERS Semi-Smokeless Ammunition and do not accept Imitations or Substitutes.

Maine State Shoot.

THE program makes the following announcement:

"The State of Maine shoot will be held at Haines Landing, under the auspices of the Mooselookmeguntic Gun Club, last year's winners of the championship, on June 8, 9 and 10, and is registered by the Interstate Association. The club is sparing no time or money to make this shoot the best held in the East this summer. The shoot will be held under the Squier money-back system. The club has arranged for the attractive log camps at the hotels at special rates, to those coming before the shoot or those there just for the shoot. The railroad companies also making special rate for the round trip. We cannot urge on you too strongly that this offers you an ideal outing. One well worth your while taking in. The traps are on the shore of the lake facing north, giving an absolutely perfect light and background. For those coming through by train, you go to Portland, Me., and then to Oquossoc, Me., where carriages meet you and drive you to Haines Landing. For those desiring to come by automobiles, it makes a beautiful trip. Take the Blue Book route through to Rangeley and then to Haines Landing, where there are accommodations for your car. We would ask that you notify the management at an early date of your intention to attend, so that accommodations can be reserved especially for you. The traps will be open for practice from June 5, on which sweepstakes may be shot."

R. L. Spotts is president and W. D. Hinds, secretary, of the Mooselookmeguntic Gun Club.

There will be over $1000 in added money, prizes and guarantees.

LIST OF EVENTS, CONDITIONS, ETC.

There will be five regular events of 20 targets each in the morning of each day; $25, added money being $5 to each event, and will be divided Rose system, 8, 5, 3, 2, 1. Optional sweepstake of $2.50 on each 100 birds of the program, morning and afternoon of each day, divided high gun system.

Guides' and Game Wardens' Match, 9 A. M. June 8: 100 birds, 16yds. rise; entrance $2.50, including targets. If entrance is entered in regular program an additional charge of 50 cents will be made to be eligible for prizes. Open to guides and game wardens only. First prize, No. 1 Bangor knapsack and $10; second, $10.

Rangeley Lake Preliminary, 1:30 P. M., June 8: 100 birds, 16yds. rise, entrance $3, including targets; open to amateurs only. First prize, gold and silver medal, value $20, and cash $20; second, cash $20.

Five-man team—State of Maine Championship, 9 A. M., June 9: No entrance fee if shooting regular program, $2 for targets if not. Each member of the winning team to receive a handsome silver and gold medal, valued at $20.

Rangeley Lakes Championship, 1:30 P. M., June 9: 100 birds, 16yds. rise; entrance $4, including targets; open to amateurs only. First prize, leg on $150 championship cup, gold medal, valued at $35, and cash $20; second prize, cash $20; third, cash $10.

Five-man Team—Intercity Team Match, 9:00 A. M., June 10: No entrance fee if shooting regular program; $2 for targets if not. Open to amateur teams of five men from any club, city or community. Each member of winning team to receive a loving cup, emblematic of region event is shot in, value $12.

State of Maine Championship, 1:30 P. M., June 10: 100 birds, 16yds. rise; entrance $5, including targets. Open to amateur shooters of the State. First prize, diamond and gold medal, value $75, and cash $50; second, cash $25. Contestants shooting this event and not eligible for medal, shoot for cash prizes only.

Elm House cup, 4:30 P. M., June 10: 25 birds, distance handicap, entrance 50 cents, including targets. Prize, leg on the Elm House cup. Open to State of Maine shooters only.

The amateur making the highest average for the entire program of 600 birds, to receive a handsome gold medal, valued at $25. The professional making the highest average for the entire program of 600 birds will receive a gold and silver medal, valued at $20. There will be a prize of $50 given to the amateur making the longest continuous run. Prize donated by the Maine Central and Sandy River Railroads. There will be additional prizes added to most of the events, list of which will be published before shoot starts.

High Gun Purse—Guaranteed to be $200 or more. All contestants who shoot the entire program shall be eligible for the purse. Ten per cent. of all sweeps will be set aside; to this will be added the money left over from the money-back system. The club guarantees to add enough money to make the purse $200 for thirty shooters or less, $250 for 40, $300 for 50, $350 for 60, $400 for 70.

Sixth Pacific Coast Handicap Tournament.

THE Interstate Association's Sixth Pacific Coast Handicap tournament will be held on May 25, 26 and 27, at Madera, Cal., under the auspices of the Madera Rod and Gun Club. There will be $1000 or more added money, made up as follows: Added to the Pacific Coast Handicap, $200; trophy for the winner of the Pacific Coast Handicap, $100; added to the Squier money-back special fund, $200; one cent for each target trapped added to the Squier money-back special fund, $500 or more—making a total of $1000 or more. If 50,000 targets are not trapped in the regular program events, the difference will be made good by the Interstate Association and the Madera Rod and Gun Club.

Secretary-Manager Elmer E. Shaner, of the Interstate Association, will personally manage the tournament, which fact will be a guarantee of a successful outcome of the shoot.

Madera, the county seat of Madera county, California, is well located on the main line of the Southern Pacific Railroad, while the Santa Fe Railroad crosses the county about three miles distant. The city is well built and the strects arc well lined with trees. A handsome court house stands in large grounds and a fine park filled with trees and flowers is developing. Business houses, banks, hotels, newspapers, factories, schools and churches are here, with the usual fraternal organizations. It is a pleasant residence city, and is steadily growing in commercial importance.

Madera county is nearly central in its position in the San Joaquin Valley, and lies fairly across it. The San Joaquin River forms the southern and western boundaries. On the east the foothills are distant from the river about forty miles, and as the county is twenty-eight miles wide, an area of forty by twenty-eight miles lies in the floor of the valley. Nearly an equal area stretches up through rolling foothills into the high Sierras, the region being one of towns and farms, of forest and lumber mills, of minerals and mines.

The Madera Rod and Gun Club was organized Dec. 6, 1907, with twenty-two active members. To-day it has thirty-six wideawake, enthusiastic members. Its game and fish preserve is located about eighteen miles southwest of Madera, and comprises nearly 20,000 acres. Located on the preserve is a comfortable club house and a set of traps for target shooting. Just outside the northerly city limits of Madera is located the trapshooting grounds.

The organization is a most harmonious one—a source of much pleasure—and a royal welcome awaits every sportsman who comes to participate in what promises to be one of the best tournaments ever given on the West Coast.

Division of moneys: Regular program and double target events, Rose system, ratio 5, 3, 2, 1.; optional sweepstakes, percentage system, 40, 30, 20 and 10 per cent., class shooting. Ten entries and under, three moneys, 50, 30 and 20 per cent. To be eligible for the Squier money-back system a contestant must compete in all regular program events. The optional sweepstakes, the special events at double targets, and the Pacific Coast Handicap are separate from the regular program, and it is optional with the contestant whether or not he makes entry for them. The Squier money-back system does not apply to the optional sweepstakes, the double target events and the Pacific Coast Handicap.

Wednesday, May 24, will be practice day, with four 15-target events, entrance $1.50 per event, and two 20-target events, with entrance of $2 each. Squier money-back system does not apply on these practice day events.

May 25—Thursday—first day of the regular program, has scheduled ten 15-target events, entrance $1.50 each, with $1 extra for money-back system. Optional sweepstakes in each event at $1 entrance. Also a special event at 25 doubles, $2.50 entrance.

On the second day this program is repeated.

The third and last day, May 27, has four 15-target events, $1.50 entrance, and two 20-target events, $2 entrance, with the usual extra entry of $1 for Squier money-back system. Also the optional sweeps extra, $1 entrance.

To conclude with the Pacific Coast Handicap, 100 single targets, $10 entrance, targets included; handicaps 16 to 23yds., high guns; not class shooting, $200 added to the purse. The number of moneys will be determined by the number of entries. The amateur contestant who makes the highest score, will receive a trophy, presented by the Interstate Association. The winner of first money is guaranteed $250 or more. If first money falls below $250, the difference will be made good by the Interstate Association. Regular entries must be made at the cashier's office, on the shooting grounds, before 5 P. M., Friday, May 26. Penalty entries may be made after Friday, May 26, up to the time the first gun is fired in event No. 6, by paying $15 entrance, targets included. Entries are not transferable, and entrance money cannot be withdrawn after handicaps have been allotted.

Further information will be cheerfully furnished by P. C. Thede, Secretary Madera Rod and Gun Club, Madera, Cal., or by Elmer E. Shaner, Secretary-Treasurer, the Interstate Association, 219 Coltart avenue, Pittsburg, Pa.

New York Athletic Club the Victors.

Travers Island, N. Y., April 23.—Gunners of the New York Athletic Club ended their regular shooting season in a blaze of glory at Travers Island yesterday. The program for the afternoon included the final legs of both the interclub shoot against the Crescent Athletic Club and the tri-club shoot against both the New Moon gunners, and the experts of the Larchmont Yacht Club. The Winged Foot nimrods entered both shoots with comfortable leads, and although they were not represented by their best marksmen, they had no difficult in winning both events.

The triclub shoot was the most important of the afternoon. Each organization was represented by a five-man team. In the aggregate the New York A. C. made 405 targets, against 385 by the Crescents, and 384 by the Larchmont tars. Adding the scores of the other two shoots, the Winged Foot experts won by a score of 1221 against 1189 by the Crescents, and 1186 by the Larchmont Yacht clubs. The home shooters won the interclub event by even a larger score. Each organization used fifteen men, and when the last bluerock was trapped, it was found that the aggregate of the three shoots gave the New York gunners 3607 targets against 3236 bluerocks for the Crescent A. C.

Being the final regular shoot for the year, the home shooters ended four events that have been running throughout the month. The final leg for the Bready cup was taken by T. O'Donohue. The winner of the trophy was not announced, however, as the conditions call for a percentage win for the month. The April cup leg was taken by C. W. Billings. However, the prize was won by R. R. Debacher. A. E. Ranney took the last leg on the Spotts cup, but the trophy was won by B. M. Higginson. The final leg for the Travers Island trophy was won by F. H. Schauffler, who also won the prize.

In addition there were innumerable trophy shoots both during the morning and the afternoon. The day was miscrable for the sport. During the morning hours a steady downpour of rain left the gunners in anything but a happy frame of mind. A chilling wind also added to their troubles, and made the conditions exceptionally difficult. Although the rain stopped during the afternoon, the wind gave the marksmen a great deal of trouble, and as a result, the scores were not high. Next week the New York Athletic Club will decide its annual championship. The scores:

Triclub shoot, 100 targets a man:

New York A. C.			Crescent A. C.

Chicago Gun Club.

Chicago, Ill., April 15.—With the wind blowing as hard as it was to-day, it is actually a surprise that any one came out to try their skill at the traps, and it was still more of a surprise to see how well they did, and their success in making some exceedingly hard shots.

The first five in the scores below were the ones who had the staying qualities to come out in the gale which was blowing.

Sharp's 43 out of the 50 in event No. 1, and MacLachlan's score of 33 out of the 20 pairs were splendid when we consider the conditions under which they were shooting. These same two shooters tried three more frames of 25, Sharp making two 21s and a 19, while MacLachlan also landed two 21s and a 16.

Eagan struck a hard day at start after being away for several months.

Shrigley tried one frame of singles and one string of doubles, when he concluded to stay out of the breeze, as it was all one could do to keep one's balance.

Mr. and Mrs. Cutler, Mr. and Mrs. Fetherstone and Miss Sullivan came out for a little practice on Tuesday, as both Cutler and Fetherston were going snipe shooting, and would not be here to-day. The ladies did especially well, both Mrs. Cutler and Mrs. Sullivan being well pleased at their success, considering the short time they have been shooting.

Nos. 2, 7 and 8 were the double-target events.

Events:	1	2	3	4	5	6	7	8	9
Targets:	50	40	25	25	25	25	10	24	25
J K Sharp, 16	43	24	21	21	19	6	14	..

Miss J V Sullivan, 16	..	..	14	15	..	..	..	..	..

April 16.—The pleasant weather this morning gave every indication of a fine afternoon for trapshooting, and conditions were certainly ideal when the marksmen started the fray, evidence of which is shown by the scores made in the practice event and the first frame of the handicap event, in which eight men made scores of 24 out of 25, five scores of 23 and seven of 22, as well as quite a number of 21s and 20s.

After being given the chance to show what they could do under favorable conditions, the shooters were given quite a surprise when within a few minutes the pleasant breeze which had been blowing from the west veered around to the northeast, and "presto!" it was a good strong wind, raw and cold, which sent many of the targets skyward, and as a consequence, it kept them guessing where to hold, and the scores of many dropped down considerably, although quite a number came through it with flying colors.

In the 50-target handicap event, Dan Thomas struck his old-time gait by breaking 49 from the 19yd. mark. Young and Earl were next in line with scores of 47, Young breaking his from 20yds., while Earl shot at 16yds. Kiley and Koester divided third honors with scores of 45, the former standing on the 18yd. mark, and the latter at 16yds.

Sharp and Hlavka each broke 44, while Quade broke 43 from 19yds., and Shrigley scored 43 from 18yds.

Young walked away with first honors in the event at doubles, breaking 35 out of the 20 pairs from the 18yd. mark. Mott and Sharp each broke 31, while Quade scored 30.

In the practice event at 25 singles, Quade, Riley, Hlavka and Sharp each broke 24, Thwaite and Thomas each scoring a 23.

In the next frame, Koester, Earl and Quade each hung up a score of 23, Riley coming in with 22.

Sharp took first place in the third frame with a score of 24, Hlavka pushing him along with 23, while Oliver was close up with 22.

Young carried away the honors in the next three frames, which were shot at 22, 23 and 23yds., making the very fine scores of 25, 24 and 22. Cutler and Thwaite each broke a 20 in the first of these, while Koester, Taggart, Sharp and Thwaite each scored 20 from 23yds.

Another race was shot at 10 pairs in which Young again won out with 19, with Quade pushing him close with 18, Thomas getting 16 and Koester landed 15, which was doing fine for his first trial at the doubles.

Hamel was out to-day for the first time in many years, for a trial at the traps, and he promises to come out often from now on.

And now, don't fail to be on hand next Sunday, April 23, for our fifteen-man team shoot with Gray's Lake. This should be a very interesting race, and we look for a good crowd.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.

THE PISTOL AND REVOLVER.

By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical hand-book for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition—primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

CANOE HANDLING AND SAILING

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. Bowyer Vaux ("Dot"). Illustrated. Cloth, 163 pages. Price, $1.00. New and revised edition, with additional matter.

A complete manual for the management of the canoe. Everything is made intelligible to the veriest novice, and Mr. Vaux proves himself one of those successful instructors who communicate their own enthusiasm to their pupils.

FOREST AND STREAM PUBLISHING CO.

Hudson Gun Club.

JERSEY CITY, N. J., April 23.—The regular bi-monthly club shoot of the Hudson Gun Club was held this morning, and a number of trophies were shot for by the "bunch" of shooters that attended. Dave Engel was the "candy kid" this morning, averaging 84 per cent., which was some shooting, as the wind was blowing a miniature gale at times, across the traps, which made the shooting very hard. Billy Emmons was the runner-up with 79.

For the Du Pont trophy there were Engel, Kelley, Emmons, Strobel and Joe Whitley, who returned straight scores, while the Western trophy event had six who returned perfect scores—Gille, Putney, Lane, Engel, Durkee and Kelley, being the lucky shooters to win a leg on this prize.

Event No. 4 was the first shoot for a number of valuable prizes, consisting of gold, silver and cut-glass articles; this event will run for six shoots, the best four scores to count in the finals, handicapped under the point system, which gives every one competing a fair chance to win a prie for each shooter that shoots in four or more events of 25 targets each, are the conditions under which it is shot. This event is open to all who wish to cnter for the ahove prizes.

There was a wonderful improvement in the shooting of Clary Durkee this morning; he got a 21 in No. 3 cvent. Billy Wright told some of the boys that it was an accident, and when Durkee got permission from his handler, Mr. Thos. Stiff, who was an old-time trapshot, he challenged him to a match race at 100 birds, to be shot on May 7, on which date the club holds its next shoot.

Burlington dropped in the club house on his way home from his trout fishing trip, somewhere in the wilds of Connecticut. He had been fishing for the past four days. Harry says that he caught lots of trout, but a peep in his creel divulged only two trout 7½ inches long, one onion, a half-eaten pretzel and a piece of cheese, which Harry afterward told us was the bait he was using.

On May 7 we are going to shoot again. Our grounds are located on the Hackensack River, near the Turnpike Bridge, and reached by the Turnpike car, and all trapshooters that care to spend a Sunday morning at our traps are welcome to do so.

SECRETARY.

DuPont Gun Club.

WILMINGTON, Del., April 23.—Forty stout-hearted devotees of the traps hraved the elements yesterday and journeyed to the Du Pont Gun Club for the weekly shoot. It was one of the most disagreeable days for trapshooting that the club has experienced since the opening, Dec. 17. An incessant rain drenched the shooters and a high cross-wind caused the targets to perform very peculiar antics.

Lester S. German, of Aberdeen, Md., the trade representative, was a visitor, and gave a number of the younger trapshooters interesting points on the trap game. He shot a four-cornered race with Messrs. Mathewson, Lukens, McHugh and Foord. Mathewson was the only one of the amateurs to tie German's average for the race, although each one of the other shooters succeeded in tying him in one of the other of the events. In the 75-bird race, Mathewson and German tied at 67. Lukens broke 63 out of 75. Foord and McHugh broke 42 and 43 respectively out of 50.

In the T. Coleman du Pont merchandise event, Frank Mathewson again carried off the honors, missing but one bird in his string of 25. He has been shooting at a wonderful clip recently, finishing up the program on Thursday night, with a straight run of 50 consecutive targets. Including this achievement, he broke his last 67 targets without a miss, and lost but one in the last 75. It was the eighteenth target that he lost in his first event yesterday.

The Class B spoon was tied for hy the following with a score of 19 out of 25: E. du Pont, W. A. Joslyn, H. Winchester, Thorpe Martin, A. H. Lobb and C. E. Springer.

The following tied in Class C with a score of 17 out of 25: Dr. C. R. Jefferis, Jr., T. W. Keithley, William Covne and W. F. Jensen.

Class D trophy, with a score of 14 out of 25, was tied for by the following: L. C. Lyon, W. B. Smith, Jr., and Dr. A. Patterson.

The ties from the preceding Saturday resulted as follows: Class B—W. A. Joslyn, 19 out of 25. Class C—W. F. Jensen, 17 out of 25. Class D—Dr. Jefferis, Jr., 17 out of 25.

The two-man team championship race was finally decided. There were three teams competing for the championship honors. Crawford and Martin, Mathewson and Dougherty, and Jensen and Taggart. Walker Mathewson and D. J. Dougherty were the successful team, breaking with their handicap 48 out of 50. The other two teams broke 47 and 46. The winning team received two solid silver loving cups in recognition of this championship. The gifts were made by one of the club's most enthusiastic amateurs.

The complete scores follow: H. W. Bush 21 out of 25, Dr. C. R. Jefferis, Jr., 17, F. H. Megaw 12, Eugene du Pont 19, R. C. McCardle 15, F. Mathewson 24, L. S. German 24, J. B. McHugh 23, William Foord 21, H. H. Lukens 22, W. Edmunson 20, D. Poffenberger 9, H. Winchester 19, R. L. Naudain 13, Thorpe Martin 19, Victor du Pont 16, W. Mathewson 22, A. H. Lobb 19, R. S. Robison 12, H. P. Carlon 20, W. M. Hammond, 18, Clyde Leedom 18, L. C. Lyon 14, J. A. MacMullen 11, T. W. Keithley 17, A. J. Curley 3, C. E. Springer 19, S. B. Trott 11, D. J. Dougherty 18, G. Godwin 20, Wm. Coyne 17, W. A. Joslyn 19, H. J. Taggart 15, W. F. Jensen 17, J. W. Burns 23, Leslie Mathewson 16, W. B. Smith, Jr., 14, Dr. H. Patterson 14.

The pistol scores were:

Revolver qualification: D. Appleby 79, 76, 72, 71, 71, 70.
Revolver practice: A. Appleby 75; A. J. Curley 46, 25, 23.
Rifle qualification (.22cal.): D. Appleby 79, 76, 71, 68.

Columbus Gun Club.

COLUMBUS, O., April 20.—Lon Fisher won high average at the regular monthly shoot, held on the Columbus Gun Club grounds, shooting from 20yds. Clarence Coburn was only one bird behind, shooting from the same distance. Ed Cain was third, shooting from 20yds. Bert Cooper got fourth average, shooting from 20yds.

Fred Gilbert, professional, from Spirit Lake, Ia., won high professional, and the general average.

There sure were a lot of fine shooters present, and every one had a good time. The only kick was heard right after dinner. Mrs. Fisher put too much dinner on. Oh, well, if you don't know when you have enough you ought to suffer. The same amount next time. All you can eat.

Mr. Fred Shattuck, now a professional, is back from the East, and he says he has the best shell ever. He has something good to tell you, boys. Cheaper ammunition sounds good, dooesn't it? Wait until you see him; he's just full of good news.

Capt. Carson is back from Texas. The captain is looking a little thin. Big John Penn is breaking in a new Greener gun. Look out, boys, when he gets started. We thank you all for your attendance and hope to see you at our next, May 20.

J. F. CALDWELL, Sec'y.

Yale—Danbury.

NEW HAVEN, Conn., April 22.—The Yale Gun Club beat the Danbury Club here this afternoon by a score of 415 to 363, in their annual shoot. The scores:

Yale.		Danbury.	
Thompson	88	Clark	82
Biddle	78	Judd	66
Morrison	85	Thompson	75
Dimmock	88	Bailey	65
Scott	76—415	Rice	75—363

Atlantic City Gun Club.

Atlantic City, N. J.—Harry Kahler, of Philadelphia, winner of the National Amateur Championship, was the one to head the list at the fourth annual Easter Monday tournament on April 17. He started off slowly, but wound up strong with the last three events straight and with the fine score of 141 out of 150. Kahler also won the merchandise event, 47 out of 50, a tie with Tomlin but in the shoot-off Kahler ran 19 out of 20, to Tomlin's 12. Frank Hineline, of the South End squad, finished second; Tomlin, of Glassboro third, and Stewart, of Salem, won fourth honors. Of the local boys, Powers topped the list with 133 breaks, with Smith and Westcott trailing closely.

Apgar was high professional with 138, and Fred Shattuck was second with 133. Lloyd Lewis was also with us and ran the books right up to the limit, and had the coin ready for the boys on the moment, and we wish to extend our thanks.

The Squier money-back system worked perfectly, and there was a surplus of over $50 for the six high guns, and that is what makes the boys happy.

In the merchandise event, we had eighteen beautiful prizes, ranging from $10 to $3.50 in value each.

Glad to have our Salem, N. J. friends with us; we have not forgotten that royal game supper they gave us December last; they are a royally good bunch.

Camden came down strong, but we expected a little better support from Philadelphia.

Our next tournament will be held in August, when the World's Amateur Championship Cup, won by Newcomb at the New Jersey State shoot here June last, will again be contested. The winner will take away a nice purse, and the cup for a year. This will be a big shoot, and you want to be on the job and take it away from Newcomb, if you can.

The program consisted of 150 targets. Scores:

	Program.	Mdse. Event.		Program.	Mdse. Event.
W T Smith	130	39	H Powers	133	42
H B Cook	126	44	G Biddle	121	43

A. H. Sheppard, Sec'y.

Cincinnati Gun Club.

The attendance at the club shoot on April 23 was very good, showing the results of the hustling which Emil Hammersmith has been doing for the past few weeks. The weather was fine, the only drawback being a rather brisk breeze, which had a bad effect on the flight of the targets, and kept some of the scores below the usual mark. Squier led the bunch, as he has a trick of doing every once in a while, breaking 90 out of 100, a feat fully equal to 95 under normal conditions. His nearest competitors were Sampson and Hammersmith, each of whom accounted for 80.

The first of the club's series of trophy events was shot to-day and resulted in a tie on 49, including handicaps, between Sampson and Hellman. Only one shoot-off was required to settle the question, Sampson getting a perfect score of 25 with his handicap, to Hellman's 24. Squier made high score in actual breaks with 45, Hammersmith was next with 43, and Trimble followed him closely with 42. Hammersmith has taken charge of the grounds of the club, and is working hard to make the weekly shoots successful. He needs the support of the club members, and also the good will of all the shooters in the vicinity.

Targets:	20	15	15	15	15	20	Total.
Squier	18	15	12	14	14	17	90
Sampson	14	13	12	14	13	14	80
Hammersmith	15	10	12	13	13	17	80
Hellman	13	9	13	10	13	16	74
Connelly	16	8	13	9	10	12	68
Dea	12	11	11	10	12	16	72
Trimble	..	11	15	13	12	17	68
Heile	11	9	6	..	..	..	26
Lambert	8	6	5	..	..	..	19
West	8	6	8	11	10	10	53
Bird	11	..	..	7	6	11	35
Bird, Jr.	..	..	..	8	5	16	29

Trophy event, 50 targets, handicap: Sampson (8) 49, Hellman (10) 49, Squier 45, Hammersmith (4) 47, Dea (8) 46, Trimble 42, Bird, Jr. (13) 42, Connelly (10) 41, West (8) 39, Bird (10) 34.

Shoot-off, 25 targets: Sampson (4) 25, Hellman (5) 24.

Marine and Field Club.

Only four gunners reported at the Bath Beach traps of the Marine and Field Club yesterday. The monthly cup was the principal event. The leg was taken by C. D. Sayre. There also were several trophy shoots. The scores:

Monthly cup, 100 targets:

C D Sayre	20	81	C B Ludwig	12	71
J H Emanuel, Jr.	4	72			

Trophy shoots, 25 targets each, handicap:

C B Sayre, 5	17	17	22	22	20
J H Emanuel, Jr., 1	18	18	18	19	20
C B Ludwig, 3	19	22	20	23	21
P G Chase, 4	..	23	21	25	15

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. This is Some Shooting!

The **Marlin** *12 GAUGE* **Repeating Shotgun**

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action.

The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hangfires harmless.

All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. Illustration shows Model 24 grade "A" 12 gauge; it has all the features that make for a perfect gun

Send three stamps postage today for our 136 page catalog, describing the full *Marlin* line.

Trap at Larchmont.

LARCHMONT, April 24.—Under fairly good conditions yesterday the gunners of the Larchmont Yacht Club made some excellent scores in their regular weekly shoot. The attendance was not as large as usual on account of the tri-club shoot on Saturday, but those present were able to complete seven matches.

R. L. Spotts proved to be high gun for the day. He won the 10-target scratch contest, as well as the 15-target event, the first with 9 and the second with 14 clay birds smashed. He was also the winner of the leg for the April cup with a full score of 25. Mr. Spotts also proved the winner of the double match at 25 targets, and W. J. Elias won the special trophy match at 25 targets. Two other trophy contests were won by A. B. Alley and E. A. Wilson respectively.

The summaries:

Ten targets, scratch: R. L. Spotts 9, A. B. Alley 8, W. E. Bemis 4, E. A. Wilson 8, W. J. Elias 7.

Fifteen targets, scratch: R. L. Spotts 14, A. B. Alley 10, W. E. Bemis 7, E. A. Wilson 12, W. J. Elias 9.

April cup, 25 targets, handicap: R. L. Spotts (0) 25, E. A. Wilson (2) 20, W. J. Elias (2) 20, E. L. C. Robins (2) 20.

Trophy shoot, 25 targets, handicap: A. B. Alley (5) 25, R. L. Spotts (0) 22, E. G. Unitt (4) 17, W. J. Elias (2) 24, E. A. Wilson (2) 21, W. E. Bemis (4) 14.

Trophy shoot, 25 targets, handicap: E. A. Wilson (2) 24, J. R. Collins (4) 22, E. G. Unitt (4) 20, A. B. Alley (4) 15, W. J. Elias (2) 22, R. L. Spoots (0) 20, J. Pisani (3) 18, W. E. Bemis (4) 14.

Bennett Gun Club.

GLOUCESTER CITY, April 22.—A special match for a gold watch was held at the grounds of the Bennett Gun Club to-day. There were more than 60 participants, and each shot from a 20yd. rise, unknown angles. There was a big crowd on hand, despite the rain. At the end of the tenth round there were ten ties for the prize, and they shot it off. They were Benjamin Foster, A. Redfield, Stokes Prickett, Benjamin Martel, Hugh Sterling, Martel and William Wakeman, who had four chances and did not miss. The shoot-off was miss-and-out, and Wakeman, won. The following were the best scores: Benjamin Foster 10, A. Redfield 10, Stokes Prickett 10, Benjamin Martel 10, Hugh Sterling 10, William Wakeman 10 (four chances, 10 each), Bernard 10, Edward Butler 9, Boyd 8, Thomas Berstresser 8, Michael Carney 8, Michael Colma 8, McElmoyle 8, William Murray 8, Sterling 8, W. Anderson 8, John Owens 8, Martel 8, Butler 8, Wilson 7, West 7, Berstresser 7, Stockman 7, Lafferty 7, Chessman 7, Prickett 7, Murray 7, Wilson 7, Shimp 7, Roadfuss 7, John Zimmer 6, F. Hannold 6, Wedemyer 6, Batzel 6, J. Anderson 6, T. Howley 6, John Healey 5.

Shoot-off, miss-and-out: Wakeman 10, Edward Butler shooting for Sterling, 9; Mertel 4, Foster 2, Wakeman 2, Prickett 2, Redfield 1, Wakeman 1.

Sweepstake, 5 bluerocks: Edward Butler 5, William Murray 4, Tom Owens 4, S. Prickett 4, Pierce 3, J. Healey 3.

Northern Kentucky Gun Club.

THE fine weather of April 23 brought out quite a bunch of shooters for the weekly trophy event, fourteen men facing the traps during the afternoon. To be sure, the wind made the targets a little more difficult to locate, but even with this handicap, some of the boys did nice work. The trophy event resulted in five men getting into a tie on perfect scores, including their handicaps, and after two shoot-offs, with the winner still unknown, it was agreed to decide the matter by a toss-up, as it was getting dusk, and there seemed no likelihood of a decision being reached in any other way. In the first shoot-off, McArdle and Luverne failed to make good, the other three tying on perfect scores. J. B. C. failed to smash enough in the second trial, and this left Voige and Ertel still tied. The latter won the toss, and carried off the trophy. McArdle had the honor of making high score of actual breaks in the match, accounting for 44; Voige was a close second with 43, and Luverne followed with 42. Voige did nice work in the shoot-offs, breaking 47, which gave him a total score of 90 in the 100. Four clubs in this neighborhood, the Hyde Park, Cincinnati, Miami, and Northern Kentucky, with a total active, shooting membership of at least sixty shooters, could inaugurate a series of club team matches that would attract attention, and would unquestionably increase the interest in the sport. If there is not material enough in these clubs, call on the Harrison, Lebanon, Felicity, Hillsboro and Williamstown shooters to come into the game. The next club trophy shoot will be held on April 30, and every one is invited to come over and have a try. The club's first money-back tournament of the season will take place on May 7. These shoots were very popular last season, and from the inquiries which have been received by the secretary concerning them, they promise to be more so this year.

Trophy event, 50 targets, handicap: McArdle (10) 50 Woodbury (8) 48, Irwin (10) 48, Keifer (10) 49, Holaday Jr. (4) 38, J.B. C. (12) 50, Voige (10) 50, H. Ertel (16 50, Luverne (18) 50, F. Smith (15) 39, N. P. Brown (18 34, J. D. Johnson (14) 32, W. McGee (20) 34.

Shoot-off divided after three tries, between Voige and Ertel. Several practice events were also shot.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., April 22.—In the practice event Smoke set the mark "out of sight"—121 out of 125. Moller 136 out of 145, and Parry 93 out of 100 were trying hard to find it. H. W. Heikes and Barr, professionals had a little race of their own, the latter having one the best of it. In the continuing struggle for the president cup, Parry scored his first win with 46 out of 50, shooing from the 16yd. mark. Lewis, 18yds., getting 4

The professionals, shooting along for company, wer again in competition, Heikes going out with the goo score of 47 from 20yds.

Program is being arranged for tournament on Decor tion Day.

In practice, H. W. Heikes scored 114 out of 125, Ba (125) 115, Lewis (60) 47, Moller (145) 136, Parry (100) 9 Smoke (125) 121, Hymer (100) 85, Britton (80) 70, Dixo (100) 86, Neighbors (80) 43, White (105) 83, Golden (4 24, Granberry (20) 15.

President's cup, 50 targets: H. W. Heikes (20yds.) 4 Barr (20) 42, Hymer (20) 39, Lewis (18) 45, Moller (1 43, Dixon (18) 37, White (18) 32, Parry (16) 46, Smo (16) 42, Britton (16) 44, Neighbors (16) 27, Golden (16)

Pigeon-Shooting Fixtures at Turin.

AMONG the many sporting events that will take pla this year in Turin during the great international exhi tion, pigeon shooting will be foremost. The clu Tiratori a volo del Martinetto and Villa Marchesa ha given a sum of 55,000 lire to be divided among the w ners of the following program: Stand del Martinet May 7, one pigeon at 26 meters, 500 lire; May 8, 9, 1 12 pigeons at 26-27 meters, 20,000 lire; May 13—one pige at 26 meters, 5000 lire; May 14, handicap, 15,000 li Stand Villa Marchesa: May 11 and 12, 10,000 lire. I trance fees to all the events in the program, 650 li Sportsmen who make up their mind to come to sur Italy and take an active part in the shooting will f this a unique occasion to find this interesting exhibit and to share the tempting prizes mentioned in the ab program.

Pigeon Shooting

CONDITIONS IN THE ADIRONDACKS.

Continued from page 658.

subsides. A club's rules must be stringent y enforced indeed if they lead to the punishment by the club of a violator.

A case in point: Last spring a protector learned that it might be worth his while to go to a certain camp up the West Canada. It is a noted camp locally. Several politicians, good woodsmen and good fellows, are members. The protector caught one man with sma.l trout and chased another across the creek. This fellow dumped his trout into the water, which was a good joke on the protector. At the annual meeting of the club the episode of the game protector's visit was made merry over and the protector's victims made humorous speeches. None of the men seemed to realize that violating the game law was other than a matter for jubilee, caught or not caught.

There is much room for education with regard to the game laws. Every man must first search his own heart on the subject, to discover whether or not he is sincere and acts according to his preachings. I know old woodsmen who used to boast of killing game out of season who now without apology obey the laws. If men who are not well educated, who are subject to great temptation, can resist the desire to kill game in and out of season, certainly those who visit the mountains and hire guides might refrain from compelling their guides to keep the table supplied and also fill the bag of the hunter who cannot shoot well enough to kill his own game.

The worst violators are guides who have to shoot game in order to keep in the good graces of unskillful or lazy employers. Many of these guides are unwilling violators, but who can blame the guide whose very living depends on retaining the friendship and patronage of the people he takes into the woods? On the other hand these guides are so foolish as to kill the game on which they depend to make their living.

If the guides would all get together and refuse to obey the mandates of their patrons, the patrons would perhaps be brought to time, but probably not. The guides could of course bring violators to court, but that is beyond hope.

In any event, every man who asks his employe or permits his guide to violate a law, or who allows his emp'oye to see him violate the law, makes that employe a violator.

The statement by "A Sympathizer" that "only the other day a man hounded a deer to the ice * * * and finished it" is typical of one class of complaints. A letter to the nearest game protector would have resulted in an investigation and very likely capture of the guilty parties. "But," "A Sympathizer" whines, "we are not receiving a single penny for that if we did it, and would not get a 'thank you,' while the salaried men would get the credit."

If "A Sympathizer" wants the credit, why not take the case into court himself, prove it, get the credit and half the fine collected, as the law says he may do if he really knows of such a case. There he has everything—credit and ha'f the fine, as provided by Section 22, of the game law.

Game is being protected very well, and the men who are doing it earn their wages. This is not to say more protectors are not needed, but even here "A Sympathizer" hardly knows the ground he treads on. He speaks of having a protector on every ten or fifteen square miles.

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 407 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.
The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.
It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Postpaid, $1.50

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING COMPANY

The Indians of To-day

By George Bird Grinnell. Demi-quarto, 185 pages, buckram. Price, $5.00.

It describes the old-time Indian and the Indian of to-day, and contrasts the primitive conditions and ways of living with those of the present. It contains over fifty full-page portraits of living Indians from photographs.

Contents: The North American Indians. Indian Character. Beliefs and Stories. The Young Dogs' Dance. The Buffalo Wife. A Blackfoot Sun and Moon Myth. Former Distribution of the Indians. The Reservation. Life on the Reservation. The Agent's Rule. Education. Some Difficulties. The Red Man and the White.

FOREST AND STREAM PUBLISHING COMPANY

There are 4,000 square miles in the Adirondack woods; 10,000 square miles in the mountains. Sympathizer suggests, therefore, that the State put from 266 to 400 protectors—even 1,000—in the Adirondacks. This would insure a number of places for people able to pass civil service examinations. Sympathizer suggests that the State now has a protector on every twenty five or fifty square miles. Probably thirty protectors all told are on duty in the Adirondacks or sometimes go there—twenty, say, regularly. That is, each protector looks after about 200 square miles, with occasional assistance from ten sent in on special occasions.

Fair criticism never hurts a square official. He will profit by his mistakes and work harder in consequence of good advice. But attacks on the Forest, Fish and Game Commission by men who know neither the results of the department's work, the conditions met by the officials, nor the quantity and quality of the work done, made without a general view of the situation and from some isolated instance or even instances, do more good and perhaps do harm.

Asking a policeman to cover 200 square miles of territory is too much, but imagine putting 40 game protectors into the Adirondacks, one in every ten miles! This would be indefensible. Just how many should be put there is a question.

As to cutting the rate of pay to $500 or $600 a year and $400 expenses, the wages were increased because the right kind of men could not be had for $600 a year. If the wages of protectors were cut now, I am quite certain from what I know of the kind of men who are in these offices more than half and the best of them would get out. Everyone knows that game protectors should be extra good woodsmen, and most of the Adirondack force are far better at their line of work than most other woodsmen are in theirs. It would please many violators to have the good men weeded out as the poor men were.

There is no epidemic of violations. Here and there are violations by people who pretend to know better than others. Yet knowing of a specific instance, or several instances, it would be easy for an unaccustomed, imaginative and forgetful man to think conditions were worse.

Cut off the sale of game and fish and draw the lines a bit clearer and more emphatic and add a score of protectors to the Adirondacks and observance of the law will be taken to 90 per cent. of the camps and hearts where now the law is disobeyed.

In the meanwhile sportsmen and others should do more to help the game protectors in the education of the public.

"A Sympathizer's" statement that timber is being stolen is another misleading generality. Certain Adirondack business men are willing to receive stolen goods. Where there is a market for fiddle-butts or saw timber, there is likely to be timber stealing. There may be places where timber thieves work wholesale, but I do not it. There are occasional stove wood trespasses, "getting over the line" and perhaps a raid on State lands, as at Tupper Lake, discovered a few days ago and now being pressed for penalties, but not one stick is stolen now where a thousand were stolen a few years ago, and "A Sympathizer" does not know that, he does not know the Adirondack forest work any more than he knows his map scale or territory covered by game protectors.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener "Unique" Ejecting mechanism is but one of the many unique points for which the Greener Gun is famous. Weight for Weight, the "Unique" Ejector is the Strongest gun that exists.

It has all the extra weight necessary to a fore-end ejector put into the barrels.

It is the simplest and most scientifically constructed, the most perfectly balanced, the easiest and most reliable gun to use.

It has a thoroughly sound hinge joint, not cut to a mere skeleton by cocking levers and ejecting connections.

There is no thrust to force the fore-end away from the joint.

The action frame, though light, has the metal so disposed as to offer the greatest resistance where the strain comes.

It is the most compact form and is the handsomest of all guns.

It is made in the best quality only, and your new gun should certainly be made on this system!

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

Catalog, illustrating and describing 38 grades. :: Mailed free.

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Are You A Gunner?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

UNIQUE HUNTING METHODS.

"ONE afternoon when I was quite a small boy living in the heart of the Australian bush," says a writer in the American Boy, "a black fellow, his wife and their two children were camped near the creek which ran through our farm They had just arrived and were both tired and hungry.

"So the black fellow walked down to the edge of the creek, and had a look around. Soon he saw a pair of wild turkeys, or bustards, feeding quietly along a wide open space and about 800 yards away. Now, wild turkeys are very good eating, but they are very shy birds and difficult to get near.

"The black fellow had no gun, but had three boomerangs, four spears and a club called the nulla nulla. I watched him carefully to see what he would do. He took the three boomerangs and the nulla nulla. Then he broke several branches of a neighboring tree and swam quietly across the creek. On the other side he skirted around the edge of the clearing, getting as close to the turkeys as he could under cover.

"I soon lost sight of him and kept my eyes on the turkeys. After about a quarter of an hour I suddenly noticed well out on the clearing a bunch of shrubbery. Watching it carefully, I saw that it was gradually approaching the birds. It never moved except when the birds had their heads down feeding.

"At last it got so close that the turkeys noticed it, but beyond a good stare they paid no further attention to it. Nearer and nearer it approached until it was only about twenty yards away. Then with a jump that made me start the black fellow sprang up from behind the boughs and, running in to the birds, threw his boomerang at them. He seemed to hit both of them, but one flew away all the same. The other one, however, was disabled and the black fellow soon finished it off with his club.

"It is the fashion to speak contemptuously of the intellect of the Australian blacks; certainly in some respects they are very deficient. I never met one, for example, that could count more than five, and most of them can only count up to three. But, as hunters they are extremely skilful, very patient, and possessed of a great fund of knowledge regarding the habits of the game they pursue.

"I have seen them catch ducks in much the same manner as the turkey was caught. The hunter, with a bundle of reeds, or other aquatic vegetation, slips quietly into the edge of the lake or lagoon or river, and either wades or swims, with the vegetation on his head, noiselessly up to the ducks. Then, one after another he quietly but swiftly pulls them under water, where he strangles them and attaches them to his belt.

"It would be thought that the ducks would either call out or flap their wings and so alarm their mates; but the black fellow does his work so smartly that the duck is underneath the water before it has time to do anything.

"The kangaroo is stalked in quite a different and rather a peculiar manner. Finding where there is a kangaroo, feeding alone if possible, the black fellow crawls as close as he can to him. His weapons this time are two spears. When there is no more cover he waits until the kangaroo has its head down and is nibbling the grass. Then he stands up beside a tree and in full view of the kangaroo but absolutely motionless.

"The kangaroo looks up, but seeing nothing moving, resumes feeding. The black fellow then takes a few slow and very cautious steps toward the animal, dragging his two spears carefully through the grass with his toes. The moment the kangaroo stops feeding he becomes immovable, standing, with his hands at his side, like a thin black stump.

"This strategy goes on for perhaps twenty minutes, at the end of which the black fellow is probably within ten yards of his prey. Then, like a lightning flash, he bends for his spears, and one after the other they are flung quivering into the flanks of the kangaroo. The animal bounds off, but the black fellow follows

Kamp-it
TRADE MARK

Outing Suits for Men and Women

Kamp-it clothing is made from a very fine twilled cotton fabric of a particular dye and fast color. Guaranteed not to change color from the sun, washing or perspiration. Not Cravenetted like Duxbak, but is a cloth of great strength, far superior to the ordinary Khaki. For the golf links, motor cycling, summer camp, hill climbing, and tramping, you will find Kamp-it garments at their best advantage. Particularly suitable for ladies' wear.

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Book Catalogue Free on Application.

Sam Lovel's Camps.

Rowland E. Robinson. Another charming story of life in innermost Yankeeland. Quaint and delightful stories of a delightful life. A splendid book for boys and scarcely less pleasing to their elders. Cloth. Illustrated. Postpaid, $1.00.

American Big-Game Hunting.

The Book of the Boone and Crockett Club. Theodore Roosevelt and George Bird Grinnell, editors. Narratives of white goat hunting, elk hunting, old times in the Black Hills, prong-buck coursing, nights with the grizzlies, buffalo days, blacktails in the Bad Lands, notes on forest reservations and game refuges. Contributors: Theodore Roosevelt, George Bird Grinnell, Owen Wister, Winthrop Chanler, Col. Geo. S. Anderson, Col. Roger D. Williams, Archibald Rogers, F. C. Crocker, Dean Sage, and others. Cloth. Illustrated. Postpaid, $2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. This is a fourth and by far the largest and handsomest of the club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiak Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics. 490 pages and 46 full-page illustrations. Price, $2.50.

American Duck Shooting.

George Bird Grinnell. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Cloth, 630 pages. Price, $3.50. Edition de luxe, price, $5.00.

Inter-Ocean Hunting Tales.

Edgar F. Randolph. A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint and dealing with every kind of game that falls to the rifle of the American sportsman. Cloth, 200 pages. Postpaid, $100.

The Art of Shooting.

Charles Lancaster. An illustrated treatise on the art of shooting. Illustrated. Cloth. Price, $1.25.

The Gun and Its Development.

W. W. Greener. With Notes on Shooting, Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Choke-boring, Gun Trials, Theories and Experiments. "The Gun and Its Development" is the standard work of the age on projectiles and all relating to them. Fully illustrated. Cloth. 770 pages. New edition. Price, $4.00.

Domesticated Trout.

Livingstone Stone. Contents: Trout Breeding Works, Ponds, Buildings, Hatching Apparatus. The Nursery, Taking the Eggs, Hatching, Care of Alevins, Rearing the Fry, Growing the Large Trout, General Observations. Cloth. Illustrated. Postpaid, $2.50.

Modern Fishculture in Fresh and Salt Water.

Fred Mather, author of "Men I Have Fished With." with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chaper on the Pike-Perch by James Nevin. Illustrated. Price, $2.00.

Familiar Fish and How to Catch Them.

Eugene McCarthy. A Practical Book on Fresh-Water Game Fish. With an introduction by Dr. David Starr Jordan, President of Leland Stanford Junior University, and numerous illustrations. Price, $1.50.

Training the Hunting Dog for the Field and Field Trials.

B. Waters. This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority. Cloth. 281 pages. Price, $1.50.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

Pocket Kennel Record.

A handy book for immediate record of all events and transactions, relieving the owner from risk of forgetting important kennel matters by trusting to memory. Morocco. Postpaid, 50 cents.

Diseases of the Dog.

By Hugh Dalziel. A handbook for amateurs. Treats of the causes of disease in dogs, symptoms and treatment, modes of administering medicine, treatment in cases of poisoning, etc. Paper. Postpaid, 40 cents.

The Spaniel and Its Training.

F. H. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Pheasants; Their Natural History and Practical Management.

W. B. Tegetmeier. New, enlarged edition. 16 plates. Cloth. 237 pages. Price, $3.50.

Woodcraft.

Nessmuk. No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm Cloth. 200 pages. Illustrated. Postpaid, $1.00.

Houseboats and Houseboating.

Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is $3.00 net. Postage, 34 cents.

How to Build a Motor Launch from Plans.

Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty, stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, $1.50.

Manual of the Canvas Canoe.

F. R. Webb ("Commodore"). Many illustrations of designs and plans of canvas canoes and their parts. Two large, full-sized working (24x38) drawings in a pocket in a cover. Cloth, 115 pages. Price, $1.25.

Canoe and Boat Building.

W. P. Stephens. Contains plan and comprehensive directions for the construction of canoes, row and sail boats and hunting craft, directions that the amateur with tools can follow. Fifty plates and working drawings in separate envelope. Cloth. Illustrated. 264 pages. Postpaid, $2.00.

Canvas Canoes and How to Build Them.

Parker B. Field. The book gives very precise instructions by which a man with ordinary mechanical bent may build a serviceable canoe at slight cost—a plan and all working directions. Paper. Postpaid, 50 cents.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

THE PISTOL AND REVOLVER.

By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical hand-book for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition—primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

FOREST AND STREAM PUBLISHING CO.

UNCLE LISHA'S SHOP

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth. 187 pages. Price, $1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days "to swap lies."

FOREST AND STREAM PUBLISHING CO.

confidently, as he knows that before the second mile is covered the kangaroo will be exhausted.

"This is the usual way in which the kangaroo was taken. Occasionally, however, it was killed with a boomerang. The kangaroo has a very thin skull, and if the boomerang hits it on the head it drops instantly.

"The boomerangs I have been mentioning do not return to their owners, as all boomerangs are so often stated to do. Boomerangs used for killing game or in war just go for the object aimed at; and whether they hit or miss they never come back, but end their course just like any other missile. The returning boomerang is really a toy, and is specially constructed. It is made and used by the same black fellow that uses the game and war boomerang.

"Perhaps the most ingenious of all their schemes is the manner in which they net ducks. A creek is chosen which has, as creeks usually do, short bushy trees along its banks. Between two of these trees, on opposite sides, the blacks stretch their light, home made net, at a height of ten or fifteen feet above the water. The net is managed by two black fellows, one on each side of the stream, who have hold of the top controlling cord. Until the critical time the net is allowed to sag well down.

"A few yards down the creek a third black fellow is concealed in the reeds. Two or three others then make a detour of perhaps a mile or more and strike the creek again. Then they walk back along the creek toward the net. At once whatever ducks are on the creek fly up and, as is their invariable custom, follow along the course of the creek, but about 100 yards or so in the air.

"Soon they come toward where the net is waiting. Just at the proper time the black fellow who is hidden in the reeds gives the loud, shrill cry of the duck hawk, at the same time hurling his bomerang into the air. Like so many arrows the terrified ducks dive down for the shelter of the trees and dart along only a few feet above the water.

"At the same time the net rises in front of them, and they dash into it. Sometimes the whole flock of a dozen or more is caught at once, and it is rarely that the stratagem is altogether unsuccessful."

A HADDOCK YARN.

An Irishman, celebrated for his good humor, was dining one Friday with a friend, and fish was the only "meat" served. The Irishman was particularly fond of haddock, and seated himself near a fine specimen. His olfactory nerves, however, soon made him aware that the fish was not too fresh. He first lowered his mouth toward the head of the fish, and then his ear, as if conversing with it. The woman of the house, perceiving his peculiar motions, asked him if he wished anything. "Nothing," replied the Irishman, "nothing at all, madam, I was merely asking this haddock whether he could give me any news of my friend, Capt. Seasalt, who was drowned last Monday; but he tells me that he knows nothing of the matter, for he himself hasn't been to sea for about three weeks."—Ideas.

THE CAPERCAILZIE.

The capercailzie is a grand bird, but we are doubtful regarding its value for sport. A bird nearly as big as a turkey cannot easily be missed, but they require to be struck in a vital spot, and it is sad to see them going away wounded. The only "caper" we were ever able to eat was one so-disguised by condiments and sauces that we really did not know it was a "caper," and horse-flesh would have been palatable prepared in that way. It is hard to eradicate the taste of turpentine which permeates the flesh owing to the "caper's" diet of pine-buds, and no ordinary cook can hope to succeed. Perhaps we should say "drown" instead of "eradicate," for the latter can never be accomplished.—Shooting Times.

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE WYOMING ELK.

SOON after the appropriation by Congress of $20,000 to care for the Wyoming elk, which each winter starve in considerable numbers in Jackson's Hole, the Department of Agriculture took up the matter. E. A. Preble, of the Biological Survey, was sent out to Jackson's Hole, and is still there gathering data with regard to last winter's destruction, and seeking for a means to prevent its repetition. It is reported that he concludes that the loss was about 5,000 elk, mostly calves.

People wholly ignorant of the elk and its habits write of a great force of cowboys and United States cavalry which, when summer comes, shall round up the elk and drive them away—say to the Big-Horn Mountains—but this is one of the absurdities only to be written of by people quite unacquainted with the subject. Elk cannot be herded in any region, and least of all over rough and timbered mountains.

On the other hand, it is learned that some lodges of the benevolent society of Elks have furnished the funds to crate and transport a dozen elk from Jackson's Hole to the Government buffalo pastures in Montana and Oklahoma, thus following the good example set last winter by the Boone and Crockett Club with the antelope. The animals are already on the way to their new home. This movement may well enough stimulate other lodges of Elks to similar action, and the net result of all this agitation cannot be other than good.

The removal and distribution of these elk is greatly to be desired, and the funds at hand should assist in getting many of them out of the country. This is a process, however, which will have to be kept up indefinitely, and is in no sense a solution of the Jackson's Hole elk problem.

At the approach of winter the elk come down from the high mountains in the effort to follow their old-time migration route, are stopped in the neighborhood of Jackson's Hole and starve there, and then in spring the survivors return to the mountains and have their young, to return south again in autumn and to starve again the following winter. The same thing has been going on for years, and no plan has yet been devised for remedying the difficulty.

IN PRINCE EDWARD ISLAND.

THE last annual report of the Department of Agriculture of the Province of Prince Edward Island contains an interesting paper on bird protection. Up to the year 1906, the enforcement of the game laws was in the hands of police officers and constables, who usually troubled themselves very little about the law's provisions. In that year, however, a new game act including the protection of useful birds was passed, and the P. E. I. Fish and Game Protection Association was formed, its members being made fish and game guardians to serve without pay.

The membership roll of the association has increased each year since, until now it contains more than 350 members. These have done much good work in their various localities by enforcing the law, and also by educating the people by personal effort, by lectures and by the issue of leaflets, all showing how the various species of birds affect the interests of the farmer and so of the community. The association's work has attracted attention in the United States and Canada. It is believed that the protection of useful birds which prey on noxious insects and on small mammals has reduced the destruction of the agricultural output of the country by these creatures fully one-half.

The report is accompanied by a list of the principal birds of the Province illustrated by a number of photographs, and this report, which is likely to have general circulation, ought to do much good. The association cannot do better than continue its work of education until it has shown to the residents of Prince Edward Island how important to the welfare of the Province is the protection of its useful birds.

DIES HARD.

THE old saw that a lie will travel a league while the truth is putting on its boots is as true to-day as ever, and it is true also that it takes many years to correct a false story that has once gained currency. The great duck egg fake of 1894-5 furnishes an example.

A recent editorial in the New Orleans Daily Picayune says that formerly the collection of millions of the eggs of wild birds in Canada threatened to cause the practical extermination of the vast flocks of ducks and geese which annually go south to escape the winter, but that Canada took the matter up and stopped this egg collecting. This is the repetition of an old story which had currency for three or four years, until in 1895 FOREST AND STREAM made an investigation which exploded it. The tale seemed to account for the scarcity of wildfowl by relieving spring shooters of their responsibility and was taken up and fathered by an organization which called itself the National Game, Fish and Bird Protective Association, some of whose officers declared that a careful investigation showed that millions of the eggs of wildfowl were annually collected in Alaska and Canada and shipped into the United States for commercial purposes. Senator Mitchell, of Oregon, brought the matter up in Congress and asked for an appropriation of $5,000 to send an agent to Alaska to investigate the matter.

Meantime FOREST AND STREAM had begun to make inquiries to learn whether in fact any such importation of wild duck eggs took place. No evidence and no facts could be had from the people who told the story. Those who had declared that they had the evidence, when applied to for this evidence, declared that they themselves did not have it, but could get it—and then were never heard of again. By careful inquiry FOREST AND STREAM learned that the transportation companies had never carried eggs, that none had been received at the ports of entry of the United States, and that the albumen trade, which was supposed to be using the eggs, knew nothing whatever about these wildfowl eggs. The investigation was so complete and the lack of evidence so impressive that the story soon came to be known as the great duck egg fake, and for some years those who had started it declined to talk on the subject.

Every now and then, however, references like this one in the New Orleans paper are printed, and to-day there are probably not a few people who have forgotten all about the exposure of the fake, but still have vague memories of the original story and regard it seriously. It dies hard.

A WESTERN magazine recently stated that nearly five hundred squirrels from Vermont had lately been liberated in Central Park, New York city, the gift of Mrs. A. F. Smith, and that hundreds of squirrels have been killed by automobiles. Distance lends enchantment to this view, as to others. The facts are that although Mrs. Smith's offer to liberate gray squirrels in the park has been accepted, not one squirrel has as yet been received. Efforts are being made to secure gray squirrels in Vermont, but to catch one-tenth as many as mentioned will require time. The Central Park squirrels are suffering from improper feeding at the hands of visitors; from the efforts of vandals, who regard them as so much food to be taken by stealth; and from the forays of small boys armed with catapults. Motorcars kill few if any squirrels. The average visitor feeds roasted peanuts to the squirrels when they should have hard-shelled nuts. Their teeth and digestion suffer. Park watchmen find one dead now and then near the walks, apparently in good condition. Instead of a decrease, there is a steady increase in the number of squirrels in the great park, and they have been thinned out at times by shooting and by transfer to other parks.

THE SPORTSMAN TOURIST

In the Hookworm Region

A Vacation on Horseback and in Camp in the Mountains of Virginia

By FLORENCE A. TASKER

IN the rugged mountains of Southwest Virginia we spent our two weeks' vacation. It could not be Canada that year, for it is an aggravation to go up there for sport and just when you are comfortably settled down to some rare trout fishing or good hunting, break camp and come home. So for the short two weeks we planned another game. There were five of us in the party: a pretty girl and a bachelor—we the married pair—and our fox terrier, Pat. It all started out so promisingly and boded to be so full of interest. It was September, the nights just chill enough to warrant a big fire, and the days all bright and warm, but will you believe it, nothing ever came of it. I watched that pair faithfully all those fourteen days and never a tremor of an eyelash did I see in either of them. So I shall have to tell just the bare facts of the outing, and leave out all the romance that I hoped would add some color to my story.

But we surely did have a good time. We left the railroad and on horseback plunged into a rough wilderness to our miner's shack, a two-room affair, very rude but comfortable, in the heart of the mountains. It nestled so cosily in a clump of trees with a sparkling spring nearby, and an outside sheltered cooking shed, with the dearest little cook stove and well constructed table and benches. Screened from view of the camp by masses of laurel was a temporary stable for the accommodation of our four horses.

Our food supply of chickens, ham and corn was brought to us each day by a farmer with whom we had previously made arrangements. He lived far away across the mountain, but he and his mule knew every little winding trail, and each day after he had been our guide on the long excursions on horseback he brought us back without any fuss to the little whitewashed shack.

The horses we used were gentle beasts, with easy gaits and well trained to the rough climbs and descents. In some places it was so steep and treacherous that we found it necessary to cling to their manes to keep from sliding off the saddles, but this bit of excitement only lent its charm to the riding and was not in the least alarming; perhaps it was not even necessary.

One very unfortunate circumstance was the fact that we two women did not wear divided skirts. We had made thin black cotton riding skirts to be buttoned quickly over the one-piece gingham dresses we wore around camp. They were comfortable and convenient, but not at all suited to such rough going. They clung and stuck and tore until in about two days their hems had turned to fringe.

The girl and I quickly solved the problem of cooking; we both pitched in and the men looked after the fire. They made it appear, too, very laborious work when in fact the wood had already been cut and stacked for our use. But I called myself quite tactful to rush off to the spring while I left Kitty frying potatoes and the bachelor prodding the fire, and would not you call it maddening to return—singing lustily—to find them still frying potatoes and prodding the fire?

On our second day in camp we unearthed a marvelous swimming pool cut into smooth rock and well screened from the horses and birds and rabbits—for no person ever came that way—by a natural heavy growth of evergreens. It was a rare treat after a long hot ride nearly all day through the sun to refresh ourselves in this dark, cool bath. And in that part of the world there were no unrighteous mosquitoes nor black flies to make those baths a torment.

The game there is rather scarce, although a bear now and then is reported killed. There are pheasants and quail in season and a few streams that boast of bass. Besides these there are raccoons, opossums and red and gray foxes which the natives hunt with mongrel hounds. The farmers along the New River, which winds around the mountains, may pull out some famous catfish—both mud and blue varieties—of which they are very proud, and they really are very good. There are rattlesnakes in the mountains, but we saw none. The country itself is wild and beautiful and just the place for horseback and a little trip like ours.

We were in an iron ore district and every day visited some mine or big deposit, or climbed slowly up and around a high mountain to eat our lunch and look off for miles and miles through the September haze across the tops of other mountains into another county. It looked as if we might step from top to top across the narrow valleys and pick our way out to level country.

Here and there, away off from nowhere, we would come upon a bit of clearing where a squatter had his abode—a dilapidated cabin containing one room, one window and door and a large family. Poor and destitute they all were, but ever ready with their "Howdy, sir," and "Howdy, ma'am." It is the land of the hookworm, and he thrives well in those parts. At every cabin the shiftlessness of the district was apparent. A broken down step at the threshold sounded a warning of what might be found within. Around this step wallowed and slept the family pig, or perhaps to a nearby stump a dejected cow was tied and fought the flies; a few scraggly chickens strutted in and out of the shanty at will, and as we rode on with few exceptions there would be a grand scramble of children, filthy and ragged, to hide behind their mother or the half closed door. The one window—and rarely did we come upon a cabin with more than one—would contain one or two whole panes of glass, the other apertures stuffed grotesquely with canvas or articles of clothing. On old decrepit fences or stunted bushes we sometimes came upon the family wash, all of it looking only too ashamed that it was supposed to have been near a tub.

This is the way the "white trash" live.

Sometimes there is work at the mines, sometimes there is none, but it makes no difference. There is never a sign of better times, never an absolutely new dress or suit upon the backs of the white trash waifs; nothing ever mended, rarely if ever a patch or darn; nothing ever new but a baby boy or girl.

In one of the lonely valleys we rode up to a habitation more dismal than any other we had seen to ask for water. Now, in that community, it is something to be talked about to have a party on horseback—and city people, too, at that—accompanied by a well-fed dog, pull up at your door and chat awhile. So the excitement within was great. There ensued a scuffling for the largest cracks between the logs and ferret-like eyes peered out at us. A half-subdued squeal we heard quickly silenced by a motherly slap, and she, poor soul, pinched and wan-looking, and no more than able to hold the tiny bundle of humanity that nestled in her arms, supported herself against the creaking door. Trying to appear perfectly at his ease, on the doorstep rested the lord of the manor, an indifferent individual, and looking like he might not have real good reasoning powers. He managed to bestir himself enough, however, to quench our thirst, and without invitation all of us alighted from the horses to give them and ourselves a bit of rest.

Our guide, the farmer, knew these people by reputation and knew that neither parent could read or write. Coming up to where I stood he told me to get the mother in conversation and ask the children's names. This I did, and in a lackadaisical way the half-fed creature answered

a few questions and produced the children. Five girls straggled out from their various hiding places and were induced to tell their names. Here they are as I got them from behind their hands or between their fingers. The eldest, Rosetta, then Gereta; a third, Serena, and the next, Le May; a fifth Lucilia, and if she thrived, the sixth, only a few weeks old (Heaven help her) would some day lisp "Florence Valerie."

That was enough. We thanked them and asked no more. It really was not funny. I rode on with Kitty and found she was biting her lips and blinking very hard, and I never think of those happy, fantastic names that there does not arise the picture of as many hungry faces and the mother of them all.

Daily we traced old timber roads or the rocky beds of dried-up mountain streams, and occasionally in some dark and lonely spot or almost hidden by rocks, came upon the deserted stills of moonshiners, driven out by fear, or at the muzzle of a shotgun. Those mountaineers, indolent and shiftless, slow at work and slow to speak, are quick and ready enough to pull a gun to settle the slightest argument. Almost every man we encountered carried a gun; in fact, they are, I believe, more primitive than in any other section of this country. All they know of law is to "bring suit" and "institute damages."

However, all my time was not taken up merely in the observation of Virginia mountaineers and their unprogressive mode of living. They will never be different and never could be made different, and they all seemed satisfied with their lots, so why should it concern me too much because their homes were not clean and in order when our days were flying by and that provoking bachelor had himself so well in hand?

One night toward the end of our stay I was tired from the long day on horseback and really tired making pleasing situations through which they both placidly moved and suggested that part of us turn in. So we left them at the fire that had long roared itself down to a beautiful glow and lighted up the girl's hair and softened her pretty eyes, until she made just the right picture for any man to fall in love with. I made up my mind that unless something came of such an opportunity as this it was my last attempt at match making. Indeed, anyone but themselves could know they were admirably suited to each other. For a while I heard nothing but the crackling of the embers and a yawn from one or the other. Then, away in the distance, came the plaintive hoot of an owl, and I covered my head that I might not hear what I was so sure would not be meant for anyone's ears but the girl's, when, will you believe me, the bachelor was calling back to that owl and drawing it nearer to camp, until it perched on a lofty pine above us and there made the night hideous.

The last few days passed pleasantly, dreamily by. It had been a little change and a happy one for us all. I regained my reason and thereby discovered that I was the only foolish member of the party, for the girl evidently intends to choose her own life partner and the bachelor his. And, indeed, they must, because I tried so hard to help them and utterly, utterly failed.

HOW THE PARTY WENT THROUGH THE MOUNTAINS.

A Rocky Mountain Goat Experience

By L. O. VAUGHT

IT was the latter part of August. We had left the home camp on the shore of Lake McDonald in Northwest Montana in the region recently made into Glacier National Park, and had gone up McDonald Creek to Granite Park, a name given to an open, parky country just over on the west side of the Continental Divide. It was an ideal place for a temporary camp, plenty of feed for the horses and wood and water for camp purposes. A little lower in the valley were huckleberries by the bushel and so large that we called them green gage plums. A short climb to the east and we looked out over the Blackfoot country and the hazy plains on beyond. One day we crossed over the divide and took in Grinnell Glacier, a baby glacier in size when compared with the great Alaska ice fields, but a glacier none the less, typical in every respect, the blue ice showing over almost its entire surface and with yawning crevasses in which one could easily find an icy grave. Snow-clad peaks, such as can be found only in the Northern Rockies, rose all around us, sharp and rugged.

One morning I decided to take a tramp to the north. I made up a substantial lunch, took my rifle and told them I would not be back until night. I followed the main divide, sometimes on one side and again on the other. I was simply exploring, with no definite end in view. When I got tired I sat down and rested. I kept my eyes open for game, for at any moment I was liable to run on a goat, sheep, bear or deer. However, it was nearly noon and, except for two or three distant goats, I had

A WATERMELON FEAST.
Photographs by Stephen P. M. Tasker.

seen nothing in the way of big game. As I crossed the rock slides the little coneys, interrupted in their hay making, darted into their holes with their funny little squeak. A marmot now and then gave the wild folk notice of my coming by his penetrating whistle. Twice I ran across flocks of white-tail ptarmigan, some of them showing almost half white. They were not so fearless as the foolhen, but still were not wild, and it would have been an easy matter to have killed nearly the whole of them with stones. The old ones led off their flocks, clearly showing their uneasiness and yet with an air of dignity, and they reminded me of nothing so much as an old turkey hen. If I got too near, the old mother gave a peculiar cluck and the little ones immediately froze, just where they were, in a most captivating manner. So perfect was the color mimicry that actually they almost disappeared from sight while in plain view. What a morning I had alone in the heights! The peaceful, abiding joy of such a tramp cannot be told in words, but the heart strings of those who can comprehend will catch the vibration.

I was on the east side of the divide, and had almost reached the top of a ridge or spur running off at right angles to the main divide. As I approached the sky line I dropped to my hands and knees and slowly worked my way up, pausing as I gained altitude to closely scan the new ground brought into view. A final crawl, and as I slowly raised my head the whole side of the ridge lay in view. So carefully and noiselessly had I worked up, that the last stage brought my head above the sky line easily, and in a manner not likely to produce startling results. My heart fair'y stopped beating.

Just over the brow of the ridge was quite a depression, and in this a huge snow bank, and this snow bank seemed to be literally covered with goats, lying down. Breathlessly I counted them—seventeen. The nearest was not over thirty feet from me and the furthest not over sixty. These figures are not guess work, as I afterward verified them by stepping. The goats were so close under the top of the ridge that I did not see them nor they me until my final movement brought my head above the sky line. I scarcely breathed. Instantly about half of them were on their feet, but the rest did not get up. Those which got up started away, took a few steps and stopped, gazing in wonder at the apparition which had risen so ghost-like on the sky line. Nine of them were nannies and the rest half-grown kids. The kids which had risen were rather more nervous than their mothers; the latter stood perfectly still, except that occasionally they impatiently pawed the snow.

I have no desire to appear in the nature faker class, and I do not know whether goats are cud-chewing animals or not. I do know that the goats which were down soon commenced chewing exactly as though they were chewing cuds and they kept it up, exactly like an old cow.

Finding that I was harmless, most of the goats which had risen, lay down, one after another, and resumed their midday rest until finally all were down except one old nanny, who could not quite bring herself to trust me completely, though she showed no great nervousness, but now and then pawed the snow. I noted that the little fellows were chewing exactly like the old ones.

How long I remained just as I was when I first saw the goats I hardly know, but it seemed a long time. At last I grew tired and slowly pulled myself into a sitting position. I supposed at the first movement they would all be off, but not one went. There was a little uneasiness, but that was all. After a time I took my lunch from my hunting coat pocket and proceeded to eat it. I never enjoyed a lunch more than that one. I ate and was almost through when suddenly, without any apparent cause, the whole bunch leaped to their feet and started off down the side of the ridge on the run. I have no idea what started them unless they winded me. Be that as it may, they raced off and were out of sight over a nearby ledge. I remained seated, finishing my lunch.

Soon seven reappeared from almost the exact spot where they had gone over and ran quartering across to the left until they came to a snow bank which lay plastered up against the side of the main ridge. This they crossed diagonally, coming out near the top of the divide, over which they went and were out of sight for good. This last snow bank was so steep that had any one told me that a goat could cross it from bottom to top, I would not have believed it possible. It was almost straight up and down; yet those goats crossed it in a smart walk, never pausing, with never a slip nor a sign of uncertainty, as easily as though they were on level ground. I rubbed my eyes, almost convinced that I was dreaming, but I saw them do it, and after I had finished lunch, I walked over to the point where they had struck the bank and looked at their tracks up and across that nearly perpendicular bank. From that day to this I have never ceased to wonder at the feat, done so easily, by such a big-limbed animal as a mountain goat.

That was enough for one day. It was an experience that comes to a man only once in a lifetime. With my repeating rifle I could probably have killed several of them. Who would trade such an experience for a dead goat?

THE TOP RAIL.

A controversy concerning water finders, in the London Field, proves one thing—that believers and skeptics are all capable of locating pen and ink, if not water. An Australian says he paid a diviner $500 to fix on twenty sites, each said to bear water within 300 feet of the surface, below which distance the diviner claimed his influence did not extend. The owner removed two of his $25 markers and began to dig. All told he ventilated his property to the extent of 1,366 feet, and, encouraged because all the digging was dry, now proposes to continue for 1,000 yards, if necessary, evidently to get his money's worth. If he will then drop the diviner in the shaft, perhaps that worthy will revise his opinions as to moisture.

Another writer proposes a novel test for "dowsers," or water witches. He says he knows of a place where water is conveyed for a distance of twenty-seven miles in large underground pipes, up hill and down. He offers to ramble over this section, crossing and recrossing the hidden pipes, in company with any dowser possessing the courage, whose guesses can readily be checked on engineers' maps or by anyone familiar with the location of the pipes and siphons.

* * *

Years ago every man who hunted game near the Mexican border was in constant dread lest he fall into one of the many prospect holes that honeycombed the lead and copper-bearing hills. I have seen these shafts in places where it was popularly believed no white man had ever been before, the comparative freshness of the earth and stone thrown out disproving this belief, and the drill marks and camp signs showing that the early American prospectors did not advertise their whereabouts. In some places where men or animals failed to put in an appearance at customary times it was thought they might be waiting at the bottom of some hole for their friends to haul them out. Frequently the holes were shallow, extending to bed rock only, but others were deeper than Bill Nye's gold mine, over the rim of which he said he could still see the hat of his Hibernian helper, although the depression made by the latter in the earth's surface had cost several burro loads of grub and much of the humorist's cash.

In one of the little 'dobe flats a diviner had "located a fine vein of water," and the man who paid the bill employed two Mexicans to dig, at so much per foot of depth. Gleefully these men performed their task, for the digging was through soft earth, and when next the owner visited them they were seventy feet down and going strong through dry sand. They did not want to stop, but when at last persuaded to do so left the wide hole totally unprotected. I had passed near it many times before I noticed the trap, which was beside one of the many game trails.

A short distance away there was an outcropping of lava, and in this lava there were numerous deep fissures. At one place there came from a great fissure the far away sound of water running as through a gorge. Geologists maintained that a great underground river crossed the country near there, and we of that locality always believed that the sounds we heard when the air was calm came from that river. But if so the diviner's "influence" was not so persuasive as his "gift of gab."

* * *

The coachman, says R. B. Marston, is a jolly good fly. I sometimes tie it with landrail wing or a light starling wing, and used in varying sizes it will kill, as Mr. Plumley says, "all the time"—he used it wet, I use it dry. Coachmen get wet at times, but I never knew one who was not always "dry."

The coachman always reminds me of the old story which I have often told in the Fishing Gazette of the London angler who was invited to fish on a friend's trout water near London. He was sent off to a good stretch of the water, his host going up stream. At the end of the day the host, who had not done any good, met his friend, beaming and with a heavy creel.

"What did you get them with?" said the host.

"Coachman."

"Coachman!" said the host in disgust. "Why, that's the wrong fly!"

Grizzly King.

NATURAL HISTORY

Facts for Breeders of Quail.

Some of the important facts elcited by our biological experiments and observations incidental to rearing and liberating bobwhite may perhaps throw some light upon some causes of disappointing results in the numerous attempts made by sportsmen's associations and indivdiuals to restock depleted covers.

The most significant cause of ill success appears to be due to lack of knowledge of the importance of the family ties in this species. The family flocks keep together until the approach of the breeding season. We have repeatedly observed that a bird from another flock was received into full membership in the family only after much strife, in some cases resulting in the death of the stranger. In cases where, for example, two flocks were put into the same box for transportation to the place of liberation, the flocks quickly assort themselves when freed and seek separate feeding grounds. Birds from different flocks usually do not unite into one flock, but wander apart seeking their old covey companions.

Apply these facts to conditions which obtain in cases where quail are purchased for liberation in large quantities. Ordinarily they are trapped by boys or negroes in the South, a small number being taken from different flocks. These are then taken to the country store where they are confined with birds similarly taken in different parts of the country. The original flocks are hopelessly mixed. They are taken North and liberated either in the autumn or long before the mating season. The birds then thus liberated wander off, each seeking its original flock companions. The chances of these birds uniting into coveys of reasonable size are very remote. If they do not so unite, the chances against enemies are exceedingly small.

We have noted repeatedly that in instances where a covey was harassed by a cat or a fox, the neighborhood of the roosting place was changed nightly, whereas if they were undisturbed they chose the same roosting place repeatedly. The peculiar and well known manner in which the bobwhites arrange themselves is a great safeguard against prowling enemies, and the safety of any one individual is enormously increased in proportion to the increased size of the flock.

A further complication arises as a result of the temporary confinement of the birds in old chicken coops. Here they are exposed to infection from the parasites, both animal and vegetable, so frequent in domestic poultry, but to the effects of which domestic poultry is relatively immune. Then follow the diseases peculiarly fatal to bobwhite and known under various names, coccidiosis, "blackhead," white diarrhea, etc., Alabama quail disease. As a result of long confinement may follow lung diseases (either inflammatory or fungoid), digestive or excretory derangements.

The obvious remedy for these untoward conditions is artificial propagation with the necessary precautions to grow healthy stock, and to prevent the spread of infectious diseases.

Robins in Texas.

Grand Saline, Texas, April 24.—*Editor Forest and Stream:* Is it common to see robins in Texas in nesting time? A pair of robins are here apparently making all preparations to build a summer home—I hear the sweet notes of the male, while perched at the top of some tall tree, in the grove, at nightfall, and also during the morning hours.

I am watching these birds with much interest, as I have never seen robins nest in Texas, although I have been a resident of the State for a number of years.

I used to watch the home building operations of the robins, in my native State (North Carolina) with great interest, as they would carry the loads of mud and mould them into a perfect little mud house, then line them with soft material, mostly feathers, picked up around the poultry yard, and also some of the feathers from the breast of the coy little wife.

The robin is not a common visitor to this section of the State at any time, and I am surprised, as well as interested to see this couple tarry here so late.

I have been unable so far to ascertain if they are actually building a home or not, but hope to learn definitely soon.

F. E. Whittemore.

Rodents and Forestry.

It has more than once been explained that a difficulty met with in the Western country by the modern forester is that the seed of forest trees which he sows is carried away or eaten by small rodents as rapidly as he can sow it. Mice, chipmunks and ground squirrels carefully go over the ground where the seeds have been sown and within a few days after planting devour from 30 to 70 per cent. of the seeds. Careful trapping by a member of the Biological Survey over a half acre containing 2,000 seed spots, yielded him three chipmunks and eleven white-footed mice, which in three days had devoured 70 per cent. of the seed. One chipmunk was seen to visit thirty-eight seed spots in four minutes. Thus the work of these rodents renders vain the efforts of the forester.

Ned Dearborn, expert biologist of the Survey, has just printed a paper which deals with Seed Eating Mammals in Relation to Reforestation. This is really only the beginning of an investigation of the subject of country-wide importance.

When the employees of the forest service learned that their seed was being eaten and carried away by these little mammals, efforts were made to protect the seed by coating it with red lead, copper sulphate and coal tar, which might be supposed to be distasteful to the animals. However, it appears that these rodents always remove the hulls of such seeds and thus get rid of the disagreeable coating before they eat them. The most effective way to terminate these depredations is to destroy the rodents before the planting is done. This is accomplished by poisoning in the way described some months ago in Forst and Stream by Dr. Merriam in the case of the California gray squirrel.

The grain used is wheat, and the other materials are starch, saccharine, pulverized strychnia and water. A mixture is made of the starch, saccharine and strychnia in water which is heated to boiling, until the starch begins to thicken. Then the wheat is added and so thoroughly stirred that every kernel receives a coat-

ing. In damp or rainy weather melted tallow may be substituted for the starch. In this case the wheat should first be slightly warmed, the saccharine and strychnia added, and the tallow then applied, about a quart answering for a bushel of wheat.

Mr. Dearborn advises distributing this poison under logs and shelving boulders. A bushel of wheat is enough for forty acres. The best time to put out the poison is in spring, when food is scarce.

Snakes of England.

Weald Park, Brentwood, England, April 20.—*Editor Forest and Stream:* In your issue of Feb. 11, on page 217, there is a short reference to the British viper. As a gamekeeper from birth, I have had every opportunity to observe the four varieties of reptiles—all we have here in our old Anglo-Saxon land. The first of these is the ring-necked snake, sometimes called grass snake, and well known over the greater part of England. This is the largest of our four reptiles, some of the females ranging up to three feet six inches in length and with a girth of about three and a half inches in the largest specimens. From thirty-four to thirty-six inches is a good average. This reptile is the only one of the four that is called a snake. The other three are classed as adders.

Frogs are the favorite food of the grass snake, though it does not object to mice and young game birds. It is very timid and quite harmless, so far as poison is concerned. It is fond of marshy, damp land and is generally found not far from lakes and streams, and although not a water snake, as it lives on land, it is a good and fast swimmer and does not hesitate to cross a pond or lake to get out of danger. In color it is usually a kind of olive green, with a yellow stripe behind the head, which has the appearance of a ring and has given it the name ringed snake. This snake casts its skin annually in the late spring or early summer, and this greatly improves its appearance, as the yellow ring and olive green skin then show to perfection. The young come into existence from eggs laid by the female snake. Manure heaps are a favorite place for the snake to deposit her eggs. They are dirty white in color and they are bunched together in small lumps and are hatched by the combined warmth of the sun and manure.

The second variety is the black adder, called in some localities black viper. It is readily known by the curious V-shaped black stripes on its broad flat head. The center of the back is marked from head to tail by zig-zag, diamond-shaped patches of the same color. The remaining part of the body is generally a dirty brown. The bite of this reptile is poisonous and has been known to prove fatal, both to human beings and dogs. It rarely exceeds twenty-four inches in length with a girth about the middle of the body from two to three inches. This, however, is a full limit, both in length and girth, even for the largest females. In some parts of England they are quite numerous, but more so years ago than now, for gamekeepers have never shown them any mercy, as they are dangerous both to sporting dogs and young game birds. I well recollect also the time when I was managing a big park of deer down in the South of England, finding dead newly-born fawns with their heads swollen double their natural size that had been bitten by this reptile.

Unlike the ring-necked snake, this is not timid, but quite the reverse. It generally lies in a coil and prefers to strike rather than to move out of the way, whereas the snake will always make its escape if possible. All four of our English varieties of reptiles hibernate for about five months, more or less, according to the seasons and weather. The black adder leaves his winter quarters in March, at which time he is generally in very good condition, and his fat when refined into oil, is considered an excellent antidote for deafness. It is also said to be a very good remedy and cure for its own bite. The young of this reptile are not hatched from eggs; they are brought forth alive, are black in color and about two inches in length at birth. They are generally from five to eight in number. They are found in the spring of the year on sunny hillsides, the female adder and her young being together. It is said by some people and generally believed in rural districts in many parts of the South of England that when the young adders are quite small, say only a few days old, if alarmed the mother viper will permit her young family to enter her mouth and pass into her stomach, and there to remain until the danger is past, when they are again returned to daylight. Personally I cannot verify this statement, as I have never actually seen the occurrence, although I quite believe there is some truth to the assertion.

Both black viper and ring-necked snakes are great lovers of all kinds of young newly-hatched birds. They will even crowd up into bushes a few feet from the ground to rob the song birds' nests of the young.

The third variety is known as the red viper. It is a small, but an extremely vicious reptile and will strike at the first opportunity. It seldom if ever exceeds twelve inches in length and both head and body are more inclined to be flat than round in shape. Its color is a rusty red or might be called reddish-brown. It is found in the southern counties of England, but was never very plentiful even in the south, and in many parts of the country it is never seen and is quite unknown. In this locality where I rusticate, I have never found one of the kind, although I have been residing in this county upward of twenty years.

Red vipers are uniform in color; that is to say, the diamond-shaped black patches on the back, which are so conspicuous in the black adder, are totally absent in the red variety. Red vipers are generally found high up on dry sunny hills, but I have never seen more than a single one at the same time and place, whereas with the black variety it was not unusual a few years ago to find several adult adders lying within a few feet of each other, especially in the early spring, immediately after leaving their hibernating quarters.

The fourth variety is the small deaf adder, ranging from nine to twelve inches in length. In color they are a uniform glossy brown and are well known over the greater part of the country. The head is not flat like the black and red varieties, but small and oval, they are quite harmless and very slow in motion. It lies at full length, never in a coil. It never attempts to strike and seldom if ever tries to escape.

H. Hickmott.

Birds Near Washington.

Washington, D. C., April 29.—*Editor Forest and Stream:* On Saturday, April 22, an excursion was made by the Audubon Society of Washington, D. C., to the Dike, on the Potomac, near Wellington Station, between Alexandria and Mt. Vernon, Virginia, with T. S. and William Palmer, of the Biological Survey, and the National Museum, respectively, as guides.

The start was made in the morning under lowering skies, with a chill northeast wind, and the thermometer at 46 degrees. Later in the day, on the return to Washington, at 1:30 P. M., it registered as low as 40 degrees. The Dike, a narrow strip of land extending into the river at right angles with the shore, is lined with trees and occupied by fishermen's huts. Plenty of freshly caught shad and innumerable oyster and clam shells were in evidence, as well as a setter bitch with a new born litter of pups. She greeted the visitors very amiably, however.

In spite of the unfavorable weather a number of birds were observed, most of which were found on the Dike. Upon arriving at the point of destination the party ascended the slope leading from the river across and beyond the tracks of the Washington and Mt. Vernon railway. Here were cultivated fields interspersed with groves and thickets having the appearance of suitable breeding quarters for birds. Some of the birds observed on this elevation were white-breasted nuthatches, yellow-breasted warblers, black-capped titmice, field sparrows, towhees (*Pipilo erythrophthalmus*), juncos, chipping and song sparrows, cardinals, bluejays, brown thrashers, mourning doves, Carolina wrens, white-throated sparrows, golden-crowned kinglets, phoebes and purple finches.

On the Dike the following were seen: Downy woodpecker, Bonaparte's gull (fishing in flocks on the river), red-winged blackbird, purple grackle, flicker, meadow lark, chimney swift, barn swallow, catbird, tufted titmouse (*Bæolophus bicolor*), blue-gray gnatcatcher (*Polioptila cærulea*), pine warbler (*Dendroica vigorsi*) and swamp sparrow (*Melospiza georgiana*).

On the trip down and at New Alexandria, spotted sandpiper, osprey (circling high above river), bluebird, black American crow, herring gull and scaup duck were sighted.

At 12:30 P. M. rain began to fall and compelled a reluctant return to Washington. The trip, although of very short duration, could not be termed a failure.

S. M. Cronberger.

Passing of the Antelope.

The pronghorned antelope, an animal peculiar to North America, is in danger of extinction. This antelope, which has so many peculiarities that naturalists class it in a family by itself, once existed by thousands on the open Western plains. The naturalists of the country fear its absolute extinction in the near future unless protection is given to the few remaining.

In 1908 the biological survey estimated that the total number of antelopes in the United States had been reduced to 17,000. Of these about 10,000 were in Montana, Wyoming and the Yellowstone National Park, and the remaining 7,000 were distributed in twelve other States. —Chicago Daily News.

GAME BAG AND GUN

In Santo Domingo.

WALDEN, Colo., April 22.—*Editor Forest and Stream:* In 1901 I had occasion to spend nearly a year on the island of Santo Domingo. The part of the island in which I located, called the Dominican Republic, has the reputation of being inhabited by white people. There are some of foreign birth who are white, but the natives are of all colors from light yellow to black and have kinky hair.

There is an abundance of small game. Many of the birds I am not familiar with, and I could find no one who was able to enlighten me about them. There were two in particular I consider good enough to please even the epicure. One was a long-legged, white-plumed bird with a great crooked bill. It fed on the mud flats, but roosted in the trees. The native name is "Cocoa." The other is a fair sized duck that moves about and feeds at night, and during the day hides in the dense thicket. "Ya-gaw-say" is as near as I can pronounce its local name.

What most surprised me was the immense flocks of wild pigeons. Some days I saw a constant stream of these birds flying over the swamp, reminding me of the stories told by our grand parents of pigeons obscuring the sun. I do not know whether these are of the same species as those I occasionally shot in New York when, as a youngster, I toted an old musket around. The size, color and flight seem similar. This calls to my mind that in 1898 I saw quite a number of pigeons much resembling the above, near Fort Apache, Arizona. I shot several to see if they were the same we once had in the East. I thought they lacked the lavender color on the breast and under the body.

I was invited by the owner of a cocoa plantation to visit some little islands down the coast where small game was plentiful. He furnished a large canoe or dugout at least thirty feet long, and we started from Sabana la Mar at 2 A. M. When the wind was fair, we put up a sail and skimmed through the water about as easily as any ordinary boat, but we had to be very careful, as a log boat will easily capsize. When wind was adverse, two negroes rowed, and we made very fair headway.

Just before daylight we heard the flutter of innumerable waterfowl, and as the sun came up, saw what I supposed was an immense flower bed which proved later to be a flock of flamingoes on a sandbar. We tried to sail close enough to get one, but they walked nearly as fast as we were going and finally disappeared in what seemed to be a tangled swamp. I went ashore, if one could call it ashore, and by climbing over roots of trees and wading through mud came to an opening in the jungle that the birds had followed and was fortunate enough to get a shot at not more than thirty yards and killed the bird with No. 6 shot. Young flamingoes are fairly good for food, but not even the negroes would cook this old one.

At about 8 A. M. we reached our little island, and the Dominicans promptly started on their hunt. This consisted of taking everything they met with in the way of meat. They robbed the nests of eggs, took the young birds if large enough to eat, and even wrung the neck of the mother bird if they happened to catch her on the nest.

I did not suppose it possible for so many and such a variety of birds to rear their young in so small a spot. It seemed as though every bush had a nest in it somewhere, and occasionally there were several nests of different kinds on the same branch.

There are no game laws in that country and the people do not know the meaning of the word protection. It was useless to expostulate, and I dare say my companions believe to this day that they gave me a royal hunt.

The carnage was soon over and we had a boat load of eggs and birds, and then headed for my host's plantation. The negro in charge saw us coming and had a pig killed and dressed in honor of the visit. He took us around the place, and showed us how to find turtle eggs which we dug out of the sand, and they made a very palatable addition to our meal. He also flushed a flock of wild guinea hens, but I killed only one, as they seem to find the densest thicket almost instantly.

It is difficult to imagine anything more primitive than the way these people live outside of the towns. Their hut was made of poles thatched with the leaves of the royal palm. A small pile of dry grass made their bed.

There was one large iron pot in which everything was cooked, so in it our pig found his last resting place. Rice was placed around him, pieces of pumpkin and yams added, then came a few bananas, and last of all our turtle eggs were put in.

The cow was milked in a large gourd, and we drank from cups made of the shell of the cocoanut. Plates, forks and spoons were manufactured from a parchment sort of bark that is torn from the palm tree by the wind, and each person helped himself from the iron pot which occupied the middle of the floor. Being very hungry I enjoyed this meal as much as any picnic dinner I have ever had.

The weather, which up to this time had been perfect, changed suddenly and we were treated to a shower such as one seldom sees outside the tropics. I had always thought it rained in drops, but this came in streams, and it continued all night. I had either to sleep with my dark companion or in the rain, so rolled up in a rubber poncho and chose the former.

The next morning the country was flooded, as the river had risen twenty feet in fifteen hours. This is not unusual, for on another occasion a river rose thirty feet after a shower.

Our return trip was uneventful. We could have shot a wild hog, but we had as much meat as we could care for.

I was invited to go again for guinea hens, but one of their semi-annual revolutions came along in the meantime and I had to call it off.

C. H. F.

The Rearing of Pheasants.

Concluded from page 655.

The incubation of a pheasant egg takes twenty-three to twenty-four days. During all of this time the setting hens should be exceptionally well treated. About five or six o'clock each morning they should be very carefully taken off the nest and put into the hatching house yard, a small inclosure with a 6 by 8 foot wire fence, where they are fed and watered. In the corner of this yard put some sand or ashes in which they may bathe. All hens in one compartment should be taken off at once by hand. If only a few were taken off at a time the rest would become impatient, tramp about on their eggs and break them. Within a week they will become accustomed to all this, and behave accordingly. In this, as in anything else, one must be punctual and always patient and kind. If you start feed-your hens at 5 o'clock you must always feed them at that hour. They will look for you at that hour, and if you do not show up, there will be trouble with no one to blame but yourself.

The hens are left off their nests for twenty to twenty-five minutes, then replaced on their eggs. Each hen must be placed on her own nest; you cannot put them back in any old way. If you do not look after this properly there will be more or less failure in hatching. To avoid all mistakes, each setting box is numbered and a corresponding number stamped on a metal ring is put on one leg of each hen.

The average temperature of eggs in natural incubation is from 98 to 103 degrees. If it be very hot and dry during incubation, the eggs should be moistened by sprinkling a little lukewarm water over the whole nest occasionally, but this should never be neglected a few days before hatching. This not only assists the chicks to break the shell, but they will hatch strong and lively, and only a few hours later will appear from under their fostermother to look with the greatest of interest at their new surroundings, even attempting to peck on unsteady little feet at an imaginary something. For twenty-four hours at least after hatching, hen and chicks must not be disturbed.

Now the time has arrived for the most difficult part of the program, the rearing of the young poults, but before writing of this I would like to say a few more things about hatching. In each hatching room must be kept a book in which the dates of each setting and each hatch are recorded; also the number of eggs hatched, number of bad eggs, number of chicks tramped to death by the hen, etc. The eggs should also be tested several times before the hatch comes off, and all eggs that are dead must be removed. Comparatively fresh eggs such as have been set on for five to ten days are very good to feed the young chicks on, but all older than that should be buried. Beginners in the pheasant business must use a tester, while experienced keepers and breeders can tell whether or not an egg is alive by a very tender shake and listening at the same time.

Now we are coming to the actual rearing of the young pheasants, and to the time when the keeper counts for everything, for a false move, be it through carelessness or inexperience, will result in losses among the young birds. He has to watch over his charges constantly and protect them from every possible harm, for the birds have many enemies. Animals and birds of prey are waiting for them and catch and carry them off surprisingly quick and unexpectedly. The keeper should at this time always have his gun ready and his traps set for winged and furred prowlers. Here in the Southern States a sharp lookout must be also kept for snakes, especially the so-called chickensnake, the coachwhip and the common blacksnake, but the first named snake is by far the most dangerous, as one of them will clean up a coop of young chicks at a meal. I killed one on Jekyl Island which had actually swallowed eleven chicks, all of which were nearly a week old, and another one which had swallowed nine chicken eggs. The danger from this snake cannot be overestimated, and it should be killed wherever and whenever found. On the same place I have also killed blacksnakes and coachwhips, which had swallowed young pheasants and quail.

Twenty-four hours after hatching, the chicks with their foster mother are taken from the nest and placed in a coop where they are given their first food. The coops should be at least 20 inches high in front, sloping down to 12 inches in the back; at least 2 feet 6 inches long and 2 feet wide, and they should have floors which should be raised about 2 inches, so as not to touch the ground. The front of the coops can be made of lath, but I prefer half-inch mesh wire in which is left a swinging door 6 by 8 inches to admit the old hen and several small openings for the ready access and egress of the little birds. The other three sides and the top of the coop are made tight, the top or roof being in addition covered with tar paper. During the nights the front is also closed by a solid board door. The floor of the coop is made so that it can be removed. For the first six weeks the chicks undoubtedly do much better on a floor than on the ground, which during the night and in wet weather is too cool for the young chicks and easily chills them—and chills are very dangerous, leading to various diseases.

For the first three or four days a small run is kept right in front of the coop into which the little pheasants may go at will. This is very important, because if no such run were there, the chicks would run out, never to return, and as they are very hard to find in the grass, they usually perish. This small run is for the purpose of keeping the chicks near their foster-mother, so they will learn and understand her cluck, which of course is entirely different from that of a hen pheasant, and the little birds have to get used to it. So the run or inclosure should never be forgotten or neglected, as without it a keeper will surely come to grief.

The food of the young pheasants must be looked after with care. For the first twenty-four hours after hatching, as mentioned before, they must not be fed, as the yolks of the eggs from which they were hatched will fully sustain them for that length of time. For two or three days they are fed on the whites of eggs, which must be chopped very fine. The little birds should be fed often, say six or eight times during the day, but very sparingly. By this I do not mean to say to starve them; no, give them all they want to eat, but no more. It not only will save food, but many birds also, because overfeeding is not good for old birds, much less for young ones, and the practice of overfeeding will cause the death of many chicks.

While feeding the young birds their mothers should be fed also, but they need only two feeds a day, morning and night. Grain and water should be given them, but the water should be left only long enough to give the old hens a drink. It should never be left standing in front of the coop or inside of it, because the little birds would get into it and drink it, which in their early days is most injurious to them. After the third day the young brood can be fed on Spratt's patent game meal or chick meal. This is one of the very best foods which can be given young pheasants, as it is easily digested by them. I always use this meal without interruption until the brood is six weeks old.

After the brood is a week old, the chick meal should be mixed with a little bone meal, meat crissel, a little cardiac powder and finely chopped eggs, both the white and the yolk; a little fine chopped clover and garlic should also be added, which will be relished very much by your charges. The chick meal should be moistened with hot water only enough to soften it, but not to make it sloppy. Feeding in this way, the birds can go entirely without water, until they are at least one month old, after which time I give them water to drink, but sparingly. A great many keepers feed their broods on custard, whey, potcheese, cornbread, etc., but, as I said before, I have never found anything so good as Spratt's patent game and chick meal, unless it is cut eggs, of which the birds are very fond—or maggots—but to procure maggots is a most unwholesome proceeding.

The food for the first week can be put in the door of the coop where the birds will pick it up without trouble, but later should be put right on the ground, so as to afford them exercise. If the coops have an adjustable bottom, they should be cleaned every morning and some white sand be put in it, but if there is no bottom, the coops should or rather must be moved at least once a day to fresh ground. This is very important and must not be neglected. The hens shou'd be sprinkled once or twice a week with insect powder to keep them free from lice.

By the time the birds are six weeks old they are well feathered and can fly. Now one can commence to feed them grain, always cracked, and also supply them with drinking water. They are well out of danger now, unless the "gapes" or some other disease attacks them, but with care and attention to the smallest detail's the chances are that all will be well.

When nearly grown the pheasants must be penned up, either in inclosed or open pens. From here later on they may be transferred to the covert, where during the shoting season they will be the delight of the sportsmen.

In conclusion I want to say that the following pheasants are best adapted to our American game preserves: First, the common pheasant (*Phasianus colchicus*); second, the Chinese pheasant (*Phasianus torquatus*); third, the Prince of Wales pheasant (*Phasianus principalis*); and fourth, the Reeves pheasant (*Phasianus reevesi*). Charles Brinckmann.

Nova Scotia Guides' Association.

Annapolis Royal, N. S., April 25.—*Editor Forest and Stream:* In your interesting account of the recent Sportsmen's Show in New York, this association is twice referred to as "of Halifax, N. S." The correction of this very unimportant mistake offers me an opportunity to inform your readers in regard to a body of men who are having a most salutary influence on sport in Nova Scotia and are likely to have even more in the future.

The Province finds herself in a somewhat curious position in regard to game and fish protection, owing first to a lack of sufficient funds to apply to this object; and second, because the inland fisheries are administered not by the Provincial Government in Halifax—as are fortunately the game laws—but from Ottawa. The game law, as it now stands, is a fairly good one, though of course no law can please everybody, and is pretty well kept. Nevertheless, there is a lot of illegal killing, especially of moose and ruffed grouse, and the limited funds at the disposal of the excellent and fair-minded chief game commissioner, Mr. Knight, do not allow of anywhere near a proper policing of the woods, especially in close season.

As to the inland fisheries they are practically not administered at all, except as to certain salmon rivers, and that very inadequately. All the trout stocking that took place year before last—latest report still to come—was 90,000, of which the greatest water system in the Province, the Liverpool, received nil. Anyone may take as many fish as he pleases with no danger of being punished, the number of fines for the polluting of streams, catching out of season, etc., being ludicrously small. A protest to the nearest fish warden is most likely not even replied to—mine at least was not. Natives bring home hundreds of trout and boast of it in the public press without even a protest, let alone a movement on the part of the authorities. In a word, so far as the fishing laws are concerned, a state of almost complete anarchy obtains in Nova Scotia.

A movement is on foot, started by this association, to have the Province take over, so far as is legal, the inland fisheries from the Dominion Government, but the Nova Scotia Government exhibits a complete apathy on the subject; "they have their hands full already," it is said. They are also ignorant of the importance of the fisheries, and do not know that the far-famed—and justly so—trout fishing of the Province, that has brought thither so many people and good money, is surely and inevitably deteriorating.

Under such circumstances, since our Government will not help us properly, the importance of an association composed of the guides of the country, trained to ideas and methods of true sportsmanship and economy, and with a clear view of their own interests, can easily be seen. Our members may not all be angels, but they are a fine class of fellows, and they do not allow a sportsman to catch as many trout as he likes. When he has boated his twentieth fish, there are few guides in our band who will net another one for him, but plenty who will flatly refuse to do so.

The Guides' Association, as at present organized, exists only in the western half of the Province. Halifax county, and all east of it, have as yet no representatives, though we are

in hopes that branches will this summer be established in both Halifax and Guysboro counties. The two most influential branches are in Yarmouth and Annapolis counties, established some years ago, and amalgamated then into the present Provincial League. The objects are self-protection, the control of wages, duties and the inculcation of sane ideas of game, forest and fish protection. The results have been excellent, and the influence of the association for good is likely to be incalculable in future, for if you would preserve the garden you must go directly to the gardener. The association is flourishing and growing. The authorities know its value and the chief game commissioner is one of its most enthusiastic admirers. Every summer it holds a most interesting series of sports, consisting of canoe races, shooting with rifle and shotgun, log rolling, log cutting, swimming and fly-casting. This year they will take place at Yarmouth in the latter part of July.

It is our object to protect the public from overcharging and incompetence, as well as to turn out guides who are efficient, respectful without being servile, clean in body and speech, hard working and cheerful; in a word, men with whom it is a pleasure to go into the woods.

A great deal of dissatisfaction was caused last year by the Canadian law which demands a fee of $5 from every foreign fisherman. This fee to be remitted if he remains thirty consecutive days on Canadian soil and employs Canadian guides or boatmen. The trouble lies not so much with the fee itself, for any good sportsman would cheerfully give his $5 under just conditions; namely, if he knew that the fee was collected from each and every foreign fisherman, and that the money was expended on the inland waters for restocking, the punishment of offenders, etc. Unfortunately this cannot justly be said to be the case in Nova Scotia, for while the fee is pretty generally exacted in some few regions, notably in Yarmouth county, it is not enforced at all in most parts of the Province, nor can anybody find out how much money is raised by this fee, or how it is expended. Under such circumstances it is little wonder that many foreigners are dissatisfied.

There is another bad side to the matter: the several under-agents have thus far interpreted the law at their own discretion. For example, at one port the agent insists on the fee being paid when the foreigner lands, even if the latter assures him that he will remain all summer. Another satisfying himself that the foreigner is responsible, or an old frequenter of the Province, lets the man go without paying. These many inconsistencies are bad for any law, and lead to annoyance, on which account the law is very unpopular among hotel men, guides and others deriving profit from the tourist trade. Cases came up last year in which the foreigner refused to pay, or placed the amount of the fee in a lawyer's hands, to be paid over only under protest, and in all cases the foreigners were not bothered for their money. It is to be hoped that the Ottawa authorities will either drop the law or administer it justly and consistently. As to the ethical side of asking a fee to fish in waters which are protected and restocked in such a wretchedly inadequate manner, everybody is entitled to his own opinion.

EDWARD BRECK,
President Nova Scotia Guides' Ass'n.

Politics.

HENDERSONVILLE, N. C., April 26.—*Editor Forest and Stream:* In my last letter, in mentioning our new county game law, I neglected to tell you of a queer provision of it: "It shall be unlawful for setters and pointers to run at large during the close season." It is a misdemeanor and punishable by both fine and imprisonment, in the discretion of the court. I keep, and always have kept, my setter or pointer from running at large; but in our county there may be a dozen of these dogs, while there are hundreds of curs, hounds, etc., that this law does not reach, and many of these dogs are half starved, yet must eat.

Is this not "a daisy of a law?" As Artemus Ward would say: "Why is this thus?" And I would reply: "Politics!"

ERNEST L. EWBANK.

New York Legislature.

Albany, N. Y., May 1.—*Editor Forest and Stream:* The following bills have been introduced:

By Assemblyman Jones, relating to sturgeon nets.

By Assemblyman Blauvelt, providing for the licensing of persons to engage in the business of raising and selling elk and deer.

By Assemblyman T. K. Smith and Senator Roosevelt, authorizing the Forest, Fish and Game Commissioner to make local regulations for taking birds or game, upon request of a majority of the town board of any town.

By Senator Cobb, relating to pheasants in certain counties.

By Assemblyman Gurnett, of Schuyler, three bills relating to establishing a fish and game board.

By Senator Roosevelt, relating to a fish and game board of three members regarding actions for penalties, in relation to the appointment of special game protectors and game wardens.

By Assemblyman Gurnett, of Schuyler, to provide an open season for Mongolian ring-necked, English or other pheasants in one of the counties.

By Assemblyman Evans, of Sullivan county, relating to deer in certain counties.

By Senator Burd:

Concurrent resolution proposing an amendment to Sections 7 and 8 of Article VII. of the Constitution in reference to water storage. It provides that the State may under provisions of general laws construct and maintain reservoirs in the forest preserve whenever the storage of water is necessary for municipal water supply, for the canals of the State or to regulate the flow of streams. Such reservoirs may be constructed only after hearing following public notice. Where property of the State is used for such reservoirs, its value shall be a charge upon any private property or municipality directly benefitted and in proportion to the benefits received. This value shall be paid into the State treasury annually and shall be readjustable at the end of every ten-year period at the instance of the State or of the owners of the property or of the municipality benefitted. Privileges to use surplus waters of the canals, or to impound or divert the waters of navigable streams, including the St. Lawrence river and excluding other waters on State lands within the forest preserve, may be granted under authority of general laws, after hearing upon notice. Privileges to use surplus waters of the canals must be subject to the needs of navigation. Grants of both of these kinds are limited to a maximum period of fifty years. The use of surplus waters of the canals are subject to a rental which may be readjusted at the end of every ten-year period. Privileges to impound or divert waters of navigable natural streams are to be subject to an annual tax for general State purposes imposed by the Legislature. The State is authorized to use any public lands and waters for producing electric light, heat and power for State use or for sale to municipalities The State may acquire private lands for this purpose.

The Assembly has passed Mr. Thorn's bill, providing that there shall be no season for Mongolian ring-necked, English or other pheasants in Erie county prior to October, 1914. At present pheasants may be taken in that county on Thursdays and Saturdays in October.

The Assembly has passed the bill of Assemblyman Miller, relating to fishing methods in certain counties. E. C. C.

Stocking with Game.

Minneapolis, Minn., April 28.—*Editor Forest and Stream:* Game Warden Jones, of South Dakota, is trying to get the Government at Washington to give him something like twenty head of elk for planting at the most suitable points in this State. The Government has appropriated $20,000 for the planting of game in a number of the Western States. The only cost to the various States that get the game which they ask for and which will be bought with the $20,000, is the crating and packing. There are a lot of good points where elk would thrive, and if they were fed during the winter—and the ranchers and farmers say they will attend to this—the chances are good that they will increase and once more roam over the suitable portions of the State.

The State of South Dakota has something over a thousand dollars it will spend in planting pheasants. This is to be a sort of experiment. It is not known just what sort of partridges or pheasants will thrive best in South Dakota, but by planting a few of the Hungarians, some ring-necks and a few of the English, it is expected to get a start that will lead to permanent game of a semi-domestic character.

There is some thought of getting the closed season for chickens to extend throughout the whole year. The small country boy with his dog and gun keep them on the move, and it is only a question of time before the birds will be very scarce.

A few days ago a small deer was chased into one of the western towns of the State by a pack of timber wolves and in attempting to get away the little deer broke one of its legs. The wolves have been reported very savage through some of the western sections this winter, driving game into refuges where man could chase off the attacking foes. Westerner.

Golden Wedding.

Fred Sauter, the well known New York taxidermist, celebrated the fiftieth anniversary of his wedding at Terrace Garden, New York, April 22.

Mr. Sauter was born in Herrenberg, Würtemberg, Germany, Jan. 2, 1839, and after passing through the high school there, his love of nature led him to seek a career which would give him unlimited opportunities for observation and study. At the age of fourteen, therefore, he became an apprentice to Professor H. Bluquet, Curator of the Natural History Museum at Stuttgart, Würtemberg, and one of the first taxidermists of Europe, and soon after took a course in anatomy at the veterinary college.

In 1858, to avoid military service, he came to New York, and in 1860 opened his own taxidermist shop at 15 Franklin street. He continued this business until June 1, 1910, when he retired, being succeeded by his oldest son, Fred Sauter, Jr. Mr. Sauter is a member of many scientific, protective and benevolent societies.

A Conservation Victory.

Conservation in general, and the forest reserves of the West in particular, have just won a notable battle by a decision rendered last Monday by the Supreme Court of the United States. This tribunal upheld the constitutionality of the establishment of the forest reserves for any national and public purpose, and declared that the Federal Government and not the State may decide how these reserves shall be used.

Specifically the decision had to do with the rights of stockmen of Colorado on the forest reserves. Suit was brought to enjoin Fred Light, a Colorado cattleman, from permitting his cattle to trespass on the Holy Cross Forest Reserve. The defendant argued that the Colorado fence law was a bar to a suit for damages for trespass, while the Government replied that the fence law applied only to individuals and not to the State of Colorado or to the United States. Certain sheep men, indicted for trespass on the Sierra Forest Reserve in California, must stand trial.

The subject was dealt with and two opinions delivered by Justice Lamar in which the entire court concurred, and the general principle laid down by the justice was that "the nation is an owner and has made Congress the principal agent to dispose of its property."

Dealing with the Colorado case, Justice Lamar said:

"The United States can prohibit absolutely and fix the terms on which its property may be used. As it can withhold or reserve the land, it can do so indefinitely. It is true that the United States does not and cannot hold property as a monarch may for private and personal purposes. But that does not lead to the conclusion that it is without the rights incident to ownership, for the constitution declares that 'Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or property belonging to the United States.

"'All the public lands of the nation are held in trust for the people of the whole country.' And it is not for the courts to say how that trust shall be administered; that is for Congress to determine. The courts cannot compel it to set aside the lands for settlement, nor to suffer them to be used for agricultural or grazing purposes, nor interfere when in the exercise of its discretion Congress establishes the forest reserves for what it decides to be national and public purposes. In the same way and in the exercise of the same trust it may disestablish a reserve and devote the property to some other national and public purpose. Those are rights incident to proprietorship, to say nothing of the power of the United States as a sovereign over the property belonging to it.

"Even a private owner should be entitled to protection against willful trespasses, and statutes providing that damages done by animals cannot be recovered unless the land had been inclosed within a fence of the size and material required do not give permission to the owner of cattle to use his neighbor's land as pasture. They are intended to condone trespasses by straying cattle. They have no application to cases where they are driven upon unfenced land in order that they may feed there.

"Fence laws do not authorize wanton and willful trespasses, nor do they afford immunity to

those who in disregard of property rights turn loose their cattle under circumstances showing that they were intended to graze upon the land of another. This the defendant did under circumstances equivalent to driving his cattle upon the forest reserve."

Justice Lamar declared the judgment right on its merits, regardless of the question as to whether the Government had inclosed its property. This made it, he said, unnecessary to pass on other questions raised in the case.

The interest in these cases was widespread throughout the West, and in the Colorado case the State intervened, the attorney-general taking the side of Light in the matter.

This is one of the most important decisions ever rendered with regard to conservation matters. It has a special and most interesting bearing on the question of national parks and game refuges, and takes the same ground with the opinion expressed some years ago by Attorney-General Knox with regard to trespass on the forest reserves. It offers great encouragement to all who are interested in the conservation of natural things.

Canned Duck.

THE Louisiana Game Commission has received an opinion from Dr. T. S. Palmer, of the Biological Survey, to the effect that while it will not be illegal for factories or individuals to can ducks and sell them during the open season, that is from Sept. 1 to March 1 of each year, it would be illegal to sell the canned ducks during the closed season. The simple canning of ducks does not cause this bird to lose its identity, and those who sell them in the canned state would be just as guilty as the person who shot the ducks during the closed season. Dr. Palmer expresses the opinion that if his construction of the law is carried out, it will discourage the canning of ducks, as the industry will not be very profitable.

The Sheide Bill.

IT is reported from Albany that Mr. Sheide is taking steps to bring up again his bill to repeal the law forbidding the spring shooting of wildfowl. Game protectors should be on the watch for the revival of this bill, which should not be allowed to pass.

For a Single Commissioner.

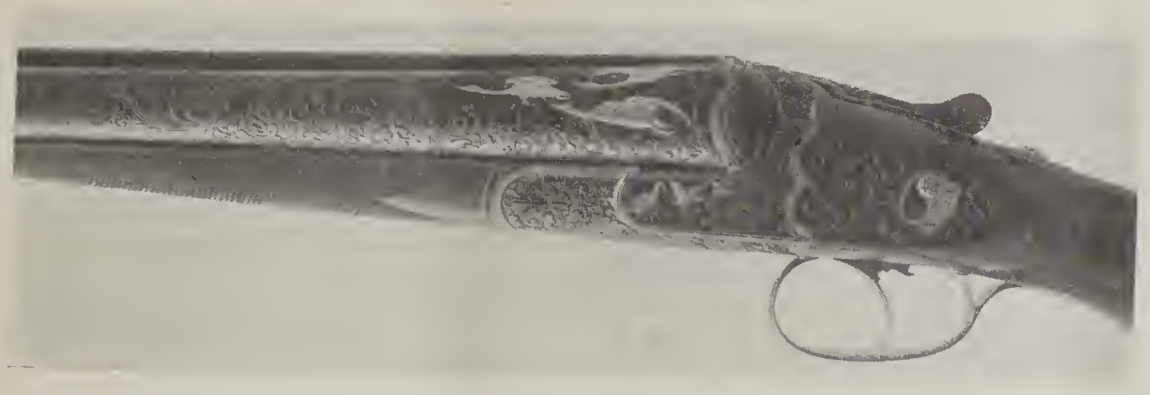
BOSTON, Mass., April 29.—*Editor Forest and Stream:* The plan of a single head for the Fish and Game Commission instead of a commission of three men as heretofore was strongly urged by many of the sportsmen's clubs before the committee on Fisheries and Game, and one of the bills presented provides for combining the Forestry and Fish and Game departments.

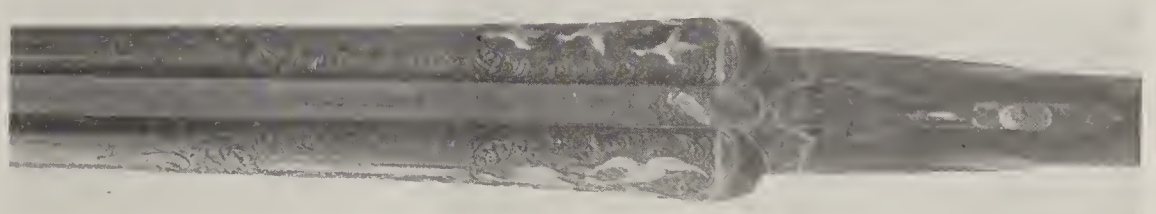
H. H. KIMBALL.

A Beautiful Gun.

A DUCK gun, which is extraordinary for its beauty and for the engraving on it, has been manufactured by J. P. Sauer & Sons, for Lowell M. Palmer, Jr., and was delivered to him only a short time ago. It was ordered last year through Schoverling, Daly & Gales.

Mr. Palmer is a well known sportsman and a member of many shooting and other clubs. One of his hobbies is to own highly ornamented and consequently very expensive guns. He already possesses a number of beautiful guns of 12, 16 and 20 gauge, and this one of 10 gauge is the most recent addition to his collection.





TWO VIEWS SHOWING THE ENGRAVING ON MR. PALMER'S GUN.

The arm has 34-inch barrels and weighs 10 pounds 3 ounces. It is chambered for 3-inch shells, and the length of stock is 15¼ inches. It is fitted with a single trigger. The barrels and the action are engraved with various birds; ducks, geese, swans and others. Mr. Palmer's crest is engraved on the trigger guard and the barrels have relief engraving.

The gun took more than one year to manufacture. The engraving is from designs made by the best artisans, following the suggestions of Mr. Palmer as to the kinds of birds he wished to have represented. The photographs give an excellent idea of the engraving on the gun.

Changed Michigan Game Laws.

GAME legislation in Michigan has given that State a slightly improved law, though the excellent bills advocated by the Michigan Association, for the most part, failed.

A great deal of hard work was done by earnest sportsmen, among whom W. B. Mershon, of Grand Rapids, was one of the most active and energetic. The bills fathered by his association successfully passed the State Senate and were all favorably reported by the committee of the House. Later the bill to put the handling of game protective work in the hands of a non-partisan commission was killed—as it is reported by political influence. The leaders of one of the parties are said to have declared that the influence of the forty deputy game wardens was needed by that party, and that the bill must be killed. So said, so done. The hunters' license bill was also killed. Members of the Audubon Society, of conservation committees, of women's clubs, and sportsmen of the Michigan Association, all these bodies representing some 20,000 people, tried to influence the Legislature, but without great results.

At the very close of the session the Michigan Association's general game bill, which had been thought to be killed, was passed in more or less mutilated form. The spring shooting season was shortened by ten days, so that fowl may now be shot from the 1st of March to the 10th of April instead of to April 20, as formerly. The bag limit of ducks is somewhat reduced. The bag limit on ruffed grouse is greatly improved, having been reduced to six instead of twelve per day. Only fifteen birds may be had in possession instead of fifty as formerly, and a limit of fifty to be killed for the season has been established. Formerly there was no limit.

On the other hand Michigan needs sharp enforcement of her laws. Good laws are good for nothing unless enforced.

Time to Reflect.

OKLAHOMA CITY, Okla., April 18.—*Editor Forest and Stream:* Mention was recently made in FOREST AND STREAM of the confiscation by game wardens at Enid, Okla., of nearly 300 dozen quail en route to a Chicago dealer. The shipment was made by one Paris Rupert, a produce dealer at O'Keene. Egg cases were used and in transferring the same at Enid, feathers protruding from one of the crates called attention to the contents. Rupert was arrested charged with the illegal killing and handling of quail. The case was called in court a few days ago. The defendant pleaded guilty to having in possession the illegal shipment of game birds and was fined $200 and given thirty days in jail. Rupert is an old offender and has frequently been fined before, but this is the first time he has had to go to jail.

The law provides that a fine of $5 for each bird may be assessed. Had this been done the total fine would have been over $17,000.

Considering the offense and the offender's utter disrespect for the game law and his continued defiance of same, the punishment meted out to him is mild in the extreme.

W. T. WHITEFORD.

SEA AND RIVER FISHING

Brook Fly-Fishing.

THERE is a fascination about fly-fishing a small brook that is different from any other angling pursuit. It is not every one who has the patience for this work. But to those who have, there is a satisfaction in getting a good fish under adverse conditions.

If in fishing larger waters it is conceded that up-stream work will bring the best results, it is also true of brook angling. Indeed, the method is really more important on brooks than on greater streams.

It is frequently true that the pools of a small brook are open and have little cover—at the upper end—and some other place for casting must be chosen. The sides of such pools, however, have just the contrary difficulties; masses of weeds, grasses and bushes are found there. It is only from the lower end that the angler can get a decent cast.

In the days before I practiced the productive art of wading up the current, I used to go around the best pools, when fishing brooks, and take my casting position below. Now I invariably wade directly up the narrow watercourse, swinging my line back and forth between the ferns and overhanging jewel-weed.

On small waters the angler will do well to remember that the lower he keeps his head the more fish he will catch. There are places where he should wiggle upward along the bank on his knees. If lowliness and willingness to "stoop to conquer" are not parts of the fisherman's make-up he had better pass by this form of sport.

It is not stooping that I object to so much as I do to the wicked affinity that my fly has for thistles, bee-balm, and weeds. On large streams, and in an upright position, the angler is not so often driven by his back-cast almost to desperation. At such times it is important not to get rattled; just calmly crawl back and disentangle the fly, and slip forward again like a mink.

The rod for up-brook fly-fishing should be as short as the angler can use and yet get out a fair length of line. I made a rod for this purpose only 7½ feet long; but, although almost perfection for the most of a brook, yet there are times when a 50-foot cast has to be made, and the dainty wand is not up to the work. By experience I have found that an 8 or 8½-foot rod of split bamboo is well adapted for small brook fly-fishing. It should be light, not more than 4 ounces in weight. Indeed, I have been shown, but have never had the opportunity of trying, an 8½-foot rod weighing 2½ ounces. I think that this delicate weapon would be just the thing for a small brook.*

The flies for brook fishing should be most carefully chosen. In general, they should conform with the needs of the geographical situation of the stream. In Canada the usual Canadian flies should be used, but smaller than those intended for lake and large river fishing; Montreal, Parmacheene belle, red ibis, silver doctor and coachman make up a formidable battery. The sizes should be from No. 8 down to 12 or 14.

In the brooks in lower New York and throughout the Middle and Eastern States the following list should cover the ground, rather the water, pretty thoroughly. Coachman, Cahill, cow-dung, brown hen, professor, queen of the water, grizzley king and the hackles, brown, black, gray and ginger.

Only one fly should be used. It is difficult enough to keep a single fly from being hitched up; two are too many, and three are rank folly. In this respect brooks are altogether unlike lakes where, over the latter, it is possible to string on the leader as many flies as the fisherman desires. The rule is pretty definite; the smaller the water, the fewer the flies that can be used to advantage.

The leader should be round, fine and strong. Drawn gut leaders have their place—on open, low, clear pools and on mirror-like lakes or ponds—but in fishing a brook their cobweb tenuity is a danger and an exasperation. Many times an hour the angler is sure of hooking weeds, bushes and trees. If the leader is too delicate for the task, it will snap with the forward swing of the rod, leaving the fly as a curio for the birds. So choose leaders that, while fairly fine, are up to the work; to be precise, let them be tested to at least a 3-pound strain.

There is a little point about the tackle that is somewhat important. The reel should not be made with what the tackle dealers call "raised pillars," but should be provided with a smooth band of metal around the frame. When fishing a brook, it is frequently necessary to push the butt of the rod behind the angler, and "raised pillar" reels have a way of catching on twigs and stones.

My favorite fly at nearly all times is the coachman, not only on brooks but on larger waters. If the coachman is taking I don't generally bother to make changes. But one day, noticing that my fish were running rather smaller than it seemed to me they should, I changed my coachman for a black fly of nondescript pattern which I had bought because it "looked good." The result of the change was immediate and amazing.

The brook was a small one in Sullivan county in New York State. It is well stocked with both brown and native trout. As I said, I had been catching smallish fish before I made the change in my fly.

Just above where I was standing lay a narrow, deep pool, completely shut in toward the upper end and on the sides by over-hanging trees. But from where I stooped, between the rocks below, I could drop my fly into the tail of the smooth water just above where it broke over the stones.

If a dynamite bomb had exploded above me it could hardly have amazed me more. Where he came from with such startling quickness it is impossible to understand. His rush was like that of a black bass; he surged at the fly, not breaking the water.

I saw at the very start that he was a big brown trout, and knowing what he would likely do, after hooking him with a decided yank, I let him run to his heart's content. But he had mighty little space in which to show off his antics, and used up his gymnastic waters almost immediately, starting down stream.

This could not be allowed. If he got between my legs, I could perceive trouble coming in chunks. So I executed a few unstudied quicksteps in the bed of the brook. He did not like my method of dancing and rushed back to the head of the pool, neatly wrapping himself, as it in a green garment, in mosses and water-weeds.

I got him in the end all right, but if my leader had not been fairly stout, this tale would not have been told. We fishermen seldom tell of our failures.

It was the black fly that did the business that day, and by afternoon I had a basket of splendid fish; my explosive friend of the difficult pool remained the biggest.

There is no royal road to successful fishing; this is true of every branch of the art; from making flies and leaders to cooking the catch a satisfactory result is always the reward of patient endeavor. In no branch of angling is this more true than in fly-fishing a small brook. Perhaps the difficulties make the success more delightful. At all events, there is a glow of complacency that accompanies a full creel as the angler trudges back along the old lumber road at the close of the day. The little brook in the ravine sings a very cheerful song, and the shadows fall refreshingly in the shady glades.

As she turns out the catch into a milk pan in the kitchen of the farm boarding-house the angler's hostess exclaims, "Sakes alive! you don't mean to say that all those came from the little brook back of the sap-house!"

The admiration of the small boy of the family; the surprise of the farmer when his wife shows him the pan of fish; the good supper with mealy baked potatoes waiting until the angling lion of the hour can "wash up"; all these make the angler think a small brook is just about the finest thing going in the entire category of fishing.

LADD PLUMLEY.

*A well balanced split bamboo rod of 7½ feet and 3 ounces will handle 50 feet of tapered line satisfactorily, and is a very handy rod for brooks if a 4½ or 6 foot tapered leader is employed. EDITOR.

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

Fishing Near Home.

St. Paul, Minn., April 27.—*Editor Forest and Stream:* The trout season in these parts opened on the 15th. Wisconsin and Minnesota each claim a fair share of the north central trout distribution, and both maintained their reputation on opening day and the Sunday following, when thousands could get out into the country and along the streams and enjoy the art of trying to coax trout from under the overhanging banks, piles of brush and from the sunny ripples.

It is encouraging to see the Minnesota sportsmen taking out their licenses for fishing in Wisconsin, for it shows a wholesome regard for the law and a desire to create a fund for the stocking of waters. A great many go to Wisconsin from the twin cities. Almost an equal number come from Wisconsin into Minnesota at various times of the year. The old saw that distant pastures look greenest is just as true now as ever, it seems.

Out from St. Paul there is very fair fishing at from five to forty miles. The day before the season opened I saw a score of motor cars with their trunk racks on behind and loaded with tackle and duffle for camping, making off into the country for the opening of the season. They seemed to scatter as a bunch of quail when suddenly flushed. The motor is certainly helping the sporting goods dealer and making for better health among a class of folks who need the pill. Light auto tents are so easily thrown into the cars and duffle is so neatly rolled into one bundle and given the place of a man that a five-passenger car can handle four with ease and take the necessary outfit for camping.

Something like ten years ago there was a trout hatchery about ten miles from St. Paul which was fed by a little spring stream from the hills. The stream flowed into Black Dog Lake, and in the latter in turn was emptied into the Minnesota River. One spring after the hatchery was going well, there came a freshet which carried away all the trout, depositing them in Black Dog, and from there they rushed into a dozen other streams, all of which had spring-fed origins. The trout found their way into all these streams, large and small. They run up to spawn and later drop back to the deeper waters. There are thousands of nice trout in these streams, but owing to bungling anglers who tread their banks the fish have grown exceedingly wary, and it takes a couple of sneaks and a quiet dropping of the hook to make them even note the angleworm.

Six steady and hard fishing sportsmen went to Savage, Minn., just a few minutes' train ride from St. Paul and fished these waters hard, throwing back the little fellows and retaining only the good ones. The banks of the streams were walked over all day by others who made the trout wild; in fact, poachers and others had been driven from these streams by the owners for weeks before. Diligent work netted for the six trouters fifty-two nice fish. Of the hundreds who left the city none did so well as this, according to all reports.

Good stocking of streams can easily be done. It is inexpensive and yields big returns. K. O. Warme, for years operating a hatchery at North Branch, this State, stocked the streams of his neighborhood without charge and they are now full of fine trout. The small boy with his angleworm will prey on the little ones though, and it cannot be stopped unless it is made a misdemeanor to be found with a rod on a stream, and this might be construed to be a violation of the constitution. But it is true that the farmer's son and the other small boys do their share of damage to the streams. Numbers are what they are after and size does not count. Of course at times we all see a man who will take the small fish just to make a

MAY DAY ON THE BROOK.

showing. The trouble with that man is that he generally comes from a class who do not read the sportsmen's papers and get that true spirit of the game, which makes it clean and manly.

Amos Burhans.

Salmon Rods for Brook Trout.

Rockville, Conn., April 19.—*Editor Forest and Stream:* Allow me to call to the attention of some of your readers a most interesting article on fishing. On Sunday, April 16, the New York Herald published an article of scintillating brilliancy over the signature of one Louis Rhead. Among a number of other light and airy quips was the following gem: For fishing in the Catskill Mountain streams, Prof. Rhead advises for trout a fourteen-foot rod, oiled silk line, nine-foot leader and three flies!

One can imagine how the rodmakers will be working overtime and sitting up nights to get out fourteen-foot rods to fill the demand, and there will, no doubt, be a brisk business in the good old cane spatting poles. Unless my memory fails me, Prof. Rhead is the same writer who in another article some years ago advised that the proper way to net a trout was always head first, and that the trout should be killed by busting his head against a rock.

I am willing to waive the first question as a matter of personal privilege, although I still persist in netting my trout tail first, but I have always seriously doubted the propriety of a dignified angler wading ashore through a boiling "rip" with a little seven-inch fish in order to dash its brains out against a boulder.

I assume that the professor is familiar with the usual mountain stream. I infer that he has occasionally seen a brook trout, but I am wondering if he ever really caught one?

Lou S. Darling.

[The remarkable passages referred to appear on pages 203 and 204 of "The Book of Fish and Fishing," as follows:

"Reel up the line as far as possible, even up to the six-foot leader; then with the rod lead the fish toward the net, which always should face the trout; it should go in the net head first * * * hold it tightly and rap it hard just over the eyes on stones * * *."—Editor.]

The Anglers' Casting Club of Chicago.

Chicago, Ill., April 24.—*Editor Forest and Stream:* Our schedule for the season 1911 is as follows:

May 7, June 4, July 9, July 30 and Aug. 27—Half-ounce accuracy bait, half-ounce distance bait and accuracy fly.

May 21, June 18, July 16, Aug. 13 and Sept. 10—Quarter-ounce accuracy bait, quarter-ounce distance bait and light tackle dry-fly accuracy.

Sept. 24—Reentry day.

Practice contests start at 9:30 A. M. and regular contests start at 10 A. M. sharp. Unless at least five members are present to compete in any one event it shall be postponed until the next scheduled day for that event and cast as a re-entry.

Contests will be held at the northeast lagoon in Douglas Park, Chicago. Visitors cordially invited to participate. E. M. Town, Sec'y.

British Casting Club.

When the members of the British Amateur Fly- and Bait-Casting Club met in London and held their annual general meeting, all of the old officers were re-elected, and Wilfred M. Plevins was chosen to fill a vacancy on the executive committee.

In its casting the club has decided to use quarter and half-ounce weights of the same pattern as those adopted by the American National Association, but the 2½-ounce weights are to be made of wood and rubber, as heretofore.

It was also decided to cast the bait as well as the fly events on the water instead of on a lawn, as in the past.

An application from the New South Wales Anglers' Casting Club, of Sydney, Australia, for affiliation with the British club, was voted on and accepted.

Efforts are being made to secure casting privileges at the Crystal Palace grounds, which are much more accessible than the Hendon grounds.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Snaring Trout.

Port Chester, N. Y., April 24.—*Editor Forest and Stream:* The following clipping is from the Greenwich, Conn., Graphic, of April 22:

There used to be good trout fishing over in Brothers' Brook, the stream that runs through Brookridge and across Post road just east of Putnam Hill. It was hardly expected after the dry season of last year, when for several months the brook was entirely dry, and the bed being nothing more than dust, that this gamy fish could again be found there so soon. But a few days ago, a lady living over in that vicinity, saw some boys going along the brook with a good-sized basket. On their return a little later the basket seemed heavier, and she was curious to know what it contained. So on request the boys raised the lid and displayed a quantity of as fine trout as are often caught hereabout, which they had taken from the brook. Their method of catching them was what they call snaring, a piece of wire being bent and fastened to a stick and held in the water in such way that as the trout passed along it came under the wire, which was quickly raised from the water, landing the fish.

Is this kind of "fishing" permissible by law? Seems pretty tough on the trout, that after "scratching gravel" and dust all summer, they should be compelled to "loop the loop" as soon as they take a spring bath.

Fly Fisherman.

[Snaring is illegal. Rod-line-and-hook fishing is the only method permitted in Connecticut. The attention of the proper warden should be directed to the case mentioned.—Editor.]

Planting Trout.

Hendersonville, N. C., April 22.—*Editor Forest and Stream:* We made our usual spring planting of rainbow and brook trout a few days ago—about 25,000 in all—in this county; the United States Bureau of Fisheries again showing its interest in our mountain streams in supplying us with the fish. This regular planting of game fish is having good results, too, with the people living on the streams. They are taking an interest in the stocking with trout of the streams of our county. When these fish were planted, it was anything but pleasant weather, yet no man dodged it, and one drove ten miles in the rain to get fish to plant in an unstocked brook near his home. Wagons enough met the noon train, which brought the fish cans, to have handled one hundred thousand trout for planting.

The spring has been a rather cold one, and the water too flush and cold for wading, yet I went to Green River on the 21st inst. with a friend, and as neither of us wears waders, we found it uncomfortably cold, and as it was flush, we caught no trout over nine inches in length. My experience has been that the large trout feed deep in flush water in Green River, and the best sport with them is when the water is low.

E. L. Ewbank.

Gill Disease in Trout.

New York, April 28.—*Editor Forest and Stream:* Can you inform me whether artificially-raised brook trout, which, from the fact that the gills show beyond the gill covers—are evidently not in the best of health—should be avoided as food? Are they so diseased as to be unwholesome? What is the disease and by what is it caused?

I have met this condition frequently, when catching trout in waters which have been stocked with fair sized hatchery fish, and have wondered whether the trouble affected their edible qualities. Robert B. Lawrence.

[It is generally believed that inflammation of the gills in hatchery trout is due to impure water, unsanitary ponds, improper feeding and similar causes. More or less progress has been made in curing this ailment by placing the affected trout in salt water, but we believe Mr. Lawrence has taken diseased fish from Long Island tidal streams, where they have free access to brackish and salt water, which should cure the inflammation, though it does not follow that they preferred the salt to the sweet water further upstream.

Mr. Lawrence says he has not taken trout affected with a disease that has been noted in other waters, tumors appearing on their backs and sides, nor with the throat disease that resembles goitre.

It would be interesting to hear from fish culturists on the subject, for although they deplore the lack of knowledge on fish diseases and their cures, they are in a position to advise as to the disposition of trout taken by anglers.—Editor.]

Aransas Pass Tarpon Club.

Tarpon Inn, Port Aransas, Texas, April 29. —*Editor Forest and Stream:* The fifth annual angling tournament opened March 1 and will close Dec. 1, 1911. Membership in the club is open to amateur fishermen only, who have caught in the waters of Aransas Pass, on light tackle according to the rules of the club, a tarpon of not less than 4 feet 6 inches.

A silver button will be presented to each angler landing a tarpon, the length of which shall be not less than 4 feet 6 inches, and a gold button for a tarpon 5 feet 6 inches long

LIST OF CUPS, MEDALS AND PRIZES.

Streeter tarpon medal for longest tarpon of season.

Boschen gold medallion for longest tarpon of season, 6 feet 9 inches or over.

Houston Chronicle cup for the longest tarpon taken each season for three consecutive seasons (1910, 1911, 1912).

Jones cup for the most tarpon taken in any one day for three consecutive seasons (1910, 1911, 1912). Fish brought to gaff and released will be credited to angler.

Hooper trophy for the two longest tarpon of season, over 6 feet 3 inches, by any one angler.

Tilford Jones trophy for first tarpon of season over 6 feet 5 inches.

W. E. Jones prize for two largest jackfish of season, over 30 pounds.

Berring cup for longest kingfish of season, over 47 inches.

Wilcox prize for longest tarpon of season, over 6 feet 1 inch, taken by lady angler residing not less than fifty miles from Tarpon.

Dilg cup for longest tarpon of season, over 5 feet 6 inches, taken by lady angler during two consecutive seasons.

Gay cup for longest silver button tarpon of season.

Cotter cup for second longest silver button tarpon taken during the season.

W. E. Jones cup for shortest tarpon of season, under 32 inches.

Murphy prize for last gold button tarpon of season. Open only to anglers who have not previously won a gold button.

Vom Hofe prize for second longest tarpon of season, over 6 feet 6 inches.

Streeter cup for longest tarpon of season by beginner.

Mills prize for third longest tarpon of season.

Boschen silver medallion for second two longest tarpon that come nearest winning the Hooper trophy.

Hooper prize for heaviest jackfish of season, over 30 pounds.

Conroy prize for second shortest tarpon of season.

Ashaway prizes for longest gold buttom tarpon of season, for longest silver button tarpon of season, for tenth gold button tarpon of season, for fifth silver button tarpon of season, for longest tarpon of season by beginner, for second longest tarpon of season by beginner, for longest tarpon of season, for second longest tarpon of season.

Keithly trophy for longest tarpon, over 6 feet 2 inches, before Sept. 1.

Keller prize for the 100th targon of the season.

Sweeney prize for longest tarpon of season by beginner.

Hamilton prize for second longest tarpon of season.

Houston Optical Co. prize for third longest tarpon of season.

Block prizes for longest tarpon taken on July 4, for shortest tarpon taken on July 4, for longest tarpon taken on Labor Day, and for shortest tarpon taken on Labor Day.

Sens prize for third largest gold button tarpon of season.

Levy prize for longest gold button tarpon taken by a lady.

Cockrell prize for shortest tarpon of season taken by a lady.

Boatmen's Prizes—A cash prize of $25 will be given to the boatman of angler landing the longest Tarpon of season.

A cash prize of $20 will be given to the boatman bringing in the most new members during season.

J. E. Cotter, Sec'y and Treas.

Anglers' Club Tournament.

New York, April 26.—*Editor Forest and Stream:* The annual tournament of the Anglers' Club of New York will be held at the club platform on the large lake in Central Park, May 11, 12 and 13 next. The events will be as follows:

Thursday afternoon, May 11, at 2 o'clock, bait-casting for distance, quarter-ounce weight, average of five casts to count, with two classes, 130 feet and open; 3 o'clock, bait-casting for accuracy, quarter-ounce weight; 4 o'clock, fly-casting for distance, four-ounce rods, with two classes, 70 feet and open.

Friday afternoon, May 12, at 2 o'clock, fly-casting for distance, five-ounce rods, with three classes, 70 feet, 85 feet and open; 3 o'clock, dry-fly casting for accuracy, delicacy and style, five-ounce rods; 4 o'clock, dry-fly casting for distance, five-ounce rods, longest cast in five to count, limited to five minutes for each contestant.

Saturday morning at 9 o'clock, surf-casting for distance, 2½-ounce weight, two-handed casting, line to be linen and to lift a dead weight of twelve pounds one foot from ground, average of five casts to count, with two classes, 200 feet and open; 10 o'clock, bait-casting for distance, half-ounce weight, average of five casts to count, with three classes, 150 feet, 175 feet and open; 11 o'clock, bait-casting for accuracy, half-ounce weight, contestant to be seated in a boat; 12 o'clock, fly-casting for distance, heavy rods, with three classes, 70 feet, 90 feet and open; 2 o'clock, salmon fly-casting.

Suitable prizes will be given in each event, and the committee wishes it understood that each event will be started promptly at the time set. Any further information can be obtained from the chairman of the committee, John L. Kirk, 2 Rector street, New York city.

There will be a separate class for professionals in the distance heavy fly and the half and two and a half ounce bait events, and the salmon event will be open to all and handicapped on the records of the contestants not on length of rods, as previously decided. All other events will be limited to amateurs only.

Edward Farnham Todd.

Anglers' Club of Milwaukee.

MILWAUKEE, Wis., April, 27.—*Editor Forest and Stream:* Club contests will be held at the casting pool, east end of Washington Park, on the following dates: April 30; May 7, 14, 21, 28; June 7, 21, 25; July 5, 16, 26; Aug. 6, 9, 30; Sept. 6. Sunday events start at 9:00 A. M. Wednesday events at 5:00 P. M.

It will be necessary to cast in at least six events in order to get an official score for the season's average classification. Keep this in mind and make an effort to get into as many events as possible in order to build up your average.

Prizes will be awarded on the average for the season's work, and according to classification.

A frog-casting game will be introduced this season in order to develop greater skill under conditions which conform more exactly to actual bass fishing practice. In this event a rubber frog not exceeding three-quarters of an ounce in weight, and a line not lighter than No. 5, or under ten pounds' breaking strength, will be used, rods and reels unrestricted. Target run same as in the half-ounce game.

A class will be made up of such new members as have had little or no experience in target practice. Several of the experts have volunteered to act as instructors in this class and give such assistance as may be required to make a first-class caster in a short time.

C. L. TOLFSON, Sec'y-Treas.

San Francisco Fly-Casting Club.

SAN FRANCISCO, Cal., April 23.—*Editor Forest and Stream:* The contests held on Stow Lake yesterday and to-day are as follows—wind variable, fair yesterday, cloudy to-day:

APRIL 22.

E. O. RITTER, Clerk.

North Shore Casting Club.

CHICAGO, Ill., April 24.—*Editor Forest and Stream:* The following events will take place during the season at the Lagoon in Lincoln Park, just north of the Refectory, beginning promptly at 2:30 P. M.:

April 29—*Practice, fisherman's tackle, ½-oz. accuracy, ¼-oz. accuracy bait.

May 6—*Events, Fisherman's tackle, ½-oz. accuracy, ¼-oz. accuracy bait.

May 13—*Events, fisherman's tackle, ½-oz. accuracy, ¼-oz. accuracy bait.

May 20—Events, ½-oz. accuracy bait; accuracy fly.

May 27—Practice, ½-oz. accuracy bait; accuracy fly.

June 3—Practice, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

June 10—Events, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

June 17—Practice, ½-oz. accuracy bait; accuracy fly.

June 24—Events, ½-oz. accuracy bait; accuracy fly.

July 1—Practice, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

July 8—Events, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

July 15—Practice, ½-oz. accuracy bait; accuracy fly.

July 22—Events, ½-oz. accuracy bait; accuracy fly.

July 29—Practice, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

Aug. 5—Events, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

Aug. 12—Practice, ½-oz. accuracy bait; accuracy fly.

Aug. 19—Events, ½-oz. accuracy bait; accuracy fly.

Aug. 26—Events, ¼-oz. accuracy bait; light tackle, dry-fly accuracy.

Sept. 2—Reentry day.

Sept. 9—Reentry day.

Sept. 16—Reentry day.

*The fisherman's tackle events will be cast with a practical fisherman's outfit. There will be no restriction as to rod or reel, the line, however, must be of a specific size and make.

Members missing any event may reenter any time on which a like event takes place. Guests are always welcome.

C. O. DORCHESTER, Sec'y-Treas.

New South Wales Anglers' Casting Club.

THROUGH the efforts of its experts, says the annual report of this Australian Club, many members have attained proficiency in the use of the fly-rod, so much so that the least experienced now stand on a level with the average old world performers, as will be seen on comparing the club's records with those of European casting tournaments.

Members visited a number of trout streams during the year and some valuable exploratory work was done by the Honorary Secretary, C. H. Gorrick, who found that the headwaters of the Snowy River are practically unfishable, owing to the ruggedness of the country, the precipitous banks of the streams, and the terrible force of the current in its confined rocky channel. Trips were made by members to the Murrumbidgee, the headwaters of which teem with *S. iridcus* and *fario*, running to very large size, and excellent sport was enjoyed there. The Goodradigbee was also visited, and a great many trout were caught, but the run of fish is small compared with other rivers, although in places there are plenty of very large trout. The Badja and Tuross rivers received a good deal of attention early in the present season, and some heavy trout were caught there by Mr. Gorrick, Dr. Maitland and Dr. Arthur Cox. Some good fish were also taken in the upper Queanbeyan River, where the dense weed beds are a great drawback to successful fishing. The fish in this river run to very large size.

There was a very satisfactory attendance of members at the various competitions, and enthusiasm was well maintained throughout the season, the average number of competitors being considerably larger than in former years. Some remarkably fine performances were enacted, notably Dr. H. L. Maitland's magnificent cast of 113 feet 3 inches, with a single-handed eleven-foot fly-rod, easily beating all Australian and European records. H. K. Anderson's dry-fly cast of 102 feet and his cast of 81 feet 7 inches under forward obstacle beat all previous records.

A system of handicapping was arranged in the endeavor to place all members on an equal footing, but while working satisfactorily in some cases, it was found not quite up to expectations, and a scheme for grading as adopted in English competitions has been suggested for the consideration of the incoming committee.

Only two bait-casting competitions were held during the season, both of which were won by Mr. Anderson. A recommendation has been made to the new committee to include more of these events in the coming season's program, the single hand overhead system of bait-casting having been proved invaluable in perch fishing, in fishing from a boat, and in beach fishing.

J. B. Meyer, of Manly, has presented a split cane fly-rod, value £5 5s., for the largest trout caught in New South Wales by a member of the N. S. W. Anglers' Casting Club, during 1910-11 season. The fish to be caught on an artificial fly, certified as to weight to the satisfaction of the committee, and to be handed over to Mr. Meyer.

YACHTING

Some News and a Little Gossip.

It is rumored that Commodore William Randolph Hearst, of the Brooklyn Y. C., will purchase the schooner Westward. Commodore Hearst has no yacht at present on which to hoist his pennant, and with Westward he would not only give his club, the Brooklyn, much advertising, but would furnish some sport pleasing to all American yachtsmen. Unless Westward is purchased soon she will remain on the ways for a season, while other fast yachts are gathering in prizes without much opposition. There is a new schooner named Water Witch, in British waters, built to race against Westward, and on this side of the Atlantic, Commodore Morton F. Plant has built Elena to try and lower the colors of last year's crack.

Commodore Hearst has never been a racing yachtsman. Some years ago he owned the fast steamer Vamoose, which he wished to race against Norwood, but nothing much came of all the talk about races. Commodore Hearst is a member of the New York Y. C., so that if he purchased Westward he could take part in all that club's races and on the cruise in the squadron runs.

D. G. Whitlock's Class S sloop Wink is anchored in the Lower Bay and has attracted much attention. She is a very attractive looking little boat, and if she does as well as her appearance indicates, she should be very fast. She is being tuned up as fast as possible, and by the time the season opens will be in good shape for racing. The second Class S sloop, building for Dr. C. L. Atkinson, will be out next week.

The following schedule of races for the season 1911 is announced by the New Rochelle Y. C.:

June 17—power boat race; club.
July 1—Annual regatta; open.
July 1—Brooklyn Y. C. challenge cup; ocean race.
July 8—Cornfield Lightship race, sailboats; open.
July 8—Cornfield Lightship power boat race; open.
July 29—Stratford Shoal power boat race; club.
Aug. 5-13—Annual cruise.
Aug. 26—Special regatta; open.
Sept. 2—Power boat race; open.

Flag officers and members have already donated many handsome trophies in addition to the regular prizes in which regard the club has always been one of the most liberal.

The open sailing regatta dates are very advantageous ones and the power boat races are a new feature. Only two club races for power boats are scheduled, but if the first is successful many additional contests will be provided for Saturday afternoons. The open races for power boats on July 8 and Sept. 2 will no doubt be very popular because of the limited number of these events open to Sound boats.

The winners for last season of the Handicap Yacht Racing Association have just been announced by the handicapper, T. Granbery. The results are computed under the Long Island Sound yacht racing system of points, boats receiving one point for each yacht which they beat in each race. The results are as follows:

FIRST DIVISION.

	Races.	Per Cent.
Sally IX.	18	.681
Crescent	16	.666
Interim	21	.648
Wanderer IV.	12	.541
Juanita	19	.444

SECOND DIVISION.

Fearless	15	.644
Scud	17	.631
Red Wing	17	.614

FOURTH DIVISION.

Kenosha	13	.745
Grace II.	12	.451

FIFTH DIVISION.

Nimbus III.	14	.822
Miss Modesty	14	.643

Sally IX., Fearless, Kenosha and Nimbus will each receive a bronze shield as a championship trophy. The handicap class will start the season of 1911 with many new boats in the various divisions. Each year the class has made further progress and is undoubtedly the most popular on Long Island Sound and furnishes more entries at the various regattas than any of the regular classes.

Harry L. Maxwell is to put the schooner Irolita in commission this year and will race her whenever he can find a class. The yacht will be renamed Princess. Irolita was originally a sloop built by Herreshoff for Commodore E. Walter Clarke, of the Philadelphia Corinthian Y. C., and when he purchased Queen last fall from the late J. Rogers Maxwell, he gave Irolita in part payment, stipulating that he should retain the name Irolita which is now being applied to Queen. The old Irolita has done well as a racer, and last summer won the Norman cup in the race of the Eastern Y. C. from Bar Harbor to Marblehead. She also won some good prizes on the New York Y. C. cruise.

The Corinthian Y. C., of Marblehead, has announced the conditions and new course for its annual ocean race. For several seasons this race was for yachts 21 feet and over on the waterline, and the course was from Marblehead to White Island Whistling Buoy, Isle of Shoals and return. Yachtsmen grew tired of this course and did not support the race as they did when it was started, and so last season the course was changed to Cape Elizabeth Lightship off Portland, being substituted for the White Island Buoy. This course was 150 miles in length. It kept the racers well offshore, too far for small boats, and consequently did not give satisfaction, so that a shorter course was selected to keep the racers within Cape Ann and Cape Cod.

The new course will be from Marblehead to Cape Ann Whistling Buoy, then across the bay to Wood End Bell Buoy A1, and back to Marblehead. From Marblehead to the whistler is fourteen miles, across the bay to Wood End thirty-nine and three-quarter miles, and from Wood End to Marblehead forty-one and one-quarter miles, a total distance of ninety-five miles.

The turning mark at Wood End is a new bell buoy, recently placed by the Government half a mile off the beach, directly off Wood End Light. There is plenty of water near the buoy, so that even the larger yachts could use it for a turning mark.

The race will be started Saturday, June 24, and the yachts will be sent away probably just after 5 o'clock. This will give the racers Saturday night and Sunday for the contest, which should allow for the finish under ordinary conditions of all the starters.

By starting the race late in the afternoon it is expected that the contending yachts will reach Wood End mark early Sunday morning, but not before daylight. Although local yachtsmen are familiar with Cape Ann waters, it is another story with the majority in regard to the hook of Cape Cod. Therefore, it is the committee's intention to start the yachts late enough Saturday afternoon so that the Wood End bell buoy will be reached in daylight.

This annual ocean race of the Corinthian Y. C. is the only open contest of its kind sailed east of Cape Cod, and the new course should bring to Marblehead for the event all the best cruising yachts of Massachusetts Bay.

The annual meeting of the Royal Canadian Y. C. was held recently at Toronto. Commodore C. G. Marlatt briefly reviewed last year's successful season and outlined the program for the coming season, which promises to be the biggest in the history of the club.

In addition to the regular program the Lake Yacht Racing Association meet is to be held in Toronto under the auspices of the club. Racing will take place off the exhibition grounds, where probably the best course on fresh water can be laid. During fair time will also be sailed the races for the George and Fisher cups.

Dr. J. D. Thoburn has presented to the club a cup, which will be known as the Marlatt cup to be raced for by whatever class Mr. Marlatt shall name.

The officers for the coming year are as follows: Æmilius Jarvis, Commodore; E. M. Gray, Vice-Commodore; W. C. Brent, Rear-Commodore; Louis MacMurray, Honorary Treasurer. The following executive committee was elected: Messrs. D. G. Bremner, C. A. B. Brown, G. B. Brush, R. H. Easson, J. M. Lyle, Dr. A. A. McDonald, C. G. Marlatt, A. W. S. Roberts, A. W. Smith and E. K. Wedd.

Sonders to Leave Next Week.

The three Sonder boats to represent this country in a series of races with Germany are to be shipped to Kiel from this city next week. Bibelot has been tuning up off Herreshoffs, and it is said is in better shape than last year. She will be sent here from Bristol; Beaver and Cima will be shipped from Marblehead. The races at Kiel will begin on June 19. The boats will go on the steamship America, sailing on May 11, so that the yachtsmen will have lots of time to tune them up before the International races. The first prize in the Kiel races is a cup donated by the German Emperor and the second a cup offered by Prince Henry of Prussia.

Bibelot is a Herreshoff-built boat owned by Robert W. Emmons 2d and Harry Payne Whitney. Mr. Whitney is much interested in polo this year and will be unable to go to Kiel. The crew of Bibelot will be R. deB. Boardman and John Parkinson. Beaver is a Starling Burgess boat and her crew will be A. H. Eustace, George Dabney and George Nicholas. Cima was designed by Charles D. Mower and her crew will be Guy Lowell, J. Robertson Harding and Arthur Adams.

Henry Howard, who originated the Sonder racing, sailed for Europe last month. He will be one of the umpires and the representative of the Eastern Y. C.

The American boats have won two matches sailed in home waters in 1906 and 1909, and the Germans won at home in 1907.

There is some talk of changing the type of boat for these International matches and the 6-meter class is favored in Germany and class R on this side. There is very little difference in the size of these two classes, and if the change is made, class R, which has never been very strong, will become a popular one. It might be a good arrangement for Americans to build to the 6-meter class when racing abroad and foreigners to build to the R class when the racing is here.

Frothingham Cup for Class A.

Lieutenant-Governor Frothingham, of Massachusetts, has presented to the Columbia Y. C. a handsome silver cup, which is to be raced for this year by class A of the inter-club association. This is one of the best racing classes on Massachusetts Bay, and the new trophy has created more interest, so that the racing will be keener than ever.

Royal Canadian Y. C.

The Royal Canadian Y. C. has issued its program for the season. It is neatly printed on a gilt bordered folder, on which the club seal is embossed. The front has a picture of a yacht race and the back a calendar.

This club has a very busy season always. It opens on June 10 and closes Sept. 9. The Fisher cup race will be sailed on Sept. 2 and the Prince of Wales' cup race on Sept 9. The championship trophy and flag will be awarded to the yacht making the best average for the season in her division and flags to the first, second and third yacht in each race. The races for Queens cup, Nicholls gold cup and Prince of Wales cup will not score in averages. Prizes, flags and points for averages will be awarded on the regular L. Y. R. A. handicap.

The schedule is as follows:

FIRST DIVISION—CLASSES D, E, F, J, K, L AND M.

Prizes, $55, $40, $25, $15, $5.

Saturday, June 10—Club regatta. All classes. Bay and lake course. Lorne cup to winner of first division.

Saturday, June 24—Cruising race to Oakville.

Saturday, July 1—Special race for schooners, Niagara and return. Nichols gold cup to winner.

Saturday, July 8—Cruising race to Port Dalhousie.

Saturday, July 22—Cruising race to Olcott.

Saturday, Aug. 5.—Cruising Race to Port Dalhousie, thence to Oakville.

Saturday, Aug. 19—Cruising race to ———. Lansdowne cup to winner first division.

Monday, Aug. 28, to Saturday, Sept. 2—L. Y. R. A. regatta at Toronto.

Saturday, Sept. 9—Prince of Wales cup race. All classes. Lake course.

SECOND DIVISION—CLASSES N AND P

Prizes, $40, $25, $15, $10.

Saturday, June 10—Club regatta. All classes. Bay and lake course.

Saturday, June 24—Cruising race to Oakville.

Saturday, July 1—Queen's cup race. Lake course.

Saturday, July 8—Cruising race to Port Dalhousie.

Saturday, July 15—Course race. Lake course.

Saturday, July 22—Cruising race to Olcott.

Saturday, Aug. 5—Cruising race to Port Dalhousie, thence to Oakville.

Saturday, Aug. 12—Course race. Lake course.

Saturday, Aug. 19—Cruising race to ———.

Monday, Aug. 28, to Saturday, Sept. 2—L. Y. R. A. regatta at Toronto.

Saturday, Sept 2—Fisher cup race.

Saturday, Sept. 9—Prince of Wales cup race. All classes. Lake Course.

THIRD DIVISION—CLASSES Q, R AND S.

Prizes, $35, $20, $10, $5.

Saturday, June 10—Club regatta. Bay and lake course.

Saturday, June 24—Course race. Bay and lake course.

Saturday, July 8—Course race. Bay and lake course.

Wednesday, July 12—Special race, for yachts sailed by ladies. Special prizes to winning crew.

Saturday, July 15—Course race. Lake course.

Wednesday, July 19—Special ladies' race. Second series.

Wednesday, July 26—Special ladies' race. Third series.

Saturday, July 29—Course race. Bay and lake course.

Monday, July 31, and following days—Trial races for Class R yachts, to select defender for George cup. Commodore's cup to winner among yachts built by owners for their sons.

Saturday, Aug. 12—Course race. Lake course.

Saturday, Aug. 19—Course race. Bay and lake course.

Monday, Aug. 28, to Saturday, Sept. 2—L. Y. R. A. regatta at Toronto. George cup races at Toronto.

Saturday, Sept. 9—Prince of Wales cup race. All classes. Lake course.

16-FOOT CLASS.

Prizes, $25, $15, $10, $5.

Saturday, June 10—Club regatta.

Saturday, June 17—Course race. Bay course.

Friday, June 30, and Saturday, July 1—L. S. S. A. regatta at Toronto.

Saturday, July 8—Course race. Bay course.

Saturday, July 22—Course race. Bay course.

Saturday, Aug. 5—Course race. Bay course.

Saturday, Aug. 19—Course race. Bay course.

Labor Day, Sept. 4—Darrell Shield, open to any two boats from any club in the L. S. S. A.

14-FOOT DINGHY CLASS.

Prizes, $15, $12, $10, $8, $6, $4.

Saturday, May 27—And every Saturday in June, July and August, there will be a club race for this class, except on the dates of open regattas at other clubs.

Saturday, June 3—Open to all L. S. S. A. dinghies. Silver cup to winner.

Friday, June 30, and Saturday, July 1—L. S. S. A. regatta at Toronto.

Labor Day, Sept. 4—Darrell shield, open to any two boats from any club in the L. S. S. A.

Cleveland Men Active.

Yachtsmen about Cleveland are getting ready for the season as fast as the weather will permit. All the yards along the shore of Lake Erie are busy places just now, and while the weather was cold and wet much work was done on the craft that have wintered under cover of sheds. At Rocky Point where the Lakewood Y. C. boats are stored things are very lively and the outlook for the coming season is very good.

The regatta committee of this club has outlined its program for the season. The racing will start with the first of a series of club races on May 30. There will be five races in this series. A special long-distance race from Vermilion to Put-in-Bay on July 16 will put the boats on edge for the race week at the bay. A long-distance race to Vermilion on Sept. 3 is scheduled and on Labor Day the fourth special race will be held off Vermilion.

A special big time is being planned by Commodore Wakefield and the Vermilion people for the entertainment of the yachtsmen at that time.

The boats in the 18-foot class will be raced under the universal rating rule, and will make racing in this class more interesting than ever.

Holding an open regatta this summer is one of the big things now being considered by the club.

There seems to be a strong likelihood of the crack 18-footer Hayseed, owned by Walter C. Baker, going down East this summer for the purpose of lifting the La Belle trophy, put up by Finley for fresh and salt water champion 18-footers. Should Hayseed bring back the cup, it will mean that an eastern boat will come out here next summer to race for it.

Two years ago Dorchen II., owned by Mr. Finley, came here from the East and by defeating Bonitwo, the local champion, took back the Foster trophy with him. At that time he stated that he would put up another cup to be called the La Belle trophy, in honor of Commodore Winton, and this cup would be for competition between fresh and salt water 18-footers. Hayseed, by winning the cup, would add more glory to her great record.

Work on the syndicate class "R" boat was started last week at Zickes' yards, where the boat is now being laid out. Harry Card, chairman of syndicate committee, showed the members the plans of the new boat. They certainly look good, and, judging from these plans, the boat will be a beauty. She has good lines and looks to have plenty of speed.

Pandora Almost Lost.

Thomas Fleming Day, editor of The Rudder, has received word from Captain George D. Blyth, of the yawl Pandora, a small vessel in which he is circumnavigating the world, that in a blow off the Horn in March the vessel was boarded by a heavy sea and her mainmast, bulwarks and boat were smashed and carried away. Pandora was picked up off New Island by the whaler Swona, Captain Wilson, and towed into port. Captain Wilson has very generously repaired Pandora without any charges, and the little vessel is on her way to New York by way of St. Helena and the Azores.

It is a curious coincidence that not an hour before Swona sighted Pandora, Captain Wilson was reading an account of her voyage, and at once recognized the little craft from the pictures accompanying the story. Pandora is a copy of Captain Slocum's Spray.

Newburyport Dates.

The schedule of events arranged by the New American Y. C., of Newburyport, is as follows:

May 15—Opening of club house, 6 P. M.

June 4—First club cruise to Sandy Point; start from Parker River at 9 A. M.

June 12—Ladies' moonlight sail to Plum Island; start at 6 P. M.

June 17—First club race, yachts and dories; start at 2 P. M.

July 1—Club race, yachts and dories; start at 2 P. M.

July 11—Ladies' moonlight sail; start at 6 P. M.

July 15—Club race, yachts and dories; start at 1 P. M.

July 31—Newburyport day; open race; high tide 2:30 P. M.

Aug. 5—Cruise to Lynn, open race, high tide 8:15 A. M.; yachts will continue on to Marblehead with the Lynn fleet.

Aug. 17—Cruise to Gloucester, open race; high tide 4:45 P. M.

Aug. 19—Cruise to Annisquam, open race; high tide 4:45 P. M.

Sept. 3—Last club cruise, under sealed orders—start from club house at 9 A. M.; high tide 7:30 A. M.

Southern Y. C.

The Southern Y. C. held a smoker Thursday night at their headquarters in New Orleans and discussed various improvements to be made to the harbor, the pen, the club house and various other business matters. Some amendments were adopted to the rules and by-laws. The affair was very pleasant and was participated in by thirty or forty members. The annual dues of nonresident members not residing within twenty-five miles of New Orleans was reduced to $10.

Elena to be Tried Next Week.

The schooner Elena, built at Herreshoffs for former Commodore Morton F. Plant, will be tried next Wednesday. The work of rigging this big vessel has progressed favorably, and on Monday the topsides will be painted and the sail bent on. After her trial, the yacht will go to New London and be tuned up there.

Motor Boating.

Sparks.

The dates for the big motor boat events of the year have been selected, and those yachtsmen who prefer racing to cruising will be kept very busy. Nearly all the clubs which a few years ago were devoted to sailing craft have arranged regattas for motor boats, and the motor boat is now quite an important factor in summer sport. Many of these smaller regattas, however, are for boats owned in the club or for local craft, and these will be under special rules adopted to meet local conditions.

The New York Motor Boat Club will open the season with races off its club house, 145th street and Hudson River, on May 28. On June 10, the Columbia Y. C. will have a regatta for motor boats. On June 17, two of the long dis-

tance races will be started. Those racing to Bermuda from the Lower Bay will be sent out by the Motor Boat Club of America, and on the Sound the New York Athletic Club will have its annual race to Block Island. On July 1, the New York Motor Boat Club will start its annual event to Albany and back, and the Brooklyn Y. C. will hold its races over the Cape May course. The Marblehead race will be started on July 14 from Huntington by the Motor Boat Club of America. The Halifax race of the Brooklyn Y. C. will be started in Gravesend Bay on July 22. On Aug. 4, a race from New York to Camden will be started by the Motor Boat Club. The Scripps reliability race will be started at Detroit on Aug. 4. The finish is to be at Buffalo.

The races for the Gold challenge cup of the American Power Boat Association will be held at Frontenac on Aug. 8, 9 and 10. The trial races to select defenders for the British International trophy will be held off Huntington during the week beginning Aug. 14, and the International races will begin at the same place on Aug. 24. The annual carnival of the Manufacturers' Association will be at Huntington Aug. 4 to 9. These are the features of the season.

The name Dixie, so dear to lovers of motor boating, is to be perpetuated. One of the new racers building for the defense of the British International trophy, is to be named Dixie IV. Dixie I. won the trophy and brought it to this country. Dixie II. successfully defended the trophy on two occasions. Last year the boat was really Dixie III., as a new hull had been built for the original engine, and so this year's boat will be named Dixie IV. The Motor Boat Club of America has under the new conditions complete control of all International motor boat racing in this country, and a syndicate of members of that club, composed of Commodore H. H. Melville, Vice-Commodore Frederick K. Burnham and August Heckscher is building the new boat. She has been designed by Tams, Lemoine & Craine, and is a hydroplane a few inches under 40 feet in length. She will be propelled by two engines built by the Crane Motor Car Company, of Bayonne, of eight cylinders each 7½ by 7½ inches. The hull is double planked mahogany, and the boat will be fitted with Monel metal propellers. The engines will develop between 500 and 800 horsepower, and the boat is expected to make about 55 miles an hour.

Albert E. Smith is having an Eleoplane built by the Electric Launch Company, of Bayonne, N. J. Although the planking has just begun, her lines denote the best of seaworthy qualities and stability, so important in boats of this class that will develop a speed of better than fifty miles an hour. She will be named Yankee and will be a shade under 40 feet, about 7 feet beam and with two 300-horsepower, 6-cylinder Standard engines of special design.

The same company is nearly ready to launch a Fauber hydroplane for Rear-Commodore J. Stuart Blackton of the Motor Boat Club of America. She will be christened Vita II. and will be 30 feet 11 inches on deck, 6 feet 6 inches beam and will be fitted with two engines and twin screws developing 500 horsepower. Vita II. will be of the multiple step type and the designer is figuring on 60 miles an hour.

Commodore Blackton is also having a semi-displacement type of boat built for the elimination trials in case the Vita II. does not come up to expectations. The other craft will be called Viva and is being constructed by the Emerson Company, of Alexandria, Va., from original lines. She will have triple screws, 400 horsepower, and will measure 32 feet over all and 5 feet 6 inches beam.

In partnership with Mr. Heckseher, Commodore Melville is having a second boat built which will be named New Nameless. Atkinson-Wheeler Company has the contract and in a few days she will be ready for her preliminary trials. Tams, Lemoine & Crane have designed and are building a modified type of hydroplane for Thomas L. Chesebrough, who, however, wishes the details of power equipment and hull kept secret for a short time. She probably will be named Restless II.

The Ohio River choked with driftwood and a strong head wind that interfered materially with the boat's progress were two elements that conspired against the success of Br'er Fox III. in an attempt by this boat to break the record between Cincinnati and Louisville, Ky.

The distance between these two points is 132½ miles, and the record for a non-stop run of this character is held by Br'er Fox II., a sister boat of the present contender, which made the splendid average of 26.78 miles an hour on a non-stop run.

Br'er Fox III. measures 22 feet long by 4 feet 1 inch beam, the total weight being 500 pounds. Her motive power consists of a 6-cylinder 4¾ by 4½ Fox de Luxe, 90-120 horsepower motor weighing only 450 pounds and developing as high as 1,600 revolutions a minute. This particular motor was built for A. R. Silverston, of Milwaukee, Wis., for use in an aeroplane.

The start was made April 15 at 9:15 A. M., and at various times in the first few miles the boat was compelled to slow down on account of the driftwood and strong wind. When three miles above Warsaw, Ky., a particularly large amount of drift was encountered and her propeller shaft was badly twisted, completely disabling the boat, leaving her helpless in the heavy sea that was running. Her crew's plight was seen from the shore, however, and a boat was sent to their assistance just as the little craft was about to capsize. Dr. Harry P. Butler, of Newport, Ky., was at the wheel of Br'er Fox III. with Arthur Rose, of the Dean Manufacturing Company, acting as engineer.

The total distance covered was 55 miles and the elapsed time was 1h. 39m, or at the rate of 33 1-3 miles an hour. All records for the same distance were beaten, and when it is remembered that 50 pounds of gasolene was carried at the start it can readily be seen that with the lightening of this load by consumption the speed of the boat would have increased materially in the latter stages of the journey. This fact coupled with the weather conditions and the driftwood makes the performance of this little craft all the more remarkable. The boat will be shipped back to Cincinnati and another attempt to complete the run will be made in the near future.

Monaco Meeting.

As far as the British boats were concerned, the motor boat racing at Monaco was disastrous. Maple Leaf was severely handicapped on account of her trial. In the Ominum handicap she did poorly. The sea was rough and she steered badly, pounded heavily and was a disappointment. Returning to the harbor, her starboard bracket gave way. Both rudders were carried away and a hole was knocked in the hull. A similar accident happened to Ursula. Later in the week Ursula and Maple Leaf were repaired so that they could race, but then in one event, when winning, the engineer of Ursula was overcome by gas. Miranda IV., another hydroplane, started a plank and nearly foundered.

Ursula for one prize made the best time over the course 6 kilometers 250 meters, 5m. 13 3-5s. This was better by 7 1-5s. than the time she made last year. Miranda covered the course in 5m. 54 3-5s.

The damaged boats were repaired in time for the Coupe des Nations contest which is 16 rounds of the course, or 100 kilometers. Great Britain was represented by Ursula and Maple Leaf III., France by Chanteeler II., Germany by Lurssen-Daimler, Spain by Hispano-Suiza. Ursula was forced to give up when she was leading the fleet by more than two laps, because of her engineer having been overcome by gas. Mr. Noel Robbins stopped and put the chief on a launch to be taken ashore and tried again, but the second engineer was unable to start the motors. Maple Leaf and Ursula made a fine race on the first lap and then Maple Leaf retired. Lurssen-Daimler won the prize in 2h. 1m. 20s.; Chantecler was second, 2h. 6m. 12s., and Hispano-Suiza third, a long distance behind.

Ursula won the Prince of Monaco's prize for the marine mile and one kilometer race, a total distance of 2,850 yards. Ursula's time in the first heat was 2m. 37 2-5s., Clement-Despujols was second in 2m. 52 1-5 s. and Maple Leaf III. third in 2m. 54 2-5s. The final heat was won by Ursula in 2m. 34 1-5s.

Referring to the type of hulls and engines shown, the Yachting World says:

"The hulls of the boats at Monaco this year may be divided up into types with characteristics of their own. There are displacement boats like Ursula, La Quise, Chantecler II., and many of the smaller cruisers; boats which rely on sweetness of lines for the attainment of the greatest speed from some certain power, limited either by the hull constants or the restrictions imposed by the rules. These are the weatherly boats, the craft which can face a sea with equanimity and which would maintain a high average speed if raced daily, taking the weather as it came.

"At the other end of the scale are the hydroplanes; the vessels which when running full speed have reduced the amount of water displaced to a minimum. The examples of this kind of craft to be seen at Monaco this year are all of the single step type, varying in design, but all with that one salient characteristic. The new Maple Leaf, La Fleche, Sigma-Labor, and Clemen-Despujols are the pick of them. Maple Leaf III. must be classed as a hydroplane, not only because she 'planes' when under way, but on account of that characteristic feature—the step. At the same time she differs from the other three boats cited as examples, in that she combines the shape of a displacement boat with the lifting agent of a hydroplane—an attempt to secure the weatherly qualities of a boat, together with the enormous speed of a hydroplane.

"Then, in between these two extremes there are numerous boats which are difficult to place quite satisfactorily. Miranda IV., for instance, is a hydroplane, inasmuch as her displacement diminishes when at speed, but otherwise she is very much of a boat. Then there are pure sharpies with flat floors and square chines, like Excelsior boats built by Celle. There are Gregoire IX. and X., the Labor team, which are but little removed from the sharpie type, except that there is the least round to the bilge, and that the bows are moulded to a sort of spoon. These boats, too, lift when at full speed; in a way they 'plane'—some of them very much so, as Lürssen-Daimler, for instance.

"The motors in the boats are of many different kinds, the car type bulking pretty large. Some of the higher speed craft have "aviation" motors, where the power-weight ratio is very high. Clement-Despujols, for instance, has a 200-horsepower engine similar to the set which drove the Clement-Bayard dirigible in her memorable voyage to Wormwood Scrubs. La Fleche has an ultra-light 'V' type engine of high power. One of the most remarkable engines is a new Gregoire motor, which has a stroke of 12 inches for a cylinder diameter of 3½ inches; an obvious attempt to increase the possible power under a cylinder-bore restriction. In itself, this method may have advantages—it ought to make a sweetly running engine—but the enormous height of the motor will certainly handicap the boat in anything but the calmest weather. A peculiar feature of this engine is that it has doubled valves, two inlet and two exhaust valves to each of the four cylinders. The long stroke has necessitated several departures from the canons of motor design, naturally. A very pretty engine is that installed in Pik-As VII., the German boat which capsized on Tuesday last week. It is a Dürrkopp motor of thoroughly sound design, from a marine point of view; weight has not been cut down to too great an extent and the design of accessory parts such as pumps and lubricating gear are sound and workman like. Gas Engines and Launches.
Their Principles, Types and Management. By Francis K. Grain.
The most practical book for the man or boy who owns or plans to own a small power boat. It is motor launch and engine information boiled down and simplified for busy people, and every line of it is valuable. Cloth, 122 pages. Postpaid, $1.25.

When writing say you saw the ad. in "Forest and Stream."

engines installed in Maple Leaf III. have, naturally, aroused great interest. A total of 700 horsepower in two sets of engines, is sufficient to warrant that. Briefly, they are V engines, each 12 cylinders, with overhead inlet valves operated by push rods and rockers; one carburettor to each engine with an induction main U-shaped running along both sets of cylinders. The exhaust valves open into a central main, the two mains joining aft of the engines into a single exhaust pipe; all being water jacketed. The main engine is started up by a small single cylinder auxiliary, the other engine is started up by the drag of its propeller.

"There is a curious resemblance between the propeller bracket arrangements on Miranda IV., Maple Leaf III., and Lürssen-Daimler. The resemblance between the two former is natural enough; but the design of the last-named is so similar to the other two as to be significant. Maple Leaf's brackets, which support rudders as well as propellers, appear to be of rather light design. Miranda and Lürssen-Daimler have another point in common; both are single screw boats, and in both the single propeller bracket has its stern set away and off to starboard. This, naturally, would give a small permanent amount of port-helm, enough to counteract any 'offsetting' tendency due to the propeller. Although this method of supporting rudder and propeller shaft end by a single vertically hanging bracket with a bearing for the extreme outer end of the propeller shaft is novel, and looks neat, it is really doubtful whether the old V bracket with a good spread to the arms is not better. It is much more rigid, less liable to break, and cannot hinder the boat so much more than the newer idea. A glance at Ursula's stern with her sturdy cast bronze 'battleship' rudder hung in a couple of journals on the transom, and her well-spread V brackets forward of her propellers, inspires confidence in her; a confidence which her record shows to be singularly well founded. A high speed boat needs to be under the most perfect control possible, else she may prove a menace to other vessels and a real danger to those who have to run and race her."

Thelma Tender for Elena.

THE fast cruising motor boat building at Morris Heights for Commodore Morton F. Plant, which is to be a tender for the schooner Elena, will be ready for delivery by June 1. The new craft will be named Thelma, and she is to make 20 miles an hour.

Thelma is of steel, 138 feet long, 16 feet beam and 5 feet draft. Much of the work is completed. The decks are laid, the joiner, plumbing and other work is well in hand and portions of the vessel are being finished.

The owner's and guests' quarters are aft and those for the officers forward. The crew will have a roomy and well ventilated forecastle.

There are two deck houses, that forward containing the dining room, which connects with the steward's pantry and the galley, while in the after house is a spacious social hall, a roomy stateroom and toilet room.

One of the 6-cylinder, 300-horsepower, air-starting and reversing Speedway marine engines is in place and the other is being tested on the blocks in the shop, and will soon be transferred to the yacht.

A Motor Catamaran.

ELLIS WARD, coach of the University of Pennsylvania's rowing crews, has had a catamaran built which is to be driven by a gasolene motor. The motor will be installed this week, and if the boat is a success, a larger one is to be built. Two decked-over shells 35 feet long support a platform, on which the engine is to rest. There is a canvas-sided cockpit on this platform 14 feet long and 3 feet 6 inches wide. The space between the shells is 18 inches, and in that space the propeller is hung. The motor weighs 300 pounds. It is thought that fair speed will be made and a larger and more substantial craft of the same type is to built at once for use on the Hudson.

FOREST AND STREAM

A JOURNAL OF OUTDOOR LIFE, TRAVEL, NATURE STUDY, SHOOTING, FISHING, YACHTING.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time.
Terms: $3.00 per year; $1.50 for six months.
Canadian subscriptions, $4.00 a year; $2.00 for six months.
Foreign subscriptions, $4.50 a year; $2.25 for six months.
Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.
The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.
A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.
Transient advertisements must invariably be accompanied by the money or they will not be inserted.
Advertisements should be received by Saturday previous to the issue in which they are to be inserted.
Only advertisements of an approved character will be inserted.

STERN OF HYDROPLANE LURSSEN-DAIMLER.

Work at Nock's Yard.

ONE of the busiest yards on the Atlantic Coast is that of Nock at East Greenwich. There are about seventy-five yachts stored there and nearly all will be in commission this season. Some have already been launched and others are being scraped and painted. On a few changes have been made and there are some new boats well advanced toward the finishing stages.

A 75-foot cruising motor boat is being built for a New York yachtsman, and this craft meant the enlargement of the construction building. An addition 15 by 60 feet was put on the west end. This new cruiser will be up-to-date in every way, and will be driven by two four-cylinder Murray & Tregurtha engines 6½ by 8 inches driving twin screws. The raised sheer extends more than half the length of the boat and terminates in a cabin trunk over the owner's quarters aft. There is a 16-foot deck forward, then a deck house in which will be the dining room. This is 12 feet long and the floor is snug below the line of the deck, thus keeping the weight low and not making the vessel look top-heavy. A bridge deck extends over the galley. The interior layout shows a large chain locker in the forepeak. The crew's quarters, which are large and comfortable, come next. A passageway leads under the dining room from the galley to the crew's quarters. The galley is 13 feet by 5 feet and is arranged with all modern conveniences. Aft of the galley and separated by watertight bulkheads at each end is the engine space. The gasolene tanks are also in this space. In the after part of the yacht are two staterooms with double berths, lockers, etc., one on each side. On the port side is a bathroom and on the opposite side an alcove from which the companionway leads to the deck. The owner's stateroom is the entire width of the yacht and ten feet in length. It is fitted with a double berth, divan, bureau, dresser, wardrobe, deck, etc. The interior finish of the owner's quarters is mahogany, and all the exterior woodwork, the dining room and deck fittings are of mahogany. The yacht will carry a sailing tender and a high speed launch on the davits. This boat will not be ready until July. She will be launched about the end of June.

H. S. Bullock is having a launch built at Nock's which is nearing completion. This craft is to be named Uonda and is the third craft built by Nock for Mr. Bullock. The finishings are all of mahogany. There is a short raised deck forward with a trunk cabin about 16 feet long. The interior arrangements consist of a stateroom forward fitted with two single berths. Then comes the toilet on one side and a clothes locker on the other. The cabin is fitted with two extension berths. The galley and engine are aft. This boat is to be driven by a 30-horsepower heavy duty Lamb motor.

C. G. Washburn, of Worcester, has had a 30-foot auxiliary built which is about ready for launching. She is a typical low powered cruiser with short overhangs, a moderate sail area and power enough to drive her at a good rate of speed. A good forecastle with accommodations for a paid hand, a galley and cabin are arranged comfortably. The motor will be a 10-horsepower Standard. This boat will be kept at Narragansett Pier all the season, as her owner has his summer residence there.

Dr. G. W. Van Benschoten, of Philadelphia, is having an ocean cruiser built from designs by J. Murray Watts. This boat is very heavily constructed because she is intended for the Bermuda race. Her dimensions are 45 feet 10 inches long, 10 feet 6 inches beam and 3 feet draft. In appearance she very much resembles the Ilys, Caliph and others designed by Mr. Watts. These boats were designed specially for cruising along the coast and going off shore. There is a fairly high freeboard at the raised sheer. Her sections are very easy and she should be driven at a fair rate of speed with the minimum amount of power. Her forward sections and the broad deck line show considerable flare. The stern is of the modified Normand type. She is to be driven by a four-cylinder Pearl motor. The interior arrangements consist of a galley forward, the crew's quarters and engine room and the cabin which is fitted with extension berths, sideboard, lockers, table, etc. The owner's stateroom is aft and contains a double berth, divan, dresser and bureau. The general finish of the interior is mahogany and with white enamel. The frames are spaced closely and the planking is 1⅜ inches thick. The trunk sides, deck beams, clamps, stringers and shelves are very heavy and there are two sister keelsons running the full length. There is a double steering apparatus, and the strong railing shows that every precaution has been taken to insure strength, which is further accentuated by the number of port lights.

W. C. Rhodes, of Providence is having a small power boat built which will be fitted with a double cylinder 7½-horsepower Buffalo motor. A one-design class is building for Kenneth Wood and others of Saylesville.

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

Canoeing.

Hackensack River Cruise.

HACKENSACK, N. J., April 29.—*Editor Forest and Stream:* The annual cruise down the Hackensack River will be held on May 13 and 14. The committee in charge has taken special care to make this event one of the most enjoyable in the programme, and it is hoped that many of our members who have not heretofore made this cruise will avail themselves of this opportunity. The schedule is as follows:

The start will be from West Nyack, N. Y., at 4 P. M., on Saturday, May 13. Camp will be made at the Hemlock Grove, as on previous occasions, and the cruise continued the next morning, arriving at Hackensack about 5:30 P. M. on Sunday, May 14. A dinner will be served at the Susquehanna Hotel at 7 P. M.

Hudson River members are requested to paddle to Hermit Point on Saturday afternoon, May 6, and after camping over night, start for Nyack at 10 A. M., Sunday with the flood tide. Arrangements have been made at Nyack to have the canoes carted to West Nyack, where proper care of them will be taken during the week. Those who are unable to paddle to West Nyack can ship their canoes and duffle from Weehawken by the West Shore railway by freight, or by National Express.

Trains leave Desbrosses street, West Shore railroad at 1 and 2 P. M. ,and from foot of W. Forty-second street at 1:15 and 2:15 P. M., on Saturday. Cruisers are advised to provide shelter tent, blankets, poncho and provisions for three meals, also light mess kit.

All members who expect to attend the cruise or dinner will please notify the chairman of the cruise committee at No. 280 West Anderson street, Hackensack, N. J., so that arrangements can be made to insure their comfort.

If you have never made this cruise before, consult some friend who has, ask him about it, and write and tell me that you will be one of the bunch. EVERETT V. WALKER,
Chairman.

Central Division Spring Meet.

THE Central Division, A. C. A., held their spring meet at the German Club, Pittsburg, on Saturday, April 22. There were 210 members and guests present, who spent a lively and enjoyable evening. The programme stated that a "big smoker and vaudeville was given by the Almindukeysylerestippy cannoe clubs under the auspices of the A. C. A. This peculiar title is made up of the first syllables of the club's helping in the entertainment.

The Duquesne C. C. band, Theo. Rentz and twenty pieces, started the show. The Algonquin C. C. members, J. E. Bonham, W. M. Damm, F. D. Hallock and Thos. Shane, gave some song and dance specialties. The Keystone C. C. members, W. E. Havis, G. L. Berger, "Buster" Brown and "Duck" Webb; the Crescent C. C. members, C. F. Bornmann and Price; the Sylvan C. C. men helped out the entertainment, which closed with a one act comedy by members of the Minnetonka C. C.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Curtis E. Lakeman, 49 St. Nicholas Terrace, New York city, by A. M. Poole.

NEW MEMBERS ELECTED.

Central Division.—6212, Lona D. Holmes, 126 Beacon street, Syracuse, N. Y.; 6215, Henry Damon Shute, 424 Emerson street, E. E., Pittsburg, Pa.

Eastern Division.—6213, Arthur L. McCrudden, 27 Common street, Providence, R. I.; 6214, Walter A. Mathewson, 117 Wallace street, Providence, R. I.

REMINGTON UMC
TRADE MARK

Another World's Record for LESMOK .22s

Hercules Gun Club.

Reading, Pa., April 29.—Fifteen shooters faced the traps at the annual target tournament of the Hercules Gun Club, on the grounds at Temple, near here, and over 1,200 targets were thrown. J. M. Hawkins made the best record for the day, going through the ten events of 15 targets each with 146 breaks out of a possible 150. Neaf Apgar was next in line with 138. The scores:

Event No. 1, 15 targets.—Cumberland 14, Ludwig 9, Apgar 15, Hawkins 15, Lewis 15, Brunner 6, Becker 13, Bortz 7, Rothermel 5, Kahn 14, Bowers 13, Yocum 12, Hessian 15.

Event No. 2, 15 targets—Cumberland 14, Ludwig 9, Apgar 13, Hawkins 14, Lewis 10, Brunner 6, Becker 11, Botz 7, Rothermel 7, Bowers 13, Yocum 12, Hessian 14.

Event No. 3, 15 targets.—Cumberland 15, Ludwig 6, Apgar 14, Hawkins 14, Lewis 12, Brunner 5, Becker 11, Bolt 8, Rothermel 5, Bowels 11, Yocum 12, Hessian 12.

Event No. 4, 15 targets.—Cumberland 15, Ludwig 6, Apgar 13, Hawkins 15, Lewis 11, Botz 5, Bowers 11, Yocum 13, Hessian 14.

Event No. 5, 15 targets.—Cumberland 14, Ludwig 4, Apgar 13, Hawkins 15, Lewis 11, Botz 5, Bowers 11, Yocum 13, Hessian 14.

Event No. 5, 15 targets.—Cumberland 14, Ludwig 4, Apgar 15, Hawkins 15, Lewis 13, Botz 9, Yocum 13.

Event No. 6, 15 targets.—Cumberland 15, Ludwig 9, Apgar 14, Hawkins 15, Lewis 13.

Event No. 7, 15 targets.—Ludwig 9, Apgar 14, Hawkins 15, Lewis 12, Hessian 15, Marks 10.

Event No. 8, 15 targets.—Ludwig 10, Apgar 13; Hawkins 14, Lewis 14, Marks 8, Biehl 7.

Event No. 9, 15 targets.—Ludwig 10, Apgar 13, Hawkins 15, Lewis 14, Marks 5, Biehl 8.

Event No. 10, 15 targets—Ludwig 10, Apgar 14, Hawkins 14, Lewis 12.

Larchmont Y. C.

Larchmont, N. Y., May 1.—The windup of the season came yesterday and a goodly number of shooters gathered at the final weekly shoot. Under the best of conditions good scores were made.

E. A. Wilson proved to be high gun for the day. He won the second and fifth trophy matches, each with a full score. Ralph L. Spotts won the 10 target scratch contest with a full score, and K. R. Hooker was the winner of the special trophy match, breaking all of his 25 targets. The leg for the April cup—the final one—was won by W. B. Short, but K. R. Hooker and R. L. Spotts having won two legs each in former shoots, they shot off. Spotts winning the cup. A. E. Ranney won the fourth match, a 25-target match, with a full score.

Saturday, May 6, will be a banner day at Larchmont for trapshooters, for the club championship is to be decided. There will also be an inter-club and universities championship shoot, in which gunners from six clubs and five universities will take part. Yale, Princeton, Pennsylvania and Dartmouth colleges have already entered, and it is expected that Harvard will enter before Wednesday. These will be individual championships, and it is estimated by the committee that at least eighty men will compete for the prizes offered.

Ideal Gun Club Tournament.

Circleville, Ohio, April 28.—The spring tournament given by the Ideal Gun Club yesterday was largely attended. Forty-one shot clear through the program, shooting ten events of 15 targets, 150 birds to each man.

In the professional class, Bert Call, of Cincinnati, was high man, breaking 140 out of 150 targets. B. S. Cooper, of Thornville, led the amateurs, breaking 139 out of a possible 150 targets.

Out of 6,000 targets 5,552 were broken. There was a little rivalry between C. L. Brandon and L. T. Shaner as to who would break the largest number of targets out of 150 each. The former led by ten targets.

The officials of the club are: President, C. O. Smith; Secretary, E. M. Stout; Treasurer, J. S. Ritt.

Among the out-of-town shooters were: Bert Call, Roundy Chamberlain, Cincinnati; L. J. Squier, Pittsburg, Pa.; F. G. Barstow, St. Louis, Mo.; F. P. Hall, Will Webster, Lon Fisher, Mrs. Fred Lenoir, Columbus; C. Coburn, Mechanicsburg; B. S. Cooper, L. Grubb, Thornville; H. Hildinger, London; J. T. Wells, Hilliards; Charles Jamison, Roxabell; Charles Ward, Asnville; H. D. Smart, F. A. Hulsinger, Utica; J. C. Cain, J. A. Penn, Dayton; H. Hirth, Galena; A. C. Blair, New Benlington; O Woolard, John Shopps, Buckeye Lake; Frank Ford, Columbus; F. M. Edwards, J. E. Nutt, Portsmouth; William Shattuck, Ironton; W. A. Linkhart, Ft. Williams; C. P. Tatman, Chillicothe; C O. Smith and F. D. Alkire, Williamsport. The scores were:

Western Connecticut Trapshooters League.

The first registered tournament of the Western Connecticut Trapshooters' League will be held under the auspices of the Bethel Gun Club at Bethel, Connecticut, May 13. In the program the club make the following announcement:

"The Bethel Gun Club extend greetings to all shooters and cordially invite them to attend our annual tournament.

"We wish to announce that we allow no sweepstakes or moneyed events to be shot for on our grounds. We find from past experiences that it tends to deteriorate and lower, rather than advance the sport.

"We have put up prizes to the value of $250, so that it will be an incentive for all shooters within a reasonable distance to attend this, our first shoot since the organization of the Western Connecticut Trap Shooters' League.

"With favorable weather conditions and the support and co-operation of our fellow members of the association and with the high grade program we are extending to you, we feel assured of a successful opening of our summer campaign.

"We wish to call your attention to the special Parker gun event; 25 targets, distance handicap. This is a D. H. grade listed at $80. Also the Western Connecticut Trapshooters' League trophy, the Du Pont Connecticut amateur trophy and the Fairfield county championship trophy.

"Shooting will start promptly at 9:30. Tournament open to al amateurs. Manufacturers' representatives to shoot for targets only. Two sets of traps, Interstate rules to govern. Lunch and loaded shells for sale on the ground. The entire program will be shot rain or shine; platforms covered.

"Ship shells to C. K. Bailey, Secretary, prepaid, and they will be delivered free on the grounds. For further information address C. K. Bailey, Secretary, Bethel, Conn."

Waynesboro—Mercersburg.

Waynesboro, Pa., April 26.—The first shoot between these two clubs was held at the Mercersburg Academy. There the school team won by a lead of 21 birds. The return shoot was held just before the exhibition shooting of the wizard of the shooting world, J. Mowell Hawkins. The traps were very irregular, and in the shoot-off the rooting of the crowd, which resembled that of a ball game, more than a shoot, no doubt unnerved the school boys. Scott is a Waynesboro man, and Horn comes from Phillipsburg, Pa. Scores at 50 targets each; tie shot off at 5 each:

Waynesboro.	Score.	Tie.	Mercersburg.	Score.	Tie.
H Scott	36	3	Tom Horn	35	5
M Harbaugh	34	4	F Schoew	34	2
G Hovis	33	3	D Campbell	33	3
J Lunge	30	2	J Kennedy	31	1
	133	12		133	11

Northern Kentucky Gun Club.

THERE was something doing at the club grounds on April 30, ten shooters keeping the trap boys busy until almost dark. The day was cloudy and threatening, but no rain fell, and barring a little wind, the shooting conditions were excellent. In the trophy event four of the contestants tied on perfect scores, including their handicaps, and after two shoot-offs had been run off, two of the four were still tied. In the second shoot-off the handicaps were cut in half, and Luverne and Payne dropped out with totals of 24 each; Woodbury and Keifer each broke 24, the former missing his 24th target, and their handicaps gave them a perfect score. It was getting too dark to see by this time, so the tie will be decided at the next trophy shoot on May 15. Payne was high man in actual breaks with 47; Luverne, Keifer and Woodbury took second place on 42 each.

E. O. White, in the practice events, did better work than he did on the day before at the Cincinnati grounds, and was much nearer to his mark. George Dameron has so far recovered that he shot to-day with no bad effects, and will once more be one of the regulars. His score showed his lack of practice, but he will soon get back where he belongs.

The club will hold its first money-back shoot on May 7. The program will be ten 15-target events, with a total entrance of $14, and an optional sweep of $2 on the entire program. The first five events will be divided Rose system, 5, 3, 2, 1; and the last five, percentage system, 35, 30, 20 and 15 per cent. The club guarantees that every amateur shooting the entire program shall receive $11 back, so that he will be out for the targets only. These shoots were very popular last season, and judging from the number of letters received from shooters inquiring when they were to be started again, they will be even more so this year. Everyone is invited to attend. The shoots will be held on the first Sunday of May, June, July, August, September, October and November.

Trophy event, 50 targets:

				Score.	Hcp.	Total.
White	10	10	13	7—40	6	46
J B C	12	8	11	7—38	10	48
Irwin	12	9	11	6—38	10	48

Indianapolis Gun Club.

IT was much like an all-star performance at the Indianapolis (Ind.) Gun Club Saturday, April 29. Parry evidently bent on evening up what he lost by three months' absence from the traps, added a little to the pace he has maintained since his return. In practice he broke 96 out of 100, which included two straights, while Dixon and Hymer each posted one 20. Burr, professional, was credited with two of them.

In the trophy event Parry maintained his pace and scored 48 out of 50, Lewis 47, Barr 46. Scores:

Practice:

Events:	1	2	3	4	5	Shot	
Targets:	20	20	20	20	20	at.	Broke.
*Barr	20	19	16	20	16	100	91

Du Pont trophy, 50 targets: *Barr 46, Moller 42, Lewis 47, Brennan 42, Dixon 45, Parry 48, Hymer 40, Neighbors 36, Britton 41, Golden 29.

*Professional.

R. R.

Smith Gun Club.

NEWARK, N. J., April 30.—A small gathering of gunners toed the mark at the Smith Gun Club traps yesterday afternoon. Most of the club's best gunners were at Jersey City shooting off a ten-man match against the Jersey City Gun Club. The scores made at the home traps yesterday were as follows:

E Betts	19	17	16	20	19	21
L Young	21	18	20	16	..	..
A L Perkins	19	19	21	18	14	..
J Schialparilly	10	8	12	14	..	..

320 STRAIGHT — 129 SRAIGHT

W Some Very Classy Shooting Done On The Herron Hill Gun Club Grounds, With W

WINCHESTER

"Leader" Shells, Regular Stock Loads.

At a complimentary shoot given for him by the Herron Hill Gun Club of Pittsburg, on April 26th, Lester S. German broke 320 "Straight." The targets were thrown full fifty yards and at regulation angles.

At the same shoot Mr. G. E. Painter, the well known and skillful amateur, broke 129 "Straight," beating the ground record.

Messrs. German and Painter both used Winchester "Leader" Shells—regular stock loads. Their exceptionally high scores add another stone in the colossal monument of proof that Winchester Shells are the peers of all others for uniformity, pattern and speed.

The Spring Tonic For Shooters Is WINCHESTER SHELLS

Cincinnati Gun Club.

THE attendance at the grounds on April 29 was not so large as usual, owing to the rainy weather. But half a dozen of the regulars went out and shot at 100 targets between the showers. Hammersmith made high score of 91, with Johnson dropping into second place on 88. The trophy shoot was not pulled off, as so few shooters were present. Mr. E. O. White, of Butterprint, Ky., was a welcome visitor, but was not shooting in as good form as usual. Hellman shot a very nice race, though we have seen him do much better. Payne did not do himself justice. It must be that he doesn't like the wet. Dr. Bird also fell down quite a little from the mark he has set at other shoots.

On April 30 four shooters visited the grounds and shot at 100 targets, besides a few for practice. J. Penn, of Dayton, O., one of the old members of the club, was present and gave Holaday a close race for first place, finishing only 2 targets behind him. Sampson came next, But not with the score we look for from him. Harrington is new at the game, and his score of 46 out of 75 is by no means a bad one. The club will hold a money-back shoot on May 21, and every shooter who happens to be in this locality is invited to attend, and may be sure of a warm welcome. There will be no shooting at the grounds on May 7, as the members will attend the money-back tournament of the Northern Kentucky Gun Club on that date.

April 29:

Targets:	15	15	20	15	15	20	Total.
Hammersmith	12	12	18	15	15	19	91
Johnson	13	13	18	11	14	19	88
Hellman	14	13	14	13	13	16	83
Payne	12	11	17	13	12	15	80
Dr Bird	13	11	14	10	11	15	74
White	12	12	13	9	11	16	73

April 30:

Targets:	10	15	10	15	15	15	20	Total.
Holaday	9	13	10	15	13	15	16	91
Penn	10	12	9	15	13	13	17	89
Sampson	7	13	9	13	13	12	18	85
Harrington	..	..	7	7	9	9	14	46

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Chicago Gun Club.

Chicago, Ill., April 22.—Quite a number of our members being away snipe shooting, and a strong, disagreeable northeast wind both were factors in the small attendance to-day. The five who did come out did good work at both singles and doubles. Ed. Graham did especially fine in his first 25 singles, of which he lost only 2.

Event No. 1, at 25 singles, resulted as follows: Graham first with a score of 24; Sharp taking second place with 23 and MeLachlan third with 20.

First honors in the second event at 50 singles again went to Graham with the score of 49, Sharp and MacLachlan dividing second honors of scores of 43.

MacLachlan captured first place in both the double events, scoring 43 out of 25 pairs, and 37 out of 24 pairs. Sharp landed second place in the 25 pairs with a score of 38, Graham breaking 36, while Shrigley made 31.

In the 25 pairs, Graham followed MacLachlan by scoring 35, Sharp being next in line with 34, while Shrigley broke 29.

Barnes is trying to get used to a new gun, and it probably won't be long before he will be grinding the targets up well enough to run his scores up in the 20s in each frame. Scores:

Events:	1	2	3	4	5
Targets:	25	50	25p	25p	25
J H Shrigley	17	31	31	29	..
J R Sharp	23	43	38	34	..
E S Graham	24	49	36	35	21
A F MacLachlan	20	43	43	37	..
C B Barnes	18	26	..	..	18

April 23.—The pleasant weather of to-day helped the attendance, although it was rather cool where the raw wind from the northeast could get at one. The field of thirty-one shooters looked good on a Sunday, with no regular or special program, as it came between the close of the winter season last Sunday, and the beginning of the summer season's program, which starts next Sunday.

In the practice event Thomas and Stannard each broke 24 of the 25 singles, Young and Burton each landing 23. Post made 22, while Shrigley, Thwaite, Holtz, Gill, Deasert and F. P. Stannard each brought down 21.

Clancey was high with 45 out of the next fifty, W. D. Stannard taking second place with 47. Sharp and Quade each scored 46 breaks, while Holtz was close up with 45.

Kausche, Deasart and Gill divided first honors in event No. 3, at 25 singles, each scoring 24. Sharp and Clancey taking second place with scores of 23, Holtz winning third with 22.

In a 50-target race at 22yds., Young landed in first place with a score of 43, Thomas and Burton each breaking 42.

Thomas turned the trick in the next race at 25 singles at 23yds. by going through the frame without a miss, Young coming in second with 23, while Shaw took third with 22 breaks.

In the first event at doubles, Young broke 37 out of the 20 pairs, Sharp landed 33, while Mott broke 32. The next race at 25 pairs resulted as follows: Clancey 38, W. D. Stannard 37, and Deasert 35.

Taggart handled first place in the last event at 10 pairs with a score of 18, Dr. Robb and Young each scoring 17, while Thomas and Gill each broke 16.

We are expecting a good big turnout next Saturday and Sunday to start in on the summer season's program, and the prospects are good for a good attendance each week through the season.

New York Athletic Club.

B. M. Higginson won the trapshooting championship of the New York Athletic Club at Travers Island on Saturday, April 29. The event was at 200 targets, and the winner had 188 breaks to his credit. Customary strings of 25 bluerocks were thrown for each man. Mr. Higginson started out with a full score of 25 in the first time at the traps. He followed the run with 22. Then came 23 and another 23, which gave the winner a total of 93 for the first 100 targets. C. W. Billings also had the same total when half of the targets had been trapped.

Mr. Higginson started the second round with another 25, and then followed up with 22, 25 and 23. R. L. Spotts, who had 90 at the end of the first 100 targets, came very strong toward the end of the shoot and took second prize with a grand total of 184 targets. The run was equalled by H. M. Brigham, champion of the Crescent Athletic Club, who shot along for targets only. C. W. Billings and F. A. Hodgman tied for the third prize, with totals of 183. In a special shoot-off the former gunner defeated Mr. Hodgman by a total of 24 to 23.

Dr. D. L. Culver, the former champion, did not figure at all in the event. His grand total was 162.

Although a little bit too warm for trapshooting, the gunners had ideal conditions on the firing line. More than a half dozen of the experts returned full strings of 25 targets. Champion B. M. Higginson led with three perfect strings. Both F. A. Hodgman and H. M. Brigham, had two strings of 25 targets each, the former gunner making his in succession. C. W. Billings, G. J. Corbett, W. J. Simpson and R. L. Spotts each had one full total. The scores:

Championship shoot, 200 targets:

B M Higinson	25 22 23 23 25 22 25 23	188

Shoot-off for third prize, 25 targets, Scratch: C. W. Billings 24, F. A. Hodgman 23.

DuPont Gun Club.

Wilmington, Del., April 30.—Seventy marksmen competed at the weekly shoot of the Du Pont Gun Club yesterday. The veteran T. Hayes Keller, Sr., of New York, was on hand, and did some fine shooting. E. H. Starr, of Baltimore, made the fine score of 95 out of 100. Frank Mathewson, who has been doing fine work at the traps recently, broke 92 out of 100. He had a run of over 50 straight. This is the second long run Mr. Mathewson has made recently.

T. W. Keithley shot well, getting 24 the first time up, which score won the spoon in Class A. As he was tied in Class C from last week, he won the spoon in this event also.

In the T. Coleman du Pont merchandise event the scores were:

Class A, 24 out of 25—T. W. Keithley.

Class B, 19 out of 25—C. C. Gerow, G. H. Mitchell, C. D. Rogers, Dr. A. Patterson, J. W. Mathews.

Class C, 15 out of 25—J. C. Miller, H. P. Carlin, R. L. Conner, W. Tomlinson, Dr. H. H. Darlington, H. Wilson, Wm. Coyne, Dr. C. R. Jefferis, Jr.

Class D, 13 out of 25—J. Bayard, John W. Mathewson, L. W. Crawford.

The shoot-off of the ties made April 22 resulted:

Class B—H. Winchester, A. H. Lobb, C. E. Springer tied again on 22. Will be shot off May 6.

Class C—Won by T. W. Keithley; score 24.

Class D—Won by Dr. A. Patterson; score 19.

The full scores, 25 targets each man, follow: H. W. Bush 20, J. Bayard John 13, D. A. Grier 23, Clyde Leedom 16, W. A. Joslyn 20, R. S. Wood 16, J. H. Bush 9, L. C. Lyon 14, F. H. Megaw 12, A. M. Lindsay 9, C. Gerow 19, J. E. Miller 15, F. Mathewson 21, S. G. David 14, J. B. McHugh 22, W. M. Hammond 20, N. K. Smith 18, R. L. Beauchamp 17, William Foord 23, C. H. Ford 14, Dr. S. Steele 21, G. H. Mitchell 19, T. Hayes Keller 22, Storr 24, M. E. Rose 21, C. O. Williams 23, J. A. MacMullen 12, A. H. Lobb 22, C. D. Rogers 19, H. P. Carlon 15, R. L. Conner 15, J. W. Burns 16, J. W. Anderson, Jr., 17, C. E. Springer 22, F. Springer 15, C. D. Prickett 12, W. Tomlinson 15, E. H. Anderson 8, T. W. Keithley 24, S. J. Newman 16, Dr. S. C. Rumford 16, Dr. H. Betts 11, E. B. Wilson 11, George Wilson 8, J. J. Magahern 14, Dr. H. H. Darlington 15, H. Wilson 15, David Lindsay 20, David Wherry 19, L. W. Crawford 13, H. J. Taggart 9, Dr. A. Patterson 19, Walker Mathewson, 13, E. F. Jones 11, R. H. Denny 10, William Coyne 15, W. B. Smith, Jr., 9, S. Tuchton 18, G. S. Borroughs 20, J. C. Ewing 14, J. C. Cannon 17, D. J. Dougherty 16.

Hyde Park (Ohio) Gun Club.

The attendance at the shoot on April 29 was smaller than usual, owing to the bad weather. The few who were present shot in four 25-targets events, which were sandwiched in between showers. De Mar, of Madisonville did the best work of the afternoon, breaking over 93 per cent. of the 75 targets he shot at. Irwin and Holaday shot a close race all through, the latter finishing only 3 targets in the lead. In an event at 25 targets from 20yds., Holaday broke 19 and Irwin 18. The last event was at 12 pairs, Holaday breaking 14 and Smith 11. The club will be well represented at the money-back tournament of the Northern Kentucky Gun Club on May 7.

Holaday	21	22	24	22	89

The Fred Macaulay Business Men's Gun Club.

Newark, N. J., April 26.—An interesting practice shoot was held yesterday at the Speedway traps by the members of the Fred Macaulay Business Men's Gun Club. The feature of the afternoon was the special match shoot between George Ohl, Peter Bey and James Wheaton, which resulted in a score of 21, 16 and 16 birds, respectively.

In the practice shooting Louis Colquitt was high man with a score of 169 out of 175. Neaf Apgar brought to earth 137 out of 150. Peter Bey showed rare marksmanship by piercing 23 and 21, a total of 44 out of 50.

At the meeting next Tuesday afternoon a handicap shoot will be held for the Du Pont Powder Co.'s trophy. The scores:

Smokeless.

Big Four League Tournament.

Wamego, Kans., April 25.—The two-day registered tournament of the Big Four League was held here yesterday and to-day. Wm. Leach was high amateur for the two days with 137 and 130—a total of 267. The veteran, William H. Heer, led the professionals with 286 out of 300. Forty amateurs faced the traps, the gun experts numbered nine. Quite an audience of Wamego citizens attended the tournament, and a number of ladies graced the occasion. Trapshooting received a boom, and an enjoyable time was had by the participants. Scores:

Tie for Gilman and Barnes Trophy.

Detroit, Mich., April 28.—The annual international shoot for the Gilman and Barnes trophy here to-day resulted in a tie between John Schmidtuz, of West Toledo, and R. D. Bates, of Ridgetown, Ont. Each broke 19 out of 20 bluerocks. The shoot-off will take place to-morrow morning. Yesterday Schmidtuz captured the Jack Parker Memorial trophy with a perfect score—25 breaks.

SCHMIDTUZ WINS TROPHY.

Detroit, Mich., April 29.—John Schmidtuz, of West Toledo, to-day defeated R. D. Bates, of Ridgetown, Ont., in shooting off yesterday's tie for the Gilman and Barnes trophy at the Jack Parker memorial shoot. Schmidtuz killed 5 live birds, while Bates missed his fifth. Bates and Rolla Heikes had each two wins to their credit, and needed only one more for permanent possession of the trophy, while to-day is Schmidtuz's first win.

Trap at Jersey City.

A ten-man team representing the Jersey City Gun Club defeated a ten-man team from the Smith Gun Club of Newark, April 29, at Jersey City, by a score of 430 to 415. Both teams shot well, Keogle, of the Smith team, falling a little behind his usual average. The scores:

Smith Gun Club.		Jersey City Gun Club.	
S Thornton	40	D Moeller	37

Wm Trowbridge	45	F Burlington	42
H Hassinger	39—415	P Hallinger	44—430

The Hassam-Wheeler Shoot.

WELLINGTON, Mass., April 29.—Clifford Randall, of Portland, Me., was high gun in the Palefaces' all-day "sweepstakes" sliding distance handicap shoot this afternoon, with a total of 153 out of 160 targets. The sponsors for the event were George Hassam and Gil Wheeler, the latter of Brunswick, Me. The weather conditions were ideal, both as to light and wind.

The field of thirty-one guns included crack amateurs from every New England State, and several from New York, New Jersey and Delaware. A party of five professionals, including Jack Fanning, of New York city, were at the traps, and found the amateurs more than enough for them. The scores:

160 targets, sliding distance handicap, 16 to 20yds.:

Columbus Gun Club.

COLUMBUS, O., April 30.—Bert Call and Webb tied for high gun yesterday afternoon at the gun club, each breaking 93 out of 100. Fred Shattuck was out with his new Liberty shells and showed the boys he still knew how. Several new faces were among us. Come often. We like to see you. The next monthly shoot will be May 20 with a 150-bird program. There will also be a shoot on Decoration Day, with 100-bird program. So you all can have some practice for the State shoot. The program for the State shoot will be: Preliminary day, 100 birds. The next three days, 150 birds each day, on the Squier money-back. There will also be two 25-bird races each day for the trophies, with an optional sweep. 50 birds will be shot for the championship race. All events are open to all amateurs, except the average money and trophies, which go to Ohio shooters only.

LON FISHER.

Marine and Field Club.

SHOOTING for the season came to an end at the Bath Beach traps of the Marine and Field Club on April 29. The last leg of the April cup was the most important feature of the afternoon. The prize finally was won by C. B. Ludwig. E. H. Lott and C. D. Sayre each took a special shoot. In the evening there was a dinner at the club house, at which the prizes were presented. The scores:

April cup, 25 targets, scratch:

C B Ludwig	255	C D Sayre	223
P R Towne	251	J H Emanuel, Jr.	231
E H Lott	234		

Special shoot, 50 targets, handicap:

E H Lott	0	48	J H Emanuel, Jr.	0	42
P R Towne	4	46	C D Sayre	6	42
C P Ludig	2	45	C M Camp	0	39
W F Pardonner	0	45	E B Church	10	36

Special shoot, 25 targets, handicap:

C D Sayre	5	25	W F Pardonner	0	20
P R Towne	4	24	E B Church	6	20
C B Ludwig	3	20	J H Emanuel, Jr.	1	19
E H Lott	0	20			

Laurel Springs—Haddonfield.

HADDONFIELD, N. J., April 29.—The return match for the cup donated by the Haddonfield and Laurel Springs gun clubs was won by Haddonfield to-day; score, 424 to 379. The match was shot on the grounds of the Laurel Springs Gun Club. By way of preface, the Laurels are a comparatively young club, and it is not saying too much of them when I tell you their membership is composed of excellent material. They are an earnest, energetic aggregation of shooters. They gave us the glad hand of welcome like gentlemen. They took defeat philosophically, as only true sportsmen can.

Mr. Judson was high gun of Haddonfield, 46. Mr. Albertson held that honor for the Laurel Springs, 43. The weather was perfect. Scores:

Haddonfield.		Laurel Springs.	
Judson	46	Albertson	43
Beideman	45	Sloan	42
Holloway	44	Logan	40
Heiss	43	Dr Rand	40
E Tomlinson	43	Brown	39

Bennett	42	Mitchell	37
Duncan	42	Beavan	36
Strafford	39	Wills	34
Peacock	38—424	Garrett	31—379

W. A. SHREVE.

South End Gun Club.

READING, Pa., April 29.—This was the first shoot under the new Interstate ruling, and is the best and most satisfactory shoot held by South End Gun Club. In the novelty event, mile-a-minute targets, there were 112 entries. The boys found this to be an exceptionally hard game. Two—C. M. Hain and Howard Schlicher—succeeded in breaking 10 straight and divided $16.80. W. W. Miller made a run of 77 and Harry Kahler one of 68. Scores:

Whitney	15	7	24	13—59	10	69

Get Together.

BUFFALO, N. Y., April 28. *Editor Forest and Stream:* In line with the treatise on trapshooting by that able critic, Paul North, which you published some months ago, I submit the following impressions, which I have gained in the observations of the advancement of this sport within the last few years.

It is quite natural that pleasure out of doors should have associated with it the field gun, so different from years ago with pioneers, when that association was so necessary for protection. The gun has always been the main attraction for sport in the woods and field, and naturally shooting has carried with it the glories of winning, and generally when this sport has been applied to the field, a money consideration for such victories.

The higher degree which the education and advancement of our people is attaining is most marked by the absence of any conflict in sport which will cause discomfort or loss among us.

The sport of trapshooting is a good barometer for the advancement of this universal peace; in fact, lends great assistance to that end. The early use of the field gun was often shaded with the taking of life or the winning of high wagers from people that could ill-afford to lose. When we consider its place to-day, we know it is not connected with either of these elements. We see the people of our immediate locality getting together in a healthful out-door sport through the medium of trapshooting, and again see these people mingling with those of other cities in the same friendly enjoyment, and they are all lovers of that great sport. We associate with people of the East and West, and from Dixie and Canada, thereby promulgating a general feeling of universal friendship and peace among all.

The most pleasing history is made at the gatherings between shooters from the United States and Canada, in such meetings as the Buffalo Audubon Club, the Hamilton Gun Club and similar clubs have. Also between the shooters of the North and South that visit the tournaments in those localities. Under these conditions, the feelings of 1812 and 1861 have passed away, and the familiarity and friendship which trapshooting has brought about is mightier than the powers of the pen.

What will continue this marked advancement of this sport is a question that many of our best minds have in their leisure moments found time to consider.

It is a fact that our natural desires lead us to out-of-doors enjoyment. It is also true that many of those who enjoy such sport do not assist or are not aware of the good that could be derived in the advancement and continuance of same. Consequently, it will be observed by those who have followed the sport of trapshooting, that the manufacturers of supplies who cater to this class of trade have been of great assistance in the furthering of this enjoyment. It is also true that they have been subjected to what would seem by some unjust criticism. However, it is safe to say that until recently where discontentment existed money matters were involved, and to this end the following suggestions are given for consideration for the betterment of this sport:

Do not have money prizes in any contest. Shoot for trophies.

Do not grade your shooters in classes. Shoot sliding handicaps, and they will grade themselves.

Do not be afraid to mingle with other clubs. Invite them to your grounds and have friendly matches. This is the way all concerned will enjoy the sport.

Do not blame the manufacturer if he is doing something you did not have time to do.

Take part in the meetings regulating such matters, and use your influence for the general good.

Remember, that you are living in an age of peace and progress. When you visit from one club to another, or from one city to another, it is going to be a peaceful and pleasant meeting, and do your part to make everyone enjoy himself.

Remember, it would be selfish to participate in such pleasures and enjoyments without the aid of your better half and friends, as it is most proper that they should be at these gatherings or at the feasts which so often follow. The contrast is so different from the hardship which their sisters had to endure with the association of the field gun years ago, that they should not be without the enjoyment it gives to-day.

WILLIAM H. SMITH.

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending April 29:

June 29-July 1.—Niagara-on-the-Lake, Ontario, Canada.—Canadian Indians. Court Thomson, High Scribe.

July 19-20.—Seattle (Wash.) Trapshooters' Association. H. E. Johnson, Sec'y.

July 22.—Coatesville (Pa.) G. C. H. A. Nichols, Sec'y.

Aug. 17.—Xenia, O.—Green County G. C. A. C. Blair, Sec'y.

Aug. 22-24.—Baltimore Md.—Maryland State tournament, under the auspices of the Maryland State Sportsmen's Association. Geo. P. Mordecai, Sec'y.

Sept. 4.—Wilmot (O.) G. C. E. E. Ellis, Sec'y.

Sept. 5.—Pillow (Pa.) G. C. J. A. Bingaman, Sec'y.

Sept. 5-6.—Dorchester (Neb.) G. C. J. Freehouf, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Alert Gun Club.

THE Alert Gun Club, of Phillipsburg, N. J., is holding its seventh annual registered tournament, at its grounds to-day. The Interstate Association contributes $50 as a part of the Squier money-back special fund, as usual, and the customary ten 15-target events (total entrance $15) and optional sweeps will comprise the program. Money in the regular program will be divided Rose system, 5, 3, 2, 1, and optional sweepstakes, percentage system, 40, 30, 20 and 10 per cent., class shooting. Edward F. Markley is the manager.

SEMI-SMOKELESS

Again proves its Superiority over other Rifle Powders, of whatever kind.

In the final shoot-off of the Inter-Club Matches, under the auspices of the National Rifle Association, the Rocky Mountain Rifle Club Team of Butte, Montana, won from the New Haven Team, with the wonderful score of

992 out of a possible 1000

Highest score ever made in the Inter-Club Matches.

This remarkable shooting organization is composed of the following members: T. E. Booth, Roy E. Tisdale, F. A. Anderson, J. W. Crawford, Hans Holmes, John A. Donovan, C. George Westphal, Louis Flagler and Joseph Morris—men, who by their skill and nerve have won the admiration of all rifle shooters from coast to coast. The individual targets made in the final match tell the story eloquently.

R. E. TISDALE,	200
T. E. BOOTH,	199
J. A. DONOVAN,	197
F. A. ANDERSON,	198
HANS HOLMES,	198
	992

In this series of matches the Butte Team did not suffer a single defeat; this is the SECOND SUCCESSIVE YEAR they have won the .22 Caliber Team Championship of the U. S. In the two years they have won 23 out of 24 matches, using exclusively

Peters .22 Cal. Ammunition

Thus in the most important .22 Caliber Competition of the year, SEMI-SMOKELESS CARTRIDGES are convincingly shown to be more accurate and more uniform than any others; they are very clean and may be fired indefinitely in the finest rifle barrel without cleaning and without injuring it; they have a record of achievement which has never and probably will never be equalled.

Ask Your Dealer for PETERS Semi-Smokeless Ammunition and do not accept Imitations or Substitutes.

302-304 Broadway (Corner Duane Street) New York City

His Best Book

MY FRIEND THE PARTRIDGE

By S. T. HAMMOND

This delightful presentment of the glories of Autumn days with gun and dog in the crisp New England woods in search of the noblest of native game birds, which has already delighted thousands of readers of FOREST AND STREAM, is now ready for delivery in book form.

Mr. Hammond knows his upland coverts as no other writer of the day. He makes no empty boast when he calls the partridge his friend, and, moreover, makes his every reader a friend of this splendid bird. He succeeds in a rare degree, not only in describing the ruffed grouse, its habits and habitat, and the pleasures of its pursuit, but in surrounding his reader with the very atmosphere of the leaf-scented autumn woods. Mr. Hammond's book is a welcome addition to the library of sport.

Cloth. 150 Pages. Illustrated. Postpaid, $1.00

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

WOODCRAFT

By "Nessmuk." Cloth, 160 pages. Illustrated. Price, $1.00.

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English.

FOREST AND STREAM PUBLISHING CO., NEW YORK

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

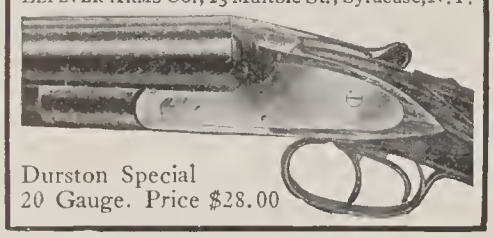
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00

FERGUSON'S

WILDFOWL SHOOTING.

By William Bruce Leffingwell.

Illustrated, 373 pages. Price in cloth, $1.50; half morocco, $2.50.

Containing Scientific and Practical Descriptions of Wildfowl: Their Resorts, Habits, Flights and the Most Successful Method of Hunting Them. Treating of the selection of guns for wildfowl shooting, how to load, aim and to use them; decoys and the proper manner of using them; blinds, how and where to construct them; boats, how to use and build them scientifically; retrievers, their characteristics, how to select and train them.

FOREST AND STREAM PUBLISHING CO.

I Want Some of

THE BLACK SHELLS

Say that to your dealer and you will get the ammunition you have been waiting for.

Our NON-MERCURIC PRIMER gives a certainty and quickness of ignition that will surprise you. It, combined with the extra size of our FLASH PASSAGE (the hole in the shell base through which the flame from the primer reaches the charge), will increase the effectiveness of your shooting from five to ten per cent.

The Waterproofing in THE BLACK SHELLS is perfect. Rainstorm nor ducking, mist nor fog, can make them miss fire or even swell or stick in the chamber.

THE BLACK SHELLS are in three classes:

AJAX, the tip of perfection in dense and bulk smokeless powders—all standard loads. Has extra high base and is made for the mo. particular.

CLIMAX, with all standard loads of dense and bulk smokeless powders, medium base. Sure to be the most popular of its class.

ROMAX, all standard black powder loads.

Send for book about shells. If you enclose 10c, we will send a beautiful colored poster, 20 x 30 inches, called October Days. It will delight any real shooter.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness. Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething. Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin. Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

The Philadelphia Rifle Association.

PHILADELPHIA, Pa., April 29.—The weekly competitions of this Association were shot to-day, on the Arlington range, Lansdowne avenue and Cedar lane, near Llanerch, Pa.:

Record match, 200yds., rifle: Dr. Davis 156, Forbes 149.
Military match: H. A. Dill (A) 44, 43, 42, 41, 40; Dr. Given 37, 37, 35.
Revolver match, 50yds.: H. A. Dill 86, 84, 81.
Pistol match, 50yds.: Dr. Palmer 89, 88, 88, 87, 87, 85, 84.

National Rifle Matches at Camp Perry.

WASHINGTON, D. C., May 1.—Camp Perry, Ohio, was to-day designated by the War Department for the annual national rifle matches this year. There will be individual matches, team matches and revolver shooting participated in by the Army, Navy, the Marine Corps, the Militia and civil organizations.

PUBLISHERS' DEPARTMENT.

Marble's game getter gun is a handy thing for canoe trips, in the mountains, or in the backwoods anywhere. It has a .22 caliber rifle barrel over a .44 caliber shot or ball barrel, and a fly on the hammer renders either barrel effective instantly. The stock is detachable, and the weapon can be carried in a holster. Write about it and other Marble specialties to the Marble Arms and Mfg. Co., 526 Delta avenue, Gladstone, Mich.

Albert E. Colburn, the taxidermist, of 744 South Broadway, Los Angeles, Cal., is conveniently located to cater to the wants of sportsmen hunting on the Western slope, Alaska and lower California. Write him for particulars regarding big game heads you hope to secure next fall.

TREED LION TIED BY HUNTER.

BECAUSE he had forgotten his "elimbers," C. E. Ordish, a Montana lion hunter, had to walk back five miles after them through the snow to Libby, Mont., reeently before he eould elimb a tree, rope and capture a lion whieh his dogs had traeked.

Leaving his dogs he walked five miles to Libby and returned with A. G. Beager, Fred Boekman and Dr. Auld. Mr. Ordish elimbed the tree, roped the lion, tied its legs together and dropped the end of the rope to the ground. It was brought to earth, where a collar and chain were put around its neek, and the trio started for the sleigh, one of the men holding the animal by the ehain and collar, another by the hind feet, and the third man held the rope around the body. A eage was made when they reached Libby. Mr. Ordish has eaptured sixteen lions alive thus far.—Portland Oregonian.

TARPON AT TAMPICO MEXICO.

THE fame of the Tampico tarpon fishing grounds seems to have spread to remote parts of the world, and it attracts hundreds of sportsmen to this place during the season. At one time recently nine foreign private yachts were anchored in the harbor, each of the vessels containing a party of sportsmen.

Most of the yachts came from England; two were from New York and one from Germany. In the English parties were men and women of title. It was said by the English owner of one of the yachts that he spent nine months out of each year visiting remote parts of the world; that he made journeys of many thousands of miles over the seas to try his hand at various kinds of fishing and big game hunting. From Tampico he and his party of friends went to Vera Cruz, and from there they will proceed to the Isthmus of Tehuantepec for tiger hunting. The early spring will find them fishing off the coast of South America.

It is only within the last few years that the Tampico fishing grounds have become well known. The establishment of a deep water harbor at Tampico took place not so very many years ago and previous to that time the town was little known to the outside world.

The ship captains and crews who came to Tampico carried to various foreign ports the news of the wonderful fishing that was to be had here, and visitors began to come to Tampico for the purpose of enjoying a season of the sport. Each winter the number of visitors has increased until there are now so many of them that the hotels are filled to overflowing.

The chief fishing for tarpon and other deep water fish is done in the Panuco River, the grounds where the best catches are made extending from the mouth of that stream to a point about three miles above Tampico, making a total distance of about nine miles. The river is broad and ranges in depth from forty to sixty feet. Owing to the salt water which comes in from the gulf water of the Panuco for some distance from its mouth is the home and playground of myriads of gamy fish, the leaping tarpon leading this class.

It is in the Panuco River that the deep water harbor is situated. The wharves and custom house are immediately in front of the city. Within five minutes' walk from the hotels the sportsman may step into a gasolene launch or rowboat and in another five minutes begin trolling for tarpon.

The fisherman does not even have to worry about the arrangements for his outing. If he leaves word with the hotel man the night before he will find everything ready for him when he starts out early the following morning. A boatman is on hand to carry his tackle and lunch, which have been supplied by the hotel; the bucket of mullet bait is in the boat, and all the fisherman has to do is to take a comfortable seat, grasp a handle of the 34-ounce rod, reel out 50 yards or so of line and wait for the tarpon to take the bait.

As a usual thing the fisherman does not enjoy his ease long after he has set his hook and bait afloat. The boatman pulls the little craft slowly along. Suddenly the line becomes taut and just as the fisherman takes a firmer grip upon the rod high out of the water jumps the tarpon. Its silvery sides glisten in the tropical sun; it gives its head a twist and its symmetrical tail a flirt in an effort to loosen the hook from its mouth and then drops back into the water.

This first leap of the tarpon is the most critical moment for the fisherman. The chances are about even that the giant fish will throw out the hook in this first effort to free itself. If it fails to do so and the wielder of the rod succeeds in keeping the line taut without pulling on it too strongly the prospects are favorable for eventually landing the tarpon.

These fish range in size from 4 to 6½ feet. If one smaller than four feet is caught it is replaced in the water. The first hooking of the fish, particularly when it is of unusually large size, marks the beginning of a desperate struggle between the sportsman and his victim.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

E. I. DU PONT DE NEMOURS POWDER COMPANY

"Pioneer Powdermakers of America"

ESTABLISHED 1802 **Wilmington, Delaware**

It not infrequently happens that the fish finally gets the better of the contest.

It is a work of labor and a test of endurance to land one of the larger tarpons. Sometimes the big fish keeps up the struggle for several hours, during which the sportsman is kept on a continual strain and must be constantly alert. In the present season it has sometimes taken five or six hours' hard work to land one of the larger tarpons. It occasionally happens that a shark will come along just toward the end of a long contest and make a meal off of the tarpon. One day recently a tarpon was being hauled out of the water into the boat when a shark made a sudden jump and bit it in two.

During the winter season here the Panuco River is swarming with pleasure craft of various kinds. Most of the private yachts here this year brought their own launches and each day they are filled with devotees of outdoor sports.

When fishing for tarpon becomes tiresome these seekers for amusement go out to the jetties and try their hand at catching and killing sharks. As many as fifty sharks have been killed by one of these boating parties in one day. Fishing for the mammoth June fish and for the smaller varieties is also indulged in by the visitors—The Sun.

IZAAK WALTON'S PARISH CHURCH.

Clerkenwell parish church contains some interesting monuments. Among them is one to Bishop Burnet, the Whig historian, who was buried beneath the altar. There is also a memorial stone to Sir William Wood, the famous Clerkenwell archer, and author of a curious little book in praise of archery, called "The Bowman's Glory." When he died in 1691 three flights of whistling arrows were discharged over the grave, and this seems to have set the precedent for the three volleys now fired at military funerals.

Izaak Walton's son, Izaak, was baptized and buried here, and the Compleat Angler has made an entry in the register regarding his other son of the same name who became a canon of Salisbury.—Westminster Gazette.

A DAY WITH THE BLACK BASS.

The small-mouthed black bass starts life under a disadvantage. He is born in the spring, and thus comes to be reckoned among the coarse fish, the tribe of bottom feeders, the, so to speak, "submerged tenth" of the fish world, whereas his talents and powers in the fight entitle him to a place among the gamest of the game. The presence of this fish in Canadian waters gives to the opening of the coarse fishing season a prestige lacking in the Old Country, for the black bass will rise to a fly, and otherwise exclusive trout fishers will generally so far recognize his existence as to devote a couple of days to his capture towards the end of June. By "fly," be it known, is not meant the ethereal insect which floats so gracefully on the surface of a chalk stream, nor, indeed, an imitation of any living thing (for which praise be! for wading would be a nightmare if the bass fly had any living counterpart), but a concoction of fur and feather described to me by a tackle dealer as "like a salmon fly, but more stylish." I would have purchased some of these fashionable insects if they had been tied on eyed hooks, but I have a particular aversion to flies tied on gut more especially on double gut as are most bass flies, an entirely unnecessary precaution, as a 3-pound fish is a rarity except when bait fishing. This question of flies is quite a difficulty out here. To anyone accustomed to use the eyed variety a fly whipped to gut is an abomination, yet though nearly all tackle is imported, I have only found one dealer who has had the enterprise to obtain any of the former, and he charges 8s. a dozen for a quality of fly retailed in London at 1s. 6d.

Fly tying is a useful accomplishment and I had once again to congratulate myself on having acquired the rudiments of the art which enabled me on this occasion to produce one or two lures of bright, not to say startling, appearance. The most sober colored and incidentally the one in which I had most faith was made with peacock eyes for wings, a flat, gold body, and golden pheasant tail. The others—well, suffice it to say they were a new variety. The most readily accessible and, unfortunately, the most popular river for bass fishing in this vicinity is the Chateauguay, which joins the St. Lawrence a few miles above Montreal. We were a party of five that set out one morning from the little French boarding house a few days after the opening of the season, and a more disreputable-looking crew it would have been difficult to find. My own well-worn waders and brogues looked positively neat besides the costume of my companions (it may be remarked in passing that this is my own opinion; I was in a minority on the point), for in this part of the country waders are hardly ever worn, and ordinary flannel trousers, after being used for wading for a decade or so, become a most unusual and peculiar shape. My flies came in for so much adverse criticism that I reluctantly bowed to the voice of experience and accepted the loan of a scarlet ibis. On arrival at the river the party scattered, after arranging to meet at the dam about two miles up stream for lunch. This river is a delightful one to fish. It is about 50 to 60 yards wide, with shelves of rock running well out into the stream, still pools, and an occasional rapid forming swirling eddies below. For some time the ibis failed to attract any attention; then, in a most unlikely place, shallow water close in to the bank, I got a rise but missed the fish.

After this I tried the shallow pools for some time, but it must have been a chance riser and probably a small fish, which is difficult to hook on these large flies, for I got no more offers though I worked hard for over an hour. A deep pool round a bend in the river seemed to

offer possibilities, and by allowing the fly to sink I got another pluck but missed again. A bass seems never to come twice at a fly, and in this respect differs from the trout which will come again and again if missed at the first onset. The next pool was occupied by a boat which was itself occupied by four hilarious bait fishermen; but just above a small creek ran in, and here I caught my first bass. He was lying just between two boulders, and took the fly almost as soon as it touched the water. The fight put up by a bass has been described to me as "one rush, and then it's all over." I agree about the rush, for the fish took out 10 yards of line before I knew he was hooked; but I found that it was by no means all over, and though he thereafter contented himself by jumping and plunging, fought gamely till he was safe in the net. Only 1¼-pound, but a well-shaped fish in good condition. The rest of the way up to the dam was all likely looking water; but not a rise could I get, the monotony being only broken by a green rock bass hooked through the back fin, and my creel still held only the one solitary fish when I rejoined my companions under the shadow of the mill for lunch. I found they had each eight or nine bass to their credit, though no one had taken anything much over a pound in weight. After lunch, feeling that ample tribute had been paid to the voice of experience, I discarded the ibis and put up the peacock fly which some one had irreverently named the "wall-eyed filly."

Away on the far side was a place where the bank had caved in, forming a partial obstruction round which the stream washed into a large eddy below. My attention had been directed to this place by a fish jumping four or five times during lunch. The leap of a bass is a pretty thing to watch and is quite distinct from that of a trout. There is no wriggle or twist as there is when the latter is sporting or trying to catch the caperers hovering over the surface of the water, but a graceful sweep like an elaborate head and shoulder rise a foot or more above the surface and a yard in length, coming up again a few feet further on and repeating the performance as if traveling on an invisible switchback. The river here was too deep to cross, but by wading out waist deep a cast might just reach beyond the center of the eddy, where the wash of the stream would carry the fly round behind the rock. The theory was excellent, and doubtless the practice would have come up to it, but in angling little things occur which are apt to upset theories. The little thing in this instance was a rolling stone; had it been content with upsetting merely the theory I should not have complained, but—however, the water is warm at this time of year, and my waders did not get unreasonably full. While I was struggling back to shallower water, with the fly dragging behind, a bass very obligingly hooked himself and joined his brother in the creel. He seemed to have risen near a small stickle which revealed the position of a submerged reef. I had quite intended to return to the bank and get dry before fishing again, but the temptation to make just one cast over this place was too great, and I retraced my steps toward the center of the river. The first cast fell short, so another had to be made; then i seemed a pity not to try the rock just beyond, an idea that was justified, for behind and around it I got four fish in four casts, which elicited a rude inquiry from across the river as to whether I was using a leaded hook.

Then a fish rose further down the river, and had to be stalked at once, so as not to lose the place, by which time I had come to the conclusion that a little water in one's waders is really not uncomfortable on a hot day. The next two pools added a brace each to the catch, and one or two small fish that were given their liberty, after which my creel was beginning to feel heavy, and I decided that anything under 1½ pounds should thenceforward be returned. There were some good shelves of rock ahead, which ought to shelter fish of better size; but, if so, they continued to shelter them, for I got nothing from that stretch of water. The narrows were fished carefully, but drew blank, the creek where I got my first fish drew blank,

YOU ought to have the best —nothing less than "The Gun of Perfection"—whether you shoot only once a year, or many times. The "hits" do not stand out in your reminiscences nearly so prominently as the "misses."

SMITH GUNS are famous the world over for their long-distance, close-shooting, hard-hitting qualities—one result of our special process of boring. You will be pretty safe, therefore, in accepting the judgment of the thousands who now shoot Smith Guns. Let your next gun be a Smith *with the Hunter One-Trigger attachment.*

Ask your own dealer about these Smith Guns with the *Hunter One-Trigger attachment*—or write us today for the beautiful new lithographed Catalogue. Ask him—or us—about the very newest Hammerless Smith Gun—*the 20-Gauge*—so light that a woman can handle it easily. It is a fine gun at a low price—just *all gun and no frills.*

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid. $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

The Indians of To-day

By George Bird Grinnell. Demi-quarto, 185 pages, buckram. Price, $5.00.

It describes the old-time Indian and the Indian of to-day, and contrasts the primitive conditions and ways of living with those of the present. It contains over fifty full-page portraits of living Indians from photographs.

Contents: The North American Indians, Indian Character. Beliefs and Stories. The Young Dogs' Dance. The Buffalo Wife. A Blackfoot Sun and Moon Myth. Former Distribution of the Indians. The Reservation. Life on the Reservation. The Agent's Rule. Education. Some Difficulties. The Red Man and the White.

FOREST AND STREAM PUBLISHING COMPANY

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

FOREST AND STREAM PUBLISHING COMPANY

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Postpaid, $1.50

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

the pool below drew blank, and it was borne in upon me that fishing in waders half full of water is too uncomfortable to be tolerated at any price. I would cross to the bank and get dry before proceeding any further. A plop away up the river recalled the eddy where I had seen that fish jumping. I had not fished that eddy. Perhaps it would be better to walk up the bank and put a fly over it before emptying my waders; it must be just round the corner. But it was not just round the corner, nor was it just round the next corner, nor the next, and I had to scramble over a mile on rocky bank before I arrived at the place. A well-directed cast sent the fly into the wash of the stream with plenty of slack line, so that the current would carry it back under the rock where the fish would most likely be lying. No need to make a second cast, for the line tightened suddenly, and the next moment a bass leaped a couple of feet out of the water and raced off down stream. He put up the best fight I had had that day, and added rather over 2¼ pounds to the "fisherman's counterpoise" on my back.

There was still half a mile or so of water down near the village which I had not fished, and to save time I took the road skirting the left bank of the river. About half way stands a dilapidated mill, and by wading across at this point a short cut through the fields may be reached. The stream has broken down the old mill dam, and nowadays the water pours over masses of debris, the remains of concrete piers, good lurking places for heavy bass. In a stickle on the near side were half a dozen fish rolling in the stream, probably suckers cleaning themselves after spawning, but at the bottom something was rising with an altogether different action. I stopped to investigate. The fly fell nicely on the far side of the stickle, and washed round over his nose. He snatched it as it passed, and was off down stream making a wave like the wash from a motor boat as he turned to seek refuge in the pool below. Stumbling down the pile of debris, I followed him into the pool, reeling in line as I went. Away he shot, making for the open water; but I was using a 10-foot 6-inch split cane rod, and gave him the butt, which caused him to alter his mind and return to the pool, where he swam slowly round, and eventually came to anchor about two yards from my feet. It was evident by this time that he was no bass, for his method of fighting was totally different; neither was he a sucker, for he played too fast, but whatever he was he had no intention of coming to the net. Though so close I could not see him, for the water was colored and nearly up to my armpits. Ten minutes passed, fifteen, twenty minutes, and he still kept close to my feet, the rod bent double in my hand. Occasionally I prodded at him with the wading staff, but he simply swam round, and came to rest again in the same place. I looked at my watch again, and found he had been on half an hour. I altered my tactics, and tried to pull him toward the shore, but he remained immovable. Then I lost my temper, and tried to kick him; but that was a mistake, for waders become buoyant in deep water—however, I saved myself with the wading staff. Then I climbed a rock and pulled on him from a new direction. For a moment I thought he was giving in, for I felt the tension relax slightly; but he turned suddenly and rushed off down stream, taking out thirty yards of line and leaving only a couple of turns on the reel. I came off that rock in one stride, vowing to have him if I had to swim for it, but it was useless. A plunge away down stream and a momentary glimpse of 2 feet of green back, then the fly came over to me with half a pound of flanned weed attached. He had chewed it out. The fish, I suppose, must have been a maskalonge, for no other fish in this water could have been of sufficient size to stand the strain of that rod unceasingly for thirty-five minutes.

As I turned to get out of the water I passed a man who had been sitting on a rock watching the whole performance. "He got off," I remarked as I climbed the bank. "Oh!" he replied, "did you have a fish on?"—H. D. T., in the Field.

For Sale.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

SAM LOVEL'S BOY

Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.

A BICYCLE THE THING
FOR HEALTH, FOR PLEASURE

It is the bicycle's turn again. More bicycles are being bought and ridden than any time since the "palmy days." Bicycling means more than pleasure—it means health, recreation, economy in transportation, and all at small cost. If you have given up your wheel or if you never knew the pleasures of wheeling, let us supply you our

VICTOR BICYCLE AT $25.00
(INCLUDING COASTER-BRAKE)

with the understanding that you may use it ten days, and if not more than satisfied with bicycling in general and our wheel in particular, the amount will be refunded. We sell more bicycles than all other stores in New York combined. Prices begin at $17.50 and end at $40.00.

WE SELL AUTOMOBILE SUPPLIES

Every style of outing goods, including Automobile Accessories, Bicycle Sundries, Athletic Goods, Fire Arms, Fishing Tackle and Camp Outfits. Tell us what lines you are interested in and let us send you catalogues. You can buy from us by mail or in person and every article we sell is guaranteed to give you satisfaction.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

SAFETY.—While the dictum that "there's safety in numbers" may be true in so far as it concerns individuals, it is certainly wrong when applied to parts of mechanisms; here the simplest is always the best, and the perfect gun is that which does its work effectually with the fewest parts. **Simplicity has always been the Keynote of Greener Guns,** and is clearly exemplified in the **Greener Side Safety.** This consists of a simple trigger-locking spindle absolutely infallible and possessing the following advantages over all other systems. It does not weaken the "grip" as is the case with the Top Safety in its weakest part; a hole 3-16 inch diameter through the "head," the strongest part of the stock, is all that is necessary to accommodate the Greener Side Safety; it is placed in the most rational position for use, just where the thumb falls naturally; it cannot be pushed on or off accidentally; it is a "safe" safety, always there when you want it, but never balking the unexpected shot.

Of course you must have it fitted to a Greener Gun to obtain fullest satisfaction.

This is but one of the many outstanding improvements on Greener Guns. Send for free catalog and let us tell you about the others.

TRAILS OF THE PATHFINDERS

By George Bird Grinnell

Illustrated *$1.50 net; postpaid, $1.65*

CONTENTS

Introduction	Alexander Henry (the Younger)
Alexander Henry	Ross Cox
Jonathan Carver	The Commerce of the Prairies
Alexander Mackenzie	Samuel Parker
Lewis and Clark	Thomas J. Farnham
Zebulon M. Pike	Fremont

One of the most stirring and inspiring chapters in the history of our country is made up of the picturesque, straightforward narratives of their adventures told by the heroic men of action, explorers, hunters and trappers who first traveled through the unknown regions and among hostile Indians, West, North and South, across the continent. Mr. Grinnell gives a number of the most exciting and most important of these stories told almost entirely in the words of the explorers themselves, and they form a work of unrivaled interest.

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

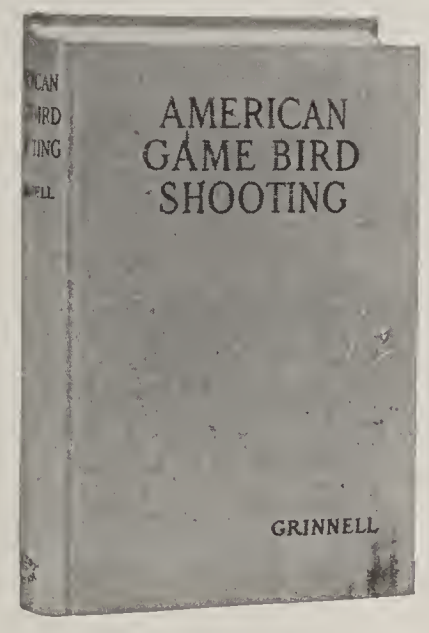
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Hunting in Many Lands.

Contents: Hunting in East Africa, W. A. Chanler. To the Gulf of Cortez, George H. Gould. A Canadian Moose Hunt, Madison Grant. A Hunting Trip in India, Elliott Roosevelt. Dog Sledging in the North, D. M. Barringer. Wolf Hunting in Russia, Henry T. Allen. A Bear Hunt in the Sierras, Alden Sampson. The Ascent of Chief Mountain, Henry L. Stimson. The Cougar, Casper W. Whitney. Big Game of Mongolia and Tibet, W. M. Rockhill. Hunting in the Cattle Country, Theodore Roosevelt. Wolf Coursing, Roger D. Williams. Game Laws, Charles E. Whitehead. Protection of the Yellowstone National Park, George S. Anderson. The Yellowstone National Park Protection Act. Head Measurements of the Trophies at the Madison Square Garden Sportsmen's Exposition. National Park Protective Act. Price, $2.50.

Modern Sporting Gunnery.

Written by the well-known English gun expert, Mr. Henry Sharp, and contains 525 pages and many illustrations. It tells of the various makes of guns and rifles, beginning with the early days of the art up to the present time. It deals with the subject of mechanism, boring, effect of different loads, and gives the results of scientific experiments. It tells "why" in entertaining and easily understood language, and is a book every lover of gun or rifle should have in his library. Cloth bound. Postpaid, $1.70.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. This is a collection of papers on different themes contributed to FOREST AND STREAM and other publications, and now for the first time brought together. Price, $2.00.

My Friend the Partridge.

S. T. Hammond. An inimitable study of the noblest of our game birds, following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game. Cloth, 150 pages. Postpaid, $1.00.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. W. Hamilton Gibson. Containing hints on camp shelter and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. Illustrated. Cloth, 360 pages. Price, $1.00.

Jack, the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, $1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, $1.25.

Jack in the Rockies;

Or a Boy's Adventure With a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, $1.25.

Jack the Young Canoeman.

George Bird Grinnell. Illustrated. Cloth, 286 pages. Price, $1.25.

Jack the Young Trapper.

George Bird Grinnell. Illustrated. 278 pages. Price, $1.25.

Manual of Taxidermy for Amateurs.

C. J. Maynard. A complete guide in collecting and preserving birds and animals. Illustrated. New edition. Price, $1.00.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

W. T. (Bill) Hamilton. The author was the last survivor of the old race of free trappers. Bill Hamilton was born in 1825, and was on the plains in 1842, trapper, Indian fighter, sign talker, trader, scout and guide so long as the old West survived. This book is the simple unaffected story of his adventurous life, more thrilling and full of personal interest than any romance. Cloth. Illustrated, 223 pages. Postpaid, $1.50.

Nursing vs. Dosing.

S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents: Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Earl, Mange, Nervous System, Colic, Worms. Cloth. Illustrated, 161 pages. Postpaid, $1.00.

Rhymes of the Stream and Forest.

Frank Merton Buckland. A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, $1.25.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evening and dull outdoor days "to swap lies." Cloth. 187 pages. Price, $1.25.

The Still-Hunter.

Theo. S. Van Dyke. A practical Treatise on Deer-Stalking. Extra cloth, beveled, 350 pages. Price, $1.75.

The Angler's Workshop. Rod Making for Beginners.

Perry D. Frazer. A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, $1.

The Book of the Black Bass.

James A. Henshall. The standard work on the black bass, comprising a complete scientific and life history of the black bass, together with a practical treatise on angling and fly-fishing, a full description of tackle and implements, and general observations. Cloth. Illustrated. 470 pages. Postpaid, $3.00.

Men I Have Fished With.

Fred Mather. Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. Illustrated. Price, $1.50.

My Angling Friends.

Fred Mather. A second series of "Men I Have Fished With." Cloth, 369 pages, with 13 illustrations. Price, $1.50

Training vs. Breaking.

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

How to Build a Skipjack.

Complete plans and instructions for building a light draft sloop. Plans and directions easily followed. Cloth. Illustrated. Postpaid, $1.00.

How to Build a Knockabout.

A wholesome boat for all-around cruising and racing; 23ft. O. W., 10ft. beam, 26in. draft. Full working plans and drawings, with instructions for building. Cloth. Illustrated. Postpaid, $1.00.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

TO CURE A GUNSHY DOG.

MANY ways of curing a gunshy dog are prescribed, but, alas! in vain, and valuable dogs are shot owing to this apparently incurable fault. Some years ago I had two valuable young setters trained by a keeper ready for the first of September. But it occurred to me to try how they would stand fire; so I asked my man to bring them out into a field, which they seemed to quarter well, whereupon I fired a shot, after which No. 1 looked round and slunk away, and No. 2 soon followed suit. After this we tried the effect of firing a few shots near their kennel, with the effect of making them still more gunshy. Then we tried leading them out, and while I fired a few shots at a distance, the man had to pat and coax them, while the dogs crouched and shuddered. Then I hit upon the plan of chaining one to a strong old dog which reveled in the sound of the gun as the sweetest music, not caring to drop to shot, but rather to look out for crippled birds, as soon as the shot was fired. The young setter crouched trembling, but the old dog dragged him, nolens volens, turning round to the youngster, inspiring him with his own feeling of delight. This was repeated after some half-dozen light charges, when the youngster gradually seemed to forget his gunshyness and to follow his senior, and soon to imbibe the delight of the old dog. The same process was tried with good effect on the other youngster, and after two more lessons the young setters were quite cured, and lost all their gunshyness, and after their experience of the first of September both young dogs worked well together. By this plan I have never failed to cure any dogs of gunshyness. I have generally commenced by firing caps on a pistol or muzzleloader at some distance from the dog, followed by light charges, always chaining the gunshy dog to an older dog, that delighted in the reports of a gun, the older dog being powerful enough to hold the younger and to drag him along. Some dogs, of course, require more painstaking than others; but if chained to a good-tempered retriever and thus obliged to witness another dog working, they may be cured.—Shooting Times.

SPARE THE CROW.

HERE is a defense of the crow that will interest the friends of that comical and intelligent bird: An Iowa man says in one of the papers that an article in that paper headed "Death to the Crow," does injustice to the crow and complains of the Legislature for killing a bill offering a bounty for killing that good friend of the farmer.

Any farmer that has cultivated the acquaintance of the crew and studied his habits as I have cannot fail to commend the Legislature for killing the bill. I grant that he is mischievous, will eat corn and, possibly, like boys, sometimes raid a Muscatine melon patch, though I have raised crows and melons on the same block and never caught them (the crows) at it. My crow seemed to enjoy helping me cultivate the vines and harvest the melons by taking the insects and worms I disturbed, but he paid no attention to the melons. He was not only an insect and worm eater, but the equal of any cat as a mouser. On one occasion when I removed a board lying on the ground about a rod from the barn, a mouse ran from under it toward the barn. The crow was sitting on a tree five rods away and thirty feet above the ground. That mouse never reached the barn, the crow landed on him before he got there. Since then I have often seen crows while flying over fields, especially recently harvested grain fields or meadows, suddenly dart to the ground and rise again with something in their beaks, which I believe was a mouse, carry it to some perch and devour it.

If Iowa was deprived of her crows it is more than probable that field mice would multiply so fast that in a few years they would become an intolerable pest, seriously injuring the crops and destroying the bumblebee nests. Without bumblebees to fertilize the clover blossoms there would be no clover seed.

—FOREST AND STREAM, Aug. 14, 1873.

WOMAN IN THE SADDLE.

IT was many years ago that FOREST AND STREAM first advocated the use of the cross saddle for women, though the term cross saddle had perhaps not then been coined. It took the ground that women should ride astride, using a man's saddle, because this would be more comfortable for the horsewoman and her mount, and would do away with the danger to which women are constantly exposed of being dragged if they are thrown from the saddle. Of the women who ride, not all by any means are good horsewomen. Many hold themselves in the saddle by depending on reins or stirrup, and if anything breaks and they lose control of the horse, something serious may follow. Many women and girls have been dragged by skirts or stirrups. This is a danger which is preventable, but nevertheless it occurs.

FOREST AND STREAM'S teachings were first adopted in the Western country beyond the Missouri River, and in the Rocky Mountains. In those regions women were then less bound by conventions than their sisters in larger communities, and the reasons offered by FOREST AND STREAM appealed to them. Whole communities took to riding astride, and a little experience taught them its advantages. The progress of the movement eastward was gradual, yet within the last five or six years it has been rapid, and now perhaps one-half the women who ride, in larger cities ride astride, and so with much greater comfort and safety.

In England they have hesitated to take up this new fashion, yet some have adopted it, and it has slowly grown in favor. Now we are told that King George, of England, regards the ordinary method of teaching girls to ride as dangerous and ungraceful, and that he is having his daughter, the Princess Mary, taught to ride astride. This, it is believed, will mean that this method of riding for women will be adopted in riding schools throughout Great Britain.

No doubt this sensible action by the King of England will give the cross saddle for women a great popularity in this country among the limited class who feel that they must do whatever is the proper thing in England. On this occasion that class will be right, even though they may be a little late in seeing the light.

NEW YORK ZOOLOGICAL SOCIETY.

ON Monday next the annual meeting of the board of managers of the New York Zoological Society, and a general meeting of the society, will be held in the Administration Building of the park in the Bronx.

No doubt it seems to very many citizens of New York as if the Zoological Society, its park, its beautiful buildings and its unique collection of animals had always been a part of the city and are to be taken as a matter of course. Yet there are a few people who remember the beginnings of all these things, who recall the many long and apparently fruitless struggles to secure a charter for a zoological society, the worries and perplexities of early days, and finally the success which crowned these long continued efforts and gave to New York city a park and a few animals.

Since that time the progress of the Zoological Society, the growth in the beauty of its park, the increase of its collections, and of its popularity with the public have been steady.

It stands to-day as the largest and best managed zoological park in the world, possesses a collection of animals almost if not quite unequalled and marvelously well housed and cared for, and within the past year has raised an endowment fund of a quarter of a million of dollars, which will give it funds to tide over any hard places that it may meet with, and especially to set on foot projects of original research which are already being considered by the managers.

The Zoological Society is perhaps the best educational philanthropic association that New York city possesses, and the New York public owes an enormous debt of gratitude to the men who have made this society what it is.

AN ARCTIC HUNTING TRIP.

CAPTAIN ROBERT BARTLETT, the skipper of Admiral Peary's Roosevelt, and now a citizen of the United States, is reported as being about to take a hunting party to the Arctic regions. He is said to have organized a little group of New York and Boston young men who are to go first to Labrador salmon fishing, and from there north to Ellesmere Land, to kill polar bears, muskox and walrus.

Captain Bartlett commanded the Beothic, which took north the Rainey-Whitney party. That party returned with many trophies, and a number of interesting living animals for the New York Zoological Society. The adventures undergone in capturing the big polar bear now in the Zoological Park at the Bronx were exploited on the lecture stage.

It is purposed to take along on this trip motor boats for use in the getting about in the Northern seas, and moving picture machines are to be taken to record the adventures of the hunters on the sensitive plate. The armament will consist of high-power rifles, with shotguns for birds and small animals.

The ship expects to leave here in July for the salmon and trout fishing in Labrador, and then to proceed to Greenland, where Eskimo with their sledges and dogs will be taken aboard, when the ship will proceed to Ellesmere Land, and a trip will be made into the interior. It is said that the cost to the members of the expedition will run from $1,500 to $2,000 each.

Last winter the game preservation committee of the Boone and Crockett Club in its annual report remarked on the danger to Arctic game from undue killing by pleasure hunting parties. The matter is hardly to be regulated by law, but the good feeling of the members of such expeditions should lead them to indulge in only a moderate killing of such animals as the muskox and the walrus, species that are believed to be growing scarce.

OVER a large section of the country forest fires are burning with a vigor unusual for May, and so far the property loss is considerable. April rains were meager, and unless the precipitation for May is far above the average, quenching the fires and supplying the water for which there is urgent need, the coming of summer will be contemplated with no little apprehension. To offset the unseasonable drouth there is the fact that the snow in the north melted very slowly, causing little waste from floods.

A PRESS dispatch from Ottawa states that E. T. D. Chambers has been appointed commissioner of fisheries and game for the Province of Quebec, and that he entered upon his new duties on May 1. Mr. Chambers has for many years been a contributor to FOREST AND STREAM. To the sportsmen of the Province, and to the new commissioner, we tender congratulations.

GOVERNOR BALDWIN has appointed Frank O. Davis, of Pomfret, and Dr. Frank W. Hewes, of Groton, members of the Connecticut Fish and Game Commission for two years from July 1 next, to succeed E. H. Fenn and George P. Mathewson; E. Hart Greer, of Lyme, has been reappointed a commissioner for the same term.

AN important measure passed by the New Jersey Legislature makes the open shooting season for the entire State Nov. 1-Dec. 31, inclusive, and materially increases the number of game protectors. Whether this bill was signed by Governor Wilson before his departure for the West is not known.

THE Bureau of Fisheries at Washington is encouraged over the unusually large run of shad this season, and believes its work in planting 100,000,000 to 125,000,000 shad fry annually is beginning to show in a satisfactory way.

THE SPORTSMAN TOURIST

Mushing in Alaska

Tramping and Wading to the Sawtooth Mountains and Back to Nome

By RUTH REAT

FOR a long time we two "schoolma'ms" had wanted to see the Sawtooth Mountains, and finding ourselves ready to leave Nome with the desire still ungratified, we held a consultation to see whether we could find time for the trip before our departure up the Yukon. At the Seward Peninsula railway office we learned that we could not go by train, for the track would not be clear of snow before the middle of July, and a month was longer than we could wait.

We casually mentioned to some friends that we intended "mushing" to the Sawtooth, and were most emphatically informed that such a thing was "ab-so-lutely impossible." Questioned as to whys and wherefores, they admitted that we would be able to follow the railroad track as far as it was uncovered, but told us we could never get through the deep, soft snow beyond; we, however, were sure it would be easy with snowshoes. The old sourdoughs argued that we would lose our way, yet had to admit that there would probably be some sort of trail, and that we could have our route described from one roadhouse to another.

Their next objection was that we would be unable to make the distance between roadhouses, but we were positive that with twenty-four hours of daylight in which to trudge along we would finally reach a destination. Then they advanced a theory of the danger of crossing swollen streams, of sinking through soft snow into creeks and so on, but there was no evidence—satisfactory to us, at least—to show why two women could not get through if men were able to. At least, the only remaining excuse for keeping us at home was the fear that we might get tired, and this we joyfully met with the answer that to get tired was exactly what we wanted, as one object of the tramp was to experience for ourselves the strenuousness of travel at that time of year.

We planned to start June 16, the day following the one on which the idea originated. There was a two-inch snow on the ground that morning, but the weather was good by the time our preparations were complete, which was not before five in the evening. We did not follow the advice given us regarding the things we should take along; if we had, we should have been loaded down till unable to walk. Much of our baggage, for example, compass, watch, revolver, fishing reel and extra socks could be put in our coat pockets, so there was left for us to carry only our snowshoes, camera and a small sack of food for lunches and to tide us over in case of emergencies.

We made only nine miles the first evening, but the next day we had a twenty-five-mile tramp from Dexter to the United States roadhouse. As we were not trying to make or break any records, we took whatever pace suited us

ONE OF THE CANAL SIPHONS AT A VALLEY CROSSING.

best at the moment, and the fact that we never felt compelled to hurry contributed very much to our enjoyment of the trip. Our shortest day's march was seven miles and the longest thirty-five. At our departure, not wishing to overestimate our powers, we named Salmon Lake as our destination, but after making that fifty miles without serious difficulty, we were encouraged to mush on another forty, to the Kruzgamepa Hot Springs, where we spent three days before starting home.

We left Nome by the railroad track, but it was clear of snow for only five miles; then began our initiation in traveling over soft snow. We could step in the footprints of people who had gone over the trail ahead of us, but these holes, after having been used several times, were from six to twenty-four inches deep, and after a short distance of lifting our feet so high from one to another, we were ready for snowshoes. It was so much trouble tying them on each time we changed from railroad ties to snow that we simply slipped the thongs over the toes of our boots and held the other end; in this way we could raise the shoes more easily when they were well loaded with snow.

Sometimes when we went down almost to our waists we found it impossible to pull ourselves up until we had dug out the snow around us, so tightly was it packed. In very slushy places the shoes would go out of sight into water. When they refused to come up with all our tugging at the thongs, we had to roll up our sleeves and plunge our arms down into the icy water after them. One day an old man whom we met was describing the bad trail ahead of us, and when we said we "guessed we'd be all right since we had snowshoes," he gave a snort of disgust and jerked out: "Snowshoes! You don't want snowshoes; what you need there is a bathing suit!"

Over the divide beyond Nome River the snow was as deep as twenty feet, and completely covered the track for a good many miles. This was a tiresome stretch because there was no place to rest, and we could not stand still long because our feet got too cold for comfort. We had several guesses here about a little pen inclosed by sticks a foot high. On our return two weeks later the snow had melted enough to show us a flat car, the six standards of which had projected above the snow.

We did no small part of our traveling on mining ditches and found them fairly good walking. At first we were rather uncertain about crossing gulches where the dirt embankment stopped, and the ditch water went through an open flume. There were bridges of snow to walk on, but we never knew whether they might not let us fall through half a dozen feet or more into the stream that ran beneath. At one place, instead of going along the embankment, we

squeezed through a narrow corridor that the ditchmen had cut out of the snow in the ditch itself. The floor was of ice, and the walls of ice, and snow was eight feet high on each side of us. Again the ditch ran around the face of a rocky cliff, part of which had been blasted off to build up the outer wall on which we walked. This rim was not over two feet wide, and we picked our way over the rough pieces of stone with some care, preferring to give them our undivided attention, and not think of the distance we should fall in case we made a misstep to the masses of rock far below.

Late one afternoon we were trudging along high up around the mountain sides in a furious snowstorm that prevented our seeing more than a short distance ahead. All at once our ditch ended, and from it a huge pipe led down into the gulch below. To our astonished gaze it appeared to be almost perpendicular and not less than a thousand feet in length.

"Well, wasn't it mean of those men to tell us we could come this way," was the first exclamation. It had been hours since we passed a camp, and we disliked very much the idea of turning back, yet this spot certainly looked like the jumping-off place. A few minutes' survey, however, showed us it was not so bad as we had believed, for through the snowstorm we could dimly make out that the pipe shot up again to the opposite cliff. We climbed and slid down the rocks to the bottom of the gulch with no other inconvenience than getting our clothes very wet and dirty. We were able to walk up the other side on the flume, as it was covered with snow, and at the top we found our ditch again.

The wading of streams was an interesting matter. We were wearing men's clothes with the addition of short skirts, and preparations for wading consisted in hanging these extras around our necks, where, as capes about our shoulders, they were less in the way. The rivers were at their highest, and we generally had to reconnoiter to find a good crossing place. If the current was unusually swift we joined forces; one steadied herself behind a rock in the stream while the other found the next foothold. We wore hip boots, but often the water came above them. After a few experiences of this sort, however, we agreed that the presence of water in the boots is soothing to tired feet, and came to rather enjoy the squashy sound it made as we set our heels down at each step onward.

WADING A SWOLLEN RIVER.

A certain fording place was deep and narrow, but quiet, and we tried the plan of throwing across our baggage, as well as a part of our clothing. The water struck us just above the waist. Climbing out on to a wide bank of snow in our bare feet had the effect of making us exercise some haste in gathering up our belongings. We put on dry clothes and carried the wet ones rolled up between the snowshoes till dry enough to wear.

Nugget Creek was not over a foot deep, and we thought it would be easier to walk in it than to snowshoe along the banks, so for a most interesting two miles we waded in its bed. The snow was not deep where we entered, but presently it was extending from ten to fifteen feet straight up on each side, and it would have been impossible for us to climb out. Fortunately there was a place where we could ascend when we were ready to leave, and we decided very suddenly that we were tired of traveling in Nugget Creek; that is, one of us did after she unexpectedly sat down in the middle of the stream.

We had no difficulty in reaching a roadhouse each night, though on one occasion we arrived ten minutes after midnight, and pounded on the door for five minutes before we made ourselves heard. As there is very little travel when the snow is so soft, we were frequently the only guests. Each roadhouse had some distinguishing feature. At the United States it was chickens and a cow, while the fresh fish and wild birds that were served at Salmon Lake set that camp apart from other places along the trail. It would have been impossible to find fault with the generous meals of all of them. The breakfasts, especially, always tasted so good that we ate too much to start off in first rate form. They invariably consisted of fruit, mush and milk, eggs, bacon or ham, a second meat dish, potatoes, hot bread, coffee and sour dough hot cakes with syrup.

One evening we were so hungry we could scarcely wait while our supper was being cooked. We had come a strenuous fourteen miles, wading a number of creeks and struggling through thick underbrush a good part of the way, and were ready to eat. All at once someone discovered that the roadhouse was on fire, and then for the next half hour there was flinging of water all over the place, a rushing back and forth to the creek with buckets, and a scrambling around in the loft to put out the flames there. The supper on the stove was completely drowned out, and when the excitement was over we had to sit patiently looking on while more canned goods were brought out, opened and put on to heat.

The "ladies' apartment" in the roadhouses was usually a smaller inside room, and the objectionable part about it was the lack of fresh air. After calling down wrath upon our heads for opening the doors one night after everybody else was asleep, we endured as best we could the next time. On starting out in a drizzling rain on the morning after this unsatisfactory rest, it was a happy moment when we recalled that we were on a pleasure excursion, and that there was no compulsion about our arriving anywhere on schedule time; so we camped at the first de-

DOG-SLED AND SLED-CAR.

sorted cabin we came to and made ourselves at home for twenty-four hours. We chopped wood and made a fire to dry our clothes, melted snow and made tea, and there being no one this time to object to the open door, we made up with interest for lack of sleep the night before.

We reached the Nugget roadhouse about six in the evening to find it nailed up for the summer, and a notice on the back door to the effect that if anything was wanted to come down to the tents on Salmon Lake, seven miles distant. Something was wanted—there was no doubt as to that—principally supper, but we had had all the mushing we cared for coming over the divide that day, and felt able to dispense with another seven miles. So we felt called upon to break in, and gained an entrance through a second story window, reached from an ell at one end. The burglar tools used were a piece of iron pipe, a rock and an old spade. We soon had a good fire and were ready to cook our dinner, but what was our disappointment upon breaking open the pantry door to find nothing we could use except breakfast food. There was some dried dog salmon hanging in the shed, so these two articles made our evening meal. A miner to whom we afterward related this sad story thoughtfully had it published in the Nome papers, so on our return the first question put to us was: "How do you like living on dog salmon and mush?"

We had a good breakfast the morning after this, however, for when we came downstairs we found that the owner of the roadhouse had arrived with provisions. He had heard over the telephone that we were on the way, and knew he would probably find us at his place. Evidently there was not much other news passing over the wires, and the people along the line were not too busy to keep track of "the two girls who were mushing through." Consequently when we walked into a roadhouse we found that we were expected, and that the folks there knew all about our journey as far as it had progressed.

The last day before arriving at the Hot Springs we gave our feet a rest and journeyed twenty miles "a la dogamote." The dogamote is the usual sled and dog team plus a little railroad truck. As long as the rails are free of snow the dogs pull the car bearing the sled and passengers, and when the track is covered, the car is turned over on top of the sled. The freezing and thawing of the ground has a pronounced effect on the track, which is therefore quite an up-and-down affair, as well as being slanted sidewise. In many places the rails had spread so that the little car would suddenly crash off on to the ties and the passengers have to dismount till it was replaced.

The distance from the railroad to the springs over the tundra is six miles, but what miles! The clumps of moss were the smallest we had encountered, and they were not strong enough to hold us up, but turned to one side as soon as we set foot upon them. If we tried walking between them we found ourselves sinking deep in the water and soft mud. We had traversed possibly one mile in the course of an hour and a half, when the proprietor from the springs came to meet us in his wagon, and we were not sorry to have a lift, even though we could scarcely stay in the wagon for the jolting. The Government has been petitioned to build a road across this six mile stretch, and it is to be hoped that Uncle Sam gets to work before the tourists discover that the Sawtooth Mountains and Kruzgamepa Springs are on the map and travel sets in from the States.

We crossed the Pilgrim River in a Peterborough canoe and found we could ride almost to the door of the log cabin hotel by following a wagon road that was flooded a foot deep with water. The building was a new and substantial one, and accommodations were a little more pretentious than at the roadhouses along the trail. Being the only guests, we had things our own way.

A good-sized bath house has been built over the springs. The temperature of the water is not far from boiling, and cold water from a creek is brought in to make it right for bathing. The ground around the bath house, and for some distance along the creek below, is appreciably warm. A cottonwood grove surrounds the springs, and it seemed nice to us to see a tree once more, as well as the green things that were growing all around. The men were putting out garden, and the greenhouse furnished lettuce, onions, radishes and mushrooms, to which, after our winter's diet of canned goods, we did full justice at meal times. We climbed the mountains, hunted ducks on the many lakes around, went rowing on the river, played the piano and read, and took three baths a day.

Leaving the springs we crossed over Golden Gate Pass and camped three days at a miner's cabin to which we had been directed. We rummaged out provisions and feasted gloriously on mush, syrup, fish, rice, coffee and hot biscuit. We moved our bed out of doors on to the ground and found this location more agreeable than in the tent, even during a rain, as there was a tarpaulin to cover us. We worked strenuously panning for nuggets in the creek that rushed alongside the camp and were kept busy much of the time at chopping wood.

When we went on to Salmon Lake we found no way of crossing it or the Pilgrim flowing out of it, but by kindling a fire we attracted the attention of the people at the tents who came to set us across. An old boat was pried out of the ice where it had lain all winter, and with one of us in it and the other bringing up the rear of the stately procession on a raft, we reached the other side to find a good dinner of fish, swan and rabbit waiting for us.

There was a great variety of birds at every turn—ducks, geese, loons, swans, snipe and ptarmigan—and we very frequently came upon nests of eggs from which the mother bird would try to lead us away. One day we watched a family of ptarmigan for a long time, the tiny little ones crouched on the tundra as quiet as could be, while the parent birds worried and fussed, giving them instructions as to how to behave. At one of our camps we confiscated a nest of eggs, salving our consciences with the plea that hunger made it necessary, and then after all our arguing about them found they were very nearly ready to hatch.

At the cabin where we spent one day we could scarcely sleep at first for the noise of the squirrels that were racing through the room. Finally we set a trap in the form of an oil can laid on the floor with the bait at the further end. After a squirrel got inside there was a most cautious approach upon him, the can was suddenly jerked upright and a board clapped over the top before he could make his escape. Tremendous jumping and thumping on the part of the prisoner. Preparations were immediately begun for his execution. A pocket knife was sharpened preparatory to cutting his throat, and gloves were donned for the dangerous work of laying hold upon him. Of course he managed to slip through our fingers when we reached in for him, but if we mourned over not having fricaseed squirrel for breakfast, at least we rejoiced that our slumbers were no longer disturbed. Our captive evidently mentioned his experience to the rest of the family, for none of them visited us again.

The nearest we came to big game was seeing a dog on our way to the springs that we did not see on the return trip because he had been killed by a bear in the interval. One of the roadhouse men guaranteed he could find bear for us if we really were in earnest in our desire to kill the beasts, but this was on the last day but one of our journey, and we were sorry to be obliged to tell him that lack of time would prevent any more side trips.

It would not be easy to describe the natural beauties of the country we traversed. During the sixteen days we were away from Nome our conversation seemed to be largely a matter of "Oh's" and "Ah's" with variations of the exclamation, "Oh, look!" as one scene after another called forth our admiration and delight. On our second day out, when from King Mountain we caught our first glimpse of the Sawtooth, so jagged and so dazzling white in the far distance, with a wonderful expanse of valleys and hills close at hand, Bering Sea stretching back of us with Sledge Island not yet unlocked from the ice, our feeling had been one of pity for all the people who had stayed in Nome, and thankfulness that we were able to see for ourselves the loveliness of Alaska in the spring time.

We brought home mental pictures, as well as photographic pictures that will be a delight for years to come, of the sharp snowy peaks, of the glaciers, of the lakes just beginning to break up, of the wonderfully clear reflections of the mountains in the water, of beautiful skies and sunsets, of the birds, of the profusion of wild flowers of every color that we had gathered, and of the amazing effects produced in the thawing of an immense amount of snow.

We experienced many kinds of weather. One day we would be tramping along in rain, the next in snowstorms and wind, while again the sun would beat down fiercely, tanning our faces, raising blisters on our ears and making our eyes ache painfully with the blinding brightness of the snow from which even our goggles could not save them. We were fortunate enough to meet with no acidents whatever, and in fact everything seemed to happen exactly as we would have chosen. We learned what travel at this season is really like, and understood many things about Alaska that we could never have learned in any other way.

We were enthusiastic over the hospitality and courteousness with which, without exception, we met. At a ditch camp where we stopped for lunch we found one of the Nome high school boys who was as much surprised to see us as we were to meet him. He went a mile or more with us when we started on to show us a trail

down to the Wild Goose ditch, which was shorter than the one we were on. At places where we stopped for a meal the people always went to work cooking a great deal more than we could possibly eat, and then did not want to take anything for their trouble.

At one lone miner's cabin we were shown his copper prospect and presented with samples of the ore. On our return he came skiing down the hill to invite us up to coffee and hard tack again. At the road houses we were loaned guns to go after ducks, and several people were ready to save us parts of our journey by taking us some distance with a dog team. Tramps appear to be a product foreign to Alaska, and in fact we met very few people on the trail, usually ditchmen busy cleaning out snow. Though we relied on "Old Faithful," as we named the revolver, there was no ocasion to call on him except for shooting birds. From the time we left Nome till we came back, sore-footed and carrying our boots under our arms, and got a lift in an oil wagon, every one was more than kind to us.

But if our feet were very, very weary when we walked into Nome at nine in the evening, we ourselves were not. We were agreed that we had enjoyed the finest outing that travelers anywhere could possibly have. The greatest advantage was that we had twenty-four hours of daylight. If it had not been for this we might have been afraid to start on such a trip, knowing that the roadhouses were often some distance apart, and that we would be in places where it would be impossible to travel after dark. Following the trail for ourselves gave a zest to our journey that it could never have had for us if we had gone by train or in any other way than tramping, and as we sang the praises of Alaska's natural beauties, we congratulated ourselves on belonging to a country where such a trip as ours was possible.

NATURAL HISTORY

Dragons of Ancient Times.

A few million years ago—if it is permitted to guess in such figures—a great shallow ocean ran north from what is now the Gulf of Mexico over the Western plains, perhaps far beyond the northern border of the present United States. Its western boundary was low land, perhaps then only a chain of islands standing where now stand the Rocky Mountains. Its eastern shores were lands lying west and south of the region now occupied by the Great Lakes.

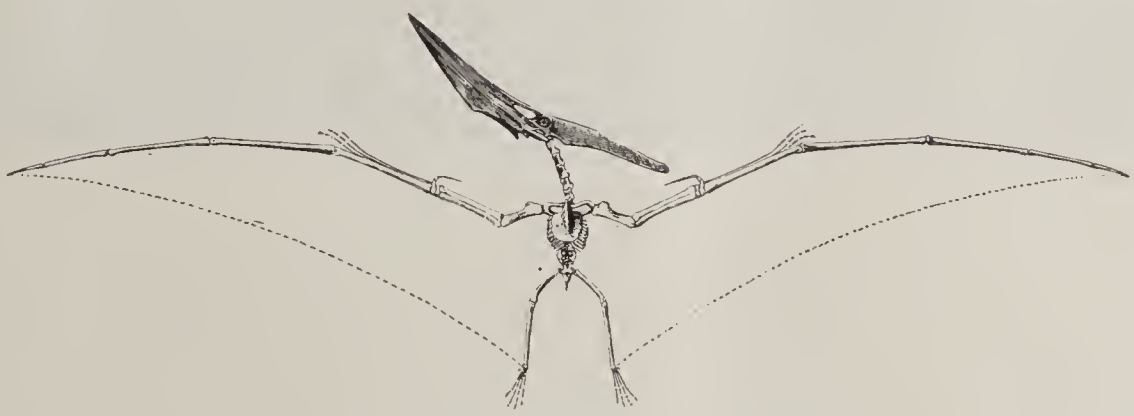
In this great shallow Mediterranean sea lived a vast number of strange animals like nothing that we know to-day. There were strange turtles of large size, great lizards, enormous sea serpents—as they may be called for lack of a better name—but with legs which were a little like the paddles of a whale.

On these waters swam a large bird, bigger than a loon, wingless and with teeth set in sockets in the jaws, as the teeth of an alligator or crocodile are set in its jaws. Over the crests of the waves long-winged birds, also with teeth in their jaws, winged their way, and no doubt diving from on high, preyed upon the tiny fishes that sought the warm sun near the water's surface.

It is impossible for us to picture the life of those days because we know of nothing with which that life may be compared—because no birds or animals like those then existing are now found on the earth's surface, or so far as we can tell in its waters.

Of all the strange creatures that lived over and near that sea in Cretaceous times, none was more unlike the animals that we know of than the pterodactyls of that day. These pterodactyls were flying reptiles, but were not much like the dragons of the story books of the children. If we can imagine an enormous bat with a small body, an absurdly long head, and with great wings which in different species had a spread of from ten to twenty feet, we shall get perhaps as good an idea as can be had of these strange beasts.

These animals were called pteranodons, and as their name implies, were toothless. The great skull, three feet long, was made up for about one-half its length of a beak or mandible in front of the eyes, and for nearly as great a length behind the eyes of an immovable bony crest. The brain must have been exceedingly small. The purpose of the enormous crest running out back of the eyes was presumably to give attachment to certain muscles, and the great bill—the



A KANSAS PTERODACTYL RESTORED BY DR GEORGE F. EATON.

creature's mouth—was used in capturing its prey, no doubt small fishes perhaps somewhat in the way in which fishes are taken by the long-winged black skimmer, a bird of our Southern Atlantic coast, which skims low over the water, the under mandible cutting through the water and seizing the small prey that may be floating on it. Possibly the pteranodon may have had a pouch like a pelican and may have captured its prey as does the pelican.

The bones of these flying dragons were extraordinarily light. Hardly thicker than a sheet of paper, they are almost always found in the chalk of Kansas crushed and broken by the weight of the earth which lies upon them.

These pteranodons were first described many years ago by the late Prof. O. C. Marsh, who, with his parties and by means of collectors whom he employed, discovered and collected a great many of them. Prof. Marsh did little more than describe the species, but one of his successors, Dr. George F. Eaton, of the Peabody Museum of Yale University, has studied the great collection of material in that museum, and has recently published as one of the Memoirs of the Connecticut Academy of Arts and Sciences a beautiful volume, which tells vastly more than has been known before about these astonishing reptiles. Dr. Eaton's volume is strictly technical, and only to be comprehended by an anatomist, but beautiful figures of the bones of these reptiles, together with the descriptions which go with them, tell to the student of ancient life a marvelous story.

Passenger Pigeons Reported.

From Milwaukee, Wis., comes a report of a passenger pigeon having been seen. Prof. I. N. Mitchell, of the Milwaukee State Normal School, recently received a letter from John E. Melish, of Cottage Grove, saying that on April 13 he saw a passenger pigeon. It alighted during a rain storm near the house, and his mother and he watched it for three hours with opera glass and telescope at distances of 20, 60, 200 and 500 feet. They had an opportunity deliberately to compare the bird with the good colored plate in the Wisconsin Bird Annual, and concluded positively that it was a passenger pigeon.

Clark University, Worcester, Mass., May 3.—*Editor Forest and Stream:* I have just returned from a wild-goose mourning dove chase to Pleasant Valley, N. Y.

The report was weak and was not accompanied by the $5 forfeit, and I would not have visited the place had I not been on my way to a lecture engagement, and had it not been located so to speak in John Burroughs' back wood lot. It

was peculiar and interesting, too, in claiming that the birds were "nesting in green trees thirty feet and higher from the ground." The people reporting did not seem to be able to get a good look at the birds or the nests and were apparently unable to count two. I failed to get them to tell me how many eggs there were in the nests, although they claimed to have from six to eight or ten pairs nesting close together.

The "green trees" proved to be Norway spruces, four clumps of them on a slight rise in the dooryard of the farm house. Our party arrived on the scene, eleven miles out of Poughkeepsie, in Mr. Gildersleeve's automobile, about 3 o'cloek P. M. No birds were in sight, but one of the informers had picked up half a hatched egg shell, the best thing in the world to do in sueh a case, whieh looked too small for passenger pigeon. We were told that the birds often came to the spruees to roost, but were generally best seen early in the morning. I immediately decided to camp for the night, and the rest of the party returned to Poughkeepsie. Walking about the plaee by 5 o'clock I had rounded up a flock of eight mourning doves. The people assured me that they had not heard mourning doves about, "except one away off in the woods." As they eame in from the surrounding fields that evening they poured their doleful music over the plaee. I climbed two of the trees and there, sure enough, found the nests well over thirty feet up among the thick, topmost branches. I think this is a record for mourning doves. At least, John Burroughs said that he had never known of their nesting so high, or so many close together. I think it is explained by the fact that the spruces formed an island of favorable nesting sites in an otherwise unfavorable field. Cats were in evidenee, and the lower branches drooped so decidedly that the birds could scarcely find safe and secure nesting sites lower down.

Luekily I stumbled on a sumptuous motor car and some good natured men who gave me a ride in to Poughkeepsie, and by 10:30 was at home for the night in the city. The next day, spent with John Burroughs at Slabsides, quite banished all disappointments, but I hope "three times and out" may prove true for my mourning dove journeys. C. F. Hodge.

Marked Small Birds.

The work of the American Bird Banding Society carried on in 1909 and 1910 has yielded some results which have not been published. Two or three records of small birds are the following:

A robin, No. 1212, was banded by Dr. Ora Willis Knight, at Bangor, Me., on July 18, 1910, and was captured at Nashville, Tenn., on Feb. 21, 1911.

A robin banded by Wilmer C. Gangloff, near Sandusky, Ohio, on June 5, 1909, was taken at Edgefield, Tenn., Feb. 12, 1910.

A Parkman's wren banded on July 31, 1909, by Wm. L. Finley, at Jennings Lodge, Clackamas county, Oregon, was found dead in a watering trough at Woodburn, Ore., on June 26, 1910.

A spotted sandpiper banded June 7, 1910, at the Four-Brothers Island, Lake Champlain, New York, was shot at Squantum, Mass., on Sept. 5 or 6, 1910.

Wildfowl on a Massachusetts Lake.

The extraordinary number of wildfowl that during the migrations visit certain Massachusetts lakes and the great preparations made by gunners for their destruction, together with the success which these gunners often achieve are well known to all New Englanders, but perhaps very little known to those who live in the other parts of the country. During their migrations toward their winter home vast numbers of wildfowl from the northeast fly across Massachusetts, and on their way north in spring reverse the flight and again cross the State. Of those so passing, many stop to feed and rest, and of these a large proportion are killed. In the last number of the Auk, J. C. Phillips, of Wenham, Mass., contributes an article of extraordinary interest to all gunners, and gives observations on the migration of the duck family on Wenham Lake, carried on over ten consecutive years.

Observations extending over only ten years do not justify any positive conclusion, but on the other hand these are vastly better than the occasional and haphazard notes or recollections which are all that the average gunner has for a guide.

Wenham Lake lies twenty miles northeast of Boston, in a thickly settled region. It is one and one-third miles in length and is bordered on the east by a brightly lighted main road, while about its southern end are pumping stations, ice houses and cottages. At the northern end are other ice houses, but the whole western shore is wild, mostly high land, forested. The waters of the lake are well supplied with the water plants on which ducks largely subsist, *Potamageton, Sagittaria* and *Vallisneria*. These and other plants growing there are well known duck food, and are found up and down the coast.

The observations given by Mr. Phillips begin with the year 1900 and close with 1909. The period of observation usually begins about the middle of September and runs to the 10th or 15th of November, though in 1901 and 1902 the observations were continued into December. A printed table shows all the fowl seen between those dates, those that came to the pond, those that were killed, and the number of different species taken during any year. The greatest number of species was taken in 1904, when there were twenty, and the smallest number in 1906, when there were seven. On the other hand, in 1906 only fifty-one birds were killed.

For the ten years the table gives a total of 7,211 fowl seen, of which 3,741 alighted in the pond and 2,054 were shot. For the period of five years, from 1900 to 1904 inclusive, 5,045 fowl were seen, of which 2,369 alighted in the pond and 1,325 were killed. For the last five years, 1905-09, 2,166 fowl were seen; 1,372 alighted and 729 were killed. Mr. Phillips calls especial attention to the extraordinary diminution between the total fowl for the last five years compared with the total for the first five years—a little over 2,000 as against a little over 5,000. He does not believe that any such actual diminution of fowl as these figures suggest has taken place, but undoubtedly there is a decrease and a very considerable one, although, as he points out, on shooting grounds at Currituck Sound, the season of 1909 and 1910, which in his table shows very badly, was there unusually successful for one or more clubs. He is inclined to attribute a part of the decrease to the placing of greater number of electric lights about Wenham Lake and to the increase of boating.

Taking up the species killed—geese do not figure much in the totals at Wenham, as that lake is slightly out of their migration line—we find that the blackduck, dusky duck or black mallard, make up 33 per cent. of all the birds shot in this ten-year period. Mallards are very scarce, while widgeons are much more common. Teal, shovellers, pintail, woodducks and canvasbacks are all very scarce. There were thirty-three mallards killed in the ten years, but in five of the ten none at all were seen. Redheads, broadbills, whistlers and buffleheads, together with ruddies, are more abundant, the last named constituting perhaps 15 per cent. of the total number of fowl killed. Besides these there were three species of mergansers, three of grebes, two of loons and a cormorant and the coot or mudhen.

To Chebacco Lake, Mr. Phillips gives some attention, but for this lake he has not the detailed records that he has for Wenham. Geese are three times as numerous at this lake as at the larger one; brant sometimes come in. A collection of stomachs was made in 1909—sixty-six specimens representing eleven species of wildfowl, and these stomachs were examined and their contents reported on by W. L. McAtee, of the Biological Survey. Many of them seemed to come from far-traveled birds.

Dr. Lucas for American Museum.

At a meeting held this week, the trustees of the American Museum of Natural History elected Dr. Frederick A. Lucas director of the museum, to take the place formerly held by Dr. H. C. Bumpus, who resigned some months ago.

Dr. Lucas has been since 1904 chief curator of the museum of the Brooklyn Institute of Arts and Sciences, and the trustees of the museum had great difficulty in inducing him to give up his position there where he has done wonderfully good work. He will assume his new duties June 15.

Dr. Lucas is one of the best museum men in the country. He was born in Massachusetts in the year 1852, undertook practical natural history work at Ward's Natural Science Establishment in Rochester when only nineteen years old, was called to the United States National Museum as ostcologist in 1882, and after various promotions there was called to Brooklyn as stated. He has served on the United States Seal Investigation Committee, and is an expert as to the fur seal, as he is in many other departments of biology. He has long been a director of the National Association of Audubon Societies, and stands very high among scientific men.

The trustees of the American Museum have elaborated a number of new plans for the enlargement of the museum and the broadening of its work. These include considerations looking toward the developments of the next ten years.

The museum will be fifty years old in 1919.

GAME BAG AND GUN

Rocky Mountain Adventures.

One of the most interesting books of Western exploration and travel that it has been my good fortune to acquire is that written by Edwin Bryant who, in the year 1846, made an overland trip with wagons to the gold fields of California which, at that time, drew thousands from their homes in the search of the quick wealth. This book is noteworthy for the interest of its descriptions of the country passed through, and of the daily incidents. The story is told in diary form by one of unusual talent and studious bent and offers a wealth of fact about the country and the Indians, and is filled to the brim with adventure.

Mr. Bryant and two companions set out for Louisville in the spring of 1846. Their starting point was to be Independence, Mo. At the latter place, Mr. Bryant purchased three yoke of oxen which he deemed sufficiently powerful to carry their baggage and provisions on the trip. A cook was engaged who had been trapping in the Rockies for several years, and the trip was begun. For the first few days a rainstorm impeded their progress, but this difficulty passed. As they proceeded they fell in with other parties westward bound, and on the tenth of May were joined by ten wagons carrying emigrants moving to California, among them some well known men, including an ex-Governor of Missouri. The next day a company was formed and officers were chosen to direct the march. An inspection showed that there were sixty-three wagons in the company, one hundred and ten men, fifty-nine women and one hundred and nineteen boys and girls. Of live stock there were seven hundred cattle and one hundred and fifty horses. What a picturesque outfit it must have been as they trailed out on to the prairie, the long line of covered wagons and the riders skirting the sides, a scene of animation never again to be witnessed!

In Kansas they were joined by a grandson of Daniel Boone and his family. They were eagerly welcomed, and everything was done to make things comfortable for them. Mr. Bryant continues in his pleasant manner through the form of his diary:

"The stream on which we are encamped is called 'Soldier Creek,' from the circumstance, as I learned, that some years since a company of traders having smuggled into the Indian territory a quantity of whiskey were pursued by a detachment of United States soldiers and overtaken at the spot where our wagons are formed into a corral. Their whiskey was taken and emptied into the stream, and the soldiers having encamped here during these proceedings gave its present name to the creek. The bank of the small rivulet was lined at an early hour after breakfast with fires, kettles, washtubs and piles of unwashed linen, showing conclusively that a general lustration was to be performed by the female portion of our party. The timber on the creek consists of oak, linden and some maple trees. They are of good size, and in several places the bends of the stream are well covered with them. I had heard reports of the creek being richly stocked with a variety of fish, but after two trials of several hours each, without a single nibble at my hook, I was compelled to entertain strong doubts of the accuracy of the reports. The whiskey poured into the stream may have poisoned the fish, as it would have done the Indians, had the traders been successful in their designs."

Meantime they must have lost some of their company, for the author says:

"A new census of our party was taken this morning, and it was found to consist of ninety-eight fighting men, fifty women, forty-six wagons and 350 cattle. Two divisions were made of the wagons for convenience in marching. We were joined to-day by nine wagons from Illinois, belonging to Mr. Reed and the Messrs. Donner, highly respectable and intelligent gentlemen, with interesting families. They were received into the company by a unanimous vote."

The next ten days went along smoothly with now and then the meeting with bands of Indians who were in all instances friendly and curious to trade with the immigrants for beads and trinkets, their furs and native wares. At all times they were good natured. Sickness was common in camp, owing no doubt to the change of water. Few of the company had been used to the outdoor existence and the exposure and privation of camp life. Bryant continues:

"Our faces are nearly as dark, from the effects of the sun and the weather, as those of the copper-colored inhabitants of these plains whom we have so often met. Before our evening ablutions after camping are performed, and the black dust of the prairie is laved from our skins, if a friend from the 'settlements' were to meet us, clad as we are in our grotesque and careless costume, he might very naturally mistake us for a company of the savages who roam over this wide wilderness. Once a week is as often as the most particular and fastidious exquisite of the party consults his pocket mirror and admires his physiognomy, and the not very delicate nerves of most of them it must be admitted are then often severely shocked, and they regard their own images with feelings of terror and aversion rather than with emotions of admiration. The anecdote of the very ugly man who, after surveying himself in the glass, exclaimed: 'Not handsome, but d——d genteel!' is not applicable to any of us. No one is either genteel or handsome.

TIGHTENING THE PACKS.

Photograph by Rutherford Page.

"Our system of travel is thus: The whole encampment is roused by the sound of a trumpet at or before sunrise. Breakfast, which hitherto has consisted of bread, fried bacon and coffee, is prepared and discussed as soon as possible, usually at 6 o'clock, when the morning cattle guard is summoned to drive the oxen into the corral preparatory to 'catching up' or yoking. This occupies an hour or more, and at 7 or 7:30 o'clock our march commences. Between 12 and 1 o'clock the train is halted in the road for the oxen to breathe. There is a delay of an hour, during which each person partakes of such refreshments as have been provided for him before leaving camp in the morning. The march is then resumed and continued according to circumstances in reference to grass, water and wood, until 5 or 6 o'clock in the afternoon, when our corral is formed, our tents pitched and our evening meal provided."

The party arrived at Fort Laramie in the midst of a thunder storm and found about 3,000 Sioux Indians encamped about the fort. The village looked to Mr. Bryant like a field set with corn shocks. There were about 600 lodges all told. The Sioux were gathering to make an attack upon the Snakes and Crows, and on one day they held a great war dance. Many of the Indians were under the influence of liquor. He speaks of the women as decidedly beautiful, the natural glow of blood showing upon their cheeks in a delicate flush which rendered their countenances fascinating. The Sioux warriors were powerful men, possessing a masculine beauty which he had never seen excelled.

Fort Laramie was then an important trading post of the American Fur Company and stood in the midst of a great plain where no timber was to be seen. None of the ground was under cultivation, and although attempts at agriculture had been made, they all had failed. The fort was a quadrangle with walls of sun dried bricks or adobes. They were surmounted by watch towers, and the gate was defended by two brass cannons. The Indians had permission to enter the fort in the day time, but at night they encamped out on the plain. Mr. Bryant next tells the manner in which the party left:

"In marching, as I met them, they seemed to be divided into numerous parties, at the head of each of which was a beautiful young female gorgeously decorated, mounted upon a prancing fat Indian horse, and bearing in her hand a delicate staff or pole, about ten feet in length, from the point of which were suspended, in some instances, a gilt ball and a variety of large brass trinkets, with brilliant feathers and natural flowers of various colors. The chiefs, dressed in their richest costumes, followed immediately in the rear of this feminine ensign bearer, with their bows and arrows in hand. Next succeeding them were the women and children and pack animals belonging to the party, and in the rear of all the warriors. The whole, as I met them, party after party, was a most interesting display of savage pageantry. The female standard bearers appeared to me more beautiful and fascinating than any objects connected with savage life which I had ever read of or conceived. It appeared as if this was a most solemn occasion, for not one of those composing the long column, some three or four miles in length as I passed them, seemed to recognize any object or to utter a word. They marched at a slow pace in perfect silence, with their eyes gazing steadfastly upon the vacancy in front. I bowed many times, but they took no notice of my salutations. Doubtless this stern deportment was expressive of their determination not to look to the right or the left, until they had penetrated into the country of and wreaked their vengeance upon their enemies, the Snakes and Crows."

The party fell in with other westward bound emigrants, one especially being a certain Captain Welles who had been in the battles of Waterloo and New Orleans. The population of the Rocky Mountains is said then to have numbered over a thousand white men, most of them trappers and hunters. For the most part they were married with Indian women and some had large families. Polygamy was common among some of the more uncivilized trappers.

About the middle of July they reached the South Pass of the Rocky Mountains and thence proceeded toward Fort Bridger, falling in with several bands of Snake Indians on the war path against their enemies, the Sioux. The emigrants gave them information regarding the movements of the Sioux they had fallen in with and were treated courteously and with marked respect. Fort Bridger was a small trading post of three cabins and stood in a fertile valley at the point where the old wagon trail, via Fort Hall, makes an angle and takes a northwesterly course. Nothing worthy of note occurred at the fort, and after more supplies were taken in the expedition went on. On the 23d they sighted some Indians:

"The first Indians that came up were two men and a small boy. One of the men called himself a Utah, the other a Soshonee or Snake. The Utah appeared to be overjoyed to see us. He was not satisfied with shaking hands, but he must embrace us, which, although not an agreeable ceremony, was submitted to by several of our party. This ceremony being over, he laughed merrily, and danced about as if in an ecstacy of delight in consequence of our appearance. He examined with great curiosity all of our baggage; tried on over his naked shoulders several of our blankets, in which costume he seemed to regard himself with great satisfaction. He was, for an Indian, very comical in his deportment and very merry. The number of Indians about our camp soon accumulated to fifteen or twenty, all of whom were Utahs, except the one Snake mentioned, who had married a Utah squaw. A hasty dinner was prepared, and we distributed very sparingly among them (for our stock of provisions is becoming low) something from each dish, with which display of hospitality they appeared to be gratified. Most of these Indians were armed with bows and arrows. There were among them a miserable rifle and musket, which they had evidently procured from Mexican trappers or traders, as, when I inquired of the owner of one of them its name, he pronounced the word *carabina*. Those who had these guns were desirous that we should wait until they could ride some distance and bring dressed deer or elk skins, which they wished to trade for powder and balls. They were all miserably clothed, some wearing a filthy, ragged blanket, others a shirt and gaiters made of skins, and others simply a breech cloth of skins. Their countenances, however, were sprightly and intelligent, and several of them were powerfully formed."

On the 3d of August they entered the desert and suffered somewhat from thirst. At length they came to a great hard smooth plain composed of a bluish clay incrusted in wavy lines with a white saline substance, the first resembling a body of water, and the last the crests and froth of the mimic waves and surges. Continuing across the desert they suddenly experienced the effect of a mirage.

The course being west there appeared off to the right the figures of a number of men and horses, some of which were mounted and some walking beside their horses. At first they appeared to be coming down upon the party; they appeared to be some three or four miles off. Soon the twenty men multiplied into three or four hundred and seemed to be marching with great speed. Bryant thought that it was Captain Fremont returning from California to the United States by this route. He spoke to one of the men about the men and horses he had noticed, and the fellow said he had noticed the same, but was sure it was a mirage. "It was then for the first time, so perfect was the deception, that I conjectured the probable fact that these figures were the reflection of our own images by the atmosphere, filled as it was with the fine particles of crystallized matter, or by the distant horizon, covered by the same substance. This induced a more minute observation of the phenomenon in order to detect the deception, if such it were. I noticed a single figure, apparently in front in advance of all the others, and was struck with its likeness to myself. Its motions, too, I thought were the same as mine. To test the hypothesis above suggested I wheeled suddenly around, at the same time stretching my arms out to their full length, and turning my face sidewise to notice the movements of this figure, it went through precisely the same motions. I then marched deliberately and with long strides several paces; the figure did the same. To test it more thoroughly I repeated the experiment, and with the same result. The fact then was clear. But it was more fully verified still, for the whole array of this numerous shadowy host in the course of an hour melted entirely away, and was no more seen. The phenomenon, however, explained and gave the history of the gigantic spectres which appeared and disappeared so mysteriously at an earlier hour of the day. The figures were our own shadows, produced and reproduced by the mirror-like composition impregnating the atmosphere and covering the plain. I cannot here more particularly explain or refer to the subject. But this phantom population, springing out of the ground as it were, and arraying itself before us as we traversed this dreary and heaven-condemned waste, although we were entirely convinced of the cause of the apparition, excited those superstitious emotions so natural to all mankind."

The latter half of the book has to do with the Bear conquest of California, of which Mr. Bryant was one of the handful of American adventurers who helped on that movement.

Glorious and glittering were the days of '48 and '49, and they will always remain in history as the turning point of civilization's spread. Had not a man who worked for Captain Sutter discovered the gold in the creek bottom, persisted that his find was truly the real article, it is hard to say how long the West would have been vacant.

Robert Page Lincoln.

Wild Life in North Carolina.

RALEIGH, N. C., May 6.—*Editor Forest and Stream:* During March and April the "tree doctors," a corps of young men from the West, were here looking after the wonderful oaks in Capitol Square. Their tree surgery was an inspiration to many people. The gray squirrels are very numerous in the square and from it have spread all over the city. When the men had stopped the hollows in the limbs and trunks in the trees in which the squirrels had so long had their abode, neat boxes covered with bark were placed in the trees, and the squirrels seem to like their new homes.

April was tricky, with some sharp frosts and even ice. The old saying that the leaves are all full grown by May 10 will not be true this year. Flowers have been and are extremely abundant and varied. After having traveled all over the State I have reached the conclusion that there are more kinds of flowers in the vicinity of Raleigh than at any other one point in North Carolina. We are on the dividing line between the north and the south, which runs through Cape Hatteras, and we are also on the dividing line between the coastal plain and its sand, and the Piedmont region with its clay and stiffer soils. This same environment has its effect in causing a great variety of birds and insects. Song birds are extraordinarily numerous and gentle. It shows what bird protection is doing. During the past few days there have been bird concerts in the woods around Raleigh, and an English friend on a visit here, Herbert A. Plater, is astonished at the beauty of the songs of the mockingbird, thrush, catbird and song sparrow, not forgetting the oriole, which is remarkably abundant and tuneful.

Birds, like flowers, seem to fancy certain places, and at this particular spot one can hear the melody of the birds which the country people call the swamp robin.

Some fine coveys of quail were flushed during the past few days, and in the case of one of them a strange thing happened. As we stopped and looked at them flying, they dropped and a half dozen jumped on a log and looked all about them, craning their necks in the fashion of a turkey which is scared and cannot understand things.

Assistant Curator Tom Addickes, of the State Museum, is on the coast superintending the digging out of the skeleton of a mammoth which is wonderfully well preserved, the bones already reclaimed being almost perfect and not petrified. It is in the bed of a little creek and above it is a bridge. A caisson of planks and logs was built to keep out the water, but the work inside this is difficult and Mr. Addickes and his negro laborers look as if they had just been dug up themselves when they finish their work each day.

Curator Herbert Brimley is arranging a very large case in the museum to contain alligators and snakes. In this will be some nine-foot alligators of his own killing, and a huge rattlesnake. This is a diamond-back rattler from Carteret county, with a head three and a quarter inches wide, twenty-two rattles, a girth of sixteen inches and a length of nearly seven feet. There is not a bruise on this snake, for an old man killed him with a slight tap of a stick. A few days ago A. J. Cobb killed a nine-foot alligator in Robeson county, the biggest one ever killed there.

Six years ago some Raleigh boys were walking along a small stream when their collie dog suddenly made a dash at a hole in the bank, but jumped back, for there was a strange sort of hissing. The boys dug out an alligator four feet long and four or five small ones. They gave away the latter, but tied the largest one on a plank and brought it to me. It was taken to Pullen Park, in the suburbs, and put in a lake in which I had some years before planted the Egyptian lotus, and there he is to-day. He came out often during the winter, but in the cold days lurked in a hole he had dug for himself in the bank. Last summer this wretch broke through a wire netting and ate a heron which up to that time had led a contemplative life.

FRED. A. OLDS.

Trained Chinese Dog.

SHANGHAI, China, March 18.—*Editor Forest and Stream:* A friend of mine relates that while shooting recently he met a Chinese sportsman equipped with a matchlock gun weighing about twenty pounds and with barrels about four feet long. This, however, is not an unusual weapon for a native sportsman to carry during the day when hunting for pheasants and other game, but as the sportsman in question was accompanied with a dog, also of Chinese nativity, there was some curiosity to know how he proceeded in the field. My informant states that he did not have long to wait, for he soon saw a pheasant feeding in a rice field and the Chinese sportsman maneuvering for a pot shot. The dog appeared to be the principal tactician, always keeping between his owner and the unsuspecting pheasant, and when the former was within shooting distance, he deliberately laid down, broadside to the pheasant, concealing the potter as much as possible, who was successful in killing the pheasant.*

In this connection, another peculiarity of a Chinese sportsman may be mentioned in the words of an eye witness. In his book, "With Boat and Gun in the Yangtse Valley," Mr. Wade says: "A method which came under my observation during a shooting trip was this: At the close of a cold December day, some seven miles from the walled city of Kiutang, near a large pond, I saw a man beckoning to me, and as I approached he asked me not to shoot the ducks in the pond. He explained that his friend was in the water, so I waited to see what would happen. After some time his friend landed, wearing a large bamboo collar or cangue, and carrying a basket containing a few wild and three tame ducks secured together by a string. He was dressed in goat skin, with the wool inside, his stockings were stitched to the clothing, and so oiled as to be nearly waterproof. Thus accoutred, he immersed his body, using the collar as a float. On his hat were placed bunches of grass, and on the collar two or three decoy ducks. He slowly approached the wildfowl, and when near enough dexterously caught the unsuspecting duck and dragged it under water. I watched him until he had gathered nearly the whole lot."

I wonder if Colonel F. A. Olds, of Raleigh, N. C., ever saw anything like the above.

T. R. JERNIGAN.

*A similar account was recently printed in FOREST AND STREAM.—EDITOR.

A Cape Cod Wolf Hunter.

IN an interesting volume about the families of Barnstable (Mass.)—a reprint of the genealogical papers originally published in the Barnstable Patriot by the late Amos Otis—is much curious history about Cape Cod. One story, which has to do with wolves on the Cape, tells of a period when Plymouth had been settled for fifty years or more, and of the doings of Joseph Bodfish, who seems to have been a great hunter and trapper.

"Though liberal bounties had been paid to English and Indians for wolves' heads, yet these ravenous animals abounded in the colony. In 1654, the whole number killed was nineteen—of which three were killed in Barnstable, and in 1655 thirty-one—nine in Barnstable. In 1690 the number killed was thirteen and in 1691 nineteen. Jonathan Bodfish said his grandfather could set a trap as cunningly as the oldest Indian, and that the duck or the goose that ventured to come within gun shot of him rarely escaped being shot.

"Wolf Neck, so named because it was the resort of these animals, was about half a mile from Joseph Bodfish's house, and there he set his traps. Once he narrowly escaped losing his own life. Seeing a large wolf in his trap he incautiously approached with a rotten pine pole in his hand. He struck, the pole broke in his hand and the enraged beast sprang at him with the trap and broken chain attached to his leg. Mr. Bodfish stepped suddenly one side and the wolf passed by him. Before the wolf could recover, Mr. Bodfish was beyond his reach. This trap is preserved in his family as an heirloom.

"Some years after, a wolf was followed by hunters from Wareham to Barnstable and they wished Mr. Bodfish to join them but he declined. Having studied the habits of the animal, he felt certain it would return on the same track. Taking his gun he went into the woods, concealed himself within gun-shot on the leeward side of the track and waited for the return of the wolf. He was not disappointed. The wolf at last appeared and was shot. He returned to his house and soon after the Wareham hunters came in and reported that they had followed the wolf to the lower part of Yarmouth, and the dogs had there lost the track and they gave up the pursuit. They felt a little chagrined when the dead body of the wolf was shown to them."

Introduced Game Birds.

W. B. NEWCOMB, the auditor of Yakima county, in the State of Washington, says of his section: "This county is taking considerable interest in stocking the country with game birds, and this spring we are spending nearly $3,000 for Hungarian pheasants and bobwhite. A few years ago a number of Chinese pheasants were turned loose, and now they are very plentiful here, and I am satisfied if the farmers had their way about it that an open season would not be allowed for a number of years.

Washington is one of the most progressive of States and is also one of the sections where, with reasonable protection, game birds should most flourish. Pheasants, bobwhites and sharptail grouse should all do well there, and if there are any sharptail grouse left in the country, strenuous efforts should be made to protect them.

One Hundred Years.

IT is not often in this country that we hear of a business that was established one hundred years ago. Here firms spring up and flourish mightily for a time, or fade and fail quickly. If they flourish, the man who has built up the business is likely to retire, or if he leaves it to his son, that son too often lets it go to pieces.

In Philadelphia things are likely to have more stability than in many cities of our land, and it is in Philadelphia that there was recently held a meeting to celebrate the one hundredth anniversary of the founding of the Tryon Firearms Company at the sign of the golden buffalo—1811-1911.

The Edward K. Tryon Company, of Philadelphia, was established by George W. Tryon, at 165 North Second street, in 1811. It has endured for one hundred years, and during four generations has borne the name of Tryon. From the point of view of to-day things were rather primitive in this land of ours in 1811. It was not very long before Lewis and Clark had returned from their trip across the continent, and just before the breaking out of the War of 1812. Firearms were all flint locks, matches were unknown, the flint and steel was the only means of procuring fire.

George W. Tryon, the founder of the house, enlisted in the War of 1812, but being a manufacturer of firearms he was sent back to his shop by the Government on the ground that he would be more useful there than as a soldier in the field. Later he was associated with J. Joseph Henry in the manufacture of repeating muskets, and very likely the old-time Henry rifle took its name from this Henry.

The E. K. Tryon Company has celebrated the hundredth anniversary of the house by issuing a beautiful memorial booklet giving a history of the firm, illustrated by portraits of members of the concern past and present, and by many engravings of old-time arms. The first week of January, 1911, was celebrated at the Tryon store by an exhibit of rare and interesting arms, a banquet and other festivities. This history of a fine old house is well worth reading.

In Louisiana.

NEW ORLEANS, La., April 25.—*Editor Forest and Stream:* The game commission is considering the problem of the English sparrow. In a bulletin from the Agricultural Department, Prof. Dearborn says sparrows have either killed or driven away most of the bluebirds, mockingbirds, the wren, the thrush, the martins and swallows, redbird and various other species that afford pleasure and beauty to mankind. It is suggested as the easiest way of exterminating them to destroy their nests and eggs by means of a hook placed on the end of a long pole. This, he says, is the simplest way, although they can be trapped, shot, poisoned, etc. The English sparrow destroys flower gardens and vegetables, plants and otherwise do great harm in addition to destroying the nests of song birds and frequently killing them. Sparrow hawks are not sufficiently numerous in cities and towns to make any successful inroads on the sparrow. This hawk should be protected and every means adopted to encourage its increase. Commissioner Miller asks the co-operation of the public in getting rid of sparrows.

Jules Moore and Tom Mathews, market hunters and trappers succeeded in capturing a large number of alligators during the past ten days and bringing the hides to Lake Charles to ship to the leather markets. It is stated that the men caught the alligators in the marshes near Lake Charles.

President Miller attended the Louisiana Press Convention at Lake Charles during the week and delivered an illustrated lecture showing the natural food supply of Louisiana and many handsome pictures of song birds, game birds, animals and fish. He thought it well for the editors of Louisiana papers to know just what the objects of the game commission are and to solicit their aid and sympathy in protecting birds and fish.

The big seven-foot alligator, captured at Chef Menteur, for Sarah Bernhardt, has been returned. It was shipped by express to New York and negotiations made with a steamship company to transport it to France, but the steamship people exacted over $200 for freight charges and also demanded food be supplied the alligator in transit. The actress demurred and declined to pay the bill. As a result the express company returned the alligator to Captain Raphe, at Chef Menteur. The alligator was intended to figure in a press agent's story.

The Louisiana game commission has fitted out three patrol boats armed with one-pound rapid fire guns for the purpose of protecting the fishing grounds within Louisiana territory on Lake Bergne.

The game commission has decided to plant a large amount of wild celery in the marshes and prairies and other places where the ducks feed in Louisiana. The planting will begin the last of August, and it is thought this plant will mature in time for the ducks which will migrate here in October from the North.

The Opelousas Gun and Rod Club, of Opelousas, La., has invited Governor Sanders, members of the game commission, levee boards and other organizations and officials to a repast to be served at Second Lake on May 9. The object of the meeting is to devise ways and means of ridding the Courtableau and tributary streams of water hyacinths. The club members state these hyacinths obstruct navigation and also kill and prevent game fish from increasing. An energetic effort will be made to eliminate the hyacinth growth.

Hunting Notes.

BERKELEY, Cal., May 1.—*Editor Forest and Stream:* The meadow lark is on trial for its life this season, and much depends upon the report that will be made to the Fish and Game Commission during the year as to whether or not a law will be passed by the next Legislature removing this bird from the list of protected birds. Investigations are now under way to determine what damage these birds do in the agricultural sections, and whether this is overbalanced by the benefits done by them. Grain growers assert that the lark does much damage to his crops, and a watermelon grower from Tulare says the birds damage his crop by drilling holes into the ripening melons. At the last session of the Legislature a bill was drafted permitting the killing of the meadow lark in all parts of the State, but that met with such a storm of disapproval that all of the counties were then eliminated but eleven. When the bill with this amendment was voted upon it was lost by a small majority. The credit for the victory for the bird should be given to Miss Libbey, of Redlands, "the little lady in brown," who spent several weeks at the State Capitol representing the Audubon Society.

C. L. Crellin, of Pleasanton, Cal., has embarked in the business of raising pheasants and has just built a seven-acre pen to accommodate the birds. He has been instructed in the business by the superintendent of the State Game Farm at Hayward, R. Argabrite, and plans to release a large number of the birds in the vicinity of Pleasanton as soon as he has sufficient on hand. A preserve of about 4,000 acres has been formed and it is believed that pheasants will thrive there, as conditions are very satisfactory.

GOLDEN GATE.

Spring in North Dakota.

GALESBURG, N. D., May 2.—*Editor Forest and Stream:* We have had a very cold spring, but geese have been here in larger numbers than in many years. The late Legislature passed a law allowing shooting of geese in the spring throughout the State, but I understand it does not go into effect until July 1 next.

Notwithstanding this, however, many were killed this spring and many ducks were also killed. This law was passed in spite of the protests of an official of the Audubon Society, and I do not believe it to be in accord with the wishes of a large majority of the residents in the State, but where will you match the idiosyncrasies of State Legislatures?

Prairie chickens are quite plenty hereabout. One can hear their booming in the house with the door shut of a quiet morning. There should be excellent shooting up here this fall.

J. P. WHITTEMORE.

English Women to Ride Astride.

THE English correspondence of the New York Sun has this to say of a subject often discussed in FOREST AND STREAM:

"While the court is at Windsor for the brief Easter recess, Princess Mary is taking further lessons in the riding school attached to the castle. She is already expert in handling a pony and has never shown any trace of the nervousness which for many years characterized Queen Mary and which has prevented her from ever really enjoying riding.

"To the delight of all votaries of cross saddle riding, Princess Mary is being taught to ride astride and she wears a divided skirt. King George has pronounced views on the ordinary method of teaching girls to ride, considering it dangerous and ungraceful. His approval of the cross saddle for women will mean that it will be adopted in riding schools and throughout the country.

"As a matter of fact the King was the original instructor of his daughter in this way of sitting on a horse, for the first time she mounted a pony it was her father who lifted her on the boy's saddle he had had made for her, and it was he who led the pony down Main avenue at Sandringham, pointing out to his daughter the proper way to sit and to hold the reins."

New York State Legislation.

On May 3, Senator Long's bill, designed to open the spring for the shooting of ducks on Long Island, was again defeated in the New York Assembly. Several weeks ago it was beaten by a vote of 66 to 73; 76 votes being required to pass the measure. The friends of the bill tried to have it reconsidered and supposed that they had secured the required seventy-six votes, but when they called it up, it was found that they were still three votes short. Assemblyman Sheide, of Suffolk, led the fight in behalf of the bill, but was again defeated. Apparently undismayed by defeat, Senator Long on May 4 introduced a bill making the open season for wildfowl Oct. 1 to Feb. 1.

W. T. Hornaday and Andrew D. Meloy unite in issuing an extra of the Wild Life Call, a circular whose purpose is to stop the destruction of wild life and to preserve and increase it. This issue refers especially to the Bayne bill, which has been reported out of the Senate committee of forest, fish and game with amendments providing for the breeding and sale, under strict supervision, of the few kinds of domestic game that may be successfully bred in captivity on a commercial basis.

In the rush of legislation toward the close of the session there is danger that this bill will be sidetracked, and Dr. Hornaday urges that all sportsmen should request their Senators and Assemblymen to press for the consideration of the bill, to keep it from being crowded out in the closing rush and to get votes for it when it comes up for passage. These bills, introduced in the Senate by Senator Bayne and in the Assembly by Mr. Blauvelt, are intended to absolutely prohibit the sale of native wild American game and to encourage the breeding and importation of several species named in the bill.

These bills permit the sale from Oct. 1 to March 1 of pheasants, blackduck, mallard duck and certain species of deer, bred in confinement, killed in the presence of a designated State officer by other means than with a gun, and properly tagged for identification. Besides, they permit the importation and sale of pheasants, Scotch grouse, black cock, European lapwing plover and certain species of deer. Imported feathered game must be brought into the United States unplucked, must be identified at the port of entry as having been killed abroad, and must be tagged for further identification before it is placed on the market for sale.

Andrew D. Meloy, for the New York State Fish, Game and Forest League, urges that members of the Legislature be made to feel the strong interest had in the passage of this law by the people of the State. He urges that members of the league and others make so active a demand on the members of the Legislature that these bills shall be driven to a vote before the adjournment of the present session.

Every New York State reader of Forest and Stream should do his part to help these bills through.

Governor Dix has had introduced in Senate and Assembly his conservation bill, which deals largely with the preservation and increase of the New York water supply and incidentally puts the making of New York game laws in the hands of a board of three persons. The bill is a ponderous one of seventy-two pages and is extremely radical in its changes. Containing many desirable features, it requires careful study before receiving comment.

Bills have been introduced as follows:

By Assemblyman Drummond, in relation to the taking, possession and transportation of deer.

By Senator Frawley, of New York, relating to automatic and repeating guns.

The Assembly has passed these bills:

By Assemblyman T. K. Smith, relating to protection for pheasants in Oswego county.

Assemblyman Gurnett's, in relation to certain fish in Schuyler and Chemung counties.

Assemblyman Wende's bill relating to spearing non-game fish in Lake Erie, and Assemblyman T. K. Smith's prohibiting for a term of years the shooting of pheasants in certain towns in Oswego county.

Senator Manley's bill, in relation to the open season for grouse and trout in Oneida county; also Assemblyman Brereton's bill relative to pike perch and angling through the ice in Lake George.

Assemblyman Baumes' bill, in relation to the use of nets in the Delaware and Hudson rivers, and Assemblyman Cosad's bill, relating to the open season for lake trout and the use of nets in Seneca Lake.

Bills passed by the Senate:

Assemblyman T. K. Smith's bill, providing that if the open season commences or ends on Sunday, in connection with the application of Section 240 of the fish and game laws, it shall be deemed to commence or end, as the case may be, on the Saturday immediately preceding such Sunday.

Assemblyman Gurnett's, in relation to the open season for pheasants.

Assemblyman Evans', relating to hunting hares and rabbits with ferrets in Sullivan county.

Assemblyman Miller's, in relation to spearing fish in certain creeks in Otsego county.

The Senate has advanced to third reading Senator Roosevelt's bill relative to the appointment of special game protectors and wardens.

The Assembly on May 3 again defeated the Long bill to permit spring duck shooting on Long Island by a vote of 73 to 55, the latter many desirable features, it requires careful study before receiving comment.

The Use of Game.

Pasadena, Cal., May 2.—*Editor Forest and Stream:* While I am not by any means a pessimist, I can easily see that at no very distant date most kinds of our game, both feathered and furred, will be a thing of the past outside of the Government game parks and private preserves.

It is now over three score years since I first went out hunting with an uncle in Northwestern Vermont and adjacent Canadian woods, and until within the past three years I have nearly every season been over the same grounds and have seen civilization come in and destroy the best breeding grounds and game coverts there. Springs that we used to call living springs with trout in their outlets have been gone for years without even a depression left in the ground to show that there was ever there a spring of pure cold sparkling water. Every summer now the mowing machine cuts a good swath of hay in the very bed of the brook where I caught my first trout. When the snows melt in the spring of the year, a flood of waters flows down through that valley, but in a few days those waters subside, and it again becomes dry meadow and pasture land.

Public stocking and protection have increased the number of only one kind of game there, the Virginia deer which, with continued protection, will hold their own in a semi-domestic state. The amount of damage done by them to the farmers' crops is very small when compared with the amount of claims for damages presented to the wardens. We have personally investigated many of these claims, and in most instances found them groundless. If any damage had been done, it was done by the farmer's cattle, and in one case by his pigs. It is astonishing to see the number of persons who in most things are perfectly honest, but seem to think it no sin to beat the Government in taxes, customs, and in these cases by making fraudulent claims for damages done by deer. If the farmer would keep a good collie dog it could easily be trained to keep deer away from the orchards and cultivated fields.

Game farms are like some other kinds of farming, an expensive luxury, for only the wild turkey, the wild goose and the mallard duck can be domesticated and reared profitably. It costs more to breed and rear a deer than it does to breed and bring up half a dozen sheep, and there is more food value in a sixty-pound sheep than there is in a 150-pound deer. An average man on an exclusive mutton diet will wax fat, strong and greasy, while on an exclusive diet of venison he would starve in less than a month. A venison pasty with all the fixings is very palatable and appetizing, though there is very little real nourishment in the meat itself.

It is wonderful how game has held its own in the face of the constant encroachments of civilization on its breeding grounds and resting places and the increasing number of hunters. A single firm of gun makers in this country turns out daily an average of over eighty double barrel guns, and this firm is only one of the many gun manufacturing firms that are sending out among our citizens improved game destroying weapons.

By all means let us unite in encouraging the increase of Government game parks, private game preserves and game breeding farms, as they are all in many ways public benefits.

N. P. Leach.

[In view of the enormous increase of interest in trapshooting, it does not follow that these guns are all used in killing game.—Editor.]

Police Dogs.

The police-dog is growing in popularity the world over, it would seem. The Inspector-General of the Straits Police has ordered one of Major Richardson's trained Airedale terriers as an experimental companion for the police on night duty in the outskirts of Singapore, with a special eye to counter the wiles of the Chinese burglar, a craftsman of peculiar skill. Always provided the burglar is not armed with a kriss, the dog will be most valuable. The North Western Canada Mounted Police have also invested in an Airedale trained in police work as an experiment.—London correspondence in the Asian.

SEA AND RIVER FISHING

On the Golden River.

THERE were plashes of cardinal and yellow among the greens of the apple trees. The vivid greens of the blades of corn were softened, and nestling among the thick vines, glimpsed occasionally along the corn rows, were golden spheres. An irregular outline of a carpet of ferns glowed in vivid color play; canary, yellow, yet radiating in the vibrant air. Smiling tiny crowns of brilliant purple poised on slender sage-hued stems courtesied gracefully as the rollicking breeze urged. Here and there among the plumes of the sumach were fronds of flaming scarlet.

Prexy and De noted all these things as they passed on their way to wade the little river of gold. Dreaming verily were they of a gladsome day or two, for neither of them had ever, in the flesh, splashed along the reaches of golden sand over which rolled the crystal flood that coined the name of the Yellow River. The Judge hald told them in his breezy way of a day among the small-mouths, the royal tigers of the waters, and fancy with delicious abandon had penciled in a day dream this new vantage ground of angling.

At a cozy shade-embowered cottage in Hoosierland they found a host in the village blacksmith and among the jewels of the household was a Pearl. The genuine, modest hospitality was charming. The light, compact tackle of anglers who wade was soon assembled, and with pace somewhat quicker than a stroll, they walked the intervening mile of steel-streaked way to the bridge. Arriving, hip boots were pulled up and belted. Prexy set up a light six-foot bait rod and rigged a spoon lure and strip while De set up a ten-foot six-ounce fly-rod, reeved through a D line, put on a four-pound-test six-foot gut leader and attached a tiny spoon and salmon fly, with a bit of pork, like half a match, for a tail. Brushing through the thick undergrowth beneath the larger trees, they put in at a sandy beach of a charming pool. A gray log extended half across the little river at the upper end of the pool behind which a bar of the golden sand had formed and along which De could wade almost halfway across. The further shore swept in a graceful curve where the river turned almost at right angles. A great gnarled stump had its roots half in the water, which deepened to eight or ten feet in places. This day at this pool was one of discovery only—discovery of pool, not bass.

Puttering along as anglers who wade must do, Prexy casting a lure here and there about the sunken logs or partly submerged treetops, De whipping this likely spot or that, the cool water sometimes half hip deep, but with gravel or sand bottom; wandering in the clear water along tree-fringed shores, they came to a charming little island. On one side the water ran blue and deep, the limbs intertwined above from either shore. It was as bassy looking as could be, but the lures lured not. Just below the island the river made a sharp turn. A great tree overhung the water and around its exposed rootage a pool deepened. Why not here, if ever? Yet the try-out indicated "not at home."

A little further along past a bit of rippling water the stream deepened again. A bar extended through the middle and a log lay a little way out, up and down stream, while another reached half way across. The surface of the water, oily and foam-flecked, swept against the log barrier with jolly fierceness until it boiled a bit. De's fly lure had gone well out, and he was bringing it across the current, about two inches under, when a gentle tug, a rush, a swirl and the first bass of the day dream was on. There was a bit of matching skill with cunning when Prexy happened to look round and exclaimed: "Why don't you holler and let a fellow in on the fun?" Alert, quick, strong for his inches, the little tiger fought his best fight, but after a few minutes a graceful bit of olive and silver lay along the water. The folding net was unbuttoned from between the angler's shoulders, the line reeled in to rod length. The rod hand swept backward, turning so the thumb was underneath the rod, the net submerged and the nine inches of latent energy slipped into it. As he was not legal, according to the angler's ten-inch law for small-mouths, he was carefully returned to his element to grow and fight again, yet he proved the fact that there were small-mouths in the golden river.

A gentle rain had begun to fall, so after exploring a bend or two the anglers brushed through a clump of pawpaw bushes (did you ever notice what a flood is held suspended by the leafage of the pawpaw shrubs on a rainy day, and how very much of it lets loose when you push through?), called the day done and hiked hostward.

There was soon need to unbuckle belts as the wholesome repast was dispatched into lessening vacuums, then the solace pipes were lighted. Afterward Prexy rendered one of his charming song recitals—"The Little Tin Soldier" for the lad Ross, "Three Little Owls" for Nellie, "Bonnie Lassie" for Miss Pearl; mine host was charmed with "O'Dooley's Five O'Clock Tay" and for the hostess there was "The Four-Leafed Clover." As he finished the soothing "Robin and Squirrel Lullaby" the sand man was throwing sand promiscuously. The swish of wind and patter of rain soon finished the work, and all eyes under the roof tree closed.

Richards came tumbling in through the downpour, midway between the day-close and the dawn from that fascinating horror, the city. He was as full of words as a lazy man's farm is full of cockleburrs, but presently Prexy, with slow measured strokes, started to "saw a board," and under that soothing cadence all were wafted into sleep land.

The freshness of the morning was still on when the trio put in the dainty river above the sand hole. It may be the others will some time forget the sand hole, but it is not likely that De will. He had put in above and was wading half-thigh deep, noting among other items the play of sunlight through the water and on the tiny rifts of moired golden sand. The sweep of the half arch of tree limbs was high overhead, making room enough for the swing of the ten-foot rod and the back cast. One shore line lay in the shadow. The shrubbery was garlanded low. A log lay lengthwise, a little way out, while another stood upright. "A queer freak of log lodging," thought De, "but a likely place, a snug lair for a tiger." Just over the one and against the other this cast must go. The fly lure settled, all a-quiver. A tiny upheaval. "Ah! come out over that log, you rascal," said De, as his rod swept the line taut across stream. "Now, you're out over these golden sand ripples; go to it! Ah! ah! stand up on your tail and make a courtesy, then the bout begins. That log across stream, eh? Think you can make it? A bully try-out! Going back to the first one, eh, and jump a time or two on the way! That's it—play circus, now again. No trying to rub that barb out on the bottom. No, sir; not you; a square fighter. Shake it out or break it off; break the rod tip—eh? Break something, but get away. You will, eh?" Six minutes of galvanic action—all busy, angler, rod, line, leader and small-mouth—ere the aquatic tiger with the red iris came to net.

On the far shore a young poplar spread broad leafage on its lower limbs. De lay the fourteen-inch trophy on fresh grasses, lifted the gill cover, and his knife-point sought the dark purple spot. The life current ebbed and was still. Wrapped in his poplar leaf robe of cool greenery, he was put to creel. Gallant to the last, he was entitled to die like a warrior. The fly was a squirrel-tail tied on No. 4 hook.

In the shadow-strewn reaches below the sand hole, Prexy had his innings, and Richards took a pair from the pool beneath the wild cherry.

It was surely a luncheon al fresco. The day and the anglers idled on. Prexy saw a scant clump of rushes along the way and De noted two spots where the leafage of the pond lilies floated. There was the whirr of a covey of bobwhites seeking cover in the corn. Richards heard the call of the red-shouldered hawk. Onward, with the little river sun-kissed here and there in the open, then along the emerald hued arches held aloft by purplish column and rafter, beside the verdure clad shores, strewn with shadows and sunlight, they wandered. Once they noted, as strolling beneath the cottonwoods, they skirted the little river, some clusters of wood violets demurely smiling up into their faces from among their cover of emerald. They left them smiling. How much a fisherman misses who merely goes fishing for fish!

At one spot the little river rippled over a grass-grown rift of gravel, swept into a pretty pool too deep to wade, bent to the right, a willow-fringed shore on one side and a pebble-strewn one on the other, and again murmured its lullaby over the shallow places. De had waded in from the pebbly shore at the lower end. All the landscape was in shadow. Under the great trees at the upper end the outlines of things had grown dim and the quiet of evening

was on just before the celestial beacon lights are set for the night watches.

De had cast across the current and was stripping his line, making loops of about four feet and holding them between his fingers, when there came a subtle little electric tug. The wrists were turned outward, setting the barb and making the line taut. The rod bent gracefuliy. The rush was so heavy that some of the loops were paid out. The surface of the water wrinkled and a sheen of olive and silver with an upturned crescent of scarlet near its top shot out and up a foot or two above. Splashing back, it swept a quarter circle with about forty feet of line as a radius, reversed and swept another half circle, again the acrobatic leap. Up stream and down, out and under, with that fascinating quiver coming up the line and down the rod into De's elbow. Now moving slow enough for its lines of beauty to be seen just below the surface, then darting by, leaving just a softened gleam of silver. Seven minutes of electric thrilling time slipped by. Ah! how much an angler feels and sees sometimes in seven minutes! The setting ideal stream, shore line, light effects, all in the softening charm of nearing twilight, and the action dynamic. When that fourteen-inch bass lay on a bit of bluegrass with its border of dullish white pebbles, and all the colors of the creature and its environment came out under the developing light of that autumn evening, it formed a picture that is the rare pleasure of but few to enjoy. The fly, a Jock Scott, tied on No. 4 hook.

"Well, said Prexy, "there are some for friend So-and-So, some for mother, and two for Lady Graygown and me." Richards had plenty for the good wife and four chicks. De had enough for the folks and the grandma. While it is no river for tonnage, the Judge's decision was founded on fact: there were small-mouths in the golden river and the day's memories are finer than the day dreams.

In the twilight the anglers heard the bell of the lead cow tinkle as she wandered homeward, and in the gathering gloom they strolled toward the lights in the cozy cottage.

L. E. DEGARMO.

Australian Trout.

SYDNEY, Australia, March 20.—*Editor Forest and Stream:* Inclosed find a cutting out of the paper in reference to some trout fishing here which will probably interest you. What is written is a fact, as the angler is well known.

"B. G. Kelly, of Gingerra, writes to Mick Simmons: 'I have had splendid sport among the trout these last two weeks, and have landed one 9½-pound, one 6½-pound, one 6-pound and several from two to four pounds in weight. I had a great time in landing the two larger fish, but even a 3-pounder up here is remarkably strong and able to put up a good fight. The 9½-pounder was hooked in rather a peculiar manner. I cast out into a clear hole as far as I could over about eight feet of weeds, and brought my line in, working the fly ready for another cast, and just as I went to lift the remainder of the line to cast, I saw this monster turn over and take the fly—the strike was a beauty. It was about fifteen minutes before I had it quiet enough to attempt to draw across the weeds, but even then it beat me time after time and got out again. I got it to net at last, however, after a splendid fight.'"

H. J. SOLOMON.

THE ANGLERS' CLUB'S NEW CASTING PLATFORM IN CENTRAL PARK, WHERE THE TOURNAMENT IS BEING HELD THIS WEEK (MAY 11-13).

Camping.

I.—THE NOVICE.

FIFTY years' experience in camping leads me to believe that I have enjoyed its charms and learned to avoid its hardships. The story of my trips may be of benefit to those who enter the practice at any stage of its course from ignorance to knowledge of the necessities for comfort.

As a busy lawyer taking only two months in the summer in the woods, those who wish to enjoy similar experiences, and do not expect to endure the hardships of winter weather or the wilds, may find valuable suggestions, especially those who wish to enjoy themselves and avoid hardships and dangerous exposure. I shall endeavor to progress in the details as they actually occurred, from the novice to the captain of an expert camping party.

We commenced as boys under sixteen, built our boat, made our tent out of heavy sheeting and started from Chicago on a flatcar of a freight train, dumping our outfit at the crossing of the Calumet River, where the train stopped for water. Our boat was taken to the river, and although we had caulked it with cotton, it filled with water.

We pitched our tent and prepared for the usual sleepless first night in camp. About midnight some men walking on the railroad stop-

ped, and our captain, thinking that they intended to steal the boat, went out with his revolver in hand, whereupon they went on their way. The incident, though probably of no importance, banished our efforts to get to sleep.

In the early morning we bailed out the boat, and finding it to be tight, moved down river to a more secluded camping place. We caught fish, bathed and shot some birds, and were having a good time with only sheets for bed clothes. A thunder storm with prolonged rain afterward made the roads very muddy and we could not keep dry. One of our party deserted us and walked to the station to go home. We stood the rain another night, and in the morning moved about three miles into the Calumet feeder and went to our grandmother's to get dried out and fed up ready to go back to Chicago. We gave her the boat, it being useless for our camping purposes, as it would not hold much more than our duffle. She traded it for a cord of firewood.

The next summer we were more eager than ever to try camping again, so we hired a clinker boat in Chicago, and two of the boys took the duffle, now including a suitable tent, to the Calumet River by the lake and up a mile to the railroad where the senior and junior joined them. After a comfortable camp we loaded up and started, coming to a marshy stretch of river and a thunder storm. The fishing was good, but we had to look out for a camping place. We tried a small island which soon began to sink with us, and we went on and made camp on a decent bank.

After a day or two we went on again, and at night came to a place where there were only low banks. We had to camp, as it was getting dark with no high land in sight, so we cut bushes for our beds to keep us from the damp ground, but in the morning the rain had flooded the bank so that we were in water. This was our last camp on low ground, as we had learned that we could not rely on dry weather. At our next camp we tried to cook some beans. We boiled them from time to time and could not get them soft enough to eat, as we did not know enough to soak them before trying to boil them. Our first effort to make coffee was the usual failure of the novice. We put the pot on the camp-fire to boil. Soon the nozzle dropped off, then the handle, and on getting the pot off we found nothing but burned grounds. About the only successful cooking we did was to boil pickerel, and one of our most enjoyable meals was had in this way, when we were quite hungry. We kept supplied by walking to town and also by buying of the farmers. When we had grown tired of our inconvenient camp life, we went down river and back to Chicago.

Our third trip was planned for a more extended voyage, being from Chicago to the Calumet River, thence to the Calumet feeder, thence to the Illinois canal, thence to the Chicago River and thence to Lake Michigan, about one hundred miles. On this trip we had learned more about cooking and relied less upon farmers and village stores. We had waterproofs for our beds and warmer bed clothes, but as yet no pillows, nor any of the essentials for comfort. One of our camps was in a marshy section, and one of our city visitors became alarmed by the mosquitoes, as he could not sleep and they poisoned his hands so that our captain had to get a light and bathe his hands and face in salt water.

When we reached the Chicago River a passing tug nearly swamped our heavily laden boat, and we landed, taking a wagon for our duffle and sending the boat along to its destination.

These trips were enjoyable, but could only be endured by those who could get wet, cold and hungry without becoming ill. They covered the times of our becoming acquainted with the items essential to a fairly endurable trip.

William H. Holden.

Minnesota Fish.

Minneapolis, Minn., May 6.—*Editor Forest and Stream:* It will probably be of interest to your readers to learn that from one small lake a mile wide and four miles long over fifty-seven carloads of buffalo, carp and sheephead were removed in two winters. This is Lake Tetonka, in the chain of lakes fed by the Cannon River, which empties into the Mississippi. This river feeds and drains Lakes Saber, Volney, Gorman, Tetonka, Cannon, Sakatah, German, Jefferson and other smaller ones near its head.

A few years ago the game fish in these lakes were known to be disappearing, and every spring the buffalo came up in greater numbers from the Mississippi, the number coming up depending upon the stage of water during their running period. When the water was high, thousands could be seen. Lake Tetonka being very deep and rather suitable for them, seemed to hold them from going up further, and as a result the spawn of all other fish suffer greatly.

Buffalo, carp and suckers are all spawn eaters. This one lake is now practically free from them, the seiners working under wardens having been unable to get more than a few fish at each haul with seines over a half mile long. The carp and buffalo removed from the lake were all iced and shipped to New York and other points where they are greatly relished by the Jewish fish eaters. In price they run from four to nine cents per pound here and the buyers stand about eagerly when the haul is being made, making bids for the catch.

It seems as if the other lakes in the chain fed by this river were too shallow to keep buffalo long, and all eventually came back to the deep lake, Tetonka. The State received a big fee for the privilege of getting the buffalo and other rough fish from these lakes, which money was returned to the fund that supplies game fish fry to the waters. In a few years the fishing for bass, croppies, pike and perch will be better, though now there are about sixty men who make a living fishing Lake Tetonka for croppies and sunfish during the season. The fishing opened May 1.

Seiners are only allowed to draw their nets before a warden sent from headquarters. The game fish are not lifted from the water, but are slid over the top of the cork line and sent away.

During the present spring there have been a great many arrests made for illegal spearing in the lakes about Minneapolis and St. Paul. Some who want everything they see in the water and do not care for the betterment of rod fishing will always be seen spearing or seining without licenses. They are after the game fish, which bring large prices at restaurants, though they cannot be sold legally. It seems as if the only salvation for the game fish is a stringent law and enforcement of same regarding the sale of fish. Personally I would like to see it made illegal to sell anything but rough fish.

During the past term of the Legislature a law was proposed permitting the seining of bullheads for market. There are thousands of tons of them in many of our lakes. They are the poor man's salvation when it comes to fishing for a living, and often on his table. They are toothsome and wholesome and bring from eight to six cents per pound according to the season. They are the only fish we can ship outside the State and sell.

Just now there is a lot of fry planting going on. It will soon cease as the days are getting warmer and fry cannot be shipped so easily in milk cans. The State fish and game commission this season is not sending cars out to planting points, as the funds available are too small, but cans of fish fry are going all over the State, sometimes with men in charge who give the planting instructions. All told, the game and fish situation is rather looking up. The true spirit of sportsmanship is becoming more of a staple article and the game hog is thinning out.

Amos Burhans.

San Francisco Fly-Casting Club.

San Francisco, Cal., April 25.—*Editor Forest and Stream:* The medal contests at Stow Lake commenced March 25. There will be five events, each contest day, as follows: Long distance fly, accuracy and delicacy fly, accuracy fly, accuracy and long distance lure. The first five contests Saturday and Sunday are for the classification of the contestants. The following average scores are necessary for the different classes:

Fly-casting—Accuracy: Championship, 98 2/3 per cent. or over; first class, 97 2/3; second class, 96 2/3: novice class, under 96 2/3 per cent. Delicacy: Championship, 99 per cent. or over; first class, 98; second class, 95; novice class, under 95 per cent. Long distance: Championship, 115 feet or over, or who in any contest has cast 130 feet or over; first class, 100 feet or over; second class, 85 feet or over; novice class, under 85 feet.

Lure Casting.—Accuracy: Championship, 98 per cent. or over; first class, 96 per cent. or over; second class, 94 per cent. or over; novice class, under 94 per cent. Long distance: For record only. Under the rules of the National Association.

The winners in Saturday contests must cast off with the winners of the corresponding class in Sunday contests. The rules of 1909 governing contests shall continue in force, except that in no event shall the leader be longer than nine feet. The club will furnish tackle in all events to those not possessing their own. Gold medals will be awarded to the winners in the different classes in each event, excepting that a contestant shall be entitled to but one medal in one event, and providing also any member having been awarded a medal must thereafter win three times before being entitled to receive a medal.

Members who have never taken part in the contests are especially invited to be present and participate in the same. Novices will be instructed in all events.

F. J. Cooper, Sec'y.

Improved Conditions.

St. Johns, N. F., May 4.—*Editor Forest and Stream:* The report of the Game and Inland Fisheries' Board for 1910, is an interesting and comprehensive document.

It is the record of the very first systematic effort made in the island to classify and reduce to order the results of game and fish protection all over the country.

One of the first duties of the commission was to appoint competent wardens for the various rivers. This was a work of some difficulty, as many of the wardens imagined they had a lien on certain sections, and resented anything like innovations. The board had information that many wardens only performed their duties in the most perfunctory manner, and in many cases they were the worst offenders against the law. It was decided to send new men from other localities to the principal rivers, so that they would be independent of local connection, and do their duty without fear or favor. On the whole, the results prove that this was a wise measure. Three supervisors of wardens were appointed to see that the wardens carried out the law. Returns show that on the whole the work of protection was well and faithfully carried out.

In 1909 it was estimated that about 400 foreign anglers visited our shores. The exaction of a license fee of $10 put a sudden stop to a large number of these visitors, as they resented being asked to contribute for the protection of the rivers that they had fished for years without let or hindrance.

In 1910 about 231 foreign anglers, mostly from the United States, took out licenses and paid into the treasury the sum of $2,310. This was a valuable addition to funds of the board, and assisted materially in paying wardens for the various rivers. In addition to this was the sum of $3,600 paid for caribou licenses, making a total revenue from both sources of nearly $6,000.

The board appointed over ninety wardens and three supervisors. About thirty-six rivers were visited by foreign sportsmen. The total number of salmon reported amounted to 3,369; total weight about 20,415 pounds.

Some of the rivers fished were: Little River, Codroy, 173 fish; weight, 1,630 pounds. Grand River, Codroy, North and South Branch, 375 fish; weight, 2,749 pounds. Robinson's, 305 fish; weight, 1,890 pounds. Harry's Brook, 119 fish; weight, 893 pounds. Humber, 422 fish; weight, 1,814 pounds. Hawke's Bay, 138 fish; weight, 829 pounds. Indian Brook, H. Bay, 53 fish; weight, 325 pounds. Indian Bay Brook, 109 fish; weight, 840 pounds. Gander, 91 fish; weight, 395 pounds. Salmonier, 499 fish; weight, 2,343 pounds. Southeast, Placentia, 113 fish; weight, 624 pounds. Grandy's Brook, 103 fish; weight, 654 pounds.

These do not represent exact totals, because there were very many fish caught by local anglers and others in those and many other rivers not reported.

Last year, for the first time, nets and other obstructions were removed from the mouths of the streams and from the estuaries, and the consequence was that immense numbers of salmon, many of them very large, succeeded in getting to the spawning grounds unimpeded.

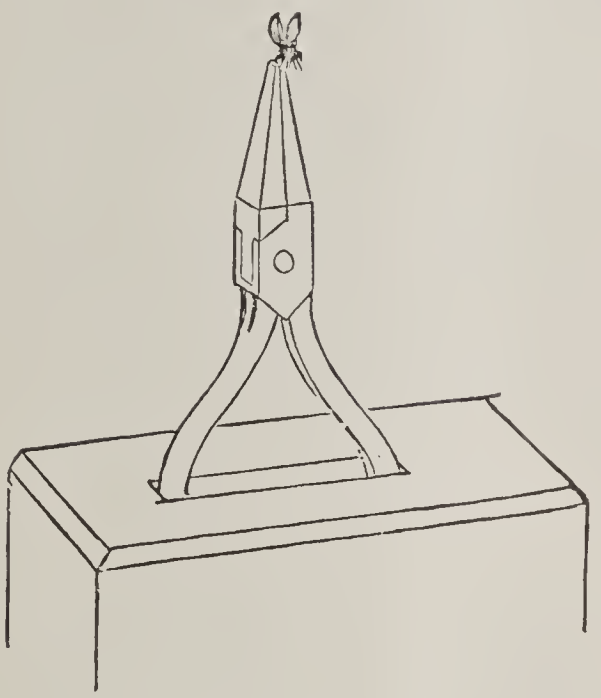
After a few years, if this protection is continued, the increase will be so marked that undoubtedly the coast fishing, as well as the river fishing, will improve, and we need not bother ourselves about artificial propagation, as the natural increase, if the spawning grounds are protected, will more than supply all demands for many years to come. The rivers of the South Coast are scarcely fished at all, and these are among the very best in the island.

The commission also took measures to protect the caribou and fur-bearing animals, but the protection of these is a harder matter than that of the game fish, as there are many serious difficulties in the way of complete supervision of the caribou and other animals. But the board has done much and has formulated plans for the future that will tend to increase the supply of these valuable animals.

W. J. Carroll.

An Impromptu Vise.

Recently finding myself unexpectedly within reach of some decent fishing there was a question of tying some flies, and nothing in the way



THE DEVICE READY FOR USE.

of a vise being procurable, necessity called forth the following substitute, which may be of interest to others who may be faced with the same difficulty, says a correspondent of the Field.

The apparatus merely consists of a pair of flat-nosed pliers and a block of hard wood in which a slot is cut to take the handles of the pliers, so that when these are pressed home the pliers are tightly closed. This proves as easy to use and as efficient as any fly vise I have ever worked with.

[While the block may be useful as a base for the pliers, if the latter are to be held in the hand a rubber band passed round the handles several times will be found equally effective, without unnecessary bulk.

A better device for the purpose is the little jewellers' pin vise, which is no larger than a fountain pen. The jaws are operated by a knurled sleeve, and the stem being knurled also it rests very securely in the hand, and will hold a hook rigidly at any angle. If, however, it is the angler's practice to carry small pliers, the hint is a useful one.—Editor.]

Fishing Notes.

Berkeley, Cal., May 1.—*Editor Forest and Stream:* Trout streams in the coast district are still high and fishing is not of a high order. In Section 3, of the new game and fish division of the State, trout fishing will open to-day, but will be poor for several weeks, owing to the fact that all the streams in the sierras are very high, and there is still a large amount of snow to be melted. In streams where there is usually fine fishing by the middle of May, it will be almost impossible to take fish before the middle of June, and the best sport will not be enjoyed until July. It is usually the case that a large number of anglers leave San Francisco for the Truckee River for the opening day sport, but none has announced his intention of making the trip to-day, owing to the unfavorable conditions.

Salmon fishing is now on in full swing in Monterey Bay and enthusiasts are flocking there from all parts of the country. Quite recently William H. Holden, of Pasadena, spent several days there enjoying royal sport, and Isidor Strauss, of New York, has also been trying this lively entertainment. Others well known in the angling world who have visited Monterey Bay during the past ten days have been J. L. Stack, of Chicago; A. C. Frost, Oakland, and A. D. Shepard and Homer Boushey, of San Francisco. The fish have commenced running in the bay earlier than usual and are to be found in large numbers.

Most salmon anglers use rod and reel. Formerly in trolling for these fish a fixed lead sinker was used, but it was often commented upon that the weight of the heavy lead did as much to tire out the salmon as the efforts of the fisherman. Now the sinker is attached with a piece of line just strong enough to carry the weight and so arranged that when the fish strikes, the sinker is released and falls to the bottom, leaving the line clear for the fish. Iron sinkers are being used, and as they cost little the angler is willing to put on a new weight every time he secures a fish.

Golden Gate.

Kansas City Bait- and Fly-Casting Club.

Kansas City, Mo., May 1.—*Editor Forest and Stream:* The wind and light were bad, causing a postponement of the fly events. In spite of the unfavorable conditions some of the boys had good eyes, as a number of them rang the bell. Mr. Noland was trying out his new $50 reel, which caused his poor showing. As soon as he gets the hang of it, he will make the rest of us hustle.

Fishing in Northern New York.

Batavia, N. Y., May 6.—*Editor Forest and Stream:* We are having some good perch fishing. Two or three years ago we stocked the nearby ponds and we are now getting results.

Fish for stocking purposes may be had from market fishermen of the Great Lakes, by first securing the permission and co-operation of the fish and game commissioner of your State.

Charles W. Gardiner.

Heavy Rains South.

New Orleans, La., May 6.—*Editor Forest and Stream:* H. F. Haffaman, while fishing in Mississippi Sound at Clermont Harbor, near Waveland, was finned by a large catfish in the left foot, which caused blood poisoning. The accident occurred a few days ago, and Mr. Haffaman was taken to the Toure Infirmary in this city for treatment, where he is doing well and will recover. Mr. Haffaman is a confidential man and bookkeeper for the wholesale house of J. C. Koenig. He is well known in this city.

The heavy rains and storms of the past several days in Southern Louisiana made fishing almost impossible on Lake Bergne, Lake Pontchartrain, Mississippi Sound and other places near the gulf. The waters have been very high and dangerous for small craft. A few fishermen went to the clubs Sunday, but did little fishing. It is expected that the fishing season will open shortly as soon as the rainy and cool weather passes.

Gar and buffalo fish have been almost eliminated from Lake Verret, in Southwestern Louisiana during the last few weeks, and the game fish will be given a chance to increase rapidly. For a long while complaints have been made to the commission to the effect that the game fish in Lake Verret were almost exterminated by the gar and buffalo. The commission authorized fishermen with seines to go into the lake and catch as many as possible of the gar and buffalo, and also destroy the eggs. For this service on the part of the fishermen the commission decided to allow fishing in Lake Verret to continue a month longer; that is, during April. The season should have closed April 1. President Miller, of the commission, says that several millions of gar and buffalo fish eggs were destroyed, and he believes that good results will be obtained, and that game fish will multiply rapidly. Lake Verret is a large body of water and at one time produced thousands of valuable game fish, but in the last year or so these fish have disappeared and thousands of gars took their places. Professional as well as pleasure fishermen will reap a reward from this lake as soon as the open season comes again.

The long bridge over the Rigolets on the Louisville and Nashville Railroad was put out of commission by the heavy storm of some days ago, and trains were operated over the Queen and Crescent by the way of Hattiesburg and Gulfport. The bridge has just been repaired and fishermen can now go to the Rigolets and other famous fishing places on the L. & N. road a short distance from New Orleans.

A number of fishermen allege that those engaged in the fishing business in Mississippi come over to Lake Borgne and Mississippi Sound in Louisiana territory and catch great quantities of shrimp and all kinds of fish and sell them in the Louisiana and Mississippi markets. The Louisiana fishermen claim that those from another State have no right to utilize the waters of this State, and especially as they pay no license here. The game commission decided that it is a difficult problem to deal with, but in the future the board would station extra officers in the waters referred to and arrest those who have no right to fish in Louisiana territory.

T. H. Lyons, John Pratt, George Lyons and T. Lyons, Jr., comprised a fishing party Sunday and succeeded in catching 500 perch in addition to a number of other fish near Dunbar. This was the largest catch of perch in some years.

J. J. Frawley, vice-president of the City Council of New Orleans, and a party of friends, spent two days recently at North Shore on Lake Pontchartrain and were the guests of the Queen and Crescent Fishing Club. The party landed a number of sheepshead, green and speckled trout and perch. The Queen and Crescent Club has excellent quarters and is provided with comfortable sleeping rooms, a spacious dining room, a well supplied kitchen and a pantry always filled with the best the market can afford. An expert chef is employed and the most tempting dishes are set before the guests. The club keeps on hand fishing tackle, gasolene boats and skiffs for the use of members. A large number of those connected with this organization are leading financiers and business men.

F. G. G.

Gill Disease in Trout.

Washington, D. C., May 6.—*Editor Forest and Stream:* My attention has been called to a query in your issue of May 6, 1911, whether trout with short gill covers, or with the gills extending beyond the gill cover, are wholesome as food. It may be said that no one should hesitate to eat trout in this condition from fear of ill effects of any sort. Such fish are entirely wholesome as food. In fact, so are the trout with the thyroid or throat tumor, and practically all trout taken fresh from the water. The objection to using any such fish as food, when it exists, is of an æsthetic or sentimental nature. When well cooked, as of course all fresh fish should be before eating, the trout are harmless, although disease or bad hygiene may have made them less palatable and appetizing.

The cause of short gill covers is not known beyond the general fact that domestication predisposes to it.

H. M. Smith,
Acting Commissioner.

Harry Whitney Injured.

A press dispatch from New Haven says that word was received there last Saturday that Harry Whitney, the arctic hunter, who for some time has been tarpon fishing at Knights Key, Fla., is recovering from an attack of blood poisoning at a Florida East Coast railway camp.

Mr. Whitney, with a party of friends, had landed a large number of tarpon, and while trying to take the hook out of the seventy-pounder the fish gave a quick snap of his head which drove the hook into Mr. Whitney's hand. There were no facilities for dressing his hand there and the hook was cut out with a rusty knife, which resulted in the blood poisoning.

Tarpon at Port Aransas.

Akron, Ohio, May 1.—*Editor Forest and Stream:* I have just received some interesting fishing news from our secretary, J. E. Cotter, at Port Aransas, Texas, in which he informs me that on the 22d inst. there were fifteen tarpon and 2,500 pounds of mackerel caught, all on hook and line. The tarpon were all caught on light tackle according to the Aransas Pass Tarpon Club's rules.

The tarpon are in the pass in large quantities and great sport is being had with them. Fishing will be excellent from now on to Dec. 1 next.

J. E. Pflueger, Cor. Sec'y.

Hungry Pike.

A pretty tall story is to'd in the Angler's News by a correspondent who submits a photograph of two pike as proof. One of them, he said, weighed about 5½ pounds, the other 4½. They were found dead with the head of the larger fish in the smaller one's mouth, the latter's teeth fixed in his intended victim's skull. Without any apparent hint at humor the correspondent adds that he saw a swallow on a certain day.

Some News and a Little Gossip.

Alexander S. Cochran has ordered the schooner Westward home. The yacht is now at the yard of Summers & Payne, Southampton, and that firm has been notified to start work on her. Captain Chris Christiansen, who last year was skipper of Cornelius Vanderbilt's sloop Aurora, has been chosen as skipper of Westward, and he and a crew of thirty men left port last Saturday on the steamer New York for Southampton. These men will put the yacht in shape for her voyage across the Atlantic and sail for home in her as soon as possible. Capt. Christiansen is a very capable skipper. He was mate on Reliance with Capt. Charles Barr. The officers of Westward are Mate Harry Klefve and Second Mate John Swenson. These two were on Westward in her races in British and German waters last year. Capt. J. F. Mauerhoff, of Brooklyn, will be navigator on the ocean trip.

The yacht is to go to Bristol as soon as possible, and she will there be put in commission and will later be raced against Elena and others of her class whenever possible. Mr. Cochran says she will take part in the cruise of the New York Y. C. It is possible that she will be ready for racing earlier than that time if she has luck in making the ocean passage. Mr. Coch-

ran has been to Bristol and male arrangements with Capt. Nat Herreshoff to have the yacht put in the best possible condition, and there some slight alterations in rig will be made to make her conform to the rule of measurement.

This is good news to yachtsmen and will mean that there will be some fine schooner racing in these waters later in the season. Westward, Elena and Irolita will meet in the regular class B, and in such events as the Astor and King's cups there will also be Karina, Enchantress and Atlantic.

The 31-raters built at Herreshoffs for racing on the Sound are ready for delivery and will leave Bristol next week. The boat for the syndicate of the Seawanhaka-Corinthian Y. C. has been named Corinthian, and will be sailed by Sherman Hoyt, Clinton H. Crane and Johnston de Forest, three of the best sailors of small boats in these waters. Corinthian is 55 feet over all, 33 feet 2 inches on the waterline, 8 feet 4 inches beam and 6 feet 2 inches draft. She spreads 1,400 square feet of canvas. This boat was launched last week and has been tried.

The second boat is Joyant, built for Commodore William H. Childs, of the Indian Harbor Y. C. She is somewhat of an experiment in model and differs much from Corinthian. Her dimensions are 59 feet over all, 34 feet 5 inches on the waterline, 9 feet 10 inches beam and 7 feet draft. She spreads about 1,500 square feet of sail. Addison G. Hanan is to sail this yacht in her more important races.

Both of the boats are painted white above the waterlines, are exceptional looking craft as to elements of speed and power, have slender ends, finely drawn sheers and the larger of the pair will swing at the least 100 square feet more canvas than Corinthian. The freeboards are not of a character to raise any adverse comment, for Designer Herreshoff struck a happy medium in giving the body sufficient height above the waterline to compare easily with the length of hull and height of spar. The pole masts are lofty, making way for a tall hoist, while the hatch coamings on the deck are stamped down to the point of giving assurance that all comforts for the crew on deck are sacrificed to the object of carrying canvas.

George Lee's new 31-rater, which is to come around the Cape, representing the Boston Y. C. in the race for the Manhasset Bay challenge cup, left Hodgdon's yard at Boothbay last Saturday for Marblehead. Mr. Lee and some friends sailed the yacht around. This boat has been named Italia.

The Fall River Y. C. has announced its schedule of events for the season as follows: May 30, open regatta for sail and motor boats, start off Fall River landing at 2 P. M.; June 20, yachting events of carnival week; July 4, Tiverton, open race; July 8, sailing and motor boat races; July 13, 22 and 27, motor boat races; Aug. 3, sailing races; Aug. 5-12, race week, Narragansett Bay Y. R. A.; Aug. 24, handicap races, all classes; Sept. 2, motor boat races; Sept. 4, open regatta, all classes.

The officers elected by the club are: President, John A. Crowley; Commodore, John Wilkinson; Vice-Commodore, Frederick Webb; Rear-Commodore, Earl P. Charlton; Fleet Captain, Frederick M. Gooch; Fleet Surgeon, Dr. A. J. Abbe; Secretary, Thomas L. Bartlett; Measurer, Herbert M. C. Skinner; Treasurer, Charles H. Davis; Directors—John Dixon, Frank Rivers, Dr. Alanson J. Abbe; Regatta Committee—John R. Walmsley, J. Louis Potter, William Ferguson, Jr., George B. Johnson, H. A. Rivers; Auditing Committee—David J. Burdick, Charles M. Freeborn, James W. Cross; Membership Committee—Charles C. Senay, Jr., Samuel Smith, Jefferson Borden; Nominating Committee, Dennis F. Sullivan, Hugh L. Flanagan, Joseph T. Leach, William H. Hawkins, Jr., William A. Gifford; Delegates to the Narragansett Bay Y. R. A.—J. Louis Potter, J. Westall Borden, Arthur H. Hathaway.

The New Rochelle Y. C. went into commission last Saturday afternoon. Commodore C. E. Myrick gave the signal to hoist the club burgee at 4 o'clock, and it was saluted by about twenty yachts anchored in the harbor. This club is always the first in commission on the Sound. The Harlem Y. C. went in commission at City Island just an hour later than the New Rochelle Club.

The regatta committee of the Boston Y. C. has announced its season's schedule. Six open races and two club events will be given by the club this coming summer, and are scheduled as follows: Saturday, June 3, Y. R. A., open, City Point; Saturday, June 17, Y. R. A., open, Hull; Tuesday, July 4, club, Marblehead; Tuesday, Aug. 8, Y. R. A., open, Marblehead; Friday, Aug. 25; Tuesday, Aug. 29, and Wednesday, Aug. 30, midsummer series, Y. R. A., open, Hull; Monday, Sept. 4, club, Hull. Also the club will give six races for the championship of the Atlantic seaboard for catboats, off Hull, Thursday, Friday and Saturday, Aug. 31, Sept. 1 and Sept. 2.

In addition to regular schedule, the club will start the sailing yacht race to Bermuda, for a $500 trophy, offered by the city of Boston, Saturday, June 3.

The club also has challenged for the Quincy cup held by the Quincy Y. C. and the Manhasset Bay challenge cup held by the American Y. C. of Rye, N. Y.. The club's representative in the Quincy cup match will be Charles P. Curtis, Jr.'s new Sonder racer Ellen II., recently completed at Burgess', Marblehead. George Lee's new 31-rater Italia will be challenger for the Manhasset Bay cup.

For the championship prizes a yacht must sail in seven of the eight scheduled regattas, except in the case of the Hull one-design 15-footers, which need enter only the five races at Hull.

The cruise will start from Marblehead late Saturday afternoon, July 15. The yachts will have all day Sunday and Monday to reach Boothbay, as the fleet will not proceed from that port to the eastward until Tuesday, July 18.

The daily runs from Boothbay have not been decided upon, but the cruise will probably extend to either Bar Harbor or Winter Harbor, and will take the yachts through Musselridge channel and Fox Island thoroughfare. The runs will be short and the destination will be signalled from the flagship each day.

Narragansett Bay Schedule.

THE Narragansett Bay Yacht Racing Association has rearranged its schedule because of some conflicting dates. The King Philip Boat Club has been dropped. The particular rearrangement was for race week, which will begin with the Edgewood Y. C. on Aug. 5. There will be a regatta for all classes with cash prizes. The club will entertain visiting yachtsmen over Sunday, Aug. 6, and on Monday all classes will start off the Edgewood Y. C. and race to the Conanicut Y. C. Regattas will follow at Newport, Fall River, Potter's Cove and Bristol. The full schedule of the association now is:

May 30—Fall River Y. C. open.
June 3—Edgewood Y. C. open and power boat races for Markham trophy.
June 10—East Greenwich Y. C. open.
June 17—Rhode Island Y. C. open.
June 20—Fall River Y. C. open; cotton carnival.
June 24—Bristol Y. C. open.
July 1—Washington Park Y. C. open.
July 4—Edgewood Y. C. special events for Stone, Wood and Edgewood trophies and motor boat races.
July 8—Edgewood Y. C. Stone, Wood, Edgewood and Palmer trophy races.
July 15—East Greenwich Y. C. open.
July 22—Weetamoe Y. C. special and motor boat races.
July 29—Bristol Y. C. ocean race.
July 31, Aug. 1, 2 and 3—Edgewood Y. C. Interstate knockabout series.
Aug. 5—Edgewood Y. C. open.
Aug. 7—Edgewood race to Conanicut Y. C.
Aug. 8—Conanicut Y. C. open.
Aug. 9—Newport Y. C. open.
Aug. 10—Fall River Y. C. open.
Aug. 11—Rhode Island Y. C.
Aug. 12—Bristol Y. C. open.
Aug. 19—Edgewood Y. C. Stone, Wood, Edgewood and Palmer trophy races.
Aug. 19—Taunton Y. C. motor boats.
Sept. 2—Bristol Y. C. open.
Sept. 4—Edgewood Y. C. special classes.

Columbia Y. C. Dates.

THE regatta committee of the Columbia Y. C., City Point, has arranged a schedule of racing and social events for the 1911 season as follows: June 10, club race; June 24, club race; July 8, club race; June 17 and 18, cruise to Marblehead; July 15, Interclub and Y. R. A. open race; July 22, open date; June 11, stag party; July 25, ladies' day; July 21, moolight party; July 16, stag party; July 25, ladies' day; Aug. 27, ladies' day; Sept. 17, stag party. Three club races of June 10, 24 and July 8 will be for the flag officers' prizes. For the cruising race from Bass Point to Marblehead, Aug. 6, the Columbia Y. C. will donate a cup.

San Francisco Yachting.

BERKELEY, Cal., May 1.—*Editor Forest and Stream:* The Pacific Interclub Yachting Association held its annual meeting a short time ago in the Mills Building, and officers were elected to serve during the ensuing year. The clubs represented at this meeting were the Corinthian, the Aeolian, the San Francisco and the California clubs. Two others, the Sequoia Y. C., of Eureka, and the Vallejo Y. C., of Vallejo, were expected to send delegates, but these did not make their appearance. The officers elected were as follows: President, G. B. Dinsmore, San Francisco Y. C.; Vice-President, A. R. F. Brandes, California Y. C.; Secretary, Ross Wright, Corinthian Y. C.; Treasurer, Gus Dorn, Aeolian Y. C. The Regatta Committee for the season will consist of Roy C. Ward, San Francisco Y. C.; L. C. Knight, Aeolian Y. C.; Ross Wright, Corinthian Y. C.; J. J. Sherry, California Y. C., and Wood O. Watson, Vallejo Y. C.

The Aeolian Y. C. has announced its sailing program for the season as follows: April 29, opening day; April 30, opening cruise; May 21, race for Times-Star trophy; May 27, Martinez; May 28, Antioch; May 29, Vallejo; May 30, race from Vallejo to club house; June 10, cruise to Bay View Point; June 11, clambake; June 18, race for Hauser trophy; July 1, Black Point; July 2, Petaluma, July 3, McNear's; July 4, return; July 15 to 30, river cruise; Aug. 5, Visitation Bay; Aug. 6, return; Aug. 27, class flag races; Sept. 2, Redwood City; Sept. 3, automobile ride; Sept. 4, return; Sept. 9, Pacific Interclub Yacht Association regatta; Oct. 7, ladies day at club house; Oct. 8, race for small boats in San Leandro Bay; Oct. 14, cruise to foot of Hyde street; Oct. 15, outside cruise; Oct. 28, closing day; Oct. 29, closing cruise.

The Sausalito Y. C., formed a year ago, held its annual meeting recently and elected officers to serve for the season as follows: President, Otto Rhode, Jr.; Vice-President, G. C. Gallagher; Secretary, W. L. Sutherland; Treasurer, W. S. Reeves; Commodore, Al Reubold; Vice-Commodore, R. H. Glissman; Port Captain, W. H. James; Measurer, H. P. Maas. The report of the retiring officers indicated that the club was in a splendid condition financially, and that its membership was rapidly increasing. Last fall it was proposed to erect a club house at an early date, and a site was secured north of the Sausalito pier at Sausalito, but this has since been disposed of and another location is being sought. Last year an ark was used as headquarters, and this will probably serve the members again this season. A sailing program for the season has been decided upon as follows: May 6, opening day; May 7, cruise in squadron; May 21, club cruise and clambake; May 27, 28, 29 and 30, Petaluma drawbridge; June 11, Paradise Cove; June 25, Hunters' Point; July 1, 2 and 3, cruise to Vallejo, July 4, race home, Secor cup; July 16, Marin Islands, clambake;

July 23-30, cruise up river; Aug. 13, McNear's Point; Aug. 14, race home, Rebold cup; Aug. 20, ladies day; Sept. 3 and 4, Redwood City; Sept. 9, Interclub regatta; Sept. 17, outside cruise; Oct. 1, Point San Quentin; Oct. 15, Paradise Cove; Oct. 22, closing cruise. R. H. Glissman and S. T. Hynes, of this club, have just purchased the yacht Ariel and will shortly have this craft in commission.

At the annual meeting of the San Francisco Y. C. officers were elected as follows: Commodore, Dr. Emmett Rixford; Vice-Commodore, L. A. Norris; Secretary, A. C. Thompson; Financial Secretary, G. B. Dinsmore; Directors-at-Large—William G. Morrow and J. M. Punnett. At this meeting the retiring Commodore, J. R. Hanify, was presented with a set of silverware designed for use on his schooner Martha. Instructions were given to the building committee to proceed with the plans for enlarging the club house and this work will probably be completed this year. It is proposed to add a large grill room and a number of living rooms. The Regatta Committee of the San Francisco Y. C. for the season will be C. E. Bead, L. A. Weidmuller and W. K. Smith. The motor boat committee will consist of J. H. Cory, J. P. Jones and Lawrence T. Wagner. It is announced that James F. Lanagan, the well known Coast athlete, will sail with the San Francisco club this season, having purchased and fitted up the Amigo, formerly owned by George Lowell.

The Corinthian Y. C. will open the season of 1911 on April 29 with a jinks and dance at the Tiburon Club house and the active season will commence on the following day. The following is the season's program: April 30, cruise in squadron; May 6 and 7, Vallejo; May 20, McNear's; May 30, annual regatta; June 3, Petaluma drawbridge; June 17, San Pablo Point; July 1, Army Point; July 2, Rio Vista; July 3 and 4, Vallejo and return home; July 15, Paradise Cove; July 23, handicap race for Hammersmith trophy; Aug. 5 and 6, Santa Cruz race; Aug. 12, river cruise; Aug. 19, Vallejo; Sept. 2 and 3, Alviso; Sept. 9, interclub regatta; Sept. 16, Fulton Basin; Sept. 17, outside cruise; Sept. 24, motor boat races; Sept. 30 and Oct. 1, San Rafael; Oct. 7, Paradise Cove; Oct. 8, Corinthian games; Oct. 21, closing day; Oct. 22, cruise in squadron; Nov. 5, bridge opening.

A number of San Francisco yachtsmen are considering the proposition of building boats of the Sonder class and there is a likelihood that before long these one type boats may be seen in action on the bay. The dory type will probably be adopted and yachting enthusiasts in other Coast ports will be interested in the project and attempts will be made to have all the boats in this section built from the same plans.

GOLDEN GATE.

Seneca Back from Long Cruise.

DEMAREST LLOYD'S auxiliary schooner Seneca arrived in New York last week, after an extended cruise in West Indian waters. The schooner left New York Jan. 21 for Porto Rico. From Porto Rico, Seneca visited Santo Domingo, then Kingston and Port au Prince. On the return voyage Seneca went to Santiago de Cuba and Nassau, and thence to Charleston, S. C. by easy stages she worked her way up the Atlantic Coast and dropped anchor in New York Harbor. Seneca will go around the cape the latter part of the month, and Lloyd intends to enter the yacht in the coast ocean races.

Motor Boating.

Speed Trials over Mile Course.

IN preparing a program of events to be held during the National motor boat carnival at Huntington, L. I., Sept. 4 to 9, it has been proposed to hold time trials for speed boats over a measured mile.

With the building of possibly nine boats in the 12-meter class intended as defenders of the famous Harmsworth trophy in the British International races to be held commencing Aug. 24, it is a foregone conclusion that some one of these boats will be able to create a new American and probably world's record in these mile time trials.

If this event is included in the program of the National motor boat carnival, it is believed that this form of competition will be welcomed by the speed boat fraternity. The timing and general supervision of these mile time trials would be most accurate and satisfactory in every particular and the competition will be keenly enjoyed by racing men and spectators alike.

During the New York Motor Boat Show, W. H. Fauber, the inventor of the Fauber hydroplane, stated that he firmly believed that 1911 would see a record of a mile a minute established for motor boats, and that one or more of the American defenders now building would in all probability be capable of establishing such a record.

Schuylkill Motor Boat Men Organize.

A MEETING of Schuylkill River motor boat enthusiasts was held last week at the Yachtsmen's Club, Philadelphia, and the Flat Rock Motor Boat Club was organized with the following officers: Commodore, George C. Krusen; Vice-Commodore, John H. Field; Fleet Captain, J. Stanley Nelson; Fleet Surgeon, Dr. Eugene Swayne; Secretary, Walter J. Miller, No. 115 Carson street, Manayunk; Treasurer, James T. Francis; Board of directors, two years, John Innes, Willows and Walter Fancourt, De Lyte; one year, Burt Sudell, Maples, Edward Miller, Wenonah. Commodore Krusen and Vice-Commodore Field were chosen delegates to the Delaware River Yacht Racing Association.

Vice-Commodore Field in outlining the objects of the new organization, said, "The new club should appeal to every boat owner along the Schuylkill River to make it a success. We want every one with a boat or who is in any way interested in the upkeep of the Schuylkill to join. The river is a part of our playground and becoming more popular every year. Therefore it is necessary to have a club in order to regulate the movements of boats, especially after dark, to keep within some bounds the number of swimmers who use the river and to lessen those evils common to a large body of water." This club was organized by the representatives of twelve boat clubs on the river, and will be a division of the Delaware River Racing Association and allied with the American Power Boat Association.

Yacht Work at Stamford.

SEVERAL boats are nearing completion at the Stamford Motor Company's shops at Stamford, and others which have been stored there for the winter are fitting out. A 45-foot, raised-deck cruiser for Loren P. Bradley, of the New Rochelle Y. C., is nearing completion. This boat is from designs by Whitlesey & Whitlesey and is to be named Mollie. It is fitted with a four-cylinder, four-cycle motor and is expected to make 11 miles an hour.

A bridge-deck motor boat 65 feet over all has been built for Commodore W. F. Blaisdell, of the Port Washington Y. C., which is to be named Flor del Mar. She has a six-cylinder motor.

A mahogany tender is being finished by the company for the sloop Nalolo, owned by N. L. Mead, Jr., of the Harlem Y. C.

The sloop yacht Curlew, owned by F. Gallatin, of Noroton, Conn., is receiving a general overhauling and will soon be placed in commission, as is the sloop Dart, owned by R. H. Gillespie, of Stamford. The motor yacht Hakucho, E. H. Du Vivier, of New York, is also in hand and will be ready for service the middle of May.

The motor yacht Dorisella, owned by Otto H. Franc, of New York, is receiving a general overhauling and will be placed in commission early. She will be used on the Hudson River.

The motor yacht Uncas, Rear-Commodore G. C. Blickensderfer, of the Stamford Y. C., has been placed in the best of condition by the company and will be delivered to her owner in a few days. The Commodore will do considerable Sound and coast cruising this season.

Work is well advanced on the motor yacht Melloise, owned by George E. Conley, of the Hudson River Y. C., which will be in commission by Memorial Day.

The sloop yacht Weona, owned by Louis Scofield, of New York, is receiving a general overhauling and will be given a new suit of sails, in addition to the installation of a new engine. Mr. Scofield intends to cruise most of the summer.

Two mahogany tenders are being built for A. W. Young, of New York. Stamford motors will be fitted.

The schooner Adrienne, S. E. Elliott, is being refitted for the season and is being given one of the company's new type heavy duty four-cylinder two-cycle motors and also new sails. The owner will cruise on the Sound.

The Bermuda Race.

THE annual race for motor boats to Bermuda this year will be the most successful in the history of the race. The change in the conditions allowing boats much larger than those of former years to compete has had the desired effect, and some new boats, as well as some of last year's craft will be starters. The Motor Boat Club of America is confident that there will be at least six yachts in the race and probably more. Those that seem to be sure starters are the new Sybilla II., built at the Mathis Yacht Building Yard at Camden for J. F. Betz, of Philadelphia; a new boat building for A. W. Teele, of New York, from designs by Whittlesey & Whittlesey; Caliph, owned by Commodore M. E. Brigham, of the Ventnor Y. C., and Eronel II., owned by Vice Commodore Samuel Cochrane, of the Bensonhurst Y. C., winner of last year's race. Sybilla is 82 feet long and has Craig motors. The Teele boat is 75 feet long, and the Caliph won the race from Havana to Atlantic City last year.

Commodore Melville, of the Motor Boat Club, has asked the Government to allow two torpedo boats to convoy the racers from Gravesend Bay to Hamilton. He says the Navy has sent vessels for aeroplane flights and for other yacht races, and there is no reason why such an escort should not be given the racing motor boats. These boats are demonstrating the reliability of the gas engine and doing other things of great benefit to the marine world. With an escort it is likely that many more owners will take part in the contest.

Two Boats for Island Heights Y. C.

Two 36-foot cruisers have been built at the Mathis Yacht Building Yard, at Camden, for Edgar J. Mickley and Archer C. Riege, members of the Island Heights Y. C. One has been tried and made 11 miles an hour.

The boats are 36 feet over all, by 8 feet 3 inches beam and 2 feet 6 inches draft. The main cabin is slightly raised above the forward deck line, which gives plenty of head room in cabin and allows for large practical windows. The most unique and practical thing about these boats is the screen doors of the companionway. Every one who has had much experience with the mosquitoes and flies on some of the Jersey bays will appreciate what a great improvement these doors are over the old type. They have to be seen to be appreciated. They cannot be left partially open, and have strong springs on them, and the sliding-top screen to keep them in place. When the screen doors swing open they push back the top screen at the same time, when the top screen locks the doors open. Upon pushing the top screen back the doors are released and close, closing the top screen at the same time. The windows will be equipped the same way.

The engines are amidships, with clutch, carburettor and ignition control to cockpit aft, beside steering wheel. One boat has a 12-horsepower Hall engine in it, the other an 18- to 25-

"Old Town Canoe"

This is the canoe—the Red Man's bark canoe—modernized and improved by the ingenuity of the white man's skill. Canoeing affords an endless variety of healthful sport, and the "Old Town Canoe" will furnish you enjoyment most of the year.

The story of the evolution of the canoe is told in our new, free 1911 book. Write for it today—many photographs and illustrations and every one interesting. A postal will bring it. Also information regarding canoe clubs and how you can form one in your town.

2000 Canoes from which to choose.
Immediate deliveries.

SAM LOVEL'S BOY
Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.
FOREST AND STREAM PUBLISHING COMPANY
Price, $1.25.

horsepower Sterling engine. As both boats are exactly alike in every detail it will be a very interesting race between them under the American Power Boat Association rules.

Halifax Race Conditions.

THE regatta committee of the Brooklyn Y. C. has published the conditions to govern the race for motor boats from Gravesend Bay to Halifax. Commodore William Randolph Hearst has offered prizes for this event which he calls the "Halifax Reciprocity Race." The total value of the prizes is $4,000, but all these will not be given unless there are eight or more starters. The race is for yachts between forty and eighty feet in length, and if the number of starters warrants it, two classes will be made dividing at sixty feet.

One rule, relating to fuel, says that boats will be allowed to carry gasolene in tanks or cans provided they are securely fastened. This rule is establishing a bad precedent. Those who have arranged the long distance races for motor boats have always tried to make the conditions such that the dangers encountered will be minimized as much as possible. Gasolene in tanks is rather reckless. The cans at the best are poorly put together. They are meant only to hold the fuel long enough to get it into the tanks of the yacht, and when stood on the deck of some vessel which is likely to roll and pitch in a seaway, there is always a likelihood of these cans breaking loose or leaking, and with gasolene about loose there is no telling what may happen.

Rules should be framed insisting that fuel be carried in tanks properly piped. If in one of these long races a vessel should be lost, and those on board drowned, the sport would get such a set back that it would take years to recover from.

The conditions are as follows:

Date of Race.—On July 22 the Brooklyn Y. C. will start the "Halifax Reciprocity Race" for boats propelled by any form of combustion engines.

The Start.—The start will be from off the Brooklyn Y. C. (foot of Twenty-second avenue, Bensonhurst, N. Y.), between the regatta committee boat anchored about one-half mile W.N.W. of the westerly end of the club pier, and a stake boat to be anchored about 100 yards W.N.W. of the committee boat.

The Course.—The course will be from the starting line, thence to and around Norton's Point, thence to and around Ambrose Channel Lightship (leaving it to port), thence to the finish line, hereinafter described. (After passing Ambrose Channel Lightship boats may select their own courses, excepting that they are forbidden to pass through Long Island Sound.)

Classes.—If eight or more boats start, there will be two classes. The first for boats measuring between 60 and 80 feet, over all measurement, and second between 40 and 60 feet over all measurement. If less than eight boats start, all will race in one class.

Eligibility.—All boats owned by members of recognized yacht clubs, which are substantially built and comply with these conditions, will be eligible to start.

Inspection of Boats.—All boats must be inspected and approved by the regatta committee,

FOREST AND STREAM

A JOURNAL OF OUTDOOR LIFE, TRAVEL, NATURE STUDY SHOOTING, FISHING, YACHTING

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time.
Terms: $3.00 per year; $1.50 for six months.
Canadian subscriptions, $4.00 a year; $2.00 for six months.
Foreign subscriptions, $4.50 a year; $2.25 for six months.
Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.
The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.
A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.
Transient advertisements must invariably be accompanied by the money or they will not be inserted.
Advertisements should be received by Saturday previous to the issue in which they are to be inserted.
Only advertisements of an approved character will be inserted.

or they will not be allowed to start. All boats entered must be anchored off the club house by 11 o'clock the day before the race is to start for inspection.

Fuel.—Boats will be allowed to carry gasolene in tanks or cans, provided they are securely fastened so as to stand rough weather; such cans or tanks must be fastened to the satisfaction of the committee, so they will not be tossed about in a rough sea. No ingredient may be used to increase the power of gasolene.

Use of Sails.—Boats will be allowed to carry sails at will. The sail area must not, however, be greater in square feet than the square of the over all length divided by eight as a constant.

Entries.—Entries will be received on cards which will be furnished by the committee up to July 17, 1911, at 12 o'clock noon.

The committee reserves the right to refuse any entry for any cause which may seem to it sufficient.

Measurement.—All entrants must report to William Gardner, the Brooklyn Y. C.'s measurer, on July 19, 1911, at 9 A. M., at Marine Basin, foot of Hubbard street, Ulmer Park (one-half miles south of club house) for measurement. A fee of $10 will be charged by the measurer, to be paid by the entrant, also the cost of hauling out on the ways, if necessary. At the time of measurement marks will be placed on the hulls of boats. A final inspection will be made at 8 A. M. on the day of the race, when measurements will be corrected. No weight may be taken out after final inspection.

The measurement will be according to the 1911 rules of the American Power Boat Association.

Ratings.—Each boat will be required to have on board sufficient rations and water to sustain the crew, which will be on board during the race, a period of fifteen days. Such rations and water must be on board at the time of the committee's inspection.

Crew.—There will be no limit as to number or kind of crew, excepting there must be an experienced navigator and engineer and two amateurs. The names of all members of crew and addresses must be filed with the committee by July 21, 1911.

Racing Numbers.—Each entrant will be required to carry, in plain view, on either side of his boat, a racing number which must be at least fifteen inches in height. Numbers for each boat will be assigned to it by the committee as soon as entries are received.

Handicaps.—The handicaps will be figured according to the rules of the American Power Boat Association, and the rules of that association will govern the race, excepting as herein altered

Prizes.—The prizes have been donated by Commodore William Randolph Hearst. In each class there will be a first prize, consisting of a trophy costing $1,000, and $1,000 in cash. If four or more boats start, there will be a second prize, consisting of a trophy of the value of $500, and $500 in cash. If six or more boats start, there will be a third prize, consisting of a trophy of the value of $300 and $300 in cash. If eight or more boats start, there will be a fourth prize, consisting of a trophy of the value of $200 and $200 in cash. Each boat finishing the course, whether it wins one of the prizes offered or not, will be presented with a prize for having finished the course.

Time and Manner For Start.—Attention will be called to each signal by a gun or whistle. Each signal will be hoisted in stops, broken out at the correct moment, and will be lowered thirty seconds before the time for the succeeding whistle. 4 P. M., white cone, warning signal; 4:05 P. M., blue peter cone, preparatory signal; 4:10 P. M., one red cylinder, start for larger class; 4:15 P. M., one white cylinder, start for smaller class. If there is but one class the start will be at 4:10 P. M.

Finish.—Each boat must make known its name and the time of its finish immediately upon crossing the finish line by notifying the committee boat anchored at the northeasterly end of the finish line. The finish line, with all information so as to find the same during daylight or darkness, will be furnished to each boat prior to the start. The finish will be in front of the Royal Nova Scotia Y. C. squadron house, and such signals will be displayed as will clearly indicate to the boats finishing either end of the line.

Protests.—Protests must be filed with the committee in writing, specifying fully the matter complained of, within seven days from the time the last boat finishes. Protests as to measurement must be filed with the committee by 10 o'clock the day before the start.

Entertainment.—The Royal Nova Scotia Yacht Squadron and the Waegwoltic Club, of Halifax, have offered the privileges of their houses to owners and their guests.

Change of Conditions.—The committee reserves the right to change or amend any of these conditions. Notice of the change of any of the conditions will be given to all boats entered, at least ten days before the start of the race.

Return Race.—The Royal Nova Scotia Yacht Squadron has offered a prize for a return race. Other prizes will undoutedly be offered. Particulars of the return race will be issued later.

Replenishing Fuel.—Any boat may at its option stop to replenish its store of fuel, but in so doing no time will be allowed for the making of such stop or stops.

Life Boats.—Each boat must carry a life raft or boat sufficient to salve the whole crew, or two boats, or a boat and raft; also a ring buoy or life jacket for each member of the crew; a full set of nautical instruments, a spare compass and fire extinguishers. All boats must also be equipped with the various articles prescribed by the United States Government.

The committee earnestly requests entries to be made as early as possible, so that it may make the necessary arrangements for the race.

PETER BENTLEY, Chairman.
HARVEY B. GRIFFIN,
DANIEL TOFFEY.
Regatta Committee of Brooklyn Y. C.

Yachtsmen's Club Race.

THE conditions to govern the long distance race of the Yachtsmen's Club, of Philadelphia, have been published. This race is to start on July 8 from Atlantic City, and the Ventnor Y. C. will have charge of the starting. That club will hold a smoker the evening before the race to which the visiting yachtsmen will be invited.

The race will start on the morning of July 8 and should be finished inside of 36 hours. The course will take the boats up the Jersey coast to Scotland Light, a pleasing run for daytime; then on to Fire Island. After Scotland Light is dropped astern the Fire Island Light shows the way plainly. After turning Fire Island Light the course is S. W. 7/8 W. to Atlantic City. On this course the yachtsman will have a fine chance to use his knowledge of chart work, and the information he may secure from the Lighthouse Book for the different lights to be picked up on the run to Atlantic City.

The race is open to three classes of boats—power yachts over 45 feet over all; power yachts 45 feet and under; auxiliary yachts of any rig. Entry blanks can be secured at the Yachtsmen's Club or from any of the committee, which is composed of Richard L. Young, Chairman; Dr. C. S. Street, Secretary; M. E. Brigham, W. H. Biddle and A. H. Edson. The judges are: Frank Vanderherchen, Frank R. Scull, C. Claud Scull. Ventnor City Y. C. Entertainment Committee—Victor Fisher, Thomas Youngman and Edwin H. Stubb, Jr.

The boats will be started off the Million-Dollar Pier, at Atlantic City, N. J. The auxiliaries will start at 8:30 A. M.; the power yachts will be sent off as follows: First class power yachts start at 12 o'clock; second class power yachts start at 11 o'clock.

All yachts must cross the line between the pier and the stakeboat.

There will be at least two prizes for each class, provided three or more start.

Any owner wishing to enter his boat must do so before noon on July 1, to the chairman of the Regatta Committee, R. L. Young, No. 104 South Juniper street, Philadelphia, on the regular form. No entrance fee will be charged.

The measuring will be done under the direction of the South Jersey Y. C. Racing Association. Boats not measured must report at the Ventnor City Y. C. not later than the morning of Friday, July 7, 1911. The rating certificate of boats from any recognized yacht club will be accepted when signed by the club measurer.

The total area of the working sails, plus 120 square feet for every unit of horsepower, as measured under the 1911 American Power Boat Association rules.

The auxiliaries will be permitted to carry light sails, consisting of balloon jibs and spinnaker, which will not be added to the above formula. No boat with less than 70 square feet of sail area per unit of engine horsepower will be accepted as an auxiliary. The time allowanee for auxiliaries will be taken from the allowance table of the American Power Boat Association as published in their 1911 book, and the distance be figured as 196 nautical miles.

For power yachts rating will be calculated under the 1911 rules of the American Power Boat Association, with full time allowance, and the distance be figured as 196 nautical miles.

Canoeing.

Pittsburg Canoe Clubs.

A MOVEMENT has been started by the six big canoe clubs about Venona, on the Allegheny River above Pittsburg, to build a long continuous retaining wall embracing all the club grounds and intervening private property. This would not only add much convenience and great beauty to the water front, but permanently do away with the annual damage and encroachment of the swollen rivers upon the properties in question.

Not satisfied with the honors of the first long cruise of 1911, two Algonquin Club members are now on the second long trip of the season. They are Walter ("Let's Beat It") Rinehart and C. W. Reamer, who left the headwaters at Salamanca, N. Y., on April 20, paddling down to Red Bank, Pa. From there they trained to Ridgway and will travel down the Clarion and Allegheny rivers to their club house. They expect to consume three weeks for the trip. The Algonquin Club has scheduled receptions for May 13, 20 and Memorial Day. There is no "opening," strictly speaking, as the club has been open socially all winter.

The latest factor among the river clubs is the Oakmont Canoe Club, organized on March 10, and has already enrolled 210 members. It has headquarters in the Oakmont Motor Boat Company's building and will take an active part in all the regattas this season. The officers are: Commodore, Edwin Wall; First Vice-Commodore, Edwin Owen; Second Vice-Commodore, Claire Kline; Treasurer, T. F. Campbell; Secretary, C. M. Hunziker; House Committee—William Peet, R. Kline, H. C. Focer and James Muir.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Arthur C. Biles, 223 Passaic street, Trenton, N. J., by Ira C. Hendrickson; Arthur F. Thornton, P. O. Box 137, Sparkill, Rockland county, N. Y., by T. O. Brown.

Central Division.—Frank E. Mee, care of I. Fitzgerald, Cape Vincent, N. Y., by M. F. Barth.

Eastern Division.—Nathaniel W. Leavitt, Medford, Mass., and 174 Portland street, Boston, Mass., and Harold E. Boardman, 18 Pembroke street, Medford, Mass., both by B. F. Jacobs, Jr.

NEW MEMBER ELECTED.

Eastern Division.—6216, Wallace C. Ray, 485 Elmwood avenue, Providence, R. I.

MEMBERS RE-INSTATED.

Central Division.—1015, J. Lowell Williams, Rome, N. Y., and 1018, E. Stuart Williams, Rome, N. Y.

Eastern Division.—5213, Edward J. W. Proffitt, Providence, R. I.

REMINGTON UMC
TRADE MARK

Washington State Championship and Texas Handicap Wins.

E. J. Chingren wins highest honors at the Washington State Shoot.
J. S. Loftin wins the Texas Handicap, score 91 x 100—46 x 50.
H. R. Murrel, second, 91 x 100—42 x 50.

All three men used a

Remington-UMC PUMP GUN

The only bottom-ejecting pump gun.

Shoots hard and close. Handles fast. Balances perfectly.

DRIVERS AND TWISTERS.

The date of the Dorchester (Neb.) Gun Club's registered tournament, scheduled to be held at that place on September 5 and 6, has been changed to Aug. 29 and 30.

Secretary Lon Fisher announces that any consignment for the Grand American Handicap, which will be held at Columbus, June 20 to 23, must be shipped prepaid to "Marble Cliff, care of Columbus Gun Club, Columbus, Ohio."

The Mohawk Gun Club, of Schenectady, N. Y., will hold an all-day tournament on Tuesday, May 30, consisting of twelve events of 15 targets each, and entrance of $1.30 each. Four average moneys, $10 to first; $7 to second; $5 to third; $3 to fourth. J. W. White is the Secretary.

The Akron, O., Club will give a shoot on May 24 at Turkeyfoot Lake. Program comprises ten 15-target events, entrance 50 cents each, total $5. A cup to each man on winning team. Team shoot open to all teams, 50 targets per man. High gun amateur, $15; low gun, $5. Professionals shoot for targets only. Not more than two in squad. Targets 2 cents each. Entries to G. S. Work, Perkins Hill, Akron, O.

A target tournament will be held on the grounds of the Freehold Gun Club, Thursday, May 25, commencing at 10 o'clock. The program consists of twelve events at 15 targets each, entrance $1 each. Money divided 40, 30, 20 and 10. Shells shipped express prepaid, care of Frank Muldoon, Freehold, N. J., delivered on the grounds free of charge. Free lunch will be served. All standard makes of shells to be had on the grounds. Central Railroad train leaves 8:30 A. M. at Liberty street, New York. Maltby W. Conover is the secretary.

Trap Season Closes at Larchmont.

LARCHMONT, May 7.—The trapshooting season came to an end at the Larchmont Y. C. yesterday with an open inter-club event, which attracted not only most of the experts of local organizations, but several prominent out-of-town gunners as well. In all fifty men faced the traps during a whole day of competition. The final tally finding Charles H. Newcomb, of Philadelphia, and W. M. Foord, of Wilmington, in the lead. The strong showing on the part of the visitors was not unexpected, as Mr. Foord is the man who held the national title in 1907, while Mr. Newcomb has several times been a runner-up for the shampionship.

The event was a 200 target scratch affair for a $1,500 cup, presented by Commodore Leonard Richards, of Larchmont, the trophy to become permanent property of the individual winning three legs on the prize. Mr. Newcomb and Mr. Foord tied for the high gun score with totals of 179. Two shoot-offs followed before the tie was broken, with Mr. Newcomb the ultimate victor. There was a tie also for third place between Stuart Scott, of Larchmont, and Harry M. Brigham, the Crescent A. C. champion. Each returned cards of 177.

In the annual tourney for the championship of the Larchmont Y. C., Stuart Scott proved the winner with his total of 177. He was closely pressed by R. L. Spotts, who broke 175.

The summary:

Open tournament, 200 targets:

C H Newcomb, Philadelphia	90	89—179
W M Foord, Wilmington	87	92—179

Alert Gun Club Tournament.

EASTON, Pa., May 5.—The Alert Gun Club held its annual spring tournament to-day. There was a large number of sportsmen present, including crack shots from New York, Newark, Allentown, Lambertville, Catasauqua, Frenchtown, Doylestown and Belvidere. Each marksman had 150 targets. Neaf Apgar was high gun in the professional class with 146 to his credit. Heil and Wilson were tie for first place in the amateur class with 142 to the credit of each. Apgar, Lawrence and Keller, of New York; Lewis, of Atglen, N. J., and Stevens, of Rolle, N. J., were the professionals who faced the traps. The scores:

Drake	97	Wilson	142
Cartright	116	Markley	131
Hartman	113	Mathews	140
Taylor	131	Barclay	129
Stubblebin	134	Clark	133
Heil	142	Sobers	110
Englert	136	Davison	110
Bitterling	106	Young	122
Hepner	123	Keller	128
Silfies	120	Geiger	136
Lewis	127	Coffin	136
Apgar	146	Page	129
Stevens	138	Welsh	130
Schlicher	140	Criger	120
Lawrence	128	Snider	101

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Canonsburg Gun Club.

PITTSBURG, Pa., May 3.—Under the hardest kind of weather conditions fifty-four shooters inaugurated the official opening of the shooting season on the grounds of the Canonsburg Rod and Gun Club yesterday.

"Kelsey," the prominent Pittsburger, led the amateurs, shooting a good, consistent race. He broke 134 out of 150, which was excellent under existing conditions. J. F. Calhoun was second. He got off badly in his first event, but good work during the rest of the day brought him in with 130 out of 150. "Jackie," of Butler was third with 127 out of 150.

Among the professionals Lester German led the field with 140 out of 150, and Stevens was second with 133, while Squier broke 130.

Butler was high in the team race with 353 out of 450; Camden second, 351 out of 450, and Brownsville third with 350 out of 450.

Class A money went to Kelsey, 134; Calhoun, 130. Class B to A. H. Brown and Morrison, 112 each. Class C to Hickman and Hahn, 105 each. Class D to Lautenslager, Lees and Wood, 89 each. Scores:

The next league shoot will be at Tarentum June 1.

Columbus Gun Club.

COLUMBUS, O., May 6.—All was needed was warm weather to bring the shooters out again. Some more new faces. Come again. We want you with us. Webb shot the best, breaking 24 out of 25 from 21yds. The writer got only 22. The grounds are being put in shape for the State shoot and Grand American Handicap, Both promise to be record-breakers. Now is the time to join the gun club. Only $5 the first year; dues $3. A nice lot of fellows to be with, and a comfortable club house. Hill broke his first 15 straight. Webb got some 70 without a miss. Shattuck was showing what his shells could do. Those 90 per cent. shooters from the City on the Lake are still there. No return match in sight yet. What the Columbus boys will do to them when they do come down will be a plenty. May 19 will be the next monthly shoot, with 150-bird program.
